

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

OCCASIONAL NOTES.

MR. LLOYD-GEORGE'S speech at Conway of December 28 reaches us just as we are going to press, and we are pleased to find that the first pronouncement of a Cabinet Minister on education confirms the horoscope we had already drawn. "The first thing that the new Government was going to do was to remedy the wrongs of the Education Act." With rate-supported schools, "all the people were entitled to a full, free, and equal share of the privileges of management and teachership." Here is virtually the two-clause Bill which we prefigured. On the religious question Mr. Lloyd-George declared himself in favour of unsectarian Bible teaching, though on this point he confessed that he did not carry all his colleagues with him. We might, he hinted, be driven to absolute secular instruction; though, in his opinion, "there was nothing worse than that," but the responsibility for Godless schools would lie with the denominational party. His last word was a counsel of moderation to his coreligionists. Who said "Gracchi"?

THE project of a Federated College for Secondary Teachers having fallen through, a less ambitious scheme for a Federal Union of the same constituent bodies is now under consideration. According to the draft scheme, each of the eight associations will send three representatives to form a Federal Council. This Council will be not only a deliberative body, as was the Joint Committee presided over by the late Prof. Jebb, but will be empowered to take action in cases of emergency. We welcome any movement that promises to centralize and

focalize, as it were, professional opinion, and to remedy the dissipation of energy which is painfully brought home to us by the multiplication of conferences at this season of the year. The executive powers of the Council are so strictly limited (there must, to start with, be a unanimous vote) that it is not easy to conceive a case in which common action would be possible. But it would be premature to criticize the details of a scheme which is still in embryo.

WE have given Miss Bathurst an opportunity of presenting her case against the Board of Education, and there we must leave the personal matter. To impugn the veracity of an official without giving the incriminated officer a chance of vindicating his statements appears to us a high-handed proceeding that needed explanation, and, in the case of a lady, to use the mildest term, ungallant. The Board may have had provocation that we know not of, and we shall await their reply. The public issues that Miss Bathurst raises are twofold. First, she accuses the Board of tampering with reports and not allowing Inspectors to express their opinions when these are not approved by the Board or may give offence to influential politicians. This is a grave charge, which we sincerely hope that the Board will be able to refute. Reports must be edited, and every Inspector cannot be allowed to say just what he pleases in the way he pleases; but they must not be doctored. Secondly, Miss Bathurst impugns the whole system of infant schools—the equipment, the curriculum, the management, the inspection—and for this she holds the Board responsible. This is too wide a topic to be even touched on in a note.

THE Conference of Northern Local Authorities, convened by the city of Bradford to consider the policy of the Board of Education in reference to the training of pupil-teachers, brought out strong expressions of feeling in favour of maintaining pupil-teacher centres. Our own view is decidedly opposed to this. The very arguments adduced by the supporters of centres are those that we should use in favour of their abolition. Excellent work is done at the centres. The teachers are usually of the best; the pupils are anxious to pass their examinations, and therefore are keen to work; they have all had much the same sort of education, and therefore classification is easier; they are all working to one definite end. All this helps the teacher, and the results, as tested by examinations, may be most promising. It is also alleged that pupil-teachers are taught at centres how to teach—i.e., the subject is presented to them in the way in which they will have to present it to others. It is no paradox to say that these are all, in fact, objections. It is a mistake to segregate any class at an early age. Up to the training-college period it will be much better for the intending teacher to mix with others, and to work with a single eye to his mental development. Even if he lost something by dissipating his energies, we would still say he would be better at a school than at a centre. Nothing so stunting as premature specialization.

"E DUCATION for Efficiency," an address delivered by Dr. Eliot, President of Harvard University, which has been reprinted and circulated to members of the Teachers' Guild, by the generosity of Sir William Mather, will be read with great interest. Its main theme, that children must be taught to think, may sound trite, but the exposition is so new and refreshing, and so completely in accord

with modern life, that the reader cannot fail to be stimulated. School education is not so much a matter of acquiring such or such knowledge; but the problem is to get the young "to weigh evidence, draw accurate inferences, make fair comparisons, invent solutions, and form judgments." Criticism, Dr. Eliot reminds us, is often associated with the power of seeing faults: it should include the faculty of discerning merit and beauty. This faculty adds immensely to the enjoyment of life. Truth is the one thing to pursue: "In the modern world a nation is effective in proportion to its truthfulness, or, in other words, in proportion as it keeps its thinking, speaking, and acting in accord with facts." One other quotation to illustrate the meaning of truth in this connexion: if a teacher comes across a sluggish mind in a primary school, she must first find out what the sluggishness is due to—poor food, bad air, fear, a crushed spirit, or what not. "She must find out the facts of the case before she can deal with it. She must learn the truth about the child before she can set it free."

ALTHOUGH the great scheme of the Consultative Committee for the simplification of school examinations has so far borne no fruit, yet the leaven works.

**Diminution
of School
Examinations.**

While Oxford and Cambridge are considering a joint Matriculation Examination, or something of the sort, the Education Committee of Surrey, after consultation with the head masters of the county, has, with a stroke of the pen, inaugurated a great reform. In future, to the University of London alone is to be entrusted the task of examining and inspecting all the schools. There have been, up to the present, special examinations for all the County scholarships, and, as these were of a specialized form, candidates were required to take some other public examination as a preliminary. The two School Examinations of the London University will henceforth be used for all purposes. The simplification of work that will ensue in the higher forms will give the schools a real impetus. There is just one objection that may be urged. If the scheme is carried out entirely, some schools will tend to lose their connexion with the older Universities. But it is not too much to hope that before long the matriculation examination of any University will carry entrance to any other. And it must be recognized that Surrey is closely connected with London, and that the greater number of boys from the schools working in connexion with the County Council already go to London, if they go to a University at all.

THE Senate of the Royal University of Ireland has been advised that its charter gives it no disciplinary

**University
Discipline.**

powers that would enable it to punish the recent disloyal disturbance on the part of students. This decision places the Senate in the unpleasant position of having no real control over the body it is supposed to govern. It may be further argued that the Senate would have no power to withhold the granting of a degree to a student possessing no moral fitness. It seems likely that many members of the Senate will resign their positions, unless the opinion of counsel be overruled or the present disability is remedied by the granting of a fresh charter. It is certainly unreasonable that a University should not have full disciplinary powers over its students. It should have the power of expulsion and the power of withholding degrees. But it is questionable whether it is wise to endeavour to exercise this power in cases that can be dealt with by the police. It is not easy to find arguments in these days for upholding a mediæval system of discipline distinct and different from that under which all citizens live. If disorder takes place at

a public meeting, the common law provides a remedy. Granting degrees stands on a different footing. No University should be compelled to give a degree to any one who passes the examination, without regard to moral character.

THE London County Council clearly intends to manage its own schools. In applying for recognition of its four new secondary schools, it is distinctly stated that the

**The L.C.C.
and Assistant
Teachers.**

Council is responsible for the organization of, and for the appointment and dismissal of all teachers in, its secondary schools; and that, until further orders, head teachers of the Council's secondary schools be given the right of being consulted in all questions relating to the appointment and dismissal of assistant teachers in their schools. Practically, therefore, the Council intends to appoint all teachers in its secondary, just as it does in its elementary, schools. Under modern conditions the head master is no longer responsible in the way that he used to be, and it is therefore less reasonable for him to claim that he cannot answer for the success of the school unless he is allowed to choose his own staff. The London County Council, with its host of inspectors and educational experts, does not need the advice of a head master in the way that the governing body of a provincial grammar school needs it. In many ways the new position will be welcome to assistant masters. They will know the financial conditions of their appointment exactly, and they will not, at least at the pleasure of an individual, be liable to capricious dismissal. Nor is there reason to fear that the new conditions will fail to attract to the schools as head masters men of independence and originality. At any rate, the present Council may be trusted to know a good man when they have got him, and to give him his head.

WE are glad that the Board of Education has issued a strongly worded circular to Local Authorities on the subject of extraneous tasks—a kind of feudal incident to

**Teachers as
Organists.**

which the parsons cling. Just as we think it a regrettable error that the clerical profession should be combined with the scholastic, so we deem it quite wrong that the teacher in a public elementary school should necessarily be identified with what is known as parish work merely by reason of his position. The two sorts of work are essentially distinct. There is a further reason against the claim of the clergy that the schoolmaster should help in parish work. Men have to earn their living by one way or another; most men like, in addition to this necessary work, to have some voluntary outlet for their energy as well. If a man likes teaching in the Sunday school, by all means let him do so. Make it compulsory, and one runs the danger of spoiling the effect. If a schoolmaster can play the organ, by all means let him be appointed organist if he wishes. The evil is when such an appointment is made a condition of his residence in the parish. If, however, managers offend after this last circular, the Local Authority can hardly do otherwise than annul the appointment and the Board may refuse to recognize the school correspondent who has inserted the invalid advertisement.

FROM £12,000 to £15,000 in wages alone will be affected by the proposal to use paper instead of slates in elementary schools, besides the loss of the capital invested in the trade. Thus spoke Mr. W. M. Roberts to Lord Londonderry on the occasion of a deputation to the Board on the subject of the use of slates. It would be a great pity if any dislocation of trade were caused by an educational

**The
Slate Trade.**

ordinance; but it has been hinted already by scores of critics that English manufacturers are altogether too slow in scrapping machinery and turning their attention to changes in trade. The loss of the quarrymen will be the gain of the paper-makers. Canon Brownrigg, also a member of the deputation, recommended slates on educational grounds. The published report of the proceedings is too brief to enable us to estimate the value of the arguments. If the glare of white paper is harmful, the paper can be tinted. In our opinion slates are clumsy and dirty. They do not encourage either neatness or good writing. The method in vogue of cleaning them is said to be unsanitary. Indeed slates were only admissible when paper was costly. Lord Londonderry pointed out, in reply, that the Board had not forbidden the use of slates. Slates and "under-five's" are on the same footing.

MR. W. P. RICHARDSON, master of the Junior House at the King's School, Warwick, has been dismissed by the Head Master, the Rev. W. T. Keeling. A lengthy correspondence on the subject, including letters from the Head Master, the Clerk to the Governors, and the Board of Education, has been published. It appears that the sole ground for dismissal is the alleged inability of Mr. Richardson to introduce boys to the school. The Head Master's second letter contains this remark: "Both the Governors and myself are under the impression that you were expected to bring boys to the school through your private connexion. This is always a *sine qua non* in any such post as you now hold." Mr. Richardson denies that any such condition was attached to the appointment. The pity is that it should be necessary to refute so extraordinary a statement that a schoolmaster may be appointed on the ground that he can introduce business. The governing body supported the Head Master to the extent of declining to hear Mr. Richardson, although the scheme allows to an assistant master an appeal to the Governors. For this they have received a rebuke from the Board of Education. The matter has been allowed to drop, as Mr. Richardson has made arrangements for leaving, which cannot now be altered. The perusal of the correspondence leaves a very unpleasant impression, and, if the Governors and Head Master have no better defence of their action than that which has appeared in print, we think that a very grave injustice has been committed.

THE open letter signed by the leaders of the medical profession and of medical officers in schools calls attention to a point that has been strangely overlooked in school hygiene. These experts pronounce that nine hours of sleep is the minimum required by the growing boy; some boys require ten or more. Yet out of forty public schools from which Dr. Acland obtained statistics only five satisfied this minimum requirement, and half fell short of it by an hour. There is no need to rehearse the fatal *sequelae*, both physical and intellectual, which, as the signatories point out, must inevitably follow from this curtailment of the proper amount of sleep, no less injurious than a stinting of food or fresh air. It is more profitable to trace the error to its root—sheer ignorance. Our head masters have not been trained; questions of hygiene have never come before them, and in framing their time-tables they are content to follow the tradition of the elders. They, the survivors of the fittest, were kept up till ten, and got up at five to fag for their masters; they slept in turn-up beds, three in a room the size of a ship cabin. What was good enough for them is good enough for the youngsters. "Spartan nactus es;

hanc exorna." And so they go on in the old rut till science plucks them by the ear and admonishes them. When Dr. Dukes told them that, what with long working hours and short nights, there would be a complete breakdown, if it were not for the holidays, they shrugged their shoulders and whispered "crank"; but they can hardly so disregard the warning of the united faculty. In fact, the matter has been referred to a committee.

LOCAL AUTHORITIES.

In a note of last month on the Annual Report of the Kent Education Committee there was an unfortunately worded sentence: "Perhaps we shall have a supplementary report dealing with Sister Cinderella." It has been pointed out to us that in the document itself it is expressly stated that "a full report on higher education is in course of preparation, and will, it is hoped, be published shortly," and that a complete survey of the existing provision for all forms of higher education, both as regards quality and quantity, has been almost completed. The Annual Report is, in fact, an appendix to the voluminous Quarterly Reports presented by the Education Committee to the County Council. Nothing was further from our intention than to question in any way the zeal and activity of Kent in the province of secondary education, to which the sentence previous to the one quoted testifies; but it would be advisable in future reports to distinguish what is of general, and what is only of local, interest, and to publish the two parts separately.

THE Kent Education Committee continues "to devote a large amount of time and attention to the many intricate problems which are connected with the provision of the preliminary and practical training of young persons intended for the teaching profession in elementary schools." We agree that the problems are indeed intricate, and we agree with another remark in the Kent Report that "none of the various arrangements possible under the Board of Education's Regulations, as they stand, are really satisfactory from the point of view of the secondary school." Meanwhile, and pending alterations that must eventually come, the Kent Committee has arranged that the pupil-teacher's instruction in the secondary school and professional training in the elementary school shall be taken in continuous periods, the time being so divided as to permit of an unbroken year of instruction in the secondary school immediately before taking the King's Scholarship or other examination in lieu thereof. The existing regulations of the Board attempt to reconcile two conflicting points of view—i.e., to combine the full advantages of a secondary education with an apprenticeship in the practice of teaching. The pupil-teacher, by being withdrawn from the secondary school for part of the time must thereby lose a part of the education that might be received. At the same time a term of practical work in a school has its advantages. Yet it is a distinct disadvantage that the period of study should be interrupted, and that for a time the pupil-teacher should be partly emancipated from discipline. At any rate, the Kent Committee has taken the best line that is possible under the Board's Regulations by dividing the time into continuous periods, and not into alternate days or half-days.

THE "Handbook for Managers," issued by the Surrey Education Committee, is an admirable work. We do not recall any publication of a Local Authority composed on quite the same lines or likely to prove, so thoroughly and usefully, the manager's complete guide. A man who has mastered the information and absorbed the spirit of this book will prove exceedingly useful to his district. The volume is not crowded with statistics or lists of schools: it might be described as a sort of confidential communication from the County Committee, inspired, we suspect, by the chairman, saying in effect to managers of schools: "Here are our ideas; this is what we want to make of the education of our county; these are your powers; this is how you can help us; will you, for the sake of the children, realize your responsibilities and duties, and perform them with enthusiasm and zeal?" It seems that the change of government that, during the year just past, has taken place (both as regards Chairman and Secretary) in the Surrey Education Office is already resulting in a cordial spirit of co-operation throughout the county. It has been said that under the Act the managers are shorn of so much of their authority that their interest would lapse. Those who hold that view would find reason to change their opinion if they read Mr. Chapman's "Handbook."

THE "Handbook" lays down that it is the duty of the Local Authority, as concerns elementary education, to give a practical, as distinguished from a literary, education to children who will have to become wage-earners at the age of fourteen, and at the same time to provide opportunities of further education for those who are able to postpone the wage-earning period. With regard to the first class, the scheme provides for public elementary schools, higher elementary schools, evening continuation schools, and technical institutes. For the second class there are the secondary schools (fed by the private preparatory schools as well as by the elementary schools), leading to colleges of University rank. It is important to notice that the Committee has adopted the syllabus of "Training in the Private and Public Duties of Life." It is easy to pick holes in and to poke fun at this syllabus; but, used sympathetically, it will achieve great practical results. There are also forms of prayer, hymns, and the like for the use of provided schools, a map of the county showing the area feeding each secondary school, and a graphic illustration of the scholarship ladder, showing the chances that each child possesses, and reminding the managers of their duty of making these known. The book is written for managers, and, on the whole, the teachers are treated with much consideration and their work cordially recognized. At the same time some of the advice given hints at a suspicion that teachers may be remiss and tends to make the manager an inspector. This is, perhaps, unfortunate.

A CONSIDERABLE amount of our somewhat scanty space has already been given to the work of the Surrey Education Committee, but we must say a word about the twelfth report that has just reached us. It is bulkier than usual, and there seems no longer any desire to keep the public in the dark; indeed, so convinced is the Committee of the value of publicity that a series of resolutions have been handed to the Chairman of the County Council asking him to take steps that may result in a proper discussion in public of the work of the Education Committee. With regard to secondary schools, the report contains what is practically a revolution, and one that will be welcomed by all secondary teachers in the county, and used as an argument in other localities for getting a similar boon. The change effected puts the schools, as far as their intellectual work is concerned, under the University of London. The examinations for the Major and Intermediate Scholarships and of the London Chamber of Commerce are swept away. Previously pupils in the top form of a school might be preparing for three or four examinations; now there will be but one. This is a real reform that will have an undoubted effect on secondary education. Certain modifications or additions will have to be made in the syllabus of the London University School Examinations, but the authorities are quite willing to make the necessary changes.

THE third Annual Report of the Manchester Education Committee is, like its predecessors, a model of conciseness and lucidity. We can only pick one or two points for comment. The Board of Education's report on the Art School is again most satisfactory. A new girls' school is projected, thus leaving the existing Municipal Secondary School entirely for the boys. As an instance of the breadth of view taken by the Committee, it may be mentioned that at the request of the Incorporated Guild of Hairdressers, Wigmakers, and Perfumers a course of practical instruction in "Board work" has been arranged for the apprentices and improvers in the trade. Not the least interesting part of the report is that dealing with the provision made by the Committee for the proper feeding of children in need of nourishment. We have all reached the point of recognizing now that it is criminal folly to attempt to stimulate the brain of a child suffering from semi-starvation. Indeed, the need of proper food, properly assimilated, is greater than, and is a necessary preliminary to, the need for education. Fresh air, an out-door life, and suitable exercise are not always possible in crowded cities: the importance of the food question becomes thereby the greater. In Manchester, we gather from the report, the necessitous children will for this winter, as heretofore, be relieved by voluntary agencies. The Education Committee has held conferences with the Guardians, but so far no agreement has been reached with regard to carrying out the Relief Order of 1905.

THE City of Manchester has no less than 112 evening-school departments. The returns show an increase of 1,891 individual students as compared with the corresponding period of last year, the total number of evening students of all sorts amounting to over 18,000, while there were 32,000 class entries. The Committee is so far satisfied with the attendance of the free students from the elementary schools last year that it has decided again to remit the fees of such children. This time there is a proviso that the parent or some responsible person should guarantee to return the fee if the student does not make a satisfactory attendance. This seems to us a wise provision. We think, also, that

a qualifying examination might be demanded from those who get educational facilities at the cost of the ratepayers. Such an examination would probably cut out those who were unable to profit by the teaching, and whose presence acts merely as a drag on the teacher until they are bored into absence. An uncompleted course can be of little real value. A table dealing with the attendances at the classes held at the Municipal School of Technology shows that the numbers reached 7,600 in the fifth week (starting at 6,650), and fell steadily—with one or two irregularities, owing to fog, holidays, and the like—down to 250 in the thirty-second week of the classes. This is the usual experience in evening classes, but it cannot be considered satisfactory.

THE Report for the Session 1904-5 of the Municipal Technical School of Birmingham shows an increasing appreciation of the opportunities offered on the part of students, additions to the premises and equipment, and an increasing number of classes. The attendances appear to be well maintained, and the figures indicate a growth in regularity as compared with the preceding session. The numbers given are those of the months of October and February: in some classes there is hardly any diminution of attendance, but, taking the classes all together, 28 per cent. of the students have fallen out by February, and an increasing diminution is to be expected for the succeeding months. On the other hand, we find that the summer classes have been well attended.

THE Quarterly Report of the Staffordshire Education Committee indicates no great eagerness to allow managers to exclude children under five years of age from the public elementary schools. The Committee has decided that children already on the register must not be excluded; that applications from managers for permission to exclude such children for the future shall be considered by the Geographical Sub-Committee, and that permission may be given when all the schools in an area are agreed upon the point.

MR. STEPHEN BAKER, Assistant Secretary for the Local Committee of Education of Swinton and Pendlebury, has been appointed Assistant Secretary to the Union of Lancashire and Cheshire Institutes. Two hundred and thirty-three applications for the appointment had been received. At the same meeting at which Mr. Baker was appointed, the following centres were affiliated for the purpose of the Travelling Library—namely, Moulton Council School; St. Michael's-on-Wyre Reading Room.

NOTES ON EDUCATION IN 1905.

By AN OLD FOGGY.

EVEN to one who, like myself, views the traffic of omnipotent authorities and pertinacious associations from a distance, and so fails to discern more than tendencies of superficial significance—ripples agitating the surface of unfathomed currents—it is apparent that a troublesome weather is coming. As Prof. Sadler suggests, "both in England and Wales, not to speak of Ireland, the educational barometer points to storm." It is well perhaps that it is so. The settled calm of unanimity would indicate only the "unanimity of the ignorant"; our condition demands the intelligent "disagreement of the inquiring." And Dr. Gow, it may be, is right in saying that the whole system of modern education wants altering from top to bottom.

WHEN a prominent statesman courageously challenges a cherished principle of commercial policy, and proposes an alternative, it is perhaps inconvenient for his political associates, but exhilarating to his opponents, and educationally useful to the electorate. Personally, as you have permitted me to remark on a previous occasion, I do not favour the feverish desire to exchange the old for the new; to substitute the unknown for the known, the shadow for the substance. But the operation of social and economic forces, I am willing to admit, may require, from time to time, a readjustment of the machinery and institutions of Government. The greater the complexity of national needs the greater the importance of a clear perception, not merely of measures necessary to solve immediate problems, but of the future destination to which the adoption of particular measures will carry us. It is reasonable to review a principle of commercial policy adopted fifty years ago; to consider whether it is equally advantageous under existing conditions. Similarly, I believe, the time has come to recon-

sider whether in the cause of public education our proceedings are on appropriate lines, and leading in the right direction.

"WE want now," in fact, as Prof. Churton Collins says, "direction, consolidation, system," and something more. We want to be assured of the wisdom of terminating the principle of *laissez faire* in the domain of elementary education; we desire to be convinced that the socialistic stride of free schools in 1891 has justified itself; we want to know why, if the State (in default of parental action) provides a compulsory mental *pabulum* free of charge, whether the child wants it or not, it is not equally a responsibility of the State (in default of parental action) to provide not only "free meals," but the additional gratuity of raiment and shelter. The distinguished statesman with a determination to put national education on a business footing is, however, still to seek. The Education Board is too deeply prejudiced by its past to favour the abolition of the policeman and the relieving officer from the sphere of the schools. And from the intelligent disagreements of my inquiring professional friends nothing can be expected. After associating, conferring, and resolving for many moons their conclusions were partly summed up by Dr. F. H. Hayward in a suggestive paper read at the Preceptors' College, on "Chaos and Contradiction in Present Day Educational Thought."

A FRIEND of mine was attending evening service in a small church in the county of W—, and the light was waning. The old rector read his discourse with difficulty, and concluded with appropriate reflections on the spiritual apathy of his flock and an appeal for an attitude of more enthusiasm towards parochial affairs. "Enthusiasm," he read, "enthusiasm leads to — leads to —." But the light had waned, and the old rector was unable to proceed. "Here, Crouch," he called to the verger, "take this to the window and see where enthusiasm leads to!" I thought of this incident after reading "Suggestions for the consideration of Teachers and others concerned in the Work of Elementary Schools." They are the suggestions of enthusiasm, but to where do they lead? Ask the village schoolmaster struggling with the concurrent instruction of several "standards" in several subjects; ask the class teacher confronted with sixty untutored little boys and girls; or you can invite that useful person once an "Article 68," now known as "Supplementary," to take the "Suggestions" to the window and tell us where they lead to! They are counsels of perfection, displaying a considerable disregard for the conditions and limitations of primary-school instruction. To attempt to give effect to them would more than double the present cost of elementary education. Reading and writing are not to be regarded as ends in themselves, but "writing is a means for fixing in intelligible language and character the passing thought," reading "a means of increasing the stock of words at command." And "The child should be encouraged to read independently and to reproduce as soon as possible in his own language the result not merely of his observations in the natural world, and in his scientific teaching, but of his historical and literary studies." And we must not omit "the cultivation of taste." An appeal must be made to the sense of harmony and rhythm, so that the children will learn to value "choice of language and beauty of expression, and the exact correspondence of thought and word."

THIS and much more in a similar strain. Beautiful sentiments, elegantly expressed. For the common schools of this country, however, concerned with five million little children (half of whom leave at the age of thirteen) and staffed by certificated masters and mistresses at average salaries of £134 and £89 respectively, the "Suggestions" are palpably absurd. They suggest further excursions in pursuit of academic refinements and ideals to the neglect of the plain and simple substance which each school ought to be capable of supplying. Mr. A. C. Benson, alluding to another sphere of educational controversy, observes that the boy "never reaches the stage at which classics become literature." The majority of little boys and girls in the primary schools seldom reach the stage beyond which reading and writing become the means to qualify for a certificate of exemption. In fact, if they do acquire a reliable knowledge of the rudiments and a disposition to exercise them

in self-improvement, the primary school is doing what it should be designed to do. If we take care of the rudiments, the natural capabilities will take care of themselves. The nation must be assured that the present large expenditure on public education is adequately productive before seriously entertaining "suggestions" for indefinitely increasing the investment. There is a widespread impression that the schools frequently fail in their primary function. "Birmingham manufacturers," I read, "find grievous fault with the Birmingham office boy. They say that he has no business aptitude, that he cannot write, that he cannot cast up a column of figures. The business men urge that the schools give nothing like an adequate return for the enormously increased expenditure compared with twenty-five or thirty years ago." The Archbishop of Canterbury said in the House of Lords: "By an investigation made some years ago in the Eastern counties into the educational status of a hundred boys taken at haphazard from the ranks of agricultural labourers, it was found that of boys between sixteen and eighteen one quarter could write fairly, one quarter moderately, and quite one half could only write in the most disgraceful manner; while in arithmetic 75 per cent. could not answer a single one of the simple questions set. Yet many of these boys had been in the elementary schools a few years before, and some of them had attained the sixth standard."

I HAVE attempted in vain to arrive at the total cost of primary education in this country from a voluminous collection of "statistics" recently published. It will not be, however, any exaggeration to estimate the cost of maintaining schools for something over five million pupils at about £15,000,000. Ten years ago, on account of four million pupils, the cost was approximately £10,000,000; while twenty years since, in respect of about three million pupils, it was, in round figures, £5,000,000. If it be open to doubt whether the schools have increased in efficiency in proportion to the large additional cost, it appears to be certain that in many districts they are now generally attended by children whose parents can well afford to pay school fees; it is equally certain that the type of primary school might be with advantage differentiated. To meet modern needs and conditions the Free Education Act of 1891 should be repealed, and Local Authorities permitted to charge fees, or provide free schools, or free places in schools, as they might determine. From 1874 to 1891 the average of school fees received per child in average attendance amounted to about 10s. This average would to-day yield £2,500,000 a year.

THE gravity of the burden of local taxation—due very largely to sentimental and socialistic legislation, designed to perpetuate the incompetent, the unthrifty, and the unfit, at the expense of the capable—is not realized by the army of important officials who constitute the Local Government Board, the Commissioners of Lunacy, and other Departments of the State. An Inspector in His Majesty's service naturally supposes the representatives of ratepayers to be utterly bereft of individual characters, intentions, or opinions, and is persuaded that he was born to supersede the necessity of their having any. "If he were to make a discovery to the contrary, he would be simply stunned, would never recover himself most likely, except to gasp and die." In education, it is to be observed, the grant paid by Government is fixed and limited; the requirements of Codes and Inspectors cannot be fixed and are far from limited. Local Authorities have no effectual control over the regulations of the Board or the requirements of the Inspector. They are confronted with the prospect of paying indefinitely the difference between the fixed amount contributed by Government and the constantly increasing cost of new demands in the name of efficiency. The position, if it were less serious, would be absurd. If the Central Authority is to continue to control expenditure in the schools, the full cost of maintaining them should fall on the Government Exchequer. An equitable distribution of responsibility, I am told, would be for school buildings to be provided by the local ratepayers; the cost of maintenance to be defrayed by (a) Government grants, (b) fees of pupils, and (c) contributions of Local Authorities in lieu of school fees. The amount of the school fee might vary from 1d. to 1s. a week, according to the type of school and the locality in which it was situated. In many districts, no doubt,

a free school would be a necessity. At such schools free meals in addition to free instruction could be provided, and we should thus, perhaps, modify the effects of socialistic aims in educational legislation, which tend to deprive the individual of independence and the parent of responsibility.

It would be entertaining if a great and good man—the editor of one of the organs of Nonconformist opinion or an apostle of passive resistance—could be appointed Autocrat of all the Educators, with power to settle the education question without reference to the rights of any conscience but his own. I read: “The spirit and genius of Nonconformity find, happily, full representation in the new Government. . . . We may be well content to leave the Education Acts to their early fate. Mr. Birrell will be concerned with the work of piloting through Parliament the new education measure, which, it is greatly to be hoped, will not only establish the principle of popular control in State-supported schools, but also mark a large advance in the struggle towards social efficiency.” Mr. Birrell, who has been unkindly described as “the Radical Party’s universal provider of ordinary platform fustian,” is, I understand, committed to the belief that “a Bill must be carried through the House of Commons if not repealing, so far modifying the Acts of 1902 and 1903 as to place all public elementary schools in England and Wales under the control of some public authority, with the consequence that all teacher-ships will be thrown open without any sectarian qualification. To do less than this would be to do nothing.” Alas! for the teacher of the future, the “happy warrior”

Who, with a natural instinct to discern
What knowledge can perform, is diligent to learn;
Abides by this resolve and stops not there,
But makes his moral being his prime care.

PROF. SADLER continues, I see, to render extremely valuable public service to the cause of secondary education, and his reports to the several Local Authorities who have enlisted the aid of his discriminating intelligence are all of excellent quality. Local secondary schools, during recent years, have suffered much from conflicting Authorities and confusing aims. They have afforded a convenient dumping ground for new schemes and alien products. They have been bribed to supply technical education and persuaded to seek salvation in the creation of science laboratories and workshops for manual instruction. They have been registered, inspected, recognized, differentiated, reorganized, and co-ordinated. They have survived the invasion of inconvenient little boys and girls from elementary schools armed with the doubtful passport of scholarships, and their freedom is now assailed by the half-time demands of pupil-teachers. In the State-aided secondary schools, in 1903-4, 52,466 pupils were “taking the approved course.” The number of recognized pupil-teachers during part of that period was 26,316. It is, I believe, the policy of those who control us for all pupil-teachers to attend secondary schools. Thus, the danger of “the right path of a virtuous and noble education” being diverted for the special requirements of a professional class appears to be imminent. Satisfactory training for the pupil-teacher has, however, given immediate prominence to the question of secondary education, and strengthened the case of those who advocate its claims to additional public support. In this branch of education, as in the case of elementary schools, I believe the right solution to be for the buildings to be provided by the localities, for the cost of maintenance to be made up by Government grants and the fees paid by pupils, and for the Local Authorities to pay the fees of pupils of exceptional merit.

AT a conference of learned experts and simple laymen the experts debated with accustomed perspicacity on devices for arresting the vagrant mental tendencies of ardent youth. A method known as “Heuristic” appeared to be the one thing needful—a patent medicine for the pedagogue warranted to cure all the disorders of the schoolroom. The chairman of the conference, who was not, like the schoolmaster of the “popular imagination,” described by Prof. J. Adams, “a loud-talking, pompous, dogmatic man, pre-eminently sure of all his facts and deplorably self-reverent,” ventured the inquiry: “What is the meaning of Heuristic?” With commendable promptitude a distinguished educationist replied: “Find out for yourself, sir!”

For the remainder of the conference, it is stated, the learned experts were engaged in trying to explain to the simple laymen where the joke came in.

IN the course of time the aspiration of each local University college for an independent charter to confer degrees will be realized, and academic distinctions adapted to parochial requirements. In America, I understand, there are some five hundred degree-giving institutions, the majority of which have no claim to the title either by equipment or by teaching capacity. There is no immediate danger, I apprehend, of a similar state of affairs in this country, but it may be regretted that the local University college—a modern growth called into existence by modern needs—is not likely to maintain its distinctive character. The substantial increase in the Treasury grant to these institutions has suggested to the special correspondent of one of your contemporaries the desirability of placing the colleges under the Education Board. The older Universities, he suggests, will, before long, find it necessary to appeal to the nation for funds. “Some of those who were much disappointed by the decision of the Senate at Cambridge to maintain compulsory Greek feel that their only remedy against the forces of obstruction, which are periodically recruited from the whole country to defeat reforms which many of them are not capable of understanding, lies in some measure of Government interference to be purchased by financial aid.” The Education Board would address itself with habitual zeal to the congenial task of framing vexatious regulations for the recognition of Universities. Perhaps in the near future an association of Vice-Chancellors will be discovered supporting the Incorporated Head Masters in deploring the inadequacy of capitation grants and regretting that they are not calculated upon terminal attendances.

ADVOCATES, like the Incorporated Head Masters, in favour of an entrance examination for candidates proceeding to degrees in mathematics and science, with a modern language as an alternative for Greek, are entitled to believe that common sense and substantial argument are on their side. As Henry Sidgwick, in his illuminating essay, pointed out, there seems no adequate reason why Latin and Greek should be regarded as a sort of Siamese twins which Nature has joined together, and which would wither if separated; while the substitution of French or German for Greek might not be disadvantageous educationally and, for practical purposes, would be an obvious gain. But I rejoice that Cambridge, in these days of change and expediency, declined to heed the persuasive arguments of the reformers. I am grateful that the so-called forces of obstruction are still in reserve to maintain inviolate the traditions of the ancient seats of learning. “If we have charge of the treasures of the past and of the accumulating discoveries of the present,” said Vice-Chancellor Beck recently, “we have also a yet graver responsibility. We are the guardians not only of the ablest, but of all who come to us for light and life. We dare not starve them on one food. Your single-food product is apt to become an intellectual freak and a barbarian. But the mind and soul of man is too fine an organism: it cannot live on physical facts alone. . . . We have not yet said that man must choose between the two halves of a mutilated education. Our aim is, and ought to be, to give, preserve, and transmit some intelligent notion of a complete education, and some sympathy with the idea of it.”

AN esteemed correspondent, who moves among those who make educational history, is accustomed at this time of the year to remember the seclusion of my existence, and to share with me his well informed opinions. He tells me that, in the matter of education, we need not anticipate any cataclysm with the new Government. My correspondent is probably right. The gentlemen who have recently ceased to be in opposition to His Majesty’s Government will now be obliged to regard the question from more than one point of view. They will find, I believe, the Acts of Parliament which have been made to appear so outrageous to the Nonconformist conscience are, in practical working and effect, measures of so radical a character that only a Conservative Government could have proposed and passed them. And they will also find that it is much easier to be passive resisters than educational reformers. For the lot of the educational reformer is like life in this—“it is a field of battle, and not a bed of roses.”

IF AGE BUT KNEW.*

WE welcome in a permanent form the series of articles on educational reform which excited such keen interest as they appeared week by week in the *Westminster Gazette*. We have already commented in passing on one or two special points; but we purposely refrained from any general criticism till we had the whole scheme before us.

"Kappa," whose anonymity we are bound to respect, is a layman professing no knowledge of public schools beyond what he has gained by common report, and by observing in his young friends the results of public-school teaching. He tells us, moreover, in the introduction that he is, or rather was at the time when the papers were written, wholly unacquainted with the literature of the subject: "I felt that the value of my evidence must lie in its sincerity as a record of personal experience and thought, and could only be impaired by collusion with other witnesses."

There is much to be said for such abstention, and we gladly allow that the book is charming by reason of its originality; that it represents "a continuous process both of thought and feeling," not, as most books of the kind, a distillation of other men's thoughts and feelings. Yet we doubt whether, on the whole, the gain outweighs the loss. Much of "Kappa's" original thought has been anticipated. For instance, what seems to him an audacious attack on the idol of athletics has become almost common form with schoolmasters, and might be mistaken for a speech at a Head Masters' Conference. Of this "Kappa" is partly aware, and we may accept his justification—that a truth which is not practised cannot be too often dinned into ears. But there is a graver defect which we cannot overlook. Had "Kappa" read and pondered the ordinary text-books on method and *praxis*, and weighed the experience of men who have devoted their lives to the art of teaching, they would at least have given him pause, and he would certainly have reconsidered his scheme of studies. As it is, we have an educational Utopia no more realizable than Plato's Republic or the course propounded in Milton's Tractate. The ideal of all three is a noble one. It is, as "Kappa" expresses it, the awakening of the faculty of wonder, the beatific vision of Aladdin's Palace, the pursuit of the adventures of Sinbad. He makes us see how weary, stale, flat, and unprofitable are all the uses of our present school world, and he fires our imagination with a vision of the future schoolboy, his eyes open to the starry heights, his thoughts widened with the process of the suns. The critical and destructive portions of the book appeal largely to our sympathies, though there is no attempt to present any but the seamy side of public-school education. Against the Uptonian, the polo and bridge player, the *blasé* scholar and the *dilettante* don, we should in fairness have been shown the Indian Civil servant, the colonial governor, the county magistrate, the founder of polytechnics. "Kappa" is confessedly a counsel for the plaintiff. It is when we come to the constructive part that the amateur stands revealed—not only the writer without any practical experience of teaching, but the theorizer who has never studied psychology and knows nothing of the mind of a child except from his own far-off recollections of childhood.

From the age of seven up to thirteen the child's studies are to be divided between science and history. Under science we must suppose mathematics to be included, and history embraces the study of literature, to which again the study of language is ancillary.

Now there is a general consensus among educators, whether scientific or non-scientific, that science, in the strict sense of the word, cannot be profitably taught to children under thirteen. It might be supposed that "Kappa" by science intended nothing more than object lessons or Nature-study in the Froebelian sense; but it is not so. He distinctly lays down as the first studies for the schoolboy astronomy and zoology—"the enumerations and classifications of zoology are so essentially attractive to children that," &c.—and when a practical schoolmaster assures him that astronomy as a school subject is no more stimulating to the imagination than Greek grammar he sticks to his guns and replies that this is all the fault of the

teaching. Again, we say, had "Kappa" read Prof. Miall, or any one of a dozen educationists we could name, he would certainly have written differently—probably have substituted botany for zoology, physics for astronomy, and not wholly have ignored drawing and manual instruction.

Our history teaching, according to "Kappa," is as bad as, or worse than, our science teaching. Our professors of history have ranged themselves in two hostile camps—the big-endians and the little-endians. "You are both wrong," says "Kappa," "you should eat your egg at both ends simultaneously, combine 'the planetary and the parochial aspect,' begin at once with the savage and the policeman." If this means that we should teach a child something of "how we are governed," and at the same time something of myth and legend, that seems to us a very sensible proposition. But "Kappa" intends much more than this. He would have us begin with "the anthropological prologue to history"—primitive man with his cave-dwellings and celts, his totems and taboos. We are old-fashioned enough to think the "Odyssey" and "Robinson Crusoe" better food for babes than "Primitive Marriage" and "The Childhood of Religion."

We pass to language, which "Kappa" allows to be the *crux* of the matter. He does not propose either to crush language out between science and history, or to wedge it in, but to approach it through and as a part of history. Working downstream from Adam or the neolithic man, the child will come to Greece, and then will be the time to teach him something of the language of Greece, that he may read his Herodotus and Thucydides in the original. "Working up-stream he would trace the constituents of his own language back to Germany and Normandy, to Rome and Athens."

A fine conception, with this nucleus of truth in it, that ancient languages wholly, and modern languages mainly, should be learnt as keys to their respective literatures, but even its author sees that it cannot be carried out in practice. We must take it that the exceptions prove the rule. French is an exception. French should be picked up before, or soon after, the alphabet. In any case it should be the second tongue. Greek is an exception. "The learner should curb his longing to converse in their own idiom with Herodotus and Thucydides." Of Low German and Anglo-Saxon and Norman French nothing further is said. We may assume that they all go by the board. Latin alone remains to illustrate the theory, and every boy, by the time he is twelve or thirteen, should, according to "Kappa," have a considerable Latin vocabulary and some knowledge of grammar. Latin is a necessary element in a liberal education. Then follow two chapters denouncing the fetish of grammar and verbal chess-playing, or the fetish of composition. With these we do not propose to deal. The matter is not new, but the arguments are admirably marshalled, and the hits are palpable.

We began by welcoming the volume, and it may seem a strange way of showing our gratitude to the author to have set about demolishing the contents, but he will, we are sure, agree with us that the sincerest flattery is not imitation, but full criticism. The parts wherein we agree we have passed lightly over. We thank him for setting before us a high ideal, "a school in which the saga of humanity is largely and luminously revealed to the average boy." We thank him, too, for bringing home to the average parent our failure in the past even to approximate to this ideal. This is a signal service, however mistaken and impracticable we may deem the methods proposed for pursuing the New Learning.

To sum up our dissent, we do not believe that history can be profitably made a central school study; still less do we believe that literature and language can be subordinated to history teaching. Correlation is a blessed word, but to the theorist it is like to prove an *ignis fatuus*. Let us hope that "Kappa" will continue his pedagogic studies—he has already profited by Sir J. Fitch's lectures and Mr. Benson's "Schoolmaster"—that he will penetrate beyond the offices of a public school, make his personal observations, and not attach so much faith to two ephemeral novels.

WE owe an apology to the *School Guardian* for assigning to it a foolish comment on a foolish story that we quoted last month from the *School Guardian*. The editorial, "we cordially agree," was part of the quotation from the *Daily News*.

CORRESPONDENCE.

HEAD MISTRESSES FOR CO-EDUCATIONAL
SECONDARY SCHOOLS.*To the Editor of The Journal of Education.*

SIR,—Has any County Authority in England appointed a woman to the headship of a co-educational secondary school? The number of such schools under public management seems certain to grow. In the smaller towns, especially in country districts, it is impracticable to establish two well staffed separate schools (costly because small), and yet necessary to provide secondary education for both girls and boys. Thus, in many places the real alternative lies between co-education and leaving half the need unmet. Buildings are costly. Staffs should be far more costly than they are. The one hope for real efficiency in secondary education in the small places lies in concentration. Moreover, in the movement for increasing the number of secondary schools, we feel the impulse, and ought to use the force, of a new social ideal—an ideal which in all new lands (and England is half new) translates itself, partly for economic but partly for deeper and more instinctive reasons, into co-education.

But is there sufficient reason for thinking that in a co-educational secondary school, which keeps boys and girls together from twelve years of age to sixteen or beyond, the head must be a man? Much more than half of the elder pupils will in most such schools be girls. In the importance which should be given to English subjects and in many points of internal organization and teaching, it seems desirable that the new co-educational schools should be more akin in spirit to the best day schools for girls than either to the ordinary boys' grammar school or to the public elementary school in its usual present form. It should combine, of course, what is best in all three, by having teachers representing the experience of each upon its staff, but should it not make English literature, physical exercises, drawing, and singing more important parts of the curriculum than they are at present in boys' secondary schools of the older type, and should it not require much more individual work from the pupils, throw greater responsibility for internal government upon them, have more specialist teachers, and make more use of the training which comes through organized school games than in existing circumstances is possible in public elementary schools?

For these reasons it seems desirable that women should have opportunities of influencing, as only the head of a school can do, the tone and methods of a sufficient number of the new co-educational secondary schools. There are many women who have the gifts and qualifications for this work. Is it in the least necessary that they should be thought, because they are women, unfitted for it? Women often excel in the management of boys' clubs and as superintendents of mixed Sunday schools. What is there in the direction of a co-educational secondary school that is likely to be unsuited to their administrative powers?

In the United States the number of secondary schools and the number of pupils receiving secondary education have more than doubled in the last fifteen years. The course in the secondary schools begins at fourteen or a little earlier, and extends (for those who remain at school) till eighteen or nineteen. There are in the United States 6,800 public secondary (or, as they are there called, high) schools. Of these, all but 56 are now co-educational. In 581 of these co-educational public secondary schools the principal is a woman. Dr. Harris, the United States Commissioner of Education, who has been so good as to supply me with information on the subject, writes that "the co-educational high schools in charge of women seem to be quite as successful as those in charge of men: but most of the former schools are in the smaller cities or urban districts where the duties of the head of the school are less varied and onerous than in the high schools of larger cities. In the principal high schools, besides the usual curricula, provision has to be made for manual training and military tactics, or some form of physical training adapted to boys. Moreover, there is a great deal of business to be looked after, which can be more easily transacted by a man. . . . It sometimes happens that there are several high schools in a city under a general director. This is the case in Washington, where two of the

five high schools under one director have women principals. The women at the head of the high schools are almost invariably women whose exceptional ability has been shown in other positions."

In our own co-educational secondary schools, small as well as large, there will have to be manual training for the boys. But a head mistress would be able to arrange for such instruction being given by a competent teacher. Probably Dr. Harris refers to cases in which manual training forms a much larger part of the secondary-school curriculum than would in ordinary circumstances be found expedient. With regard to physical training, I may add that some of the best which I have ever seen is in a co-educational secondary day school. The instruction is given by a woman. I saw her taking a class of big boys. The discipline was perfect.—Yours faithfully,

MICHAEL E. SADLER.

December 20, 1905.

MISS BATHURST v. THE BOARD OF EDUCATION.

To the Editor of The Journal of Education.

SIR,—With reference to the "Special Reports by Women Inspectors of the Board of Education," may I ask you kindly to publish the following statement?

The Board of Education have prefixed a separate preface to my report denying the accuracy of my statements and impugning my personal truthfulness. I had never seen this preface or the notes till they appeared in print. My original report had been sent in thirteen months previously, *i.e.*, on August 16, 1904. Seven weeks afterwards (on October 7, 1904) I received instructions to write a supplementary report. Between these two dates my result forms had been sent to the Office; therefore the Board had had before them not only my report, but the detailed evidences on which it was based.

My second report was sent in on February 7, 1905, and had been in their hands seven months. During the whole of this time no hint was given me that the facts were under dispute; no question was asked me, no chance was offered to me of explaining any point under discussion. The injustice of this procedure is self-evident: the only explanation that occurs to me for the action taken by the Board is as follows. The Board had, I think, no intention of denying the truth of my first report until I insisted upon their printing the second (see *Morning Post*, September 29, November 1 and 8). To punish me for revealing the procedure with regard to reports, they have thrown doubt on all my statements.

I propose to deal here with the principal points only; but I have sent a detailed reply to the President of the Board of Education, begging him to include it in the next edition of the "Reports." The original edition has already been withdrawn from circulation. On page 77 I say: "Under the present régime the work of inspection is necessarily largely done by subordinate officers; these Inspectors outnumber the H.M.I.'s by 4 to 1. As a rule they write suggested reports on the schools visited; but H.M.I. is ultimately responsible for the form such a report takes and the opinions it expresses. The reports of the schools are therefore not necessarily even drafted by the Inspector who visited the school." Later on I say: "On some occasions reports have been simply altered, amended, or portions omitted without such reference, and the report has reached the school with that omission, without the knowledge of the writer or of the Inspector responsible for the district."

Mr. Morant's note says: "The duties of a Sub-Inspector are not accurately described." The note at the end of the report adds: "It is not the case that before June, 1904, it was the practice of Junior Inspectors to alter reports without reference to the inspectors who had furnished them." I must point out that I never said: "It was the practice." Mr. Morant deliberately misquotes my words, which are as follows:—"On some occasions reports have been," &c.

I now, before specifying two occasions on which my ordinary reports were altered, make the following statement:—This special report of mine contains some notes made under the direct authority of Mr. Morant, unknown to its editor, Mr. Cyril Jackson, who, like myself, never saw them until they appeared in print. I appeal, therefore, primarily to these particular special reports to prove my contention. Can any stronger proof be required that reports have been and are

manipulated at headquarters; that Inspectors are muzzled; that it requires exceptional moral courage to speak one's mind?

I state in my report—and I restate it now—that a Sub-Inspector is not expected to draw his own inferences, but to reflect the opinions of his chiefs.

I again appeal to this volume of "Special Reports" to prove my contention. Miss Munday has been an Inspector for ten years; I was an Inspector for seven years; Miss Callis has been an Inspector for eight years. Compare our reports now with the ordinary reports of the districts in which we have worked. Have our views found expression before, and to what degree? In my own case, reports on infant schools have never, except in Oxon, represented my views. Throughout my official career I have pleaded in vain for rational treatment of baby classes, and for maternal rather than military discipline. The reports did not represent these views, but those of the H.M.I.

Again, I appeal to the log books of Manchester. Mr. Kynnersley inherited the staff of Sub-Inspectors who had worked under Mr. Cornish. The schools are therefore largely visited by the same officers and taught by the same teachers; but the whole tone of the reports has changed, and from the date of Mr. Kynnersley's arrival criticism has replaced satisfaction. Again, I challenge the Board of Education to produce the correspondence they had with Mr. Sneyd Kynnersley about one of his own reports—especially the letters and minutes of Mr. Trench, date May or June, 1904.

Lastly, I come to the individual cases where my own reports were altered at headquarters, unknown to Mr. Holmes, the Inspector responsible for the district. See page 77 of "Report" and Mr. Morant's note (page 93) where he says: "The words quoted were never used." I shall ask the Board of Education to produce the correspondence to which I referred. The school is Spilsbury, Oxon, and the manager was Lord Dillon. The words they repudiate were those of a junior examiner. He said he did not wish "to offend the philanthropic nobleman." The word "offend" may have been "annoy" or some such term; otherwise the quotation is correct. The teachers were Miss Bayliss, Miss E. Bayliss, and Miss Kitchen. Their united salaries were £100 a year. The teacher under Art. 50 got £10 a year. These are hardly philanthropic prices. My report for 1902 ran as follows:—"The work in this school reaches a most unusual standard of intelligence and efficiency, and the greatest possible credit is due to its admirable teachers. At the visit of inspection half the children in the school were sharing each other's books. This practice is injurious to the eyesight, and reflects discredit on the managers." The report was passed by Mr. Holmes, but sent down to the school without the last phrase. The other school was Hinton in the Hedges, near Brackley.

Again, on pages 76 and 77 of "Report": I was not talking only of the closing of a school, but of condemning the teaching in a school. It requires real moral courage to suggest alterations in methods of teaching, or construction of buildings, when the managers have political influence and are likely to oppose the ruling of the Inspector. Page 77: I submitted this report to Sir John Gorst, who replied on February 5, 1905: "Your report is very interesting and perfectly true. You, who are out of the service, alone can afford to speak the truth." In this description of the dangers to which reports are subjected the only inaccuracy is that of incompleteness. The reports pass through more hands than those specified.

I must now call attention to the contradictory nature of the Board's minutes (see *Morning Post*, November 1 and 8). On September 20 Mr. Morant says: "Mr. Kynnersley has not the slightest desire that you should keep silence or in any way restrict the expression of your views." On November 14, however, he says: "Your general views have already found adequate expression." Lord Londonderry says: "I find that she [Miss Bathurst] has widely departed from the definite instruction given her as to her work, and has sent in a report upon quite other lines than those laid down for her. She is to complete the writing of the report upon the specific points which have been put to her in regard to infants, from which she has so widely departed in the document she sent in on August 16." On November 14 Mr. Morant says: "No such instructions have yet been issued."

I must now explain that I had in vain attempted to get instructions on several occasions. See page 87 of Report, where I say that I was forbidden to see any school not an infant

school, and the Board say: "It must be distinctly understood that no such instructions were given." They repeat this assertion on page 88. Please note the following letters in this connexion:—On March 14, 1904, Mr. Kynnersley wrote: "It will be better for you at present to confine yourself to the limits laid down, infants between three and five." On June 4, when I asked to see some secondary schools, he says: "Is there anything in your instructions to help you out?..." "Can you be content with one as a sample?" I replied: "I have received no instructions verbal or written." To this, June 15, 1904, he says: "Did you not get a long printed instruction?... Two or three weeks ago I received one and assumed that one was sent to you.... My copy is somewhere at Chester."

On June 20 he wrote again: "On further consideration I think what I called your instructions was only the sort of schedule that you have to fill up. I cannot find it; but it does not matter if it is only a schedule. No doubt they would have sent you a copy of anything more solid."

I have now proved that before beginning my inquiry I was told to confine myself to infant schools, and to confine me to infant schools was to forbid me to enter others; but, besides this, Mr. Kynnersley gave me my list of schools, and these I retain. They are all infant schools. He had a copy of Form 61, and he knew that Standard I. was taught in schools for older scholars: by this means he made it impossible for me to see Standard I.

I now come to a later date. In August, 1904, when my first report had gone in, I again applied for instructions. Mr. Kynnersley says in reply (August 18): "I have asked Jackson to instruct you what to do next week. I go to Switzerland tomorrow for three weeks, and no letter will reach me. I find it is hopeless to try to get peace in places where the office can pour in references." Mr. Jackson wrote on the same date: "You will continue investigating in further schools questions... with regard to the teaching of children between three and five." On August 23 he adds: "If you still have some of the schools assigned by Mr. Kynnersley... you will... go on with them." I therefore continued to inspect the unfinished list of infant schools sent to me by Mr. Kynnersley two months or so earlier.

I applied verbally for further instructions on September 14, and on the 17th Mr. Kynnersley wrote again: "Mr. Jackson has been away on vacation. He says: 'I think she should endeavour to really test by careful investigation of the work in some schools whether the children in Standard I., or even higher classes, can be distinguished by any superiority or the reverse owing to earlier or later attendance at the infant schools.'" On September 18 I replied as follows:—"Please forward this to Mr. Jackson. I have only seen about three schools that have a Standard I. at all. In July all children over six were promoted... The eldest children now called 'sixes' are really only just over five. Ask him for definite instructions. Are children of five and three months, five and four months to be tested on attainments?" In consequence, on September 19 I got leave for the first time to visit schools which contained a Standard I. Mr. Kynnersley says, September 19: "You need not confine yourself to infant schools.... Take any schools that will give you the information you require." On September 20 Mr. Morant says: "You must continue your investigations under the instructions already recently given you."

I now come to another important case. On page 52 I say: "The children attend till eight years old, and the boys' urinal faces the girls' offices. This is apparently allowed under the Board of Education regulations." Mr. Morant says in a note: "This is not so; the building rules of the Board naturally do not forbid arrangements which are obviously improper. When cases such as the one referred to are brought to the notice of the Board the persons responsible are at once required to remedy the evil complained of."

On page 53 I say: "—School had no water supply at all." But Mr. Morant says: "The school in question has a dilapidated pump.... The premises... are to be closed as soon as the new school now being provided is completed." The school referred to in both cases is New Headington Infants', near Oxford.

In October, 1905, after reading the note, I revisited the school. The offices were only built in June, 1893. They consist of two seats under a shed. They face the boys' urinal, which is exactly 6 ft. away. There are no doors and no screen. The teachers have no office accommodation at all; the one

(intended?) for their convenience is never used. The pump belongs to the house attached to the school. The water is unfit to drink. The new school had not been begun. The teachers did not know whether even the plans had yet been approved. The log-book entries condemn the offices (see April 11, 1902; March 30, 1903). Mr. Morant's notes are therefore misleading, while my own words are perfectly accurate.

On page 55 Mr. Morant makes an equally extraordinary denial of facts which can be verified. I complain of the standing imposed on infants, and quote the case of Eynsham Board Infants' School, Oxon. Mr. Morant says: "No such provision is, or was, on the time-table of the school named, so far as the Board of Education can discover." I must point out that time-tables never state whether the subjects mentioned are taken sitting or standing; but certain subjects (such as drill) are always taken standing up. When, therefore, a time-table mentions such subjects, one may legitimately say they provide for "standing up." Old time-tables are seldom retained. I ceased to visit the school some three years ago. I made long log-book entries here; and asked for copies of them this October. The Inspector of the district refused to instruct or request the mistress to give them to me, and the mistress herself declined to send them: but, as she said Mr. Davidson, H.M.I., had got copies of them, he probably took these quite lately; in this case the Board of Education are fully aware of their contents. I request that some further effort be made to see the entries of which I speak.

On page 39, note 2, Mr. Morant again denies facts which can be tested. I say: "thousands of children are using seats that are too high or too low for them." Mr. Morant says: "This statement cannot be accepted as true of the area under consideration." The area is Manchester. I call a seat too high if the heel of a child's foot cannot reach the floor, and the seat too low if (a) the shoulder has to be hunched up when writing, (b) if the child sits on its own foot to raise itself, or (c) has to stand up to write comfortably. On page 47 Mr. Morant says: "No report to this effect can be found in the official records of the school." There is a lack of candour in such a criticism. Mr. Morant must know that I refer to a report in the log book. The school is St. Alban's, R.C., Manchester.

With reference to page 42, (1) I must add that the Manchester Education Committee employed ten Inspectors. Counting myself, the Government employed seven—total seventeen. I need only add that I have forwarded a fuller statement, covering all the questions raised by the notes, to the Board of Education, with the request that the next edition of the "Reports" shall also contain my reply, and I close with some notes on the position of Women Inspectors.

It is, perhaps, not generally known that Mr. Morant has entirely altered the status of Women Inspectors. Up to February, 1904, they ranked with men Junior Inspectors and did the same work. Mr. Morant issued a minute, which I published in full in *Education*,* altering their name from Junior Inspectors to Women Inspectors, depriving them of the ordinary chances of promotion and employing them rather as special inquirers than as inspectors. Their duties, after February, 1904, till the date of my resignation, were purely advisory. The new position was a difficult one. For instance, I was sent to Manchester to advise the Divisional Inspector of my views and to report on his schools to Mr. Jackson. The Divisional Inspector had not the right to alter my report: he had no option but to send it on unaltered to headquarters; but I have no manner of doubt that he and other Inspectors resented the introduction into their district of an independent official. Here was some one in a totally anomalous relationship, whose views could be expressed without the revising process that subordination imposed upon the regular staff.

As regards the teachers who were and are already over inspected, the new element of a third critic (belonging neither to the usual Government staff nor to the Council inspectorate) created far more confusion than confidence. Instead of the usual routine type of examiner, I appeared only to care for premises, health, and recreation. If my views had been accepted, the teachers who acted upon them would undoubtedly have been condemned in the reports written by the usual staff, and it was obviously easier to conduct a school on a mechanical

system than to try experiments. Moreover, the bad premises and the disfavour of public opinion as represented by all-powerful officials would have made any experiments exceedingly unpopular.

My own difficulties will not have been in vain if the evils of which I speak become sufficiently known for freedom for teachers and happiness for the taught to be inaugurated. Until, however, infant schools are entirely left to Women Inspectors I have myself no faith that any important reforms will be carried.—I am, &c., KATHARINE BATHURST.

THE PLACE OF GRAMMAR IN ENGLISH TEACHING.

To the Editor of The Journal of Education.

SIR,—As a very old member of the Teachers' Guild and one interested in every fresh departure in original educational activity, I received with pleasure the notice of the first meeting of the Education Society connected with the Guild, and saw with considerable satisfaction that the subject selected for earliest discussion was English. From the syllabus which appeared on the back of the notice I judged that the treatment would be exhaustive, and that probably new ideas as to method would be put forward and important questions raised, which I still hope may be the case at future meetings. I, therefore, seeing that outsiders were invited to be present, went on Monday evening last, though not, perhaps, even thinking of becoming a member.

Unfortunately, the ground the opener of the discussion (Mr. C. E. Rice) had to cover was so large that but little time was left for real discussion, though one or two excellent remarks were made by Mr. Cooke and others, and a good suggestion by a lady, whose name I did not catch, in reference to the teaching of poetry, which will be carried out in a series of experiments by members of the Society in their own classes, and the results given at the next meeting.

I think little was said by the opener that would not be familiar to every experienced teacher of English, but I was extremely sorry, and so, I believe, were many present, to hear him declare analysis and grammar to be really useless, except as helping to disentangle complicated sentences in Milton's works, and fitting the pupil to satisfy the demand for grammatical knowledge made by the teacher of any foreign language. Surely logical grammar is a very important branch of English, and the study of it, together with analysis, not only an excellent mental training, but also one of the means of cultivating that pure and good style in speech and writing at present apparently so little required of even the orator, novelist, and newspaper writer. Further, admitting that we can be drilled to speak and write well without them, this is but drill; and we can neither explain our ground of preference for one over another structure, nor modify or improve intelligently when we ourselves or others are dissatisfied with the forms used. Grammar and analysis are not, as I know from long and varied experience, unattractive subjects; and I am sure many will agree with me that it will be an evil day for the English speaking and writing world when these branches of English study are abandoned by teachers of English, even if then every one should learn Latin at an early age. True, though there are good English grammars, those books which deal with analysis too often make it needlessly complicated and difficult. A good teacher will generally prefer a manual of his own construction to Mcrell's or any current one that I know. But analysis can be taught hand-in-hand with grammar, both of them almost without text-book, though not without well graduated exercises and abundant practice.—I am, Sir, yours obediently,

143 King Henry's Road, London, N.W.,

LOUISA DREWRY.

December 8, 1905.

[We agree as to the importance of grammar and analysis, but hold that they should be kept apart from the literature lesson.—ED.]

TEACHERS' REGISTRATION COUNCIL.—The Teachers' Registration Council have just issued the following important notice:—"The Board of Education have notified the Teachers' Registration Council that the operation of the temporary or 'grace' clause (Regulation 4) of the Regulations for Registration in Column B will be extended until July 31, 1906, with the exception of the provision for the Registration of head masters and head mistresses at the end of that Regulation. The effect of this modification will be that all teachers possessing an academic qualification as required by Regulation 4, who complete by the above mentioned date the necessary three years' experience, will be eligible to apply for Registration in Column B, provided such applications be lodged by July 30, 1906. But head masters and head mistresses claiming under the proviso alluded to above must lodge applications not later than March 5, 1906. Copies of the Regulations and Forms to be filled in may be obtained on application to 'The Registrar, Teachers' Registration Council, 49 and 50 Parliament Street, London, S.W.'"

* See *Education*, August 25 to November 3, inclusive.

JOTTINGS.

A ROUMANIAN correspondent asks us for the best authorities on Education in Japan. We have to thank Dr. Edwards for furnishing us with the following references:—(1) a short article on "Things Japanese," by B. H. Chamberlain; (2) a useful short summary in the "Encyclopædia Britannica," Vol. XXIX., contributed by F. Brinkley; (3) an article by Count Okuma on "Japan by the Japanese," compiled by A. Stead; (4) for the training of the Samurai class, read "Bushido," by Prof. Nitobe, and certain chapters in "Japan: an Interpretation," by Lafcadio Hearn; (5) Reports and Statistics published by the Minister of State for Education (Tokyo); (6) bibliography, see "Bibliography of Japan," by F. von Wenckstern.

SIR WILLIAM ANSON has accepted the position of President of the Association of Technical Institutions for next year, in succession to Sir Philip Magnus. The annual meeting of the Association will be held at the Fishmongers' Hall on January 26 and 27, 1906.

UNDER the heading "This Sorry Scheme," the *Schoolmaster* has a long and wholly eulogistic review of "Let Youth but know." "Every line is annulled out with sincerity and conviction"; the charge is proved "ab ovo usque ad mala." Like Thackeray, "I don't presume to criticize"; and yet I think that, if the reviewer but knew, he would not have written of "T. B., Mr. A. C. Benson, and 'Kappa'" as "men who write with a full inside knowledge" of the great public schools. A parallel would be to quote Anthony Hope, Mr. A. H. Hawkins, and Mr. Henry James as writers with a full inside knowledge of the philosophy of marriage.

DR. MACNAMARA treats his readers to a Christmas supplement of "School Humour." All is fish that comes to his net—real wit and wisdom from the mouths of babes and sucklings, some hoary chestnuts, some unconscious profanities which we could have spared, and a few charming juvenile essays, none the worse because there is no pretence of humour in them. We borrow one delightful parent's letter, too good, we fear, to be genuine:—"Sir, will you please for the future give my boy sum easier somes to do at night? This is what he brought home to or three nites back: If fore gallins of bere will fill thirty-to pint bottles, how many pint and a-half bottles will nine gallins fill? Well, we tried, and could not make anything of it at all, and my boy cried and said he didn't dare go back in the morning without doin' it; so I had to go and buy a nine gallin cask of bere, which I could ill afford to do, and then we went and borrowed a lot of wine bottles, besides a few we had by us. Well, we emptied the cask into the bottles, and then counted them, and there were nineteen, and my boy put the number down for an answer. I don't know whether it is rite or not as we spilt sum while doing it. P.S.—Please let the next some be in water as I am not able to buy any more bere."

MR. E. G. A. HOLMES, who has been appointed Chief Inspector of Elementary Schools, in place of Mr. Cyril Jackson (resigned), is not only a distinguished Oxford man, but a poet and a critic of poetry. Full, but not more than full, justice was done to his essay: "What is Poetry?" on its appearance in 1898 in a review contributed to this journal by the late Prof. Meiklejohn.

MR. A. H. D. ACLAND, at a Conference called by the Education Committee of the West Riding County Council, pointed out that the effect of the Board of Education's Minute on children under five would be to mulct every Local Authority that determined to keep their infants in their schools. He calculated that in the West Riding the fine would amount to a sum equal to a rate of $\frac{3}{4}$ d. in the £.

A CORRESPONDENT sends us two quotations, with a comment, from "Dick Pentreath," a recently published novel by Katherine Tynan:

Page 309: "Hilda is only sixteen. She goes up to Newnham in the autumn. . . . Her ambition is to come out near the top in the Classical Tripos. . . ."

Page 336: "Hilda did, indeed, achieve the summit of her desires, and came out bracketed with the Third Wrangler."

Have the authorities at Newnham ever admitted any girl under eighteen? Probably not. But Third Wrangler in the Classical Tripos is delicious at any age.

"WHAT misfortune then happened to Bishop Odo?"—"He went blind."—"Where do you find that?"—"Please, Sir, book says so: [pointing triumphantly] 'Odo was then deprived of his see.'"—"Etonian" in *Spectator*.

THE following definition has just come under my notice while correcting an examination paper:—"An irregular verb may have all its

moods, tenses, &c., but it does not always keep its route [sic]."—D. G. L.

IN the Schools of the Empire Shooting Match Charterhouse was again the winner, with a score of 477. Harrow came second with 473; then, in order, Bedford, Bradfield, Uppingham. Winchester was thirteenth and Eton twentieth. Eighty schools competed—44 in Great Britain and 36 in the Colonies.

THE Training Colleges' Association held their fourteenth annual meeting on December 19. The President for 1906 (the Rev. J. W. Thomas), in his address, regretted the threatened exclusion of children under five from school, and the abolition of the old system of pupil-teacherships. As to preparation for a University degree at the training colleges, the Board did not appear as yet to have made up its mind whether to encourage it or not. He highly approved the Board's official "Handbook of Educational Theory." Miss Ravenhill read a paper on "Methods of Hygiene Study in Training Colleges."

MR. ARTHUR ELAM HAIGH, who died on December 20 at Oxford after a brief illness, will be chiefly remembered by his two standard works, "The Attic Theatre" and "The Tragic Drama of the Greeks," which superseded the text-book of our youth, Donaldson's "Theatre of the Greeks." A brilliant career as an undergraduate was crowned by a Fellowship at Hertford College, and for twenty-seven years Mr. Haigh was among the most energetic and capable of college tutors.

SIR JOHN GORST is standing as an independent candidate, and we looked to his address for a lead on education reform, but we find nothing but conservative optimism. The present principle of religious instruction in our elementary schools "is put into practice without friction or complaint to the great advantage and contentment of the people," and he will do his utmost "to defend the Church of England and her schools against all attacks." No friction from passive resisters, no discontent in Wales!

THE High Commissioner for New Zealand has received a cablegram from his Government that Miss Dorothy Fitch has been selected to fill the new post of kindergarten teacher and mistress at the Training College and Kindergarten to be opened by the Board of Education, Wellington, New Zealand. Her duties will commence on April 1, 1906. Miss Fitch has been for some years the successful head of the Kindergarten Department attached to the Home and Colonial School Society's Kindergarten Training College at Highbury Hill, N. The post is an important and a remunerative one, and the competition for it was keen.

MR. RICHARD LESTER AGER, assistant master in Bishop's Stortford College, has been appointed Head Master of Tettenhall College.

LORD ROBERTS will deliver an address to the Incorporated Association of Assistant Masters at their Annual Meeting to be held at St. Paul's School on January 5 at 3 p.m.

"THE Blot on British Games" is an article in *C. B. Fry's Magazine* for January that all educators should read. Briefly, Mr. Fry urges that rifle-shooting should take its place among national sports on a level with cricket and football. The way in which this is to be effected he will expound in future articles. We are heartily in sympathy with the proposal, which, as Mr. Fry is careful to explain, savours in no way of militarism. In Switzerland, the most pacific country of Europe, rifle-shooting is the one national sport.

THOUGH the new Cabinet, as compared with the last, is distinctly democratic, yet the majority of its members were educated at the great public schools and the Universities. There are eight Oxford men (four from Balliol College) and five Cambridge men (four from Trinity College), while the Scotch Universities can claim a share in three. Of the public schools, Eton (as usual) heads the list, with three; Harrow, Cheltenham, and Edinburgh Academy have two each; Winchester, Clifton, Wellington College, the City of London School, and Glasgow High School have one apiece. Two members hail from the public elementary schools.

A FRIEND of Sir Richard Jebb sends us an anecdote worth relating:—"I had the pleasure of introducing Jebb, when he was an undergraduate, to Thackeray. It was at Evans's, in Covent Garden, where the great man had come after a Charterhouse dinner. Thackeray's first words were: 'Take off your hat, man; I want to see that wonderful head.' Jebb obeyed; but he was covered with confusion, and that night was dumb. Thackeray, however, made it up by inviting him to dinner, and they became the best of friends."

COLONIAL AND FOREIGN NOTES.

FRANCE.

A recent Ministerial circular calls the attention of head masters of *lycées* to the advantages of the tours organized for the pupils of secondary schools by the Club Alpin. **Le Club Alpin.** Supported by a large number of teachers, and quite disinterested in its action, it has during the last twenty-eight years arranged some hundreds of excursions not only in the neighbourhood of Paris, but also in the departments and abroad. Many of the school "caravans," as they are called, have visited Germany, England, Belgium, Italy, and Switzerland, and have even traversed Algeria and Tunis. The Minister of Public Instruction is convinced that the journeys have done much to increase the knowledge and develop the muscles of French boys. We have often wished that something of the kind could be set on foot for our own youngsters, that they might learn at least *how to travel*. It is an art in which Englishmen at present are not considered to excel.

Since there is in the air a disposition to revive the questions when and for how long school holidays should be, we set down the conclusions to which the Second Congress for Scholastic Hygiene came. The duration of the long holidays ought not to be less than two months. The *congés* at New Year and Easter could neither be suppressed nor diminished without inconvenience; the former should be at least for a week, the latter for a fortnight. The dates of the beginning and the end of the long holidays might well be fixed by the head masters after consultation with the teachers and with the medical authorities—that is to say, it is a matter to be determined locally. The Congress, however, looks forward to the time when schools shall be closed from July 14 to October 1. Meanwhile, the prize distribution might be held on July 14, and parents be free to take their children away then, even with the school remaining at work. It is a suggestion very characteristic of hygienists. Yet it is interesting to know that French opinion favours a solid vacation of two, or even two and a half, months in the hottest part of the year, with, as it were, "trimmings" at the New Year and Easter.

GERMANY.

We have already published the time-tables of the *Gymnasium* and the *Realgymnasium*. Let us now, for the sake of completeness, give that of the *Oberrealschule*, the third of the three higher schools of Germany. The scheme that we choose is the Prussian. To explanations already given we add that a bracket implies a certain freedom of action in the limits indicated. Thus "German and Historical Stories, 4 1 5" means that, if it be found convenient, three hours may be devoted to German and two to Stories, or other distributions of time made, provided that the total of five hours is maintained. Our readers will observe that Latin has now vanished as well as Greek, the *Oberrealschule* being the modern school, from which the ancient humanities are banished wholly, whilst the elements of literary culture are sought in living tongues. But in the cases of all three schools the time-table itself is a sufficient indication of the character of the school in question, and serves in place of a definition. What an *Oberrealschule* is will be clear enough from its *Lehrplan*:

	Hours a Week.									
	VI.	V.	IV.	U. III.	O. III.	U. II.	O. II.	U. I.	O. I.	Total
Religion.....	3	2	2	2	2	2	2	2	2	19
German and Historical Stories	4 1 5 3 1 4	4	4	3	3	3	4	4	4	34

It will readily be granted that, with extra hours for gymnastic exercises, singing, &c., the burden here laid on a pupil is tolerably heavy. As will be seen, French and Mathematics form the heaviest part of it. With respect to German, that is to say the mother language, we allow our-

selves to make a few remarks on the manner in which it is taught. In old times the one qualification for teaching English in an English school was ignorance of classics and mathematics; with regard to the present day we elect to say nothing. Now hear what the Prussians lay down: "German is to be ranked with religion and history as one of the subjects educationally most important. The end proposed for the instruction is difficult to attain and can only be reached by teachers who, with a deep understanding of our language and history, with an enthusiasm for the treasures of our literature, and with patriotism in their hearts, can train the young to appreciate the German tongue, German nationality, and the intellectual achievements of the German race." Every nation teaches its own greatness for the sake of its own safety. Let us get to details. Grammar is a subject of instruction from the lowest form to *Obertertia* inclusive. The instruction in it aims at enabling the pupil to solve cases of doubt and to understand the structure and development of his native language. The written exercises are at first simply dictation; then reproductions of matter read at home or in class; then (from *Untertertia* upwards) regular essays. For these last subjects are taken from the work of the form in German, or from history or from the French or English books read. At all stages some help in the making of the compositions is afforded, but in such a way that the boys learn by degrees to find for themselves the proper thoughts and the sequence in which they should be expressed. Sound German is insisted on not only in these essays, corrected often, as we can ourselves testify, with the most laborious care, but also in the written translations and in oral work. In order to cultivate the patriotic sentiment German instruction is brought into the closest possible connexion with instruction in history. Saga, made vivid in the German lessons, prepares the way for history, which, again, is continuously illuminated by the study of literature. In the lower and middle forms poems are read by the teacher, who then makes the necessary comment on matters of language and fact, and lastly discusses with his boys the several thoughts and the meaning of the whole. An exercise particularly recommended is a comparison of poems that treat of the same subject. The highest forms study plays or long poems as literature (not for the sake of etymologies or allusions). Prose-reading goes on at all stages. It is so ordered as to enlarge the sphere of thought and to make the pupil ready for introduction to philosophy, the rudiments of which are generally taught in *Prima*. In all reading, whether of prose or poetry, the chief end pursued is that discussion and reflection shall lead to a full understanding of what is read.

All that has been said about the teaching of German in the *Oberrealschule* applies also to the *Gymnasium* and the *Realgymnasium*. But we leave the schools in order to touch on another topic. It has been frequently suggested in this column that the true desire of the great manufacturing centres in England is toward polytechnics or technical *Hochschulen*, not towards Universities. Let us bring out what a technical *Hochschule* is by stating what a technical *Hochschule* teaches. That at Berlin has sections for:—(1) architecture; (2) civil engineering; (3) machine construction; (4) ship-building and marine engineering; (5) chemistry and metallurgy; (6) general sciences, particularly mathematics and the natural sciences. At Karlsruhe there is a special department for forestry, perhaps the most important of sciences in Baden. Other polytechnics lay stress on agriculture; many concern themselves with art as well as with science. All these institutions rank with the Universities as *Hochschulen*, and are attended by students of the same age. Now, do Bolton and West Bromwich want polytechnics, or local machinery for the teaching of higher Latin composition and Greek philosophy?

AUSTRALIA.

Educational progress in Australia, especially in the direction of increasing the efficiency of Government-aided schools and Universities, has shown no sign of amendment during the last three months. In New South Wales, the University of Sydney has perfected its machinery for improved science teaching, and is now engaged in launching a scheme by which the absence of an Australian Military College will to some extent be atoned for. The University has undertaken to endow a chair at the cost of £800 a year, so as to provide for the higher education of young Australians who seek commissions in the Imperial or the Australian military forces. The Australian Minister of Defence has warmly welcomed the scheme, and has arranged for two of his expert officers to lecture, under the directions of an imported military professor, on special branches of defence subjects. The Chancellor of the Sydney University, Sir Norman McLaurin, has thrown himself heart and soul into this embryo Sandhurst proposal, and the whole project has been received as a gratifying testimony to the determination of Australians to make a beginning in the direction of being self-sufficing in the matter of military education.

In New South Wales a new scheme for training teachers in the State public schools has been put forward by the Carruthers Government, acting on the advice of the two experts who were despatched by

(Continued on page 30.)

HORACE MARSHALL & SON'S LIST.

H.M.S. writes of Horace Marshall & Son's books:—

"The specimens you send me from time to time always please me. There is a rich refinement about them, and they are genuinely educational."

THE CARMELITE CLASSICS.

"We have already spoken favourably of the 'Carmelite Classics' as fulfilling a definite and original aim in a suitable and capable way."—*School World*.

This Series aims at providing Standard English texts at a low price, of attractive appearance, and containing a minimum of editorial matter. Such notes as occur refer only to such matters as pupils of school age could not be expected to know or to think out for themselves; and, when quotations from Greek or Latin authors occur, they are given in standard English translations. The prices range from 3d. to 8d. in the smaller series, and from 10d. to 1s. 6d. in the larger series.

I. Small Series.

- LAYS OF ANCIENT ROME.** Edited by N. L. FRAZER, B.A., of the Whitgift School, Croydon. Cloth, price 8d.
MILTON—L'ALLEGRO AND IL PENNEROSO. Edited by C. L. THOMSON. Paper, price 4d.
MILTON—COMUS. Edited by C. T. ONIONS, M.A. Cloth, price 8d.
MILTON—SAMSON AGONISTES. Edited by C. T. ONIONS, M.A. Cloth, price 8d.
MILTON—LYCIDAS AND THE SONNETS. Edited by N. L. FRAZER, B.A. Paper, price 3d.
GOLDSMITH—THE TRAVELLER AND RETALIATION. Edited by N. L. FRAZER, B.A. Paper, price 4d.
GOLDSMITH—THE DESERTED VILLAGE. Edited by C. T. ONIONS, M.A. Paper, price 4d.
COLERIDGE—THE ANCIENT MARINER. Edited by N. L. FRAZER, B.A. Paper, price 4d.
CHAUCER—PROLOGUE TO THE CANTERBURY TALES. Edited by C. T. ONIONS, M.A. Cloth, price 8d.
MACAULAY—LIFE OF GOLDSMITH. Edited by N. L. FRAZER, B.A. Paper, price 3d.
MACAULAY—LIFE OF JOHNSON. Edited by N. L. FRAZER, B.A. Cloth, price 8d.
SHELLEY—ADONAI. Edited by N. L. FRAZER, B.A. Paper, price 3d.
GRAY—ELEGY AND ODES. Edited by N. L. FRAZER, B.A. Paper, price 4d.

From Bolton comes the following appreciation:—

"You may be interested to know that I have taken the opportunity to draw the attention of His Majesty's Inspectors to the merits and suitability, as well as to the great attractiveness, of your series. . . . There is a great field of usefulness for books so skilfully edited and printed."

THE CARMELITE CLASSICS—(continued).

MARLOWE—DR. FAUSTUS. Edited by A. G. TURNER (Miss AGNES WARD). Price 8d.

II. Large Series.

- SPENSER—FAERIE QUEENE. Book I.** Edited by C. L. THOMSON. *Specimen booklet post free.* Price 1s. 4d.
SCOTT—LAY OF THE LAST MINSTREL. Edited by J. W. B. ADAMS, M.A. Price 1s.

IMPORTANT HISTORY BOOKS.

A FIRST HISTORY OF ENGLAND. By C. L. THOMSON, late of Somerville College, Oxford, and the Cambridge Training College. *Part VI. (1689-1820) is now ready,* and completes this useful history for young pupils. The author has made full use of the original authorities in writing this history; and life and colour are given to the narrative by the inclusion of literal translations from the Old English Chronicle and close paraphrases of the works of contemporary authors. Each part is very fully illustrated.

The *Schoolmasters Yearbook* (1905) says of Part V.:—"Throughout, the book gives evidence of Miss Thomson's wide experience, careful research, and sympathetic treatment, and is quite the best of its kind at present in the market."

- Part I.** (B.C. 330-A.D. 1066). Second Edition. Price 1s. 6d.
Part II. (1066-1272). Second Edition. Price 1s. 6d.
Part III. (1272-1485). Third Edition. Price 2s. 0d.
Part IV. (1485-1603). Third Edition. Price 1s. 6d.
Part V. (1603-1689). Price 1s. 6d.
Part VI. (1689-1820). Price 2s. 6d.

- ILLUSTRATIVE HISTORY.** Fully Illustrated.
British and Old English Period (55 B.C.-1066 A.D.). By E. J. BALLEW, B.A. *Now ready.* Price 2s.
Tudor Period (1487-1603). By N. L. FRAZER, B.A. *Now ready.* Price 2s.
Stuart Period (1603-1714). By J. W. B. ADAMS, M.A., Head Master of the County School, Tenby. *Now ready.* Price 2s. 6d.
MEDIEVAL HISTORY. By M. A. HOWARD, B.A. Illustrated. *Now ready.* Price 2s. 6d.

NO TEACHER CAN AFFORD TO OVERLOOK THIS LIST.

MODERN LANGUAGE BOOKS.

- EXCITATIONS ET POÉSIES.** With Phonetic Transcript (Alphabet de l'Association Phonétique Internationale). Edited by VIOLET PARTINGTON, French Mistress at the Queen's College School. With over Sixty Charming Pictures by A. M. APPLETON. Price 2s.
LES DEUX PÈRES AND OTHER FRENCH PLAYS FOR LITTLE CHILDREN. By VIOLET PARTINGTON. In Decorated Paper Cover. Price 9d.
DES VACANCES A PARIS. By VIOLET PARTINGTON. Illustrated. Price 1s. 6d.

This is a Second Year reading book in French, describing the adventures of a little English girl on a visit to some French relations in Paris.
LITTLE FRENCH FOLK. By C. T. ONIONS, M.A., Author of "English Syntax." Second Edition. *Specimen booklet post free.* Price 2s.
DEUTSCHE SAGEN. Edited by MARGUERITE NINET. Price 1s. 6d.
 This reading book in German, adapted for pupils in their third year, contains four charming stories, based on mediæval legends. They are prettily illustrated, and form a very attractive reading book.

POETRY BOOKS.

- A BOOK OF BALLADS.** Edited by C. L. THOMSON. Price 1s. 6d.
 Designed to meet the requirements of the Syllabus of the Board of Education (first year). *Specimen booklet post free.*
THE NEW ENGLISH POETRY BOOK. Edited by E. E. SPEIGHT, B.A. A New Selection from English Poetry, from Spenser to Swinburne, with a number of Scotch Ballads. Price 1s.
LITTLE ENGLISH POEMS. Edited by LETTICE THOMSON, Kindergarten Mistress at the Kensington Gardens School, W. With Designs by the Editor. Price 1s. 6d.
 This little book contains verses suitable for children in Infant, Kindergarten, and Preparatory Schools. They cover a large range of subjects, and many of them may be profitably used in connection with object and natural history lessons.
CARMINA BRITANNICA. A New Collection of Historical Poetry. Edited by C. L. THOMSON. Second Edition. Price 2s.
SELECTIONS FROM WORDSWORTH. Edited by E. E. SPEIGHT, B.A. With an Introduction by Dr. EDWARD CAIRD, Master of Balliol College. Price 1s.
SELECTIONS FROM TENNYSON. Edited by E. E. SPEIGHT, B.A. With an Introduction by Miss A. J. COOPER, and Frontispiece by G. F. WATTS, R.A. Price 1s.
THE TEMPLE RECITER. Edited by E. E. SPEIGHT, B.A. A new collection of Serious and Humorous Verse Suitable for Recitation. In Illustrated Cover. Price 1s.

LITERARY READING BOOKS.

- MAULYTT'S ENGLISH VOYAGES.** Edited by E. E. SPEIGHT, B.A., F.R.G.S. With an Introduction by Sir CLEMENTS MARKHAM. Illustrated by R. MORTON NANCE. *Specimen booklet post free.* Price 2s. 6d.
SELECTIONS FROM PEARSCOTT'S CONQUEST OF MEXICO. Edited by A. S. LAMPREY, B.A., of the Maidstone Grammar School, formerly Scholar of Corpus Christi College, Cambridge. Illustrated. *Specimen booklet post free.* Price 1s. 3d.
SELECTIONS FROM PEARSCOTT'S CONQUEST OF PERU. Edited by A. S. LAMPREY, B.A. *Specimen booklet post free.* Price 1s. 3d.
STORIES FROM THE NORTHERN SAGAS. Edited by A. F. MAJOR and E. E. SPEIGHT. With Illustrations by W. G. COLLINGWOOD, M.A., and R. MORTON NANCE. *Specimen booklet post free.* Price 2s. 6d.
TALES FROM THE FAERIE QUEENE. Edited by C. L. THOMSON, Examiner and Occasional Inspector to the Central Welsh Board. Illustrated by HELEN STRATTON. *Specimen booklet post free.* Price 2s. 6d.
SELECTIONS FROM THE MORTE D'ARTHUR OF SIR THOMAS MALORY. Edited for the use of Schools by C. L. THOMSON. With Twelve Illustrations by HELEN STRATTON. Second Edition, Price 2s., or in Cloth Gilt, Picture Cover. *Specimen booklet post free.* Price 2s. 6d.
SELECTIONS FROM BERNERS' TRANSLATION OF FROISSART'S CHRONICLES. Edited for the use of Schools by NORMAN L. FRAZER, B.A., Whitgift Grammar School, Croydon. With Twelve Illustrations by A. DUDLEY. Price 2s.
STORIES FROM CHAUCER. Arranged for Children by C. L. THOMSON. With many Illustrations and Designs by M. THOMSON. Second Edition. *Specimen booklet post free.* Price 1s. 6d.

THE ROMANCE READERS.

(For Junior Pupils.)

THE TEMPLE READERS.

Write for full List and particulars of these Valuable Readers.

A FIRST BOOK IN ENGLISH LITERATURE. by C. L. THOMSON. *Part I.* (to Wycliffe and Langland) and *Part II.* (from Chaucer to Lyndsay) *now ready.* 2s. per volume. Fully Illustrated, with reproductions from contemporary MSS. (of which transcripts are given), Portraits, &c., and containing many valuable illustrative extracts.

THE MAGIC HOOK AND OTHER PLAYS FOR CHILDREN By MARION LINKLATER THOMSON. Illustrated with Designs for costumes. Price 1s.

On receipt of your post card, we will send, post free,

ILLUSTRATED CATALOGUE, SPECIMEN BOOKLETS, NEW LISTS.

(Please mention THE JOURNAL OF EDUCATION in writing to us.)

London: HORACE MARSHALL & SONS, Temple House, and 125 Fleet Street, E.C

the See Government to tour the world in the interest of Australian elementary education. The scheme provides for the opening in February next of a day training college sufficiently large to accommodate 170 students at a time in premises within the University grounds. The training college embraces fully organized kindergarten, manual training, domestic science, and Nature study departments, and is to work in harmony with the agricultural college at Richmond. The training course will extend over two years, the minimum age for admission of pupil-teachers being seventeen. The State Government has arranged for a number of scholarships to be made available for the poorer pupil-teachers each year. The value of the scholarships is small: viz., £20 a year, but is sufficient to meet the needs of every deserving class.

An important minor change in the education system of the State of Victoria has been proposed by the Minister of Education in relation to the old trouble of truancy. The existing law allows absence from school during 25 per cent. of the days of the quarter, without any necessity of showing reasonable excuse. The result has been that truancy and non-attendance are the rule in many districts. The proposal now is that every child must attend eight school meetings out of ten per week. That is practically eight half days during the five school days of a week. It does not follow that neglect to comply with this law will necessarily involve prosecution, but the provision will render it possible for the State truant officers to proceed against the parents of a child who is observed loitering in the streets on two successive days.

It will interest followers of Froebel to learn that the free kindergarten movement is extending from Sydney to the capital cities of the other five Australian States. Very successful meetings have been held in Adelaide and Melbourne in promotion of kindergarten extension. A great teachers' conference at Adelaide, held in September, greatly stimulated this development of educational work on behalf of the very young. Miss Newton, the chief director of free kindergartens in Sydney, who has been acting as a sort of Froebelian missionary, has generated enthusiasm wherever she has addressed meetings. It is probable that the next centres of free kindergarten in Victoria will be Kew and Richmond, suburbs of Melbourne representing the very poles of the social globe. If experiments there prove successful, a rapid extension is bound to take place in other parts of the State.

The Anglican Church in Australia moves very slowly in educational matters, and is only just realizing that in the future it must depend for its success, in a country that is becoming nationalist in sentiment very rapidly, upon the Australian trained rather than the imported clergyman. However, the bishops of the various States have at last decided on the establishment of a central training home in connexion with the Australian College of Theology, which is at present an examining, and not a teaching, body. The nucleus of this home has been found in the building of a clergy house at Ferntree Gully, one of the prettiest woodland holiday resorts in the State of Victoria. This clergy house, the first of its kind in the State, was opened on October 17, by the Archbishop of Melbourne and the State Governor. It is a very modest building of jarrah timber, with only just the necessary rooms for the accommodation of six or seven men, with a small chapel attached. The students are to combine theological and literary training with missionary work in some eighteen country centres around the Ferntree Gully.

Modern languages enthusiasts in Great Britain will learn with pleasure that their cause prospers in the Commonwealth. The classical schools each year are more and more confined to the sphere of work bounded by the professions of the law, the Church, and pedagogy. Everywhere the obligation to learn Latin and Greek is being removed and even in the sphere of medical training the Latinists are suffering defeat. Dr. J. W. Barrett, one of the most influential of Australian medical men, pointed out in an *Argus* interview a few weeks ago that the Faculty of Medicine at Melbourne University has now before it a proposal to make German a compulsory subject at Matriculation in the case of medical students. He hinted that the Council of the University would probably adopt it in a partial form. Of course the faculty cannot substitute German for Latin, because the Council of Medical Education in Great Britain insists on Latin as a compulsory subject. Still the trend of opinion to which Dr. Barrett calls attention may be taken as characteristic of the leaders in medical science throughout Australia.

UNITED STATES.

Who, in general, should examine boys? And who should conduct, in particular, the final school examination, by what name soever called? The Germans pronounce in favour of the teacher—subjecting him, however, to some measure of control. We in England obtain a judgment from without, not always with satisfactory results; for your outside examiner is prone to go beyond the field at which you profess to have laboured. The American College Entrance Examination Board of the Middle States and Maryland, founded to secure uniformity in the

requirements of boys leaving school for (the American) college, combines the German principle with the English. Under the Board's system no paper may be set as a test of fitness for admission to college unless it has been approved by a representative of the secondary schools concerned, and the actual examiners are to include secondary-school teachers as well as college professors. This method of what we may term joint examination has now been used for five years with much success. The total number of candidates examined in 1901 was 973; by 1905 it has risen to 2,077. Moreover, the uniformity sought is being reached. Not only are the colleges that belong to the Board abandoning their separate examinations, but other institutions are also bringing their requirements into harmony with those that it formulates.

The *Elementary School Teacher* for October has a useful article on "The Correlation of Mathematics and Physics."

Correlation of Mathematics and Physics.

The writer contends, with much justice, that more use of experiment and observation should be made in the teaching of mathematics, and explains how experimental work is so employed in Bradley Polytechnic Institute. We quote a few sentences in the hope that they may contain some germ of suggestion for our mathematical readers. "There are certain experiments usually performed in the physics laboratory that are really mathematical in form. But little physical knowledge is needed for their performance. A number of these are now performed in our mathematical classes; credit is given for reports upon them by both the departments of mathematics and physics. It is not so much the purpose to teach physics as to teach mathematics in a setting of physics. In the beginning algebra class the balance and lever are used; observations on the movement of a street car are made. The law of falling bodies, $s = \frac{1}{2}gt^2$, is tested by a stone dropped from the tower. Heights and distances are calculated and then actually measured. This gives confidence in mathematical processes and control in their application. In the second year, devoted especially to geometry, the work is a little more serious. Careful reports are required on about thirty experiments, chosen because of the geometrical ideas involved. Among these may be mentioned reflection of light and formation of images in plane mirrors, refraction of light by prism, composition and resolution of forces, and inclined plane, involving use of trigonometric functions. The same care and accuracy that are demanded in the physics laboratory are insisted upon. From this kind of work the student gets a more real and intimate hold on the meaning of geometric and algebraic truth."

How far such experiments as those indicated may properly be introduced into mathematical instruction is a question about which diversity of opinion may legitimately exist. Yet that the lack or insufficiency of attempts at correlation is the great defect of education as it is now practised in England will be least disputed by the best informed. But our business here is with American, not with English, affairs. How to make a home, at least, is a matter in which English women are deemed unrivalled. At the School of Domestic Arts and Sciences in Chicago a course for teaching it as a science has been established. At the close of the year diplomas will be awarded to those who have completed the work, which will include cooking, sewing, hygiene, home economics, serving, sanitation, ventilation, marketing, and household decoration. The course in home economics deals with the following subjects:—location of house, ventilation and sanitary arrangement; general arrangement of the house; best environment for laundry, kitchen, and bedrooms; laundry and kitchen appointments; methods of work; uses of chemicals as cleansing agents; handling of delicate fabrics in the laundry; methods of treating clothes; removal of stains from grass; fruit; iron-rust; tea and coffee; manufacture and application of soaps, washing compounds, bluing; general care of entire house; relation of mistress and maid.

It is an extensive list of subjects; among them we are slightly astonished to see marketing, which we had supposed to come to women by nature. But the special training for woman is to begin after she has received the same general education as man. At least, so Prof. Kate Gordon, of Mount Holyoke College, would contend. At a recent meeting held at Boston she spoke thus: "A woman's education, like a man's education, should fit her to take an intelligent choice of a life occupation. There are probably some mental distinctions between the sexes, but they are certainly pretty difficult to determine. Shall we have a 'Mrs. Brown-ing for Men'? Must we edit a 'Woman's Bible' or 'The Ladies' own Shakespeare'? The education of a woman should not differ from that of a man until after she becomes engaged to be married. The difference would not involve any change in school or college. The most certain way of securing to men and women an identity of opportunity is the co-educational plan. I believe that co-education helps to correct the faults of both sexes. To the fear that women may be coarsened by the association, or the men made less manly, I am inclined to reply that, if the men and women are fit to marry one another, they are fit to go to school together."

Co-education.

It is an extensive list of subjects; among them we are slightly astonished to see marketing, which we had supposed to come to women by nature. Mr. MURRAY'S LIST.

Ready on January 12th.

GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE.

By **W. MANSFIELD POOLE, M.A.**,

Senior French Master at the Royal Naval College, Osborne.

With Exercises. Crown 8vo, 2s. 6d.

An Elementary French Grammar on modern lines, written entirely in French, and intended for the use of scholars up to 14 or 15 years of age.
IN USE AT THE ROYAL NAVAL COLLEGES AT OSBORNE AND DARTMOUTH.

AN ELEMENTARY GREEK GRAMMAR FOR SCHOOLS.

By **JOHN THOMPSON, M.A.**,

Formerly Scholar of Christ's College, Cambridge; Senior Classical Master at the High School, Dublin.

Part I.—ACCIDENCE, 1s. 6d. Part II.—SYNTAX, 1s. 6d. COMPLETE, with full Indexes, 8s.

The object of this book is to give in a form suitable for beginners the elements of Greek Grammar. Owing to the great importance of the appeal to the eye in the case of young students, special attention has been paid to the type and arrangement of the printed matter. Attic Greek only has been included, and the usages of poetry distinguished throughout from those of prose. Unnecessary and unusual forms have been left out, and the author has endeavoured to state all the requisite facts both of accidence and syntax in the clearest possible manner. At the same time advantage has been taken of the developments of modern scholarship, so that the work may be thoroughly up to date.

CLASSICAL DICTIONARIES.

REVISED EDITIONS.

Smaller Latin - English Dictionary.

WITH A SEPARATE DICTIONARY OF PROPER NAMES, TABLES OF ROMAN MONEYS, &c. Thoroughly revised and in great part re-written. Edited by SIR WM. SMITH and T. D. HALL, M.A. The Etymological portion by JOHN K. INGRAM, LL.D. Square 12mo, 7s. 6d.

Concise Dictionary of Greek and Roman

Antiquities. INCORPORATING THE RESULTS OF MODERN RESEARCH. Edited by F. WARRE CORNISH, M.A., Vice-Provost of Eton College. With over 1,100 Illustrations taken from the best examples of Ancient Art. Medium 8vo, 21s.

Smaller Classical Dictionary. With 200

Woodcuts. IN GREAT PART RE-WRITTEN BY G. E. MARINDIN, M.A., sometime Assistant Master at Eton College. 29th Impression. Crown 8vo, 7s. 6d.

Classical Dictionary of Mythology, Biography and Geography.

IN GREAT PART RE-WRITTEN BY G. E. MARINDIN, M.A., late Fellow of King's College, Cambridge, sometime Assistant Master at Eton College. With over 800 Woodcuts. Medium 8vo, 18s.

MURRAY'S STUDENTS' MANUALS.

The following volumes in this famous series of historical works have been revised throughout and brought into line with recent research and criticism. New illustrations, new maps, and new plans have been added, and the books in their present form will be found to meet all requirements of modern teachers and students. Illustrated list post free on application.

Greece. From the Earliest Times to the Roman Conquest. With Chapters on the History of Literature and Art. Thoroughly revised and in part re-written by G. E. MARINDIN, M.A. With many new Maps and Illustrations. Crown 8vo, 7s. 6d.

Rome. From the Earliest Times to the Establishment of the Empire. With Chapters on the History of Literature and Art. By DEAN LIDDELL. New and revised Edition, incorporating the results of Modern Research, by P. V. M. BENECKE, M.A., Fellow of Magdalen College, Oxford. With Coloured and other Maps and numerous Illustrations, nearly all prepared for this Edition. Crown 8vo, 7s. 6d.

Student's Gibbon. A History of the Decline and Fall of the Roman Empire. Abridged from the Original Work. A new and revised Edition in Two Parts, with Maps and Illustrations. Crown 8vo, 5s. each.

Part I. From the Accession of Commodus to the Death of Justinian. By A. H. J. GREENIDGE, M.A., Lecturer and late Fellow of Hertford College, Lecturer in Ancient History at Brasenose College, Oxford.

Part II. From A.D. 565 to the Capture of Constantinople by the Turks. By J. G. C. ANDERSON, M.A., late Fellow of Lincoln College Student and Tutor of Christ Church, Oxford.

The Roman Empire from the Establishment of the Empire to the Accession of Commodus, A.D. 180. With Coloured Maps and numerous Illustrations. By J. B. BURY, Regius Professor of Modern History at Cambridge. Crown 8vo, 7s. 6d.

Modern Europe. From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. 4th Edition, thoroughly revised. Crown 8vo, 7s. 6d.

France. From the Earliest Times to the Fall of the Second Empire. By W. H. JERVIS, M.A. A new Edition, thoroughly revised, and in great part re-written, by ARTHUR HASSALL, M.A., Censor of Christ Church, Oxford. With a Chapter on Ancient Gaul by F. HAVERFIELD, M.A., Student of Christ Church, Oxford. Coloured Maps, and many new Woodcuts. Crown 8vo, 7s. 6d.

Manual of English Literature. A History of English Literature of the chief English Writers founded upon the Manual of Thomas B. Shaw. A new Edition thoroughly revised. By A. HAMILTON THOMPSON, B.A., of St John's College, Cambridge. With Notes, &c. Crown 8vo, 7s. 6d.

SMALLER MANUALS.

Greece. From the Earliest Times to the Roman Conquest. With Coloured Maps, Plans, and Illustrations. Thoroughly revised by G. E. MARINDIN, M.A. Crown 8vo, 3s. 6d.

Rome. From the Earliest Times to the Establishment of the Empire. Thoroughly revised by A. H. J. GREENIDGE, M.A., Fellow of Hertford College, Oxford. With a Supplementary Chapter on the Empire to 117 A.D., by G. MIDDLETON, M.A., under the direction of PROF. W. M. RAMSAY, M.A., D.C.L. With Coloured Maps, Plans, and Illustrations. Crown 8vo, 3s. 6d.

JOHN MURRAY, ALBEMARLE STREET, LONDON, W.

CAPE COLONY.

Very wisely the Education Department takes measures to provide instruction in kindergarten methods for such as desire it. Thus arrangements have been made for holding teachers' kindergarten classes during the early part of 1906, at Mossel Bay, Knysna, Beaufort West, Kimberley, Ceres, or Malmesbury. The classes, which are free to teachers in State-aided schools, prepare for the work of the kindergarten examination in December, and will be held every school day from four to six o'clock. The course lasts about a month.

Whether the Education Authority is equally wise in preferring day schools to boarding schools we will not say. At any rate it has no doubts on the subject. "The best training for a child," declares the official

Farm Schools.

Education Gazette, "is to be brought up in a good home and to attend a good day school." But, as such a school is not always accessible in sparsely populated districts, resort must be had to the private farm school—an institution which has often been abused, but which it is believed can be made an effective means of education. The conditions under which it succeeds are if the single teacher has from five to twelve pupils and is—not a young girl or an old and decrepit "meester"—but an active and capable certificated governess. At the end of last quarter there were 4,172 children attending farm schools, an increase of 521 over the attendance in the corresponding quarter of last year, from which it appears that the schools play a not inconsiderable part in the education of the Colony. One is formed whenever a farmer adds to his own children those of his neighbours, and calls in a teacher. As to the pleasantness of pursuing learning under such circumstances, we quote the language of the *Gazette*: "For children between nine and thirteen years of age a home on a good farm is Nature's best school. The healthful open-air life and the inherent interest and variety of farm occupations combine to make it this. Here the boy is initiated into and gains an epitomized experience of those immemorial arts by which man won his place of dominion in Nature. He learns to manage the domestic animals; he grows acquainted with the crops and their seasons; the crafts of the smith and the carpenter are regarded with respect; and to an even deeper instinct still there is the appeal of the charm of wild Nature. There is the long ramble to gather flowers, the occasional expedition with the gun, the visiting of the traps set for jackals and wild cats, the night hunt against the porcupine."

INDIA.

Regulations have been published for the new Training College in Bombay:—

Training for Secondary Teachers. "I.—The Government Training College for Teachers in Secondary Schools will be opened in the first week of January, 1906, in the building of the Elphinstone High School, Bombay. The College will be under a European Principal, assisted by a Vice-Principal.

"II.—*Admission of Students.*—There will be, in the commencement, twenty-nine students in the College. Of these twelve will be educational *employés* selected for training from the Government secondary schools of the Presidency, and seventeen will be stipendiary students selected for training with a view to fill future vacancies in Government high and middle schools. There will be two stipends of Rs. 50 per mensem each, and fifteen of Rs. 30 per mensem each, payable throughout the course of training, subject to the following conditions:—

"III.—The two stipends of Rs. 50 per mensem are reserved for selected men who have taken their M.A. degree at the Bombay University. The remaining fifteen stipends of Rs. 30 per mensem will be given to selected graduates in Arts or Science of the Bombay University, but will also be open to men who have taken the M.A. degree, provided they are willing to accept the lesser stipend of Rs. 30 per mensem and are duly selected.

"IV.—The seventeen candidates will be, as far as possible, selected with due regard to the educational requirements of the four divisions of the Presidency and the four main vernacular languages."

MEDICAL INSPECTION OF SCHOOL-CHILDREN.—The Inter-Departmental Committee appointed last March report most favourably on the results hitherto attained. Thus in many areas the spread of diphtheria can be stopped in a few days, and ringworm has been almost stamped out. Attention has been paid to eyesight, and spectacles have been provided. On the other hand, the Local Authority does not at present attempt treatment of children's defects, and has no power to compel the parents to have these defects remedied. It is plain that the Committee, had their reference allowed it, would have recommended compulsory powers.

Customers will oblige by communicating with Messrs. G. M. H. & Co., Ltd., if this individual calls upon them.

Moreover, Messrs. Geo. M. Hammer & Co., Ltd., beg to state that their Renovator (sold in Pint Tins at 2s.) does not need the attention of any special workman, but can be applied by any intelligent School-keeper.

CATALOGUE OF SCHOOL OR CHURCH FURNITURE FORWARDED ON APPLICATION.

From GINN & COMPANY'S LIST.

JUST PUBLISHED.

First Studies of Plant Life.

By GEORGE FRANCIS ATKINSON, Ph.B.,

Professor of Botany in Cornell University.

EDITED FOR THE USE OF ENGLISH SCHOOLS

By E. M. WOOD,

Teacher of Botany and Nature Study to the Wallasey Technical Classes, Cheshire.

280 pages. Fully Illustrated, with over 300 Cuts.

Price 2s. 6d.

First Studies of Plant Life has met with such success in the British Isles in its American form as to persuade the publishers that the book would achieve an even wider popularity if arrangements were made to remove the basis of the one adverse criticism of it, found in its occasional reference to plants unfamiliar on the Eastern side of the Atlantic, and its use of names and spelling better suited for schools in the United States.

The Mother Tongue.

By G. L. KITTREDGE and S. L. ARNOLD, and (Vol. III.) J. H. GARDINER.

The Mother Tongue bases the teaching of English upon inductive principles, and the practice of composition is encouraged from the very beginning of the lessons. Its purpose is to develop and encourage the power of expression through frequent practice in composition, first oral and then written, with the most familiar things as themes carefully arranged in a systematic sequence. In this way the child is led to appreciate the need for grammatical rules, which are gradually introduced and learned as the occasion for them arises.

Book I.—Specially Revised for use in English Schools by JOHN W. ADAMSON, B.A., Professor of Education at King's College, London. **LESSONS IN SPEAKING, READING, AND WRITING ENGLISH.** xiv + 294 pages. Illustrated. Price **1s. 6d.**

Book II.—**ELEMENTARY ENGLISH GRAMMAR, WITH LESSONS IN COMPOSITION.** xxii + 417 pages. Price **3s.**

Book III.—**ELEMENTS OF ENGLISH COMPOSITION.** xx + 431 pages. Price **4s. 6d.**

What the Reviewers say of Part I.

School World.—"This admirable little book, admirably edited, lays proper stress on oral composition, and is full of suggestions for the wise teacher. . . . Its chief excellence is that it gives the children nearly all the work to do; it even suggests that they should think."

Athenæum.—"The volume aims at training the mental faculties of children by arousing their interest and curiosity from the start, and inducing them to think for themselves."

What His Majesty's Inspectors say of Part I.

"I regard 'The Mother Tongue' as an admirable book for beginning the teaching of English through composition."

"I do not know of any better method of teaching English than that so carefully developed in 'The Mother Tongue.'"

What Teachers say of Part I.

A Head Mistress says :—"I have studied your little book most carefully, and shall without any hesitation introduce it generally in my junior classes."

A Head Master says :—"I am much struck with its originality and general excellence. It is in my opinion an ideal composition book for young children."

Books sent on approval to Teachers.

GINN & CO., 9 ST. MARTIN'S STREET, LONDON, W.C.

SOME REMARKABLE OPINIONS OF Cassell's New French Dictionary.

Price 3s. 6d.

A Magnificent Book.

"Your 'New French Dictionary' is a magnificent book, and a marvel at the price. It will meet every difficulty of the young student. I should be doing my pupils a great injustice did I not introduce them to this excellent work—it will be used here henceforth."—JAMES MCCUBBIN, B.A., F.R.S.E., Burgh Academy, Kilsyth, Glasgow.

Excellent In Every Respect.

"After careful inspection of your 'New French Dictionary,' I find it excellent in every respect. It is quite up-to-date and very complete, whilst its cheapness places it within the reach of all. I was particularly struck by the numerous examples given to show the different meanings of the same word; they have been compiled with much discrimination, and will go a long way towards rendering the book both intelligible and attractive."—J. L. HAREL, B. ès L., Wyggeston School, Leicester.

A Marvel of Fullness, Accuracy, & Cheapness.

"I can say with perfect confidence, after an examination of several School Dictionaries, that there is none of anything like the same dimensions which so completely meets the requirements of students. It is a marvel of fullness, accuracy, and cheapness."—J. D. MCCLURE, M.A., LL.D., Mill Hill School, N.W.

Extremely Moderate Price.

"The bold type in which the important words are printed at once arrests the eye, and reduces to a minimum the necessary effort required to find what you want. The treatment of idiomatic French seems to me very full, and the extremely moderate price of the book places it within the reach of all."—J. C. NICOL, M.A., The Grammar School, Portsmouth.

Most Useful Dictionary.

"The careful revision which has been given to it is a guarantee that it will retain the reputation of being one of the most useful dictionaries in the language."—Sir WILLIAM TURNER, K.C.B., Edinburgh University.

Brought up to the most recent Requirements.

"It appears to have been fully brought up to the most recent requirements of modern school teaching."—Rev. A. H. COOKE, M.A., Aldenham School.

A Marvel of Cheapness.

"The new edition is, indeed, a marvel of cheapness, and will, I trust, meet with the large circulation it deserves. We shall certainly recommend it here."—Rev. A. JAMSON SMITH, M.A., King Edward's Grammar School for Boys, Camp Hill, Birmingham.

A very Complete Work.

"It appears to me to be a very complete work, and especially good in the translation of idioms from both languages: it is marvellously cheap at the reduced price."—MATTHEW H. PEACOCK, M.A., Queen Elizabeth's Grammar School, Wakefield.

Absolutely Unique and Reliable.

"We have had your French Dictionary in use for some years here, and find it absolutely unique and reliable."—T. F. G. DEXTER, B.A., B.Sc., Finsbury P. T. School, Offord Road, Barnsbury.

Most Accurate and Useful.

"A most accurate and useful book, and remarkably reasonable in price."—Rev. Dr. EPPSTEIN, M.A., Reading School.

CHEAP EDITION. NOW READY. Price 3s. 6d.

CASSELL'S NEW FRENCH DICTIONARY.

Compiled from the best Authorities in both Languages. Revised and considerably Enlarged by

JAMES BOIELLE, B.A.

This Edition has been newly Revised by

DE V. PAYEN PAYNE,

Assistant Examiner in French in the University of London.

3s. 6d.

Cassell's Educational Catalogue will be sent post free to any address.

CASSELL & COMPANY, LIMITED, La Belle Sauvage, London, E.C.

28th Thousand.

A History of England.

By the Rt. Hon. H. O. ARNOLD-FORSTER, M.A., M.P. Fully Illustrated. Price 5s.; or handsomely bound, with gilt edges, 6s. 6d.

The Daily Mail says:—"The 'History of England,' by H. O. Arnold-Forster, M.P., which Messrs. Cassell & Company have just issued at 5s., has all the ingredients which go to the formation of a universally popular work. While it is certain to become a standard history book in schools, it is at the same time conveniently arranged for use in the home as a dependable book to be referred to in all matters of historical fact, and it is also written so clearly and attractively that it may be read right through merely for its interest as a straightforward and comprehensive narrative."

ENGLISH.

NEW EDITION OF A POPULAR WORK.

The Story of English Literature. By ANNA BUCKLAND. New and Enlarged Edition. Cloth boards, 3s. 6d. A charming reading book for pupil-teachers and young students generally.

This new edition contains chapters covering the Victorian period. The volume gives a clear and attractive account of the development of English literature, and the great names connected therewith, not in the form of an examination cram-book, but as a simple introduction to the subject. The new chapters are the work of Miss Christabel Coleridge.

English Literature, A First Sketch of. By HENRY MORLEY. Comprising an Account of English Literature from the Earliest Period to the Present Date. New and Enlarged Edition. 1,099 pages, crown 3vo, cloth, 7s. 6d.

Cassell's English Dictionary. Giving Definitions of more than 100,000 Words and Phrases. Scientific words, Americanisms, Provincialisms, and Archaic words are largely introduced, and in an Appendix is given a short historical account of the language, with some specimens of its literature at various periods. 1,100 pages. Cheap Edition. 3s. 6d.

FRENCH.

Cassell's Lessons in French. Cheap Edition. Revised. By JAMES BOIELLE, B.A. Parts I. and II., 1s. 6d. each; complete in one volume, 2s. 6d. KEY, 1s. 6d.

The Marlborough French Exercises. By the Rev. G. W. DE LISLE, M.A. Cloth, 3s. 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed— "THE PUBLISHER, JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE OUTLOOK.

WE are on the eve of a General Election, and by the time that this number of *The Journal* reaches our readers most of them will be engrossed in the political issues of which education is an important, but not the main, factor. From that issue we must stand aloof, but we may say without prejudice that to us the question of Free Trade or Protection seems so momentous that it must and should for the time obliterate differences on educational policy.

We may say likewise, without any party bias, that as educationists we hope much and fear little from a change of Ministry. The late Government gave us the great Act of 1902, and we are grateful; but it is undeniable that since then the Board of Education has shown signs of old age and approaching dissolution—a lack of initiative, an unwillingness to face difficulties, a desire to shirk or shift its own responsibilities. The Teachers' Register, School Certificates, Tenure of Teachers, Children under Five, East Ham, the West Riding—all these headings suggest burning questions on which the Board has procrastinated, or temporized, or refused to take action.

It is therefore that we welcome new blood, and are not sorry to exchange for an ornamental President of the Board of Education in the House of Lords a working President in the House of Commons. Whatever else he may be, Mr. Birrell is a man of high intellectual distinction and of tried ability as an organizer.

One of the penalties of greatness is that youthful indiscretions are sure to be raked up. The "Letters of Runnymede" were flung in Mr. D'Israeli's teeth, and Mr. John Burns is reminded of his dictum that no man in England is worth more than £500 a year. Fortunately, Mr. Birrell, though he has spoken freely on most subjects, has touched lightly on education, and has little or nothing to withdraw. It is true that in an article contributed to the *Educational Record* he pronounced it hopeless under any Government to attempt to abolish the parsons' schools; but this article was written before the Act of 1902. The important point to note is that Mr. Birrell here pronounces himself an out and out opponent of secular education. If only as a great classic, the Bible must be retained in our schools.

In a subsequent article which appeared in the *Independent Review* after the passing of the Act Mr. Birrell reaffirms his opinion. "Is nothing ever to be said again in any English elementary school of a life hereafter or of judgment to come? I should not care to fight an election on that issue." He then suggests a compromise. Let the Nonconformists part with the Cowper-Temple clause, and, in return, let all elementary schools be placed under the control of the public Local Authority. If this compromise were accepted, there need be no difficulty about the form of the religious teaching. "Whenever I am asked what is meant by 'Board-school Christianity,' I have one reply: 'Dr. Temple's Rugby sermons.' Denominational teaching could be given at the close of each secular day to children whose parents desired it."

These pronouncements are valuable, not as indications of what we may expect, but negatively as dispelling many unfounded alarms. We need have no apprehension that the guiding policy of the 1902 Act will be reversed. A journal that professes to be inspired tells us that the second item in the King's Speech will run: "The amendment of the Education Act in respect of those clauses which have caused discontent among the Nonconformist objectors." This can be at best only an intelligent forecast, and the Cabinet have still to determine the order of measures to be proposed. But it is a safe prophecy that, on the one hand, we shall see no attempt to reconstitute School Boards, and that, on the other hand, whether by revising the proportion of publicly and privately appointed managers in non-provided schools or in some other way not yet revealed, there will be an attempt to place all schools under public control. It is equally certain that the religious test for head teachers will be abolished.

Turning from men to measures, we naturally look to the two principal gatherings of teachers before Christmas to give us a clue to the future. The meeting of the Modern Language Association is instructive in many ways. The system of "Assistance," lucidly explained by Dr. Heath, is in its infancy, and the machinery is by no means perfect; but we are assured that it has come to stay, and that it will promote not only a knowledge of the living tongues, but international amity. The discussions on the use and abuse of the conversation method and on the organization of a school by forms or departments both showed how far we are from agreement even on first principles. The President, Mr. Warren, was a Saul among the prophets, and it speaks well for the open-mindedness of modern language teachers that they heard him gladly.

From the Head Masters' Conference we do not look for light or leading. They live in a paradise of their own, and the problems of national education find only a far-off echo in the Upper House. We are asking whether the inspection of secondary schools is to be universal and compulsory, as is the case with primary schools, and, if so, who are to be the inspectors. What are to be the relations of the Board of Education to the Local Authorities, and how are we to avoid a duplication of inspection which may prove as injurious to schools as none at all? Such large questions do not appeal to the Conference: they hardly seem to be aware of their existence. Recent regulations of the War Office have driven the great public schools, including even Eton, to offer themselves for inspection, and the general attitude of the Head Masters is: inspection may be a necessary evil, but let us have as little of it as possible, and let us fall into the hands of the Universities, not of the State. This attitude is quite natural and reasonable, and Dr. Rendall is to be congratulated in persuading the Army authorities to make their inspection quinquennial.

But, with regard to the larger issue, we must needs reaffirm the position that we have taken up on more than one occasion. The Universities are not the proper bodies to form a board of national inspection. They have no regular staff or office equipment, and the resident Fellows who are employed in the business are withdrawn from their proper work of teaching. Even the limited inspection that they have hitherto conducted cannot be pronounced altogether satisfactory.

We say nothing of initial mistakes, as in the case of Bradford; but how is it possible for ex-head masters, however distinguished, to criticize frankly and fully the work of their former colleagues and friends, or to pronounce on a system of which they have themselves been a great part?

An anonymous assailant like "Kappa" the Head Masters were perhaps well advised to ignore; but we might reasonably

have looked for some explanation or criticism of Canon Bell's proposed Federated Council.

If we were asked what is the most urgent need in education for the coming year, we should have little hesitation in answering: "The supply of qualified teachers." This is the first problem that the Government must set itself to solve. Money is at the root of all good, no less than of all evil, and the first thing is to provide in every county foundations analogous to the London Day Training College and the Goldsmiths' Institute. Next, the salaries of secondary teachers must be raised, and the conditions of tenure be made such as to induce men and women of ability to enter the profession. Thirdly, the burden of training must not be laid upon the rates. We have every reason to believe that in the Estimates of the year there will figure a substantial grant for higher education—not a dole of a few extra thousands, but the equivalent of a man-of-war. If our naval supremacy is threatened, we freely vote millions; why, in our struggle against the powers of darkness, should we continue to think in thousands?

DIRECTORY OF EDUCATIONAL ASSOCIATIONS.

THE object is stated only when this is not obvious from the title or not known by general repute. The following number gives the membership as far as ascertainable. Then follow the yearly subscriptions, the name of the Secretary, and office address. We owe our best thanks to Secretaries for their promptitude in correcting slips. All but three of those sent out have been returned.

- Aberdeen County Schoolmasters' Association.
Mr. George Murray, Dyce, N.B.
- Agriculture, Scottish Teachers of, Incorporated Institute of.
Mr. J. Wilson Sinton, F.E.I.S., Dalmeny, N.B.
- Allgemeiner Deutscher Sprachverein.
A literary association to promote the study of pure German.
25,000 members. Zweigverein London. 580 members. 5s. Hon. Secretary, Dr. L. Hirsch, 25 Gleneldon Rd., Streatham, S.W.
- Alliance Française.
186 Boulevard Saint Germain, Paris. (Secretary for England, Monsieur B. Minssen, 8 Barnard's Inn, Holborn, E.C.)
- Army School Appointments.
Address A.A.G., Army Schools, War Office, Cleveland House, St. James's Square, S.W.
- Art for Schools Association.

ROYAL HOLLOWAY COLLEGE.

During the temporary absence of Miss M. Benson, D.Sc., the governors have appointed Prof. Percy Groom, M.A., D.Sc., as Lecturer in Botany for the Lent and Easter terms, and Miss H. Fraser, B.Sc., as Assistant Lecturer in Botany. Miss Hayes Robinson has been appointed Senior Staff Lecturer in Philology. A course of lectures on "English Lyrical Poetry" was given during the Michaelmas term by the Rev. H. C. Beeching, Canon of Westminster.

Thirty Royal Holloway College students graduated this year in the University of London—20 in Arts (9 in Honours), and 10 in Science (of whom 4 took an Honours degree). The George Smith Studentship was awarded to G. E. Ingram. One of the University Exhibitions of £40 a year for two years was gained this year by H. Cam. In the competition for University Scholarships E. Garrett won the University Scholarship in French, and E. Fleet the first University Scholarship in History. They were disqualified from holding them because they also won the two Gilchrist Scholarships. The first French Prize in the competition open to students of English Universities and University colleges held under the auspices of the National Society of French Teachers in England was awarded this year to M. Hornby, and the third prize to E. Garrett.

Students come into residence for the Lent term on January 13. An occasional lecture will be given on January 18 by Mr. Edward Armstrong, of Queen's College, Oxford, on "Pope Pius II.," at 8 p.m.

UNIVERSITY COLLEGE, LONDON.

Mr. P. M. Heath, F.R.C.S., has been reappointed by the Council Surgical Registrar to University College Hospital for a further period of one year from January 1, 1906. The Council have appointed Dr. R. H. Williams Lecturer in Phonetics for the remainder of the current session. The Council have conferred on Dr. G. A. Buckmaster the title of Assistant Professor of Physiology. Mr. H. D. Vigor has been elected to the Ricardo Scholarship in Political Economy, tenable for three years.

The second term of the Faculties of Arts, Laws, and of Science, will begin on January 9. Among the courses of lectures announced, the following are of general interest:—Friday, January 12, at 4.30 p.m., Mr. D. S. MacColl will continue his course on "Sculpture, Mediaeval, Renaissance, and Modern." Monday, January 22, at 3 p.m., Prof. Gardner will begin his course on "The Surroundings of Greek Life: Houses and Dress." Saturday, January 27, at 10 a.m., Prof. Priebsch will begin his course of public lectures on "Goethe and Schiller." Saturday, January 27, at 11 a.m., Principal Gregory Foster will begin his course of public lectures on "English Literature: mainly Shakespeare"; Prof. L. M. Brandin will begin his course of public lectures on "Racine and Molière."

MANCHESTER.

In connexion with the steps taken by a Board of Guardians in North Manchester with reference to the scheme for the feeding of school-children, some indignant protests have been received from parents who appear to feel keenly the insinuation that their children are not properly cared for. At the monthly meeting of the Manchester Education Committee the recommendation of the Training of Teachers' Subcommittee on the matter of the site suggested for the new college for male students was referred back. It transpired in the course of the discussion that not only was the expenditure suggested (£20,000) much larger than had been anticipated, but that the lease would only run for twenty years, at the end of which time the buildings would revert to the owner, Lord Derby; and no information was available as to whether the property could be purchased. The scheme, which was supported by the Chairman, Sir James Hoy, was criticized by the Deputy Lord Mayor, Sir T. T. Shann, and defeated by 18 votes to 13.

A satisfactory report was given of an experiment in the instruction of children afflicted with stammering, and it was agreed to provide additional accommodation for the teaching of crippled children, the number now provided for being sixty-five.

The Education Committee have decided to take over the Manchester School of Domestic Economy and Cookery.

The Scheme of Scholarships for 1906 has been issued, and is illustrated by a diagram showing the possible careers of those who will benefit by them. No scholarships are offered for any University except that of Manchester. The Salford Education Committee, however, have offered a scholarship to be held at any British University other than the University of Manchester. A similar motion was recently defeated in the Manchester Committee.

Mr. W. E. Urwick, M.A., Principal of the Pupil-Teachers' College, has resigned that position on his appointment as an Inspector of Secondary Schools under the Board of Education, his work terminating on December 31.

The Engineering Section of the Manchester Chamber of Commerce have evolved a scheme by which it is proposed to provide for the district "a small supply of men as highly trained in theoretical and experimental work as those produced in the foreign technical high schools, while retaining the practical training which the foreigner lacks."

At the University an appeal has been made for £15,000 for the new buildings of the Hulme Hall of Residence. At the Women's Hall of Residence, the New Warden of which is Miss H. D. Oakeley (late Principal of the Royal Victoria College, Montreal), Miss Maude Parkin, B.A. (of Montreal), has been appointed Sub-Warden.

Dr. W. A. Bone, F.R.S., Lecturer in Metallurgy, has accepted the invitation of the Council of Leeds University to fill the new Chair of Applied Chemistry (Fuel and Metallurgy) there.

Mrs. Fielden, who founded the Fielden Professorship of Education, has added £2,000 to the endowment. We hope to be able to report further benefactions to the Education Department next month. A number of other bequests to the University are announced, including £20,000 from the late proprietor of the *Manchester Guardian*. The Committee of the Brunswick Street Primary School and Kindergarten, which was founded and carried on by Miss Dodd as a practising school for the Women's Department of the Day Training College, have asked Prof. Findlay to act as Director to this school after Christmas. It is intended during the spring to organize the work of the school on a more permanent footing, so that it may be continued in association with the training of teachers at the University.

In the Education Department this session Prof. Findlay has organized a series of lectures on modern language teaching, illustrated by demonstration lessons, and Mr. Earl Barnes has lectured upon "Children's Attitude towards the Curriculum." Next term Miss Dodd is to lecture on "The School Curriculum," while Mr. Paton deals with "Problems in the Teaching and Training of Older Scholars."

The annual *soirée* of the University Students' Union took place in the University Buildings on December 16. The proposal to build under one roof a Men's Union, a Women's Union, and a University Refectory, has again come to the front.

At a special meeting of the Governors of the Grammar School a resolution was passed recording the Governors' sense of their loss by the death of Mr. C. J. Heywood, who has been a much valued member of the governing body as well as a public-spirited citizen in

many ways. Open scholarships have been won by boys of the school in Mathematics at Corpus Christi College, Oxford, in Modern Languages at Caius College, Cambridge, and in Classics (the Bishop-Prince Lee Scholarship) at Trinity College, Cambridge. This year the boys of the school have collected nearly £250 for the Lads' Club, which is mainly dependent for support upon their annual collection. Mr. E. N. Marshall, M.A., has been appointed Head Master of Walsall Grammar School. The annual *conversazione* took place in the school buildings on December 20, when the Dramatic Society gave scenes from "The Critic." At the gymnastic display the Lord Mayor and the Lady Mayoress were present, and the latter distributed the medals. A feature of the exhibits was the collection of recent gifts to the school museum, which has lately been considerably enlarged. A very interesting illustrated history of the school, by Mr. R. D. Hodgson, M.A., has just been published for circulation among past and present members. During the term twelve lectures have been given to the Upper and Lower Schools. The North Manchester Preparatory School, which was opened in September last under Mr. A. W. Dennis, M.A., has already risen in numbers to nearly fifty boys. The first term concluded with a successful entertainment, at which the boys gave a performance of "Bardell v. Pickwick."

At the Hulme Grammar School Mr. J. H. Smith, B.A., late scholar of Brasenose College, Oxford, has succeeded Mr. F. E. Brown, M.A., as mathematical master, the latter having taken the position of chief mathematical master at King Edward VII. School, Sheffield. Some interesting presentations were made to Mr. Brown on leaving the school, where he had been master since 1892.

At the Manchester High School for Girls much regret is felt at the loss of Miss Mills, who has been on the classical staff for nearly three years. Miss Ethel Harvey, of Lady Margaret Hall, Oxford, has been temporarily appointed to take her work. Prof. Weiss has been appointed a governor to represent the University of London, in place of the late Dr. Wilkins.

At the Pendleton High School the girls gave two performances of "As You Like It" to crowded audiences of parents and friends.

On December 4 Miss E. P. Hughes spoke at a joint meeting of the Teachers' Guild and Child-Study Association on "Education in Japan."

WALES.

The report recently issued by the Executive Committee of the Central Welsh Board contains some highly interesting statistics relating to the progress of the intermediate schools. That the Welsh county-school system has taken a firm hold upon the confidence of the people is clearly proved by reference to the growth of the schools since 1897. In that year the total number of pupils on the school roll was 6,427; whereas in 1905 the number had reached 10,413, an increase of 62 per cent. This is equivalent to 5 per 1,000 of the population: in Merioneth the attendance exceeds 10 per 1,000. The essentially democratic character of the system is unmistakably shown by the very high percentage of pupils who were admitted from the primary schools. For 1905 the percentage is 81.5, and it is a remarkable fact that from 1898 onwards there has been a gradual increase in this percentage from 71.9 to the present figure. However, before drawing from these statistics any very definite conclusion as to the social status of the pupils at the intermediate schools, it is necessary to remember that in Wales the primary schools are utilized to a far greater extent than they are in England. Mainly because of the hopeless inefficiency of the majority of the private schools in the Principality parents not only of the artisan class, but also of the well-to-do middle class, are practically compelled to send their children to the primary schools for their preliminary training before entering the secondary schools. This close organic connexion between the two grades of schools will undoubtedly remain a permanent feature of the Welsh educational system.

The report also points out that extensive recognition of the Board's Certificates by various public bodies as equivalent to their Preliminary Examination has relieved the schools from the harassing necessity of attempting to meet the demands of a variety of external examinations. That this recognition has resulted in a very distinct gain in efficiency and in simplification of the curriculum is of course obvious. Consequently, the Board's Certificates are utilized to an increasing extent from year to year. In 1905, for the Honours Certificate there were 185 candidates, for the Senior 957, and for the Junior 508. The percentage of successful candidates for the Senior Certificate has dropped from 65.7 in 1904 to 53.1 in 1905. It would, therefore, seem that there is ample justification for the contention of many head masters that the papers set this year, in several subjects, were distinctly harder than in any previous year, and that the standard of the examination, as a whole, has been raised very considerably. That the Central Welsh Board recognizes the fundamental importance of preventing as far as possible any sudden variation in the standard of its examination is proved by the existence of a Revising Board of Examiners; but, somehow, the reputation of this body for efficiency is not yet fully established.

Several other statistics of interest are published. Thus, in 1897

the total amount spent in scholarships and bursaries was £8,500; in 1905 it amounted to £20,731. The grants paid by the Board of Education in respect to the years 1901-2 was £8,549; for 1903-4, £10,238—an average of about £1 per head.

Every one who reads this review of secondary education in Wales in an impartial spirit cannot but be impressed by the truly remarkable progress which the schools have made during the past ten years. Nor will it be possible to deny that, as a whole, the educational policy of the Central Welsh Board—the controlling body of the system—has been based on thoroughly sound principles. As for the future, the outlook for secondary education is a bright one.

The attendance of members at the last meeting was thoroughly satisfactory, and a considerable amount of business was transacted. Most of it was naturally of a highly technical character, and had reference to questions of syllabus, inspection, &c. The

Honours Certificate Syllabus, that perennial difficulty of the schools, was once again discussed with much energy, if with little illumination. Several suggestions, however, which might be helpful at the forthcoming conference with the Central Welsh Board were forthcoming, and it is sincerely to be hoped, in the interests of peace, that some final solution of this delicate question will be devised, and that in the immediate future. Considerable feeling was shown during the discussion on the French papers set at the last annual Central Welsh Board Examination, particularly that for the Senior Stage. There was almost a consensus of opinion that they were, on the whole, of a distinctly retrograde character, and were set apparently in ignorance of the advance that has been made in recent years in modern language teaching. The opinion was also expressed that the Revising Committee of the Board should have exercised its authority in this matter of the French paper, not only for the sake of maintaining the continuity of the standard of the examination, but also to prevent a reversion to the older methods of language teaching.

The proceedings on this occasion were specially interesting because for the first time in its existence the Association was presided over by a lady President (Miss Collin, of Cardiff). All the members present were most favourably impressed by the businesslike and tactful manner in which she controlled the meeting and steered it through the maze of a very long agenda. At this same meeting the members of the Association expressed their keen appreciation of the services of the retiring Hon. Secretary (Mr. W. Jenkyn Thomas, M.A.). Mr. Wm. Lewis, of Llanelli, an ex-President of the Association, was unanimously chosen as his successor.

The recent Regulations of the Board of Education continue to excite a certain amount of discussion in Welsh educational circles. In the first instance, strong objection is taken to the elimination from the syllabus of the options hitherto allowed to Welsh candidates. For some mysterious reason the Board, for example, has omitted any special reference to the geography of Wales as an alternative subject, nor does it specifically state that questions in Welsh history will be set. The Welsh Language Society and similar bodies are up in arms, and are trying to exert strong pressure on the Board to induce it to return to the *status quo*, but hitherto without any result. Sir Marchant Williams and the *Western Mail* declare, however, that it is all a matter of drafting, and that, as a fact, Welsh candidates will suffer no hardship, nor will they be at any disadvantage as compared with previous years in the examination.

Another cause of complaint against the Board of Education is based upon the somewhat stringent conditions laid down in Circular 530 dealing with the admission of normal students to University degrees. The Principals of the University Colleges go so far as to declare that their normal departments will be seriously depleted of students if no relaxation is forthcoming.

It is impossible to describe with accuracy all the different phases which the educational revolt is assuming. Every county has some species of it to deal with. We are already familiar with the trouble over the non-provided schools, emergency schools, maintenance of the fabric, and the fulminations of the Board of Education, &c.—these are the common-places of the situation. But in some counties the revolt has taken a new turn, and a serious one; for there the elementary teachers are showing strong resentment against the conditions which many of the Education Committees are trying to impose upon them. Not only is the scale of salaries a source of dissatisfaction, but in one or two of the counties—notably in Glamorganshire—terms of service are drawn up which they cannot but best regard as humiliating to the whole profession. The outlook on the whole is a discouraging one as regards primary schools, and it is no wonder that the dearth of primary teachers is becoming a pressing problem in Wales.

By the death of Mr. Humphreys-Owen, M.P., Wales has lost one of its most prominent public men, and its most trusted educational leader. He has been associated in the most intimate manner with the growth of secondary education in Wales, for he has acted as Chairman

Welsh County Schools Association.

Pupil-Teacher Regulations.

Revolt.

Mr. Humphreys-Owen, M.P.

of the Central Welsh Board from its foundation. His colleagues on the Board were deeply impressed by the breadth of his views and the soundness of his judgment on all educational matters; for no one probably had a more thorough knowledge of the state of education in Wales. With the head and assistant masters of the schools Mr. Humphreys-Owen invariably adopted a thoroughly sympathetic attitude, and no section of the community will deplore his loss more sincerely. It will be very difficult to find a Chairman for the Central Welsh Board who will possess all the necessary qualifications for such an important post. Laymen who have the necessary knowledge of secondary education and who can afford the time are not too numerous in Wales. Lord Stanley has been mentioned, but it is obvious that his acquaintance with the special condition of Wales is far too limited to entitle him to such a position.

Sir Isambard Owen and Principal Reichel have taken strong objection to the wording of a clause in the proposed charter which, they declared, controverted the original intention of the Museum Conference, and was likely to reduce what was intended to be a national museum into a mere imitation of the many museums scattered all over England. However, after some discussion, the matter was amicably settled at a general conference held in London. By an amendment of the objectionable clause, the distinctively national character of the Museum is made perfectly clear.

SCOTLAND.

Mr. F. W. Dyson, F.R.S., one of the Chief Assistants at the Royal Observatory, Greenwich, has been appointed by the Crown to be Astronomer-Royal for Scotland, and also to be Professor of Astronomy in the University of Edinburgh, in succession to the late Prof. Copeland. Prof. Dyson was Second Wrangler at Cambridge in 1889, and he has been for six years Secretary to the Royal Astronomical Society.

Sir Henry D. Littlejohn, M.D., has resigned the Chair of Forensic Medicine in Edinburgh University, which he has held since 1897, when he was appointed by the Crown as successor to the late Sir Douglas MacLagan. He is one of the most distinguished of living medical jurists, and he has appeared in all the most important trials in Scotland during the last thirty years.

Glasgow University Court has appointed Mr. James L. Galbraith to be University Librarian, in succession to Mr. James Lymburn, resigned. Mr. Galbraith is at present sub-librarian in the University Library, where he has done excellent service for many years.

Mr. Haldane, as Rector of Edinburgh University, has appointed Lord Dundas to be his assessor on the Edinburgh University Court, and Mr. Asquith, as Rector of Glasgow University, has appointed Mr. William Lorimer as his assessor on the Glasgow Court. The General Council of St. Andrews University has elected Dr. George A. Gibson, Edinburgh, as assessor on the St. Andrews Court, in room of Dr. James Welsh, resigned, and it has re-elected as assessors Dr. W. Barrie Dow and Mr. Edward E. Morrison.

The number of students in attendance at Aberdeen University this session is 810, as compared with 815 last year, 811 in 1903-4, and 790 in 1902-3.

The late Mrs. Margaret McIntyre, Greenock, has left a legacy of £500 to Glasgow University, for the purpose of founding a bursary in the Faculty of Arts.

During the last three years there has been a deficit on the annual accounts of Glasgow University, amounting in all to about £3,000, and it is expected that this will be increased during the present year by about £800. The deficit is due to the inability of the General Fund to meet the large increase of annual expenditure which is due to the development of the scientific departments, and, as the sources of the General Fund are not likely to provide any large increase of income, considerable retrenchment will be necessary.

At a meeting, held at St. Andrews, of the General Committee for arranging the celebration of the quatercentenary of George Buchanan, it was resolved that the celebration should take place early in July, 1906. It is proposed that the proceedings shall include a reception of classical scholars from this country and the Continent, a meeting of delegates at which orations will be delivered, a graduation ceremonial, a representation of one of Buchanan's plays, and a banquet. An appeal is being made to the owners of portraits of Buchanan, early editions of his works, and books which belonged to him to contribute to a loan collection for exhibition at the time of the celebration.

On Thursday, December 21, the first section of the new buildings of the Glasgow and West of Scotland Technical College was formally opened by the Right Hon. John Sinclair, M.P., Secretary for Scotland. The college is the oldest technical college in Great Britain, and the buildings, even in their present incomplete state, are the largest of the kind in the country. They constitute nearly three-fourths of the whole building that is contemplated, and they have cost about £212,000, of which £210,000 has been obtained by subscription and otherwise during the last five years. A further sum of £100,000 is required to complete the building and to provide additional equipment. The

number of students of the college has grown rapidly in recent years, the increase during the last ten years being 50 per cent. At present there are 5,020 students in attendance, of whom 530 are day students. The guests at a *conversazione* held in the evening were much impressed by the extent and suitability of the buildings and their admirable equipment for all the most important branches of technical instruction. The success of the whole work is largely due to the indefatigable exertions of Mr. W. R. Copland, C.E., Chairman of the Governors.

The St. George's Training College at Edinburgh for women teachers in secondary and higher schools has to report a marked decrease in the number of its students, which is due to the raising of the standard of qualification. It is hoped, however, that a place may be found for the college in the new scheme for the training of teachers which is about to be established by the Scotch Education Department.

The Provincial Committees for the training of teachers in connexion with the Universities have now elected their chairmen, and appointed sub-committees to consider the new training scheme and to confer with the representatives of the existing training colleges, with a view to the taking over of these colleges by the Committees. Mr. R. S. Allan, Chairman of Glasgow School Board, has been elected Chairman of the Glasgow Committee, and Dr. Day is Chairman of the Aberdeen Committee.

At a meeting of the Classical Association of Scotland, held at Glasgow, the report of the Committee on Pronunciation was considered, and it was resolved that the report and a short abstract should be circulated in all the chief schools and training colleges in Scotland, with a request for an expression of opinion on the matter. At a meeting of the Modern Languages Association, held in Edinburgh, a resolution was adopted deprecating the "retention of pupils at schools with a view to specialization for bursaries after they have qualified for the Leaving Certificate."

Mr. James Milligan, M.A., LL.D., has been entertained to dinner by representatives of all branches of the teaching profession in the West of Scotland on the occasion of his retirement from the Rectorship of the Glasgow High School for Girls.

IRELAND.

The big degree prizes this year have been taken by Mr. Harry

Trinity Biggs, Sch., son of the late Dr. Biggs, of Portora
Degrees. Royal School, who, after a brilliant college course, has obtained the Mathematical Studentship;

Mr. W. Powell, Sch., of the High School, Dublin, who obtains the Classical Studentship; Mr. J. Stevenson, Sch., also from the High School, who is the Mathematical Brooke Prizeman; and Mr. M. T. Smiley, Sch., who takes the Classical Brooke Prize. The High School thus maintains the long and high record it has in Trinity College distinctions.

A special Committee has for some time been considering alterations

The Fellowship in the present method of electing to Fellowship
Examinations. on the results of a severe and badly planned examination which at present holds. It was

proposed to do away with this examination, and elect candidates, having regard to the ability and learning they had shown in their whole college career and their subsequent work either in original research or active employment. It is now stated that owing to various difficulties this idea is abandoned, and that the examination will be maintained. One of the difficulties lies in deciding what shall be done with the Madden Prize, a valuable prize bequeathed to Trinity College as compensation to the second best candidate in the Fellowship Examination. It is to be hoped that, even if the examination be retained, it will be much modified, and opportunities given for encouraging original work. As it is at present it seems destructive of mental and physical vigour, of original power, and the most valuable qualities required for the work of a Fellow.

At the Commencements on December 19 about thirty ladies

Women and from Cambridge took *ad eundem* degrees. At the
T.C.D. luncheon afterwards, to which about a hundred guests were invited, the Provost explained the position of

the Board in granting these degrees. He pointed out that they had communicated first with the authorities of Oxford and Cambridge and obtained their cordial sanction, and that they were only giving to Cambridge and Oxford women the privileges they had always extended to men graduates of those Universities. He also repudiated the statement that Trinity College had been opened to women merely to obtain pupils and money. For twenty years their admission had been agitated, and any surplus funds arising from the fees of women students would be spent in benefits for those students themselves. There are now seventy-one women students in Trinity College.

The scholarships to be held in the University College under the

The Catholic Royal University and awarded on the results of the
Scholarship Fund. Intermediate Examinations are being supported by several County Councils which are proposing to found scholarships for their own counties. It is doubtful, however, if

the scholarship fund will be heartily supported by the Catholic laity, the more thoughtful and educated of whom generally hope for some alteration in the constitution of Dublin University making it acceptable to the Catholic religious authorities, rather than the creation of a separate Catholic College or University.

Catholic Laymen's Memorial. A few weeks ago a memorial was published by the Association of Catholic Laymen which represents this more enlightened Catholic opinion, asking that a Commission should be appointed to inquire into what changes could be introduced in the government and constitution of Dublin University that would make it available for Catholics and in a real sense a National University. The memorial points out that Trinity College was excluded from the terms of reference of the last University Commission, and that its governing body is exclusively Protestant. That such a Commission would be very desirable for the sake of the College itself is undoubted, but it is very unlikely that any Government would issue it.

The New Government and Irish Education. Whether the Liberal Administration will make any attempt to reform Irish education is so far unknown. Their attitude formerly was to give home rule and allow an Irish Parliament to settle the Irish University question. If the present Government adheres to this position, it means an indefinite postponement. Nor would this method solve the real difficulty—would the English people give money to support University education controlled by the Church, even if demanded by an Irish Parliament? In regard to primary and intermediate education it is believed that Sir Anthony MacDonnell will have a free hand. If this be so, we have some hope of reform, and a certainty of a vigorous conflict. The reports of Mr. Dale, which are believed to embody his views, met with strong opposition from both Catholic and Protestant clerics. In a recent speech the Bishop of Limerick, one of the chief leaders, made a noticeable admission—that they should not object to an Irish Education Department were it placed under the control of an Irish Parliament, but they would resist to the utmost the handing over of Irish education to the administration of English officials.

Rowdyism in the Royal University. The Senate have decided, on considering the opinion of their legal advisers, that they have no power to punish (or prevent?) disorders, such as prevailed at the last Conferring of Degrees. They state that they will immediately apply for such powers. The undergraduates thus remain triumphant.

The Intermediate Group System. The Central Association of Irish Schoolmistresses has addressed a memorial to the Intermediate Board, requesting the abolition of the group system in the Intermediate Examinations. They point out that specialization at so early an age is injurious, and so unnatural that it results in unsuitable groups of subjects being taken; consequently the most serious injustice has been inflicted on students, while the examinations under this system fail completely as a criterion of merit. They also complain of the complicated system of marking, which has led to many errors. The Board are divided on the subject of the group system, a section being in favour of it, while on the other hand several Commissioners have spoken in public strongly against it. It is to be hoped the absurdity of a complete revision of the lists this year having to be undertaken and the general indignation excited by the recent results will now lead to the abandonment of the system.

The Lady Registrar of Trinity College, Dublin, writes to correct an inaccuracy in the December notice of the women students in Trinity College, Dublin. Miss Ethel Hannan is not the first woman who has gained a gold medal in Trinity College. In the year 1900 Miss Betanna Beatty was awarded a gold medal in the Modern Literature course.

SCHOOLS.

BRUTON, SOMERSET, GIRLS' HIGH SCHOOL.—K. R. Lewin has gained an exhibition and sub-sizarship at Trinity College, Cambridge, for Natural Science.

CHELTEMHAM LADIES' COLLEGE.—The following pupils have been successful in the University of London B.A. and B.Sc. Examinations:—B.Sc., Division I.: Mary Nalder; B.A. Honours, Class II., French and English: Lettice Heath; B.A., Division I.: Mary Allwood, Bessie Allen Bull, Theresa Kewley, Dorothea Stock, Geraldine Weaver; B.A., Division II.: Mary Browne, Ursula Edmonds, Edith Turner.

DATCHELOK TRAINING COLLEGE AND SCHOOL.—Miss Carpenter, the mistress of method and lecturer on psychology in this college, has been offered by the University of London, and has accepted, a seat on the Board of Studies of the University. Both the Principal (Miss Rigg) and Miss Carpenter are recognized teachers of the University—the Principal in the theory and practice of education and Miss Carpenter in psychology. Seven students from this college, six of whom were B.A.'s of London, while the seventh was an Irish M.A.,

have just taken the examinations for the Teaching Diploma of the University of London. Four others have taken those for the Cambridge Teaching Diploma. Two students in the Preparatory or Academical Division of the college passed the London B.A. Examination in October. The Old Girls' Club inaugurated in September a scheme for a bazaar in aid of hospital cots. The idea was warmly taken up by the club generally and by the school and training college, with the result that by the two days' sale £450 was cleared. It has been determined to make this up, out of a reserve fund which the club possesses, to £500, and present this to the new King's College Hospital when it becomes established on Denmark Hill, in the immediate neighbourhood of the school. Meantime the club will go on maintaining the three cots for children which it has maintained for five years past in the All Saints' Convalescent Home at Highgate. The school is, owing to her approaching marriage, losing its chief mathematical and chemistry mistress, Miss Renneson, B.Sc. The work is being to some extent rearranged, and the Head Mistress has been fortunate in obtaining the services of Miss Gertrude Williams, B.A. (English Honours), for six years member of the staff of the Skinners' School, Stamford Hill.

EAST LONDON COLLEGE.—The Drapers' Company have announced a very large extension of their scheme of scholarships tenable at the East London College. In next July, on the result of the examination conducted by the London Inter-collegiate Scholarships Board, they will award fifteen scholarships of the value of £40 per annum tenable for three years. Six of the scholarships are reserved for women students. Mr. Tom S. Moore, an old student of the college, who afterwards proceeded to Oxford, has been awarded a Fellowship in Chemistry of Magdalen College, Oxford. Mr. B. W. Perkins has obtained the 54th position in the Indian Civil Service list. In the past the work of the college has been confined to science and technical work, but at the commencement of the present session it was decided to start courses for the London B.A. degree. These are suitable for women students, for whom special arrangements are made. The Drapers' Company have voted a sum of £5,000 for the improvement and extension of the college buildings.

HAILEYBURY COLLEGE.—The following scholarships have been awarded:—Senior Classical—K. G. Digby, R. S. Stafford, G. L. Waller, R. N. Nicolls; Senior Modern—G. R. Richardson, W. J. Bryan; Junior Classical—H. R. Carter (Mr. Caldecott, Eastman's, Southsea), D. C. Thomas (Haileybury), F. M. Strawson (Haileybury), P. A. Meade (Mr. Kingdon, The Briers, Westgate-on-Sea), H. T. Mogridge (Haileybury), W. H. Clarke (Rev. W. R. Phillips, South Lodge, Lowestoft), E. F. Ledward (Haileybury), H. C. Grace (Rev. W. R. Phillips), R. M. D'Ombrian (Mr. Hunter Rodwell, Woodgate, Bexhill); Junior Modern—H. G. Vincent (Rev. F. J. Hall, Northaw), G. S. Walley (Haileybury). C. H. Gidney has been elected to an open classical scholarship at Hertford College, Oxford, and J. H. Mason to a science scholarship at Gonville and Caius College, Cambridge. The following passed into the Royal Military Academy, Woolwich, in August, direct from the school:—G. H. Sugden, F. L. Brown, A. K. Chater, B. J. Bewley, E. H. Clarke, G. S. Oddie (O. H.) was successful in the India and Home Civil Service Examination. We have welcomed this term the Rev. St. J. B. Wynne Willson, of Rugby, who has succeeded to the Mastership of the college. The school was inspected in October, under the Regulations of the Oxford and Cambridge School Examination Board, by Canon Bell, and Messrs. H. W. Eve, E. Barker, and P. V. Bevan, and satisfied the Inspectors.

ISLE OF MAN, KING WILLIAM'S COLLEGE.—The trustees of the late Henry Bloom Noble have handed over £10,000 to the trustees of this college with the condition that they shall found seven £50 scholarships. This generous gift will enable the trustees of the college to complete their scheme for the improvement of the college buildings, which will then rank among the finest to be found in the North of England.

LINCOLN, GIRLS' HIGH SCHOOL.—The prize distribution was held on December 13. The Mayor of Lincoln presided, and the prizes were presented by Lady Mary Turnor. They included two London Matriculation prizes, a Special Oxford Certificate, and Oxford Senior Local Certificates. The Head Mistress, Miss Ashburner, stated that the examination results were the best the school had ever had.

PURLEY, SURREY, WAREHOUSEMEN, CLERKS', AND DRAPERS' SCHOOLS.—Five candidates (boys) took oral French at the Cambridge Examination at Christmas, three Seniors and two Juniors. Debenham Scholarship for Modern Languages (two pupils for a year in Switzerland annually): Edgar C. Tacchi, Florence A. Lewis. The new Head Master, Mr. C. B. Gutteridge, M.A. (Alleyn College, Dulwich), was installed on October 2. Mr. W. G. Livermore has been appointed house master. Natural science has now been introduced into the school curriculum.

RUGBY SCHOOL.—The following are the year's distinctions at Oxford and Cambridge:—H. M. Margoliouth, classical exhibition, Balliol College, Oxford; C. R. Cruwittell and R. W. Evers, classical scholarships, Queen's College, Oxford; H. Podmore, classical exhibition, Trinity College, Oxford; R. C. Brooke, classical scholarship, King's College, Cambridge; C. F. Tatham, classical scholarship,

Clare College, Cambridge; K. H. Scougal and H. F. Russell-Smith, classical scholarship, St. John's College, Cambridge; G. I. Keynes, natural science scholarship, Pembroke College, Cambridge; D. P. Forman, history scholarship, Caius College, Cambridge; G. W. Milroy, history exhibition, Emmanuel College, Cambridge; A. Bowley, mathematical scholarship, Sidney Sussex College, Cambridge; R. W. Macfarlane-Grieve, classical scholarship, University College, Oxford.

SHREWSBURY HIGH SCHOOL FOR GIRLS.—The following distinctions have been gained during the past year:—B. Wace and D. Wale obtained Certificates and two other girls Letters from the Joint Board. At the Royal Drawing Society's Exhibition M. Gough won a silver star and Mr. Ablett's prize, and W. Earl a bronze star. In the examination eighty-eight Honour and forty-two Pass Certificates were obtained, while four girls completed their full Drawing Certificates. In the Examination of the Associated Board twelve girls passed, one with Honours in the Higher Division. The Council's Scholarship was awarded to W. Earl on the results of the School Examination conducted by the Oxford and Cambridge Board. Three girls obtained £20 scholarships awarded by the Salop County Council, two others obtaining qualifying marks, while two obtained minor scholarships, and a third qualifying marks for such. The prize-giving took place in the hall of the school on Friday, December 8. Prof. Dunstan, F.R.S., occupied the chair, and the Countess of Powis distributed the prizes and certificates. In the course of the proceedings the pupils sang some part-songs and carols. At the close Lady Powis acknowledged the thanks accorded to her and expressed a wish, as a memento of the occasion, to send a prize for drawing and another for music for the ensuing year.

WESTMINSTER.—The play this year, the "Adelphi" of Terence, was given on December 14, 18, and 20. Denia and Micio (A. P. Waterfield and R. E. N. Bowen) sustained the two principal characters with *félicité*, and Syrus (R. C. Le Blond) created roars of laughter in the drunken scene. In the Prologue—an excellent piece of polished Latin—the deaths of General Glyn and the Rev. H. L. Thompson are commemorated. By the new laboratories in Great College Street

"Chemicæ

Indagatores exultant scientiæ

Fumumque et fel et verba non innoxia

Miscunt inultu."

The new racquet court—a memorial to Dr. Rutherford—is happily described. The connexion of Westminster with the Battle of Trafalgar is the final topic. The Epilogue is a scene on the Westminster golf links. For characters, we have Admiral Togo, a motorist, a lady swimmer, and a tout for the *Times* Book Club. To non-golfers the allusions are obscure, but all will appreciate

"Nomen 'Mors' dictumst vere, nam morte peremit

Feles tres, pullos quattuor, octo canes.

O monstrum! quid non motoria pectora cogis,

Cursus sacra fames præcipitisque rotæ?"

WINCHESTER COLLEGE.—The Debating Society refused to "deplore the spirit and methods of modern journalism" by 25 to 14. The Greek Prose Medal was awarded to O. B. Wordsworth. The Sixteen Club on November 25 listened to a paper by Mr. F. L. Nicolls on "The Formation of the British National Character." Mr. C. Carus Wilson lectured to the School on November 17 on "Volcanoes and Volcanic Action." O. Wordsworth has been elected to a major scholarship or classics at Trinity, Cambridge; F. P. Robinson has been elected to a £40 scholarship for mathematics at Pembroke, Cambridge. The Shakspeare Society has ended its session by readings of "Coriolanus" and "Much Ado about Nothing." The usual concert took place on December 18, when the chief feature was a performance of selections from "Israel in Egypt." The orchestra performed the overture to Mozart's "Figaro."

WOOLWICH POLYTECHNIC SCHOOL.—Mr. Bevis has obtained the degree of B.Sc. (Lond.), with First Class Honours in Botany. The Christmas Concert took place in the Gymnasium on Wednesday, December 13, and was very successful. The *pièce de résistance* was an operetta entitled "Queen Mab and the Kobolds," which formed the first part of the programme. All the parts were taken by girls, whose singing, acting, pretty dresses, and graceful dancing commended themselves to a crowded audience. The second part of the programme was more miscellaneous. Among its special features were the chorus singing of the boys, the recitations of Miss Adams and Mr. Young, and the violin playing of Mr. Wildfeld. School closed for the holidays on December 15, when the Rector of Woolwich presented the summer holiday prizes to the winners.

WORCESTER HIGH SCHOOL FOR GIRLS.—The senior mathematical mistress, Miss A. A. Woodall, has been appointed Head Mistress of Milton Mount School, Gravesend. Speech Day was November 20: the certificates and prizes were distributed by the Bishop of Worcester (Dr. Yeatman-Briggs), who, in his speech, dwelt on the importance of ideals and of a religious basis in education. The Head Mistress in her speech drew attention to the new training department which has this year been opened in the school.

REVIEWS AND MINOR NOTICES.

"Crown Theological Library."—*The Child and Religion.* Eleven Essays by various writers. Edited by THOMAS STEPHENS, B.A. (6s. Williams & Norgate.)

This collection of essays is one that ought to prove of interest not only to professed teachers and educationalists, but also to the wider circle of parents. The essays deal with the following subjects, and are by the following writers:—(1) *The Child and Heredity*, by Prof. Henry James; (2) *The Child and its Environment*, by C. F. G. Masterman; (3) *The Child's Capacity for Religion*, by Dr. George Trumbull Ladd, of Yale; (4) *The Child and Sin*, by F. R. Tennant; (5) *The Conversion of Children*, by Dr. Cynddylan Jones; (6) *The Religious Training of the Child in the Church of England*, by Canon Hensley Henson; (7) *The Religious Training of Children in the Free Churches*, by Dr. Robert F. Horton; (8) *Baptists and the Children*, by Dr. George Hill, Nottingham; (9) *New Church Training (Swedenborgian)*, by J. J. Thornton; (10) *The Religious Training of Children among the Jews*, by Rabbi A. A. Green; (11) *The Child and the Bible*, by Dr. Joseph Agar Beet.

The problems which are raised in these essays, and to which more or less tentative answers are given, are numerous. Only one or two can be noted here. In the first essay—which seems to us the most valuable in the book—Prof. Jones points out that the varying stress that is laid, now on heredity, now on environment, as if the two were opposed and radically inharmonious, involves hopeless confusion, inconsistency, and impotence in dealing with educational and social problems.

I should like [he says] to question this assumption of the opposition of heredity and environment, or of their alternate sway over human life. The fact is that life in all its activities implies their *interaction*. The child is never under the dominion of one of them to the exclusion of the other; for they signify nothing so long as they are held apart. Except for the environment, his powers would remain potential only, and mere potentiality, whatever it means, is not actuality; and similarly, on the other hand, the mere environment has no significance, and its influence is not real where there are no powers that can utilize it. The entire meaning and power of both lies in their *relation*. They are what they are through mutual implication. (Page 64 f.)

This way of regarding the matter, taken with the writer's view of evolution—which means "what idealistic philosophers have maintained, that it is, namely, a process of levelling upwards, and not of levelling downwards. It does not strip man of his powers, but endows the lower animal creation with the promise of them, asserting that they exist from the first potentially"—and with the acceptance of Weismann's theory of the denial of the transmission of acquired characteristics, leads to the hopeful conclusion that "a community should spend its care upon bringing what is best within it to bear upon the opening powers of its children, even taking upon itself the responsibilities and privileges of parentage when the natural parent by his own vice and folly has abdicated them." As the author remarks, "the only good education of the child comes, as Pythagoras said, 'by making him the citizen of a people with good institutions.'"

The writer of the second essay calls attention to the effect of the changed environment produced by the development of modern city life on the problem of child-education:—

For the first time in history the child is being reared in the perpetual contact of a crowd. Its playground is the crowded street, its home the crowded tenement, its school the gigantic human hive in which it is packed with 900 or 1,600 creatures similar to itself. This is the human element making for unrest. Unrest, resulting in profound mental changes, is to prove the distinguishing mark of the new city race. The result, as all familiar with our town children know, is a forced and premature development. (Page 105.)

The price paid for this in later life is vividly stated by the writer. He also points to "the disintegrating force" which this environment "is continually beating down upon the family life."

The other essays in the volume are mainly concerned with theological questions, viewed especially in relation to the child. Mr. Tennant, in his paper on "The Child and Sin," naturally re-states his well known evolutionary theory of evil in this connexion. Canon Hensley Henson's essay is a notable one, especially for the suggestion that the Free Church Catechism

should be accepted as a standard of religious teaching in all publicly supported primary schools. Apart from this rather startling proposal, the essay is an able and stimulating defence of definite religious teaching in the schools, and will be read with pleasure and profit even by those who differ from its conclusions. Hardly as much can be said of Dr. Horton's discussion ("The Religious Training of Children in the Free Churches"). His criticism of the "Catholic" method seems to rest upon a somewhat insecure foundation. His criticisms would equally apply to the Free Church Catechism "for use in home and school."

Of the last three essays Mr. Thornton's on the Swedenborgian system is rather curious than practically valuable, and Rabbi Green's on the Jewish method is disappointingly slight. Dr. Agar Beet's on "The Child and the Bible" is also disappointing. It is a sort of mild testimonial to the "beauties of the Bible" in paraphrase. Here there was surely room and opportunity for a sketch of a rational method of teaching the Bible to children, which is so badly needed.

The volume, as the editor explains, is in the nature of a pioneer work. Its voices are, to some extent, discordant. But it contains some really valuable discussions, many admirable and luminous suggestions, and is alive with interest throughout.

Other Memories, Old and New. By JOHN KERR, LL.D.

(3s. 6d. Blackwood. 1904.)

Encouraged by the reception accorded to his "Memories Grave and Gay," Dr. John Kerr has devoted a month of evenings to putting into shape another collection of reminiscences, to which he gives the title of "Other Memories, Old and New." Anecdote interspersed with moralizing may be taken as a general description of the matter of the volume. The manner is easy, genial, mellow, perhaps a little "chestnutty"; but that is only what can be expected from memories confessedly old, at least in part. Comparing the beginning with the end of the nineteenth century, Dr. Kerr finds few signs of change more "outstanding"—and outstanding rather for evil than for good—than the enormously wider distribution of newspapers and the constantly increasing production of cheap literature, of which a large proportion is meant merely to kill time, but which, in effect, kills not time only, but "all desire for true literary culture." Which, obviously, is at once a truism and a truth. He remembers the day when a pound of loaf sugar cost 8d. or 10d., when regulation meal-times were one o'clock for dinner, five or six for tea, and nine for supper. And he looks back with affection on the simpler social habits which made the nine o'clock supper the opportunity for "homely rather than ceremonial" hospitality. He remembers also the characteristic methods and manners of the various professors through whose hands he passed in the course of his school and college training, and records typical cases of their dealing with pupils. Noblest among them all stands out the Edinburgh Professor of Biblical Criticism, Dr. Robert Lee—hasty-tempered, but fair—who commanded a pupil to "sit down" for having dared to maintain he was right "after being twice told he was wrong," and next day, when the class met again, asked him to stand up and receive his rebuker's apology:

"I insulted you yesterday publicly in the presence of your fellow-students, and I now as publicly apologize for my rudeness. You were right, and I was wrong. Please come into my room at the end of the hour and let us have a talk." Dr. Lee was thenceforward M.'s hearty friend.

One likes the story of how Dr. Kerr got a mastership in Bury St. Edmunds Grammar School. A friend of Cambridge days, who had got into idle habits and debt serious enough to lead to his being forbidden to take his degree, had wanted the post and believed it could be got in spite of the lacking degree, if some fellow-student of character would write a well considered letter of explanation and apology to the Head Master. Kerr wrote the letter without, however, expecting that any good would come of it. And, in fact, it did not procure the appointment for his friend. But, a year later, when the whole thing was forgotten by him, Kerr received a letter from the same Head Master, offering to himself a mastership at Bury St. Edmunds, and alleging, as his reason for doing so, the good impression made on him by the letter written on behalf of his friend. In less than another year Kerr was appointed Inspector of Schools in Scotland.

From the store of anecdotes bearing on educational phases

we select two, both belonging to the days before the Bill of 1872, a point in chronology on which the writer lays much stress. We are not sure, however, that the defect of intelligence they both illustrate is entirely a thing of the past. The first story is of religious (?) teaching in the old days:

A rapid conversion to orthodoxy is recorded of an old teacher who, in examining his pupils on their knowledge of a very simple manual—"The Mother's Catechism"—asked a boy if God had a beginning. "No," said the boy. "Will He have an end?" "Yes," he replied. This was followed instantly by a buffet on the side of the head. "Will He have an end, noo?" "No," said the boy, and the master was satisfied.

The other story may help some people to understand how it is that so many men and women who have "passed the standards" yet possess so little power of reading with understanding.

The Revised Code of Education which was introduced in 1862 made provision for nothing but reading, writing, and arithmetic in their barest forms. . . . Though its application to Scotland was only tentative and formal, it had unquestionably a deadening effect on intelligence in the hands of a mechanical teacher. I had many proofs of this during the ten years of its existence. Though explanation of the reading lesson was not demanded, it was not neglected in schools of average efficiency. In some it was neglected. The following is an example:—The lesson was one giving an account of a clever dog which had rescued a child from drowning. It was said that the dog was caressed by the parents of the child. I asked what was the meaning of "caressed," and the answer came at once, "Made of fond led." On referring to the list of words at the top of the lesson, I found the explanation given was, "Made of, fond-led." Wishing to find out if any child in the class had got a glimmering of the meaning, I went from top to bottom, and got from every child nothing but "Made of fond led," pronounced as four words, to which they attached no meaning whatever. The teacher was surprised that I was not satisfied with the intelligence of the teaching.

The book closes appropriately with a chapter on "Varying Views of Age" and a modest hope that it will be found readable enough to beguile an idle hour—a hope that surely finds fulfilment.

The Educative Process. By WILLIAM CHANDLER BAGLEY.
(5s. net. Macmillan.)

The view suggested by this writer is that the educative process may be discussed apart from the consideration of the ultimate end of education. "Whatever the ultimate end of education may be, the acquisition, the retention, the organization and the application of experiences are subject to certain uniform laws." The author suggests that the methods underlying the aim of education in a particular school and the aim of Fagin in his training of Oliver Twist will be based on "identical principles." Of course, the aims are different; but the suggestion is that we can in educational study deal with method apart from aims, and Mr. Bagley's purpose is to present general principles valid in any particular case. And yet the writer of this book at once sets himself to consider proposed ethical ends, and apparently accepts the following position:—"The school must fit the individual not for the life of the past, nor for a remote Utopian future, but for the immediate future, the requirements of which can be predicted with reasonable certainty. If it fails to do this, the school cannot justify its existence."

The fundamental question in pedagogy is the relation of experience to education. Our author holds that "education in its broadest sense means just this: acquiring experiences that will serve to modify inherited adjustments." What is the place of the school? Clearly, to control environmental forces operating on the child. School studies represent different aspects of experience by supplying the environment. Accordingly, what is wanted is an analysis of experience in its relation to education. First we have the inquiry into the acquisition of experience through apperception. Here the needs of the organism are seen to determine apperception. Next follows the study of the "functioning of experience." This involves the understanding of habit, judgment, and formation of concepts. Then we must consider the organization of experiences through conceptual judgments and the factors of efficient recall, especially as modified by periods of development in the individual. On the more practical side follows the selection of experiences for educational purposes, and an investigation of educational values. Finally, we are led to the process of the "transmission

(Continued on page 46.)

MACMILLAN & CO.'S LIST.

NEW EDITION. WITH NOTES BY THE AUTHOR.

IN MEMORIAM.

By ALFRED LORD TENNYSON. With Notes by the Author. Edited by HALLAM LORD TENNYSON. Fcap. 8vo, 5s. net.

A NEW SERIES. FIRST VOLUME NOW READY.

SIEPMANN'S CLASSICAL FRENCH TEXTS.

LES CARACTÈRES OU LES MŒURS DE CE SIÈCLE. Par LA BRUYÈRE. Adapted and Edited by EUGÈNE PELLISSIER. Globe 8vo, 2s. 6d.

FOURTH EDITION, REVISED AND ENLARGED. NOW READY.

ELEMENTARY TRIGONOMETRY.

By H. S. HALL and S. R. KNIGHT. Globe 8vo, 4s. 6d.

This edition is adapted to all the modern requirements. In particular, it contains Graphs of the Trigonometrical Functions, and Examples of their use. A special feature is the large number of Examples in illustration of Four-figure Tables. Tables of Logarithms, Antilogarithms, Natural and Logarithmic Functions (specially compiled) are given at the end of the book. *.* The old edition is still on sale.

A New Arithmetic by S. L. Loney and L. W. Grenville.

A SHILLING ARITHMETIC.

By S. L. LONEY, M.A., and L. W. GRENVILLE, M.A. 1s. With Answers. 1s. 6d. [Shortly.]

THE BEGINNER'S SET OF MATHEMATICAL INSTRUMENTS.

Bow Compass; Dividers; Two Nickel Set Squares, 45° (4 inches) and 60° (5 inches); Nickel Protractor; 6 inch Rule, double-bevelled, inches and millimetres; and a Lead Pencil, in metal Pocket-Case. 1s. 6d. net.

ELEMENTS OF QUANTITATIVE ANALYSIS.

By G. H. BAILEY, D.Sc., Ph.D. Globe 8vo, 4s. 6d.

A MANUAL OF CARPENTRY AND JOINERY.

By J. W. RILEY. With 923 Illustrations. Crown 8vo. 6s. net.

MACMILLAN'S CLASSICAL SERIES.—NEW VOLUME.

THUCYDIDES. Book I.

Edited by E. C. MARCHANT, M.A., Fellow and Tutor of Lincoln College, Oxford. Fcap. 8vo, 3s. 6d.

New Regulations for Secondary Schools.

GEOGRAPHY.

JUST PUBLISHED. Globe 8vo, 3s. 6d.

AN INTRODUCTION TO PRACTICAL GEOGRAPHY.

By A. T. SIMMONS, B.Sc., Associate of the Royal College of Science, London, and HUGH RICHARDSON, M.A., Senior Science Master of Bootham School, York.

. The Exercises in this book include the practical work suggested in the New Regulations issued by the Board of Education.

PHYSIOGRAPHY. By T. H. HUXLEY. Revised by Prof. R. A. GREGORY. 4s. 6d.

GEOGRAPHY OF EUROPE. By J. SIME, M.A. 2s.

GEOGRAPHY OF AFRICA. By EDWARD HEAWOOD, M.A. 2s. 6d.

ELEMENTARY GEOGRAPHY OF INDIA, BURMA, AND CEYLON. By H. F. BLANFORD. 2s. 6d.

MAN AND HIS MARKETS. By Prof. L. W. LYDE, M.A. 2s.

ELEMENTARY GEOGRAPHY OF THE BRITISH COLONIES. By G. M. DAWSON, LL.D., and A. SUTHERLAND, M.A. 2s.

COMMERCIAL GEOGRAPHY. By Prof. E. C. K. GONNER, M.A. 3s.

ENGLISH LITERATURE.

General Editor: J. H. FOWLER, M.A. Globe 8vo, limp cloth.

NOW READY.

BALLADS OLD AND NEW. Selected and Edited for School use, with Glossary, &c., by H. B. COTTERILL, M.A. In Two Parts. 1s. each.

THE TALE OF TROY. Retold in English by AUBREY STEWART, M.A. Edited for Schools, with Introduction, &c., by T. S. PEPPIN, M.A. Illustrated. 1s. 6d.

THE HEROES OF ASGARD. Tales from Scandinavian Mythology. By A. and E. KEARY. Adapted for the use of Schools, with New Introduction, Glossaries, &c., by M. R. EARLE. With Illustrations. 1s. 6d.

TALES FROM SPENSER. Chosen from "The Faerie Queene" by SOPHIA H. MACLEHOSE. School Edition, with Introduction, Notes, &c. 1s. 3d.

LONGFELLOW'S SHORTER POEMS. Selected and Edited, with Notes, Glossary, &c., by H. B. COTTERILL, M.A. 1s.

EDUCATIONAL NEWS.—"The series is well printed on good unglazed paper, tastefully bound in pale green cloth, and can be cordially recommended."

SCOTT'S THE TALISMAN. Abridged and Edited, with Introduction, Notes, Glossary, &c., by F. JOHNSON. 1s. 6d.

SCOTT'S IVANHOE. Abridged and Edited, with Introduction, Notes, Glossary, &c., by FANNY JOHNSON. 1s. 6d.

A BOOK OF GOLDEN DEEDS. Of all Times and all Lands. By CHARLOTTE M. YONGE. A Selection, Edited, with Introduction, Notes, Glossary, &c., by HELEN H. WATSON. Part I. 1s.

MACAULAY'S ESSAY ON ADDISON. Edited, with Notes, Glossary, Index of Proper Names, &c., by R. F. WINCH, M.A. 1s.

MACAULAY'S ESSAY ON CLIVE. With Introduction, Notes, &c., by H. M. BULLER, M.A. 1s.

MACAULAY'S ESSAY ON SIR WILLIAM TEMPLE. With Introduction, Notes, &c., by G. A. TWENTYMAN, B.A. 1s.

ESSAYS FROM ADDISON. Selected and Edited, with Introduction, Notes, Glossary, &c., by J. H. FOWLER, M.A. 1s.

of experience," and the *technique* of teaching, and the hygiene of the educative process.

The value of the book consists in its appreciation of the importance of a many-sided theory on which to build a many-sided subject. Ethics, psychology, methodology, sociology, hygiene are involved, and, provided the reader has an insight into these subjects, this book will be found very suggestive and valuable. The writer has spent much thought over the book, and is thoroughly up to date in educational literature. His theory is "alive"; it is closely in touch with sociological developments. We want more of his spirit in English educational writing. Moreover, the analysis of the educative process as such is an excellent idea. Whether it can be done effectively without appeal to metaphysics is a difficult question. Mr. Bagley's attempt to regard educational theory as a system of *axiomata media* without reference to final ends is certainly not successful; for he constantly himself introduces all kinds of educational ends. How, then, can the reader forbear to follow his lead? The book is, however, well informed, on new lines, and should be studied by the increasing body of English thinkers and students of educational theory.

On Ten Plays of Shakespeare. By STOPFORD A. BROOKE.
(7s. 6d. net. Constable.)

No book, after the Bible, has been so much commented as the plays of Shakespeare, and as we put down this last and most attractive exposition we recall Coleridge's happy epithet "myriad-minded." It is natural to compare Mr. Brooke with his immediate predecessor in the field, Prof. Bradley; but it can be only by way of contrast. There is only one play in common in the two volumes, and the treatment is wholly independent and different in principle. Prof. Bradley is concerned mainly with the plays as plays, the tragic construction, the weaving, entanglement, and evolution of the plot, the appositeness of each scene, the significance of each speech—we had almost said, of each phrase. It is a marvel of subtle analysis. Mr. Brooke treats the plays merely as poetry. He, too, has steeped himself in his author: but he is content to reproduce the impressions that the plays have left on a sensitive mind in broad outlines, without any minute criticism or fine discrimination. He is the Extension lecturer: Prof. Bradley is the University professor. In saying this we are far from disparaging the work. As Dr. A. W. Ward has well remarked, the utmost that any one student can hope to achieve in the study of a genius like Shakespeare is to draw nearer to it from those points of view that are open to him; and Mr. Brooke, by his running commentary, by his paraphrases—which give in prose, as far as that is possible, the poetry of Shakespeare—has undoubtedly helped many of his hearers to read their Shakespeare with opened eyes. Mr. Brooke is not only an interpreter of poetry, but a psychologist. Many of his character sketches are admirably touched, sympathetic, and genial, though the language is rather fitted for the chair than the study—over-ornate, and sometimes bordering on preciosity. Thus, of Ariel:

Though at many points the conception of Ariel is not apart from that which physical science has concerning the finest forms of matter, a scientific correlation does not suit his spiritual nature. . . . As the ethereal forms of matter vibrate between the molecules of the earth and water, so Ariel can live in the seas, &c.

This is neither good physics nor good criticism. Let us end with a sample of Mr. Brooke at his best, taken from the same play. In reference to Prospero's parting speech, "These our actors," &c., he warns us that it is in character, and only a phase of that character.

But Prospero—and, indeed, Shakespeare, if we mix him up with Prospero—was far too sane and too experienced to imagine that life was illusion, or that we were the stuff of dreams, or that sleep ended our little life. No one should quote the passage as an explanation of Shakespeare's theory of life, only as far as "rounded with a sleep." The rest is Prospero's (or Shakespeare's) indication that his picture of the story of humanity arose from the passing weakness of a vexed and weary brain. The philosophy of illusion is the philosophy of tired people—

"Sir, I am vexed;

Bear with my weakness; my old brain is troubled."

After all, he need not have taken the trouble to explain to Ferdinand and Miranda that they were only alive in a dream. The lovers knew better.

Essais de Littérature et de Politique. Par CHARLES SAROLEA.
(Hachette.)

This is a remarkable volume in more ways than one. Not only does M. Sarolea show a knowledge of current English thought and politics—this distinction he shares with several foreign critics; but he proves that he can write as good English as French—a far rarer distinction. One of the fourteen essays is in English, and the English is faultless.

Most of the matter lies beyond our province, and we can only indicate the chief subjects treated: Froude as an historian, Saint-Simon and Mirabeau, colonies old and new, Mr. Chamberlain and Mr. A. J. Balfour. There is, besides, one pedagogic essay—on the Indian Civil Service Examination. This is held up as a model for foreigners, especially Frenchmen, and as encouraging high intellectual capacity in all branches of knowledge. We at home are apt to regard the reverse of the medal, to point out how few are the candidates who pass in direct from the University, how marks can be gained and places attained by cramming Roman Law or Political Economy for a fortnight before the examination.

In the study of Froude, which is the longest essay in the book, the paradox is elaborated that partiality is a virtue in the historian—a favourite one with the essayist; for it is twice repeated. In one sense this is, of course, a truism. The style is the man, and the man without preferences is the "god or beast" of Aristotle. On the other hand, we refuse the title of historian to a man who falsifies documents and deliberately ignores or conceals facts which do not square with his hypothesis. To suggest that Froude's "Life of Carlyle" will outlive Carlyle's writings seems to us the height of extravagance.

The essays are undated; but it is clear that they were composed at various times. The character of Mr. Balfour as a statesman—"esprit positif, volonté tenace, convictions fermes, résolutions énergiques; en un mot, homme de foi et de certitude"—reads to-day like mocking irony.

We think, too, that, in the light of a recent trial and of the just published Report, M. Sarolea would be inclined to modify his laudation of King Leopold as a high-souled monarch, and of his countrymen as the disinterested pioneers of civilization.

It is a poor excuse for systematized massacres and mutilations in the Congo in the twentieth century that the Belgians are no worse than Cortez was in Mexico or Warren Hastings in India; and whether or not "the English drove the Boers out of their country with brutality" does not affect the moral question. Lord Rosebery is so near a neighbour of M. Sarolea that he should not have given him two *s's*, as he does *passim*. "Sceptic" is not derived from *σκηπτειν* (*sic*), and Britannia is generally spelt with two *n's*.

"Arnold's French Texts."—Edited, with Notes and Vocabulary, by MAURICE A. GEROTHWOHL. (1) *Le Forcat; ou, A tout Pêché Miséricorde.* Proverb in two acts. By Madame DE SÉCUR. (2) *Aventures de Tom Pouce.* By P. J. STAHL. (3) *Histoire de la Mère Michel et de son Chat.* By Comte E. DE LA BÉDOILLÈRE. (4) *La Souris blanche et Les petits Souliers.* By HÉGÉSIPPE MOREAU. (5) *La Vie de Polichinelle et ses nombreuses Aventures.* By OCTAVE FEUILLET. (6) *Le Bon Père.* Comedy in one act. By FLORIAN. (7) *Monsieur Tringle.* By CHAMPELÉURY. (8) *Aventures du Chevalier de Grammont.* By Chevalier D'HAMILTON. (9) *Histoire d'un Pointer écossais.* By ALEXANDRE DUMAS père. (10) *Trafalgar.* By JOSEPH MÉRY. (11) *Marie Antoinette.* By EDMOND and JULES DE GONCOURT. (6d. each.)

In a previous notice we have indicated the general plan of this series of texts. The announcement that they are graduated in difficulty is not adhered to—"Tom Pouce" might serve as a first French Reader: "Marie Antoinette" is hard enough for a Fifth Form.

(1) Is a pretty little play—"Les Misérables," one might call it, adapted for children. "Nous autres gendarmes" needs a note, as *do délicat*, which is not in the vocabulary, and "qu'on me t'en fasse une de farce." "Menton de galoche" is translated in the notes "long pointed chin," and *de galoche* in the vocabulary "nutcracker." Will the pupil discover for himself that *galoche* = "golosh"?

(2) Is well edited, and we have noted no omissions.

(3) Is a capital child's story. *Repartie* and *petits-enfants* are not in the vocabulary, and *aucun* should not be rendered "no."

(4) Two excellent stories, but rather hard. The notes are inadequate; a number of allusions are unexplained. The vocabulary is likewise imperfect. We miss *agonie*, *agoniser*, *décliner*, *différer*, the very words which, from their similarity to the English, are sure to be mis-translated.

(Continued on page 48.)

Messrs. J. M. DENT & CO.'S Educational Books.

WRITE FOR OUR COMPLETE EDUCATIONAL CATALOGUE.

DENT'S NEW SERIES OF MATHEMATICAL AND SCIENTIFIC TEXT-BOOKS FOR SCHOOLS.

Edited by **W. J. GREENSTREET, M.A., F.R.S.**, Head Master of Marling School, Stroud, and Editor of "The Mathematical Gazette."

PRACTICAL NATURE STUDY FOR SCHOOLS.

By **OSWALD H. LATTER, M.A.**, Senior Science Master at Charterhouse; formerly Tutor of Keble College, Oxford.

PART I. (Pupils' Book), 2s. 6d. net. PART II. (Teachers' Aid and Answers), 6s. net.

N.B.—Part II. is supplied to Recognized Teachers only.

The School Guardian says:—"We heartily commend this book to all teachers who include Nature study in their time-tables."

The School World says:—"It is impossible to speak too highly of the skill with which the questions have been framed."

The Journal of Education says:—"The questions are excellent and cannot be answered without personal observation. . . . The book is a thoroughly good one."

A FIRST BOOK OF GEOMETRY.

By **W. H. YOUNG, Sc.D.**, Senior Examiner to the Welsh Examination Board, and **Mrs. YOUNG, Ph.D.**

Crown 8vo, 1s. 6d. net.

With Three Coloured and many other Illustrative Diagrams.

The Westminster Gazette says:—"Remarkable alike for its contents, its profusion of illustrations, 'plain and coloured,' and for the price at which it is offered to the public. . . . The child does everything himself; he is not taught, he learns. The ideal which the authors have set themselves is excellent, and the book is evidently the outcome of much patient care and thought."

PRACTICAL PHYSICS.

By **F. J. TRISTRAM, M.A.** Cloth, fcap. 8vo, 1s. 6d.

Education says:—"This admirable little book approaches very near to our ideal of an elementary text-book of practical physics. . . . Fortunate, indeed, is the student who has his powers of observation and manipulative skill trained on the lines indicated in this excellent little book."

DENT'S MODERN LANGUAGE SERIES.

General Editor—**WALTER RIPPMMANN, M.A.**

NEW SHORT FRENCH READERS.

Edited by **W. OSBORNE BRIGSTOCKE.**

This is a Series of French Readers for pupils who have gone carefully through DENT'S **First French Book**, and who are now taking the **Second French Book**. They are issued at a merely nominal price, well graduated, and suitably edited.

The Second and Third Year Books contain 48 pages of clear type, bound in limp cloth, and the price is **4d. net** per volume. The Fourth Year Readers will contain Illustrations where possible, 64 pages, and the price will be **6d. net** per volume.

DENT'S SECOND YEAR FRENCH READERS.

Perrault's Tales. Vol. I.

" " Vol. II.

DENT'S THIRD YEAR FRENCH READERS.

L'Éléphant Blanc. Vol. I.

Simple Stories. Vol. II.

DENT'S FOURTH YEAR FRENCH READERS.

French History in Extracts.

Vol. I.—The XIXth Century.

Vol. II.—The Revolution.

First Volume of a NEW SERIES on the lines of DENT'S MODERN LANGUAGE SERIES.

General Editor—**WALTER RIPPMMANN, M.A.**

DENT'S FIRST LATIN BOOK. By **HAROLD W. ATKINSON, M.A.**, Head Master of the Boys' High School, Pretoria, and **J. W. E. PEARCE**, Head Master, Merton Court School, Sidcup. With 12 Coloured Illustrations by **M. E. DURHAM**. Small crown 8vo, cloth, 2s. 6d. net.

The Journal of Education says:—"Certainly an interesting, perhaps an important, book. . . . The plates, attractively coloured, are put to a sensible use. . . . The continuity at which the Reader aims is an excellent idea. . . . The authors have planned their work with intelligence and executed it with care."

The Schoolmaster says:—"A unique book. . . . It represents a wonderful stride in teaching Latin."

DENT'S WALL PICTURES for Teaching Latin. Four Coloured Pictures enlarged from the "First Latin Book." Size 30 in. by 22 in. Unmounted, 2s. net each; mounted on linen and eyeletted, 3s. net; mounted on linen and bound at edge, with rollers, 5s. net.

Romae, Sexti Domus. **Romae, Triumphus.**

Pompeii, Ostium Tabernae et Via Strata.

In Gallia, Proellum Equestre et Pedestre.

FRENCH SECTION.

Sixteenth Edition (completing 100,000 copies).

DENT'S NEW FIRST FRENCH BOOK. By **S. ALGE** and **WALTER RIPPMMANN**. Extra fcap. 8vo, 1s. 6d. net.

DENT'S GERMAN READER. By **S. ALGE** and **WALTER RIPPMMANN**. Extra fcap. 8vo, 2s. 6d. net.

Third Edition, Revised.

GERMAN DAILY LIFE. By **Dr. KRON**. Extra fcap. 8vo, 2s. 6d. net.

J. M. DENT & CO., 29 and 30 Bedford Street, London, W.C.

(5) Rather a vulgar story, which we do not recommend.

(6) A pleasant innocent little play with a conventional love plot.

(7) A farcical story in which the joke is well sustained; rather hard s regards vocabulary. *Fil d'archal* (misprinted *archat*) is "brass wire," not "iron."

(8) The adventures of a high-born blackguard written by a gentleman of the same kidney are not food for babes. In the notes there is an elaborate explanation of backgammon, but the game of *quinze* is unexplained. "*Perdant leur Latin en me le faisant apprendre*" surely calls for a note—we should not like to be called upon to translate it.

(9) One of Dumas's animal stories written with all his verve. It might have been well to note that the dog described by Dumas must have been a setter—not a pointer, and the editor is mistaken in correcting Dumas: "*faire des pointes*" is simply "to point," not "to deviate from the line"—"*faire ou pousser une pointe*." "*C'est Cartouche, &c.* : four famous highwaymen" is not an illuminative note, as the text furnishes this much information in the very next line. *Amadis, fumer* are not explained.

(10) A French Henty story which has nothing to do with the naval battle. Collingwood, on hearing a French witticism translated to him which recalls "the great English poet" (allusion not explained), reflects a while and then says with the solemnity of an Englishman: "Very buffoon! very buffoon!" So like Collingwood! "I say, you on the tartar, it is for me to call out: 'Surrender,' is a bad mistranslation: and 'it was aflame with all sorts of intoxication' is not elegant. *Glorieux, sérieux* should for reasons given above be included in the vocabulary.

(11) Is a little masterpiece, but it contains passages that would try the wits of our Prize competitors. The notes give little or no aid. Thus on the first page we have fifteen lines from the gazetteer on Versailles, but on "*sourcils froncés, ce trouble et ces premières hontes*," not a hint of help either in notes or vocabulary. "*La note de quelques sous*" does not mean "making a note concerning a few pence"; "*tribune*" is not "gallery"; "*siège*" is "box" not "seat"; "*le tiers*" is not "the third party"; "*les enfants de France*" are not "children of the heir to the throne."

In Memoriam. Annotated by the AUTHOR. (5s. net. Macmillan.) The title raises expectations which this authorized edition, valuable as it is, very partially fulfils. The editor, Hallam Lord Tennyson, who modestly suppresses himself on the title page, tells us that the notes were left by his father, partly in his own handwriting and partly dictated to the son; that the proofs were revised by Tennyson, and their publication sanctioned with a protest that "poetry is like shot silk, and every reader must find his own interpretation." We have in all twenty-five pages of notes, but half of them are interpolated notes by the editor, "in answer to numerous questions put to me by my friends." The edition, we repeat, is of value, as it combines in a convenient form all the references to "In Memoriam," including the suppressed cantos that are scattered through the "Memoir," but it throws very little fresh light on the vexed passages of the poem, and most of the comments have been anticipated in the notes and editions of Dr. Gatty, Miss Chapman, Prof. Collins, and Prof. Bradley. We cannot help wishing that the editor, instead of telling us that the *yew* is diceous, that "quicks" mean "quickest thorn," that "rathe" is the Anglo-Saxon *hreath*, "early," had set himself to answer the questions raised in Prof. Bradley's edition (on cantos lxxx.—lxxxi., for instance), to some of which the Professor himself can give only a conjectural and tentative reply. We must except the notes on cxii. ("High wisdom holds my wisdom less"), which are really illustrative, and they dispose of Prof. Collins's suggested interpretation. "High wisdom" is ironical; "glorious insufficiencies" is unaccomplished greatness such as Arthur Hallam's, and "the power and grasp of A. H. H.'s intellect and the greatness of his nature (which are not mere 'glorious insufficiencies') make me seem careless about those that have a narrower perfectness." This note we owe to Lady Tennyson. "Temperate" still seems to us an inapt epithet. We should expect the superior philosopher to twit the poet with gazing on his friend with dazzled, blinded, ravished eye. On lxxxi. we have the suggestive note: "My father told me, as far as I remember, that a note of exclamation had been omitted by accident after 'ear.'" Was it not 'a note of interrogation'? In lxxvi. the note *horned flood*: "Between two promontories," snuffs out many learned comments.

Teaching by Picture: the Pernot Method. By ALFRED PERNOT and F. E. AKEHURST. (3s. 6d. A. Owen.)

From internal evidence we conclude that this First English Book is intended for German scholars. The English is unimpeachable, but the pictures are *echt Deutsch*—spinning-wheels, flails, bare-legged mustachioed peasants, and a sportsman with his gun in a sling and a porcelain pipe.

Old Tales from Rome. By ALICE ZIMMERN. Illustrated. (Fisher Unwin.)

These are transcripts from the "Aeneid," the First Book of Livy, and the "Metamorphoses." Miss Zimmern is a good Latinist, and her free paraphrases will satisfy the scholar and yet be quite intelligible to children. And it is well that boys and girls alike, whether or no they learn Latin, should be partakers of what has been inwoven in our language and literature, the myths of Rome.

Object Lessons in Elementary Science. Stage VI. By VINCENT T. MURCHÉ. (2s. Macmillan.)

Teachers in elementary schools will find a mine of information in this book from which to extract material for object lessons in mechanics, chemistry, and physiology, and in biology so far as it is concerned with those animal and vegetable products which are of economic importance. The best method of presenting the subject of each lesson is clearly indicated, and the information appears to be uniformly trustworthy. The illustrations are numerous, and in many cases are designed as models for black-board drawings. One may, perhaps, express a doubt whether certain of the lessons in chemistry are likely to have any educational value, and, unless the teacher has some experience of chemical manipulation, certain of the experiments may easily lead to unpleasant experiences. Operations involving the use of phosphorus and potassium should not be entrusted to a novice, and we think that the danger lurking in some of the experiments should be pointed out most emphatically. We note, for example, the instruction to dry thoroughly a piece of phosphorus between filter papers, but the operator is not warned against untimely ignition; again, the teacher is told to allow his pupils to taste sulphuric acid, and no hint is given of the necessity for great dilution. It may be said that no teacher would be likely to go wrong on such points, but it must be remembered that comparatively few teachers in elementary schools have sufficient familiarity with chemical materials and manipulation to render them entirely independent of the details given in their text-book.

Blackie's "Little German Classics."—(1) *Schmid's Die Ostereier*. Edited by A. R. HOPE MONCRIEFF. (2) *Körner's Der Vetter aus Bremen*. Edited by CH. C. CLARKE. (3) *Grimm's Die zwei Brüder*. Edited by A. R. HOPE MONCRIEFF. (6d. each.)

(1) Mr. Moncrieff has made a special study of the juvenile literature of all countries, and this little story that he has unearthed of the German "Sandford and Merton," as he aptly names the Canon of Augsburg, is an excellent reader for beginners. Much improved by cutting out the moralizings.

(2) We cannot say as much for Körner's "Lustspiel." It is, to the best of our knowledge, unique as a comedy written in quatrains, and its mild sentimentality may recommend it as "specially suitable for girls."

(3) Grimm's Tales, besides their other merits, have, as the editor remarks, from the teacher's point of view, the advantage of containing a frequent recurrence of phrases and rimes reiterated in such a way as to fix themselves on the memory. The countervailing drawback of rustic phrases and popular idioms, he thinks, is sufficiently met by free translation in the notes. On this point we must be allowed to differ, and we confess that we do not understand the principle of annotation adopted in all three volumes. A pupil who needs to have *es giebt, vor vielen Jahren* explained or translated surely needs *a fortiori* to have his attention called to such idioms as *hätte behalten wollen*, der demonstrative for relative, *wann* used for *wenn*, the double accent of *einmal*—we take at random a few typical instances. A sharp boy will guess at the sense without a translation; he certainly will not observe the idiom or the irregularity without a note.

Poems of Robert Browning. Oxford Edition. (Frowde.)

The volume contains all the poems of the three volume edition of 1863 and "Pauline." It has, besides, two short poems that have not yet been included in any collected edition. Of the one published in "The Keepsake" we are tempted to quote the last stanza, so unmistakably Browning:

"Thus Kershook, the Hiram's-Hammer,
The Right-hand Temple-column,
Taught babes in grace their grammar,
And struck the simple, solemn."

Cassell's New French and English Dictionary. Newly revised by DE V. PAYEN-PAYNE. (3s. 6d.)

We highly commended M. Boiellé's new edition on its appearance some three years ago, and at the same time pointed out some serious defects in the way both of superfluities and omissions. These apparently lay beyond the province of the latest editor, who has confined himself to the correction of misprints. Accordingly there is nothing here to note except that the price has been reduced from 7s. 6d. to 3s. 6d.

"Science Ladders."—*The Story of Animals*. By MRS. ARTHUR BELL. (G. Philip.)

This might be described as the child's cyclopaedia of animals; and the main point in its favour is that it has plenty of woodcuts. Though divided into lessons, it is not suited for a lesson book. On the first page a definition of an animal is given, and the second lesson tackles protoplasm. There is no attempt to carry out the *principium* of pedagogics—from the known to the unknown.

Forty Bible Lessons and Forty Illustrative Stories. By R. M. BROWN. (3s. 6d. Allenson.)

The plan of the book is a little crude. The first chapter of Genesis is not the best food for babes, even if illustrated by blowing soap bubbles, for which elaborate directions are given. Some, however, of the illustrative stories will be a help to the infant teacher.

(Continued on page 50.)

The Cambridge Yearbook and Directory.
5s. net.

The Public Schools Yearbook for 1906.

SEVENTEENTH YEAR OF ISSUE. 2s. 6d. ; post free, 2s. 10d.

Ready in January. Greatly Enlarged. It will contain an important article on "Military Efficiency in Public and Preparatory Schools," with an Introductory Letter from Field Marshal Earl ROBERTS, V.C., K.G. The article is based on special questions drawn up for the Editor of the "Public Schools Yearbook" by Earl ROBERTS.

Revised General List of Preparatory Schools, rearranged in geographical order.

Special Articles : "HOW TO BECOME A BARRISTER OR SOLICITOR" and "HOW TO ENTER HOLY ORDERS."

Parallel Grammar Series.

Edited by Prof. E. A. SONNENSCHNEIN, M.A. (Oxon.), Dean of the Faculty of Arts, Birmingham University.

Uniformity of Terminology and **Uniformity of Classification** are the distinguishing marks of this Series ; all the Grammars are constructed on the same plan, and the same terminology is used to describe identical grammatical features in different languages.

Latin, English, Spanish, Dano-Norwegian, Welsh, Greek, French, and German.

16-page Prospectus free. Keys to the Latin and German Readers and Writers may be had by Teachers direct from the Publishers.

PRO PATRIA.

A Latin Story Book. By Prof. E. A. SONNENSCHNEIN, D.Litt. (Oxon.), M.A. Being a Continuation of "Ora Maritima," and carrying the pupil to the end of the Regular Accidence, including all Regular Verbs. Crown 8vo, cloth, illustrated, 2s. 6d.

SURE STEPS TO INTELLIGENT FRENCH.

By H. R. BEASLEY, late Head Master of Hornsey Grammar School. Crown 8vo, 1s.

"An endeavour by a headmaster of long experience to break the dead English method of teaching a language by its grammar alone."—*Notts Guardian*.
"The book will be found useful."—*Glasgow Herald*.

TEKEL :

A STUDY OF THE EDUCATIONAL PROBLEMS OF THE DAY.

By FRANK J. ADKINS, M.A. Crown 8vo, 3s. 6d.

"The book will be found well worthy of perusal by the special class for whom it is intended."—*Scotsman*.
"Contains much useful matter."—*Speaker*.

ENTRANCE SCHOLARSHIP QUESTIONS

for the chief Public Schools and H.M.S. "Britannia."

With Solutions and Hints by E. J. LLOYD, B.A., Head Master of Harrow House School, Bognor.

Crown 8vo, cloth, 5s. net.

Northern Trails. By WILLIAM J. LONG; illustrated by CHARLES COPELAND. (7s. 6d. Ginn.)

This time Mr. Long leads us to the moors and mountains, the rapids and salmon rivers of Labrador and Newfoundland on the trail of Wayeases the white wolf; Waptonk, the wild goose; Pequam, the fisher; Matwoc, the Polar bear, and a score of their co-mates and congeners. The book has a fascination of its own no less potent than that of the "Jungle Book," but the genius of Mr. Long and that of Mr. Kipling are miles asunder. Mr. Kipling, with his intuitive perception of local colour, has caught the main features of the Indian landscape, and has then given free rein to his imagination in portraying with this background its denizens, a modern bestiary. Mr. Long is a born naturalist. He loves the beasts he hunts, or more generally is content simply to observe; he has the patience of the Brothers Kearsley in tracking them; and his pen is a finer and more expressive instrument than any camera. His observation as to how salmon get up waterfalls too high to leap is new to us, and we have never seen it even hinted at in any book or article on salmon fishing that we have come across. In his illustrator Mr. Long has found a kindred spirit.

Thackeray's Esmond. With an Introduction by AUSTIN DOBSON and Illustrations by HUGH THOMSON. (6s. Macmillan.)

No living critic has in an equal degree with Mr. Dobson the art of telling us briefly and pointedly what we want to know of a book or an author—in this instance why and how "Esmond" was written, what impression it produced at the time, what are the many imaginary and the few real flaws in the most perfect, if not the greatest, of historical novels, and Mr. Hugh Thomson has furnished quite a gallery of Beatrices.

A Naturalist's Holiday: Idle Hours on the Cornish Coast. By EDWARD STEP. (3s. 6d. Nelson.)

We are not too old to remember the zest that the gift of a copy of Kingsley's "Glaucus" added to a seaside holiday. Mr. Step's book has thrilling accounts of catches of conger and mackerel that will fire the imagination of the young sea-fisherman, and at the same time it tells of the life history of anemones, sea spiders, hermit crabs, algae, and all the common objects of the seashore in a way that will excite the young collector, who, by help of the numerous illustrations, will have no difficulty in identifying all the common sorts of marine plants and animals.

Trois Contes des Fées. Par Mme. LE PRINCE DE BEAUMONT. Edited by W. G. HARTOG. (1s. Rivingtons.)

The fairy tales are worked on the strictest new method—notes in French, with questions, grammar, and composition founded on the text. The plan is well carried out. The only suggestion we can make is the addition of an English-French vocabulary. Without this the "Traduire en français" will prove hopelessly difficult. Thus in the first exercise the pupil will search in vain for the French of "prevent."

Wordsworth's Literary Criticisms. Edited, with an Introduction, by NOWELL C. SMITH. (2s. 6d. net. Frowde.)

We have characterized Wordsworth's Anthology as an interesting curiosity. His prose criticisms are a document that no serious student of literature can afford to neglect. Besides the Prefaces to "Lyrical Ballads," "The Excursion," and "Poems," we have the three "Essays on Epitaphs," and the Letters (Epistles would be a fitter name) to Dyer and other friends. Mr. Nowell Smith contributes a just appreciation of Wordsworth as a prose writer, and on the much-vexed canon of the Preface to "Lyrical Ballads" he enters a caveat neglected by most of the critics. The canon is laid down *ad hoc* of what Wordsworth termed his experiment, and not as of universal application. We should have welcomed a few annotations. What, for instance, can Wordsworth have meant by "the first canto" of "Wilhelm Meister," and how did Goethe therein "wantonly outrage the sympathies of humanity"?

Five Famous French Women. By Mrs. HENRY FAWCETT. (6s. Cassell.)

"Famous Women," four at least out of the five, correspond to Brantôme's *grandes dames*—Louise of Savoy, Margaret (Queen of Navarre, Jeanne d'Albret, and Renée of France)—and the fifth is Joan of Arc. Mrs. Fawcett lays no claim to original research, and the list of authorities consulted is mainly English. But she writes with clearness and vigour and groups around her heroines a momentous chapter of French history—the struggle of Catholicism and Protestantism. Joan of Arc is an excrescence—a purple patch sewn on to a web of even texture. To Renée bare justice is done. Not only did she attract learning to her Court, but she was herself a highly cultured woman—something more than a theologian and a dabbler in astrology.

Elementary Steam Engineering. By H. W. METCALFE. (7s. 6d. Longmans.)

This book is intended to introduce young students to the principles and many of the details to be found in naval machinery without assuming any previous scientific knowledge. The author has taken extraordinary pains to carry his readers along slowly, making each step clear and missing none. A special feature is the series of cuts illustrating the use of squared paper for hand sketching.

(Continued on page 52a)

MR. EDWARD ARNOLD'S LIST.

ENGLISH HISTORIES

By C. W. OMAN, M.A., Chichele Professor of Modern History at Oxford.

A HISTORY OF ENGLAND. By C. W. OMAN, M.A. Fully furnished with Maps and Genealogical Tables. 760 pages. Ninth and Enlarged Edition (to end of South African War). Crown 8vo, cloth, 5s.

Special Editions, each volume containing a separate Index.

In Two Parts, 3s. each: Part I., from the Earliest Time to 1603

from 1603 to 1902

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.

Division III., 1688 to 1902, 2s. 6d.

* In ordering please state the period required, to avoid confusion.

ENGLAND IN THE NINETEENTH CENTURY. By C. W. OMAN, M.A., Author of "A History of England" &c. With Maps and Appendices. Revised and Enlarged Edition. One volume, crown 8vo, 3s. 6d.

A JUNIOR HISTORY OF ENGLAND. From the Earliest Times to the Death of Queen Victoria. By C. W. OMAN, M.A., and MARV OMAN. With Maps. Cloth, 2s.

LINGUA MATERNA.

By R. WILSON, B.A., Author of "A First Course in English Analysis and Grammar," &c. Crown 8vo, 3s. 6d. Intended for teachers who wish to keep themselves abreast of what has been aptly called "The New English Movement."

THE LAWS OF HEALTH.

By DAVID NABARRO, M.D., B.Sc., D.P.H., Assistant Professor of Pathology and Bacteriology at University College, London; Scientific Assistant in Pathology at the University of London. 192 pages. Crown 8vo. Illustrated. Cloth, 1s. 6d.

ARNOLD'S ENGLISH TEXTS.

With a view to meeting the requirements of Teachers who, with an Examination in view, prefer to place a plain text in the hands of their pupils, Mr. EDWARD ARNOLD has now in preparation a series of texts of English Classics to which nothing has been added but a small Glossary of Archaic or Unusual Words. The first three Volumes, from *Arnold's School Shakespeare*, will be issued at once. In paper covers, 6d. each; or cloth, 8d. I. *Macbeth*. II. *Henry V*. III. *The Tempest*.

THE ARNOLD PROSE BOOKS.

A New Series of Representative Selections from leading Prose Writers, each book confined to one author. A few explanatory footnotes have been added. 24 books, each 48 pages. Paper 2d.; cloth, 4d.

THE LAUREATE POETRY BOOKS.

An entirely New Series of Selections from the best Poetry, in 34 books. Each book 48 pages. Paper 2d.; cloth, 4d.

THE HOME AND ABROAD ATLAS.

24 PAGES. SIZE 9 INCHES BY 7 INCHES.

ARNOLD'S LATIN TEXTS.

General Editor, A. EVAN BERNAYS, M.A., Assistant Master at the City of London School. The object of the series is to supply short texts, adapted for lower forms, sufficient to provide one term's work. Each volume consists of a short introduction, text, and vocabulary. 54 pages. Cloth limp, 8d. each.

HORACE.—Odes. Book I. By L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School.

OVID.—Selections. By GEORGE YELD, M.A.

OVID IN EXILE.—Selections from the "Tristia." By L. D. WAINWRIGHT, M.A.

CORNELIUS NEPOS.—Select Lives. By L. D. WAINWRIGHT, M.A.

VERGIL.—Select Eclogues. By J. C. STOBART, M.A., Assistant Master at Merchant Taylors' School.

VERGIL.—Selections from the Georgics. By J. C. STOBART, M.A.

PHÆDRUS.—Select Fables. By Mrs. BROCK, formerly Assistant Mistress at the Ladies' College, Cheltenham.

TIBULLUS.—Selections. By F. J. DOBSON, B.A., Lecturer at Birmingham University.

CÆSAR IN BRITAIN. By F. J. DOBSON, B.A.

CICERO.—In Catilinam, I. and II. By L. D. WAINWRIGHT, M.A.

CICERO.—Pro Archia. By Mrs. BROCK.

LIVY.—Selections. By R. M. HENRY, M.A., Classical Master at the Royal Academical Institution, Belfast.

THE "GUIDE"

RURAL CALENDAR.

SECOND EDITION. Revised and much Enlarged.

By ALFRED J. EWART, D.Sc., Ph.D., F.L.S.,

Lecturer on Botany in the Birmingham University.

Such a book will be found an indispensable *vade mecum* for country rambles. It gives for each month—**Wild Flowers** which may be expected to come into bloom, with places where they are likely to be found, arranged according to colour, &c., so as to make recognition easy.—**Trees and Shrubs**, with particulars of blooming, coming into leaf, &c.—**Birds**: Song Birds, Migrants arriving or departing. List of Common Birds, building and breeding, with places where nests are built.—**Gardening and Farming Operations**.—There is also a **Complete and Simple Key** to the recognition of the Common Wild Flowers of this country, printed separately from the Monthly Calendar, and an **Index** to all the names in the book. Price 1s. net.

AN ENGLISH HISTORY NOTE BOOK. Second and Revised Edition. By M. A. ROLLESTON (First Class Historical Tripos, 1886), with Introduction by the Rev. T. W. SHARPE, C.B., Principal of Queen's College, London, with Appendices containing Summaries of the Histories of (1) Ireland, (2) Scotland, (3) Wales, (4) Great Britain, (5) India, (6) The Army, (7) The Navy, (8) The Church, (9) The Constitution, (10) Relations of England to France, with Glossary, Index, Bibliography, &c. 3s.

ALGEBRAICAL FACTORS. By H. R. BIRCH. Contains (a) Rules for resolution of Algebraical Expressions into Factors, (b) the application of the Rules to Algebra, Arithmetic, Geometry, and Mensuration. Over 200 carefully selected illustrative Examples *fully worked out*. The Exercises are numerous and well graduated. Miscellaneous Exercises comprising Questions set at various Examinations are also included. 2s. 6d.

THE "GUIDE" NATURE DRAWING CARDS. Set I. Wild Flowers. Set II. *nearly ready*. Beautifully coloured copies, and yet simple enough to allow of successful imitation. Sections of Flowers and simple Designs are also given. On the backs of the Cards are Notes on the Flowers by A. J. EWART, D.Sc., which afford a valuable opportunity of correlating Drawing with Nature Study. 2s. per packet net.

THE "GUIDE" SERIES BRUSHWORK DRAWING. Containing 48 beautifully coloured Plates, mainly on Flower Forms, together with minute directions to the teacher on the method of working, the construction of the designs, and the colouring. Price 6s. Published also separately on Cards at 2s. per packet, and in Book form in Outline at 3d. each.

THE "DESIGN" FREEHAND DRAWING SERIES. In Five Sets. Published in three forms, viz., Sheets, Cards, and Books. All beautifully coloured.

Specimens of Drawing Publications sent on request.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

(Late of 39 Holywell Street, Strand.)

A Treatise on the Theory of Alternating Currents. By ALEXANDER RUSSELL, M.A., M.I.E.E. Vol. I. (Cambridge University Press.)

The author of this work expects his readers to have a working knowledge of trigonometry, the calculus, De Moivre's theorem, and of hyperbolic sines and cosines. For those thus equipped, whether mathematicians seeking problems or engineers seeking solutions, this volume is a mine of interesting investigations in a practical field which lends itself wonderfully to exact mathematical treatment. Far less preparation than the above will enable readers fully to appreciate the practical value and suggestiveness of chapter xvii. on "Duality or Reciprocal Relations," and we think that a preliminary dip into that chapter will prove to be a strong inducement to a plunge into the greater depths of the body of the work, which is well printed and schemed with great clearness. Valuable lists of references are added.

A Biographical History Reader for use in Elementary Schools. By BEATRICE A. LEES, Somerville College, Oxford. (2s. 6d. Black.)

This book fulfils Carlyle's definition: "History is the biography of great men." It deals with the period from the accession of Alfred to the death of George III., and there is not a dull page from first to last. It is a history of the English people as distinct from the English sovereigns. Chapter headings are only assigned to Kings when they were notable for more than wearing the royal crown: as, for example, "Alfred the Great"; "Henry V., the Victorious King"; "Charles I., the King by Divine Right"; while the other reigns are distinguished by the great Englishmen who shaped the nation's destinies, as "Saint Anselm, the last of the Fathers"; "Warwick the King-maker"; "Sir Walter Raleigh: the Scholar, the Courtier, the Adventurer"; and so on to "The Two Pitts." This useful and modern little book is the result of wise judgment as to what should be included and what excluded in a work for children, and should have a wide circulation.

A First Reader in Health and Temperance. By W. TAYLOR. (1s. 6d. Church of England Temperance Society.)

This book forms one of a series published by the C.E.T.S. This and "The Physiological Aspect of Temperance," by the same author, contain sound teaching on the care of the human body. Both deal with temperance in the nobler and wider sense than mere abstinence from alcohol. They explain in readable form and with good illustrations the wonderful mechanism of the body, and the rules which must be observed if it is to serve its highest purpose. Having intelligently studied the little books in this series, children should grow up with less

desire to overeat, overdrink, overplay, or overwork; in short, to be temperate in all things. Syllabuses are published, and examinations for prizes held throughout the country. Particulars can be had from the *dépot* of C.E.T.S., 4 Sanctuary, Westminster.

Simple Lessons on Health and Temperance. For the use of the Young.

By Sir MICHAEL FOSTER. (1s. Macmillan.)

We are glad to welcome a primer from the pen of so great an authority as Sir Michael Foster. This book goes to the very root of the matter, as only one who is master of his subject dare go without fear; and what Sir Michael calls the "almost ostentatious simplicity," with which he explains "the reasons for some of the rules which ought to guide us in the physical conduct of life," only emphasizes the command which he has of the broad aspect of the subject. No more useful work can be done in the schools than to bring home the practical lesson that, in this age of stress and struggle for place and fame, we can have sound minds only in sound bodies; and the more such teaching takes the form of simple reasons for fresh air, exercise, sleep, sunshine, and temperate habits, and abjures lists of technical names for the parts of the body, meaningless to children, the greater will be the effect of such teaching on the younger generation. Sir Michael Foster deserves the thanks of parents and teachers alike for an admirable and unsectarian handling of the question of alcoholism as it affects health.

"Academy Shakespeare Series."—*King Henry V.* With Introduction and Notes. (1s. 6d. W. & R. Chambers.)

This is an entirely new series, three plays only being ready. In the "Henry V." just published the young reader attacking the plays for the first time will gain a good idea of perspective from the interesting sketch of the historical events of Shakespeare's time, the state of the drama of the period, and the circumstances under which Shakespeare produced his plays and developed his genius. The author's notes throughout bear the impress of the living and experienced teacher. There is a concise story of the play, and the sketches of the principal characters are well written. The chapter on the characteristics of Shakespeare's English should prove useful and sufficient, and the glossary is not rendered cumbersome by the inclusion of common words or phrases. So skilfully is the student referred not only to "Henry IV.," without which no study of "Henry V." would be complete, but the subject is so handled that even the schoolboy will not be satisfied to remain a man of one play. This inspiring element alone justifies the existence of the edition.

With Answers, 1s. 3d. Answers only, 6d.

McDougall's School Atlas

This is THE ONLY ATLAS that meets the views of the Board of Education as to the teaching of Geography.

SEE A COPY AND YOU
WILL BE CONVINCED!

Political (Coloured) and Photo Relief Physical Maps given opposite each other.

40 pages. Stiff Boards. Price 6d. net.
With Index, 8d. net.

McDougall's Laws of Health

Review by "THE LANCET."

"The first twenty-two pages of this little book are devoted to a description of the structure and functions of the body. The second chapter deals with the composition and chief impurities of air and water. Subsequent sections treat in turn of food, the proper care of the body, ventilation, heating and lighting, drainage (including the removal of refuse), the spread of diseases, and first aid. The whole tone of the book is judicious. It is very simply written, and it contains a mass of information that will be useful to all classes of the community. The wide spread of such knowledge will add health and happiness to all homes where it is rightly appreciated. There is a useful index, so that the subject matter may be quickly referred to, and the illustrations are clear."

Cloth Covers. Price 6d. net.

McDougall's Outlines of Geography

WITH SPECIAL REFERENCE TO
THE BRITISH EMPIRE.

The large number of Illustrations, Photo-Relief Physical, and Coloured and Black-and-White Political Maps given in this book renders the Geographical Lesson one of absorbing interest. Suitable for all Junior Examinations.

124 pages. Cloth Boards. Price 1s.

McDougall's Alexandra Readers

"Regional Geography."—*Europe and the Mediterranean Region.*

By J. B. REYNOLDS. (2s. Black.)

The author of "Regional Geography of the British Isles" maintains her high standard in the present work. Like the uniform volume ("British Isles"), the "Europe deals with the life of mankind" in all its relations as influenced by the physical features of the areas in which they live. Population, commerce, productions are all traced to the physical phenomena of the respective "natural regions." Thus, physical geography is not divorced from topographical and humanistic geography. The maps and diagrams deserve special mention. In every case they are true handmaidens to the text. The sketch-maps are clear, and each serves its own purpose, and nothing more: not an unnecessary line nor letter is admitted to obscure the particular facts to be emphasized. We are familiar during the past few years with the reiteration of "thou shalt not" in our teaching of geography. The busy teacher will welcome a book which indicates clearly the path which he *shall* follow.

"The World and its People."—*The British Empire.*

(1s. 10d. Nelson.)

Love of country and reverence for the great Empire of which they are citizens should be the outcome of using these thoroughly up-to-date books. They breathe out the spirit of the times when even our Sailor Prince leaves home and children for the sake of King and country. There are over 350 pages of excellently chosen matter and some 400 maps and illustrations in colours and black and white. They fully meet the requirements of the latest specimen schemes of the Board of Education.

"Globe Geography Readers": Intermediate.—*England.*

(1s. 9d. Macmillan.)

These attractive studies form "essentially a reading-book for children, and not a text-book for the teacher." Even the teacher will find pleasure in the freshness with which the almost threadbare subject of the geography of Eng'and is treated.

***The World's Childhood, Part I.* By M. B. SYNGE. (Blackwood.)**

These nineteen stories of the fairies simply told for little children exercise the fascination which "Cinderella" and other old tales will always do. The division of the words into syllables makes the book readable by tiny children. The illustrations by Brinsley le Fanu are very bold; but faces seem to be a weakness, and we would rather *imagine* Cinderella at midnight than see her leave the ballroom ugly as well as distressed.

***The Mother Tongue.* Anglicized Edition. (1s. 6d. Ginn.)**

A few years ago one of the subjects least loved by children was the series of experiments in vivisection into which lessons in "English" had degenerated. We are now beginning to realize that a modern language, even our own, is primarily to be *spoken*, and that with readiness and intelligence. The admirable set of three of which "Mother Tongue" is the first stage is the nearest to perfection which has yet come under our notice. The books are designed for use by the individual children and not merely by the teacher, and are aids to reading and writing as well as speaking pure English.

***A First History of English Literature: Campbell.* (1s. 6d.)**

Edinburgh: Oliver & Boyd. London: Simpkin, Marshall.)

There is much originality in the method of presentation of this important subject. There is sufficient information, well arranged to satisfy the requirements of certain examinations (upper classes in elementary schools, P.T.'s, University Preliminary, &c.), but it is compiled in such a way as to encourage pupils to study further for themselves our vast literature, and not to regard examinations as ends in themselves. The various tables (including living authors, with their works), notes on literary terms, literary essays and exercises, make the book especially valuable for the more advanced examinations.

***L'Avare.* Edited by G. H. CLARKE. (10d. Blackie.)**

Mr. Clarke has put some elaborate work, both critical and literary, into this edition of "L'Avare." The introductions contain detail historical information as to the origin and production of the comedy, together with an interesting review of it by Voltaire. A new feature is the addition of a very full appendix in which "French grammar of the seventeenth century," as shown in Moliere's plays, is compared with that of the present day. The discussion is excellent in many respects, but we could wish Mr. Clarke had made it rather less detailed. Its forty pages will be apt to terrify the ordinary student, who, moreover, does not need to be told under three different headings that the definite article occasionally balances the indefinite in the superlative, and could find out for himself the omission of the second pronoun in "Je n'ai qu'un mot à dire et ne tarderai guère," and similar lines. The only slips we noticed are the classing, as a peculiarity of seventeenth-century grammar, the non-agreement of *feu* in "feu ma femme," and the construction after *laisser*, surely still common, in "De me laisser mener par le nez à ma femme." Altogether a thoroughly scholarly edition both in matter and form.

(Continued on page 56)

Spoken French, already optional, will soon be compulsory for Junior and Senior Locals.

To teach Spoken French you must employ the **Direct Method**, and the best book by far for this purpose is **ROSSMANN and SCHMIDT'S**

FRENCH BY THE DIRECT METHOD, (NOW COMPLETE)

of which nearly 200,000 copies have been sold, and which is RAPIDLY REPLACING all other French Courses in British Schools.

DR. GRAY, Warden of Bradfield College, Berks, writes:—"A valuable work, and infinitely superior in system to the old grammars."

D. L. SAVORY, Esq., of Marlborough, writes:—"Certainly the best First French Book on Reform lines that I have yet seen."

Part I., 1s. 6d. Part II., 1s. 8d. Part III., 2s. 6d. Part IV. Livre d'Exercices, 2s. Livre de Lecture, 2s. Grammaire Française en Français, 8d.

Each Part consists of a carefully planned year's work.

"We consider it excellent for those who wish to acquire a practical knowledge of French."—*Athenaeum*, 3/6/05.

The Cambridge Examination, Christmas, 1905, shows that times are changing, and that the R. & S. Course is by far the best for the changed conditions.

ENGLISH FOR JUNIOR FORMS. CLASS WORK IN ENGLISH.

Books I. and II., 2d. Books III.-V., 3d. Books VI. and VII., 4d.

"Devised with great practical skill and judgment. Should command wide acceptance."—*Schoolmaster*.

"Well suited for the lower forms of secondary schools, and may provide hints on method that will even be of some value to masters in middle and upper forms."—*Guardian*.

What is History? By KARL LAMPRECHT, Ph.D., LL.D., Professor of History in the University of Leipzig. (5s. Macmillan.)

These lectures on history which were delivered to an American audience must have impressed those who heard them with a sense of the author's profound knowledge and thorough grasp of scientific principles, but it would be very interesting to learn what percentage of the listeners really understood them. Dr. Lamprecht holds that "history is primarily a socio-psychological science. In the conflict between the old and the new tendencies in historical investigation, the main question has to do with social-psychic, as compared and contrasted with individuals psychic-factors." And, taking this point of view, he deals with the subject scientifically, and uses words and phrases that will prove a very real difficulty to the historical student who has not had a scientific training. Chapters i. and ii., on the "Historical Development and Present Character of the Science of History," and "The General Course of German History from a psychological point of view," are extremely difficult reading, and those who have not made a thorough study of psychology will probably get little benefit from them. It is indeed open to question whether this strictly psychological treatment of history—a method hitherto unknown in its completeness in England, though Buckle, of course, attempted something of the kind in his "History of Civilization"—is valuable; but, if it is to be accepted as a necessary method of studying history, then the student of history must be the student of practically all branches of human knowledge. Indeed this is what Dr. Lamprecht implies when he says (pages 32, 33): "It is necessary to obtain a full comprehension of the meaning of the socio-psychological process in history." Modern historical science "concerns itself with the investigation of the dominating social psyche of the times in question, and with its changing forms during the various ages of culture: it can only do this by taking a survey of all its embodiments in history from time to time. These are to be found in language, in poetry and art (*i.e.*, style), in science and philosophy, the climax of intellectual attainment, argumentation, &c." From the above quotations it will be seen that Dr. Lamprecht lays a heavy burden on the historical student, and one that the English historian does not at present seem anxious to discharge. In chapters iii. and iv. there are interesting analyses of some of the maladies of the end of the nineteenth century—its pessimism, its negation, its worship of "the hateful, of the decaying, of the perverse, and a tendency to psychic prostitution, which is so characteristic of a considerable part of the early impressionistic literature, especially of that produced by women." Many would probably disagree with the Professor's dictum that "altruism, and all that is connected with it, the sense of fellowship among men, capacity for self-sacrifice, moral idealism—all these tendencies are being crowded to the wall; egoism rules the day"; but all serious readers will appreciate the earnestness and thoroughness with which he attempts to diagnose present symptoms, and the illumination that he throws on German culture between 1850 and 1880.

Facts and Ideas: Short Studies of Life and Literature.

By PHILIP GIBBS. (Arnold.)

This volume will probably have a large circle of readers who have no time to read thoroughly and yet like to have a nodding acquaintance with many subjects. The titles of some of the chapters will sufficiently indicate the scope of the book: "How to be Happy though Poor," "The Man in the Street," "Literature and Journalism," "Domestic Reforms," "Emotion and Human Nature," "Buddhism," "Brahminism," "The Model Young Business Man," &c. There is much information of a useful nature, though the supercritical, perchance, might call some of it superfluous; the advice given is sober and serious, and many a young man who is just entering upon a career might usefully spend an hour in mastering its contents. Of its kind the book is distinctly good, but we do not much care about the kind.

The Temper of the Seventeenth Century in English Literature. By BARRETT WENDELL, Professor of English at Harvard College. (7s. net. Macmillan.)

Prof. Barrett Wendell, who was Clark Lecturer at Cambridge, 1902-3, endeavoured in his lectures "to trace, so far as we may, the processes by which the national temper of England changed during the seventeenth century, when its literature passed from the period of Shakespeare to that of Dryden." To do this he has to deal with many great writers, and the exigencies of time obliged him to deal with them but briefly. But he has never dealt with them superficially, and his book will be a welcome addition to the literature of the Stuart period. Perhaps the best chapter in the book is the one dealing with Puritanism and its influence on life and literature; and, as was to be expected from a New Englander, Prof. Wendell's treatment of the subject is sympathetic and penetrating. The same remark applies to the lectures on Milton, which show enthusiasm based on wide knowledge and comprehension.

The Modern Language Calendar for 1906 (1s. 6d., George Gill & Sons) is a neat wall calendar, with a detachable page for each day of the year. Each day contains a proverb in English, French, and German.

Geography for Secondary Schools.

THE MEMORY MAP ATLAS AND TEXT-BOOK COMBINED.

NEW EDITION, REVISED AND ENLARGED

UNDER THE DIRECTION OF THE

REV. E. F. M. MACCARTHY, M.A.,

Head Master of King Edward's Grammar School, Five Ways, Birmingham.

Strongly bound in cloth, price 3s. 6d.

Contains a Glossary of Geographical Terms, Directions for Map-Drawing, Seventy-Four Memory Maps and Four Special Maps in Colours, of England and Scotland, Railways and Industries, with letterpress opposite each, forming a complete Text-Book of Geography for teaching purposes, and specially suitable for preparation for all Public Examinations. Adopted in many of the foremost Secondary Schools in the Empire.

EXCELSIOR WALL MAPS.

20 in the Series. 20 Test Maps. Size, 4 feet by 5 feet. 15s. each.

"Absolutely unrivalled."

Reduced Series. Size, 30 by 40 inches. 6s. each.

"The Excelsior Wall Maps are familiar objects on schoolroom walls, as they deserve to be."—MR. WETHEY, M.A.

EXCELSIOR WALL ATLASES.

"In many Schools the very size of Wall Maps is against them. There are, however, in the market several smaller types of Maps to meet their wants, as BACON'S WALL ATLASES. The Wall Atlases, as their name implies, are a series of maps bound together on one roller. Their technical advantage is their handiness: they can be slung over a blackboard and turned over to the desired map like pictures in a portfolio. Bacon's are beautifully clear and distinct."—MR. WETHEY, M.A., in *School World* for September.

Teachers of Geography should insist on having Bacon's Wall Atlases, which are "Marvels of Cheapness and Utility." Fourteen different parts published, including Plans and Definitions for Junior Classes, England, Ireland, Scotland, Europe, Asia, Africa, America, British Isles, British Colonies, United States, Palestine, and the World. Special Atlases to suit any scheme of Geography can also be made up of any number of sheets of Bacon's Bold Feature Maps, Reduced Excelsior Maps, and Special Maps (fifty to select from) 10 in. by 40 in.; Mounted on Cloth, and securely riveted together in ornamental covers, with metal band to prevent curling up, at a uniform price of 3s. 6d. per sheet.

G. W. BACON & CO., LTD., 127, STRAND.

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

Philips' Large Planisphere is a beautifully simple contrivance designed by H. Genricke for showing the stars above the horizon on any day and hour of the year. The days are inscribed on the rim of a revolvable outer disk. This is turned till the day corresponds with the time-scale marked on the outer edge of the chart. Down the centre there runs a graduated straight-edge, by which it is easy to locate the position of any heavenly body on the chart. Stars are shown white on a dark blue background, and the conventional figures of constellations are faintly indicated. The price is 6s.

Hazell's Annual attains this year its majority, and the 1906 issue contains more new matter than any previous edition. We note in particular the full text of the Russo-Japanese Peace and of the Anglo-Japanese Treaty. "Le mieux est l'ennemi du bien," and we cannot help noting too that "Education" has been curtailed. Educational journals have disappeared, and under "Literature" only six educational books are mentioned—one a new edition, and a second that should rather be classed under "Psychology." Surely the "Upton Letters" and "Kappa" deserved a line. The selection of "Public Schools" and the space allotted to each are somewhat arbitrary. Christ's Hospital has more lines than Eton, Rugby, and Winchester combined. We look in vain for Consultative Committee, Inspectors of Schools, Local Examinations.

Messrs. HARDTMUTH send us specimens of their *Koh-i-Noor Pencils*. They are dear as pencils go (4d. each or 3s. 6d. the dozen), but for quality there is nothing on the English market to rival them. They are free from the two besetting sins of pencils—grittiness and brittleness. There are no less than seventeen gradations from hard to soft. The pocket pencils with propelling leads and with point protectors make very reasonable presents.

CORRECTION.—The price of Dent's "New First German Book" is 2s. net—not 4s. 6d., as stated in December.

BOROUGH POLYTECHNIC INSTITUTE.

A LARGE and enthusiastic audience, which included such well known workers as Miss Adler, Miss Eve, Sir Philip Magnus, Mr. W. F. Sheppard, Dr. Walmsley, and Principal Skinner, assembled at the Borough Polytechnic Institute on Monday evening, December 4, on the occasion of the thirteenth annual meeting and distribution of prizes and certificates. The newly appointed Chairman, Mr. Leonard Spicer, begged the sympathy of his audience in the difficult position in which he found himself—that of taking the chair at an annual meeting over which Mr. Eddic Bayley had presided for twelve years. Mr. Spicer said the work of the Institute was going forward with great strides, and he feared that, even allowing for the magnificent additions to the building which had recently been made, the Governors would again be faced with the problem of knowing how to house the students. Although the word "Polytechnic" is associated in many minds with recreation and amusements, the chief work of these institutes lies in an educational and technical direction, £15,000 a year being the least sum upon which the work at the Borough can be carried on at present. Mr. Spicer specially referred to the new trade classes for girls, which turn out competent and skilled workers after a training lasting from eighteen months to two years under a trade expert. The heartiest thanks of the Governors were tendered to those ladies and gentlemen who had spared time to serve on the Advisory Committee which arranged these classes, and to all the teaching staff of the Institute who had followed the splendid lead given by Mr. Millis, the Principal, and Miss Smith, the Lady Superintendent, and loyally supported the Governors in all their undertakings.

Mr. C. T. Millis read the annual report, which disclosed a state of progress upon which the Institute can congratulate itself. The percentage of passes gained in examinations was higher than last year, and the total value of scholarships was £375. Two students received the freedom of the Worshipful Company of Bakers, and three full Technological certificates were awarded to students in plumbing and metal plate work. An experiment is being made in the direction of co-ordination with London County Council evening schools, and several new classes have been started. Satisfactory features of the work of the Institute are the readiness with which intending students ask for and follow advice given as to their courses of study and the increasing number of students who attend for two, three, and four years.

After the certificates, which numbered considerably over five hundred, and the numerous prizes were distributed by Lady Lockyer, Sir Norman Lockyer expressed the pleasure which he felt at being present and testifying to the work that was being done in that part of London. We were now at the beginning of a Renaissance, just as our forefathers were seven or eight hundred years ago, but science now stood in the place of Latin and Greek. He referred to what was being done in this direction in America, South Africa, and Japan.

(Continued on page 60.)

Now Ready, price 5s. net. Royal 4to, strongly bound in Art Vellum.

ATLAS OF COMMERCIAL GEOGRAPHY.

Edited by R. FERGUSON SAVAGE, F.R.G.S., Author of

"A New Geography of the World."

This new Atlas contains 36 coloured Maps, 6 pages of Notes on Maps, and complete Index. It has been prepared with the greatest possible care, and is probably the most complete School Atlas of its kind.

Most of the Maps in the Atlas can now be had separately—Double Maps printed in one, 2d. net; Single Maps, 1d. net. List of these separate Maps and some Specimens will be sent to any Head Master on application.

EIGHTH EDITION. With Supplementary Easier Exercises. Fcap. 8vo, cloth, interleaved. Price One Shilling.

HINTS ON FRENCH SYNTAX.

By FRANCIS STORR, B.A. Camb.

Extract from Author's Preface.—At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

PRIZE COMPETITIONS.

The Translation prize for December is awarded to "Eicarg."

The winner of the Translation Prize for November is G. H. Clarke, Esq., 42 College Road, Clifton, Bristol.

By the request of "γραμματικός," a cheque for £1. is has been forwarded to the Children's Country Holiday Fund, 32 John Street, Bedford Row, W.C.

Et puis c'est un très long cortège de vieilles drapées de bleu et qui tiennent des bols de cuivre. Elles ont surgi de la fente obscure entre deux grands perrons, et les voici qui cheminent, une à une, en file égrenée, tout le long du même degré. Mais elles s'arrêtent à l'angle d'un *ghat* dont le côté plan tombe d'une chute perpendiculaire dans le fleuve, et dressées sur la muraille à pic, avançant le bras au-dessus du vide et retournant d'un même geste leurs cratères, toutes ensemble font leur libation. Après quoi, tout de suite, les voilà reparties, les blanches vieilles femmes, à travers les étendues des gradins, et longtemps via barque suit leur ligne qui passe d'un *ghat* à l'autre, descend jusqu'aux berges de marbre ou de poussière, contourne la crique charbonneuse ou brûlent les feux des morts, remonte, parfois disperse derrière les fouillis des chapelles, mais circulant toujours. Et soudain elles ont trouvé leur issue : toute la blanche théorie s'est enfilée dans la cheminée qui grimpe raide entre deux palais jusqu'à la ville.

Il est plus de dix heures ; toute brume s'est évaporée. Sauf quelques brahmes encore perdus dans l'extase, le grand recueillement sur les marches d'en bas est fini. Finies de même les dévotions aquatiques ; mais sur les degrés le feu du soleil exaspère la vie de la multitude. On dirait que de ce fourmillement qui s'attise sort la chaleur croissante, réverbérée par les perrons, les façades, avec l'insupportable lumière.

Nous venons de nous arrêter devant le plus bruisant de tous ces *ghats*. Jusqu'en haut il bouillonne, celui-là, d'humanité mouvante.

By "EICARG."

And now it is a long procession of old women clad in blue and bearing copper bowls who have emerged from the dark cleft between two high flights of steps and move, one by one, in a long scattered line, all along the same step. But they stop at the corner of a *ghat* whose smooth flank goes sheer down into the stream, and, rising to their full height over the perpendicular wall, stretching their arms out over the abyss, with the same gesture and at the same instant, empty their bowls and pour forth their libation to the sacred stream. Then, at once, they are off again—these white-haired old women—across the flight of steps, and for long my boat follows their line passing from one *ghat* to another, descending to the river banks of stone or dust, skirting the ash-strewn creek where burn the funeral pyres, climbing again, breaking at times their line behind confused groups of little shrines, but ever moving onward. And suddenly they have found their way of exit ; all the long white line is swallowed up in a narrow dark lane which climbs steeply up between two palaces into the town.

It is now past ten ; every trace of haze has vanished. But for some Brahmins still lost in ecstasy, the pious meditation of the worshippers on the lower steps is over. Over, too, the devotions in the water ; but on the steps the sun's fiery rays seem to stimulate the life and activity of the crowd. One might almost imagine that it was from this ever growing swarm that spreads the ever increasing heat, reflected by flights of steps and fronts of walls with intolerable glare.

We have just stopped before the most noisy of all these *ghats*. To the very top it is crowded with one seething mass of moving humanity.

We classify the 152 versions received as follows :—

First Class.—Mot, Inkspot, Glenleigh, Phosphor, Titchkie, Sirach, Gothicus, Sirach (2), Eicarg, Lux, J.E.D., W.E.G., Ilex, Puck, W.F.K., Chien-lung, Menevia, Rowans, Cassandra.

Second Class.—Jack, Corklight, Max, I.C.M.C., Altnacoille, Chestnut, E.J.R., Sea, Erin, Yennips, Prig, Oubliette, Stumps, Felixstowe, Booboo, Chemineau, Etym, Lob, Outis, India, Eboracensis, Nil arduum, Madeetha, K.H.D.A., J.B.A., Pranner, Sapolio, Vision d'Inde, T.V.D., Mapas, Primrose, Valence, Cosy, Taugenichts, Cantab, A.P.W., 11,976, Chose, Crystal, Emilia, 100,000, Adlii, Phaethon, Goa, Chingleput, Exon, Devanha, Fortes et fideles, Shakspeare, Wilts.

Third Class.—K.M.L., Havis, Clio, Hoh Reuter, Ripplesmere, L.P.S.L., Frederika, Essex, Missa, Alix, C.St.C.S., W.E.S., C.H.T., F.T., Abutlon, Copper Knob, Timber, W.H.K., Zouave, Tarantula, Leander, Midget, Barbara, M.F.C., Bruno, Mars, Ravenhill, S.S., R.J.P., Rayon de M., Jessie Tollemache, E.M.W., Parisian, Nhill, M.G., Emil, Chaplet, Market, G.M.L., Sweeps.

Fourth Class.—E.M.B., H.V. Rawlinson, Zilpah, A.G.H.D., Epreuve, Gardez bien, I.E.P., Inde, Alpha, Sunlen, Llewellyn,

Speranza, D.B., Blanche, Sarum, Summerbank, Hazeldeane, M.A.H., Microbe.

Fifth Class.—Hanna, Sulmo, Tag, Cherry, Figo, Doris, Bon jour, Tête blanche, Novice, Yram, Job, U.S., Pill, Brahm, T.O.S., C.R.S., Jour, Helot, Calcutta, D.D.D., G.M., Jove, B.O., Suttee.

I must apologize for three misprints, due to a miscarriage of proofs—two of them, *drassés* and *marble*, obvious ; the third, *s'attire* for *s'attise*, misleading. In awarding classes and the prize, due allowance for these was made. The difficulties were mainly verbal, but the few who surmounted all these failed to reproduce the characteristic note of the original—the jottings of a traveller who is describing what passes before his eyes. Let me, by way of example, give first the average version, and then a (comparatively) fair copy of the beginning : "And then there is a very long procession of old women in blue dresses who carry bowls of copper. They have risen from the dark opening between two perrons, and, lo, they are walking, one by one, in single file, all along the same step." "Then comes an endless train of ancient dames in blue draperies, with copper vases in their hands. They emerge from the dark gorge between two flights of stairs, and now they are all crossing the same stair extended in Indian file."

Bol, "vessel" or "vase," rather than "bowl," and the archaic synonym *cratère* may be rendered by "urn" or the Indian word *lotah*. *Egrenee* : the metaphor is from an unthreaded chaplet of beads, and connotes the irregular intervals in the single line. *Ghat* (or *ghaut*), the stairs or landing-place on an Indian river, must, of course, be retained. *Retournant d'un même geste*, "emptying as they raise their arms," was strangely mistranslated. *Après quoi*, "Then straight they are off again, the train of grey old women" ; *blanches* must refer to the hair, and does not contradict the previous *bleu*. *Berges de marbre ou de poussière*, "the river banks of loose earth, or lined with marble" ; "banks of marble or dust" is too bold. *Charbonneuse* : *Litré* only gives the medical sense, but "carbuncular creek" is a *non-sens* ; it may mean that these had the appearance of coal wharves, or simply that they were smoke-begrimed ; "fuliginous" might serve. *Disperse*, "losing itself amid the labyrinth of shrines." *Issue*, "way home." *Cheminée*, in the Alpine sense "gully." *Recueillement*, hardly tackled by any, can only be given by a paraphrase : "the service of silent adoration," "the mystic ritual ; " "aquatic devotions" is grotesque—try "lustral rites." *Exaspère la vie*, "goads and quickens." *On dirait que*, "It is as if this excited human ant-hill generated," &c.

A Prize of Two Guineas is offered for the best translation of the following extract from Faguet's "*Etudes Littéraires*":—

Commynes est avant tout un homme très intelligent, et c'est presque toute sa définition. Il y a des hommes qui sont nés pour agir, et, selon qu'ils ont du bon sens ou n'en ont point, ce sont des actifs ou des agités. Il y a d'autres hommes qui sont nés pour comprendre, et qui ne se lassent jamais. Ils peuvent être actifs aussi, mais comme en seconde ligne. L'homme d'action se sert de son intelligence pour agir, et l'homme intelligent qui est mêlé à l'action ne se sert guère de l'action que pour comprendre plus de choses. Tel était Commynes. Personne plus que lui n'a contribué à faire l'histoire, en ayant l'air de rester témoin curieux plus qu'acteur. Il devait savoir se dédoubler, s'occuper d'une affaire en la conduisant au but, mais en même temps en l'étudiant pour elle-même, et les hommes qui y étaient mêlés, comme objets très intéressants pour le curieux de choses humaines. Très différent en cela de Saint-Simon, à qui du reste on n'a pas eu tort de le comparer. Saint-Simon, parfaitement incapable d'action, est possédé par la curiosité, et, malgré toute sa pénétration, malgré tout son génie, qui n'est pas ici en cause, reste toujours extérieur aux choses dont il est témoin. Commynes est dedans, à l'intérieur même de ces choses-là ; il y est mêlé intimement, il les fait ; mais il est assez froid pour les observer cependant, et il les observe comme du centre. De là, avec cent fois moins de talent que Saint-Simon, une sûreté, une certitude, une plénitude de sens, un manque merveilleux d'imagination, qui sont des qualités supérieures d'historien.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by January 16, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected.

FOR THE NEW TERM, 1906.

HEATH'S PRACTICAL FRENCH GRAMMAR.

AN EXPERIMENT IN HISTORY TEACHING.

By EDWARD ROCKLIFF, S.J.,
Assistant Professor of History, Wimbledon College.

AS these remarks are addressed to those interested in history as an instrument of education, it would be out of place to preface them by any attempt to justify the high educational value set upon this branch of learning or by any explanation of the object to be aimed at in presenting it to the minds of the very young.

The writer came to his work of history teaching with high ideals and great expectations; but, finding it excessively difficult to realize those ideals in practice, he met, no doubt like many another, with early disappointment. He made it his special object—as, indeed, it was his first difficulty—to kindle an interest in the persons and events of bygone days, to drag great men out of the text-book, and clothe them in living flesh, to make the boys really feel that behind the black and white of their synopses these were *real* men, *real* heroes, who actually *did* what was there recorded of them.

This seemed the first object to be attained, and, though literature in its different forms, copies of original documents, monuments, relics, &c., were of considerable use, the results, though fair, were not on the whole satisfying. These things, excellent as they are as far as they go, do not go far enough. They help just where the lesson is most likely to be interesting, and is therefore in least need of help. They serve very well in intensifying the interest of events already interesting in themselves; but, as soon as we come to deal with men whose eminence is due rather to their political opinions than to success in war, as soon as we leave the battle-field, the revolution, the riot, the execution, then at once their value begins to dwindle, and when we come to treat of the characteristics of periods, the growth and decay of national forces, epochs of parliamentary reform, the effects direct and indirect of peace or war on national liberty, social development, the progress of commerce, &c., then their value as stimulants to the interest of *young* boys at least has practically vanished. High as the standard here implied may appear to some when the age of the students in question is taken into account, the writer is of opinion that these ideas *can* be grasped by young boys if put before them in a striking form, and that they *ought* to be put before them, if history is to educate, and not merely to supply the mind with historical facts. Far be it from me to minimize the benefit to be derived from the acquisition of accurate knowledge of historical facts; but these facts, it must be admitted, have the more power in broadening the young mind the more they are looked upon as incidents in the working out of great human forces, as particular verifications of great principles, as punctuating, as it were, great historical periods.

The method, however, by no means confines itself to bringing these larger views into prominence: indeed it has been equally, if not more, useful in fixing an accurate knowledge of historical incidents; but it has this advantage over the ordinary synopsis, that it brings the facts into their proper place, shows the connexions between them, and forms a *visible* nucleus for the miscellaneous information to be gained from the sources referred to above.

To begin with an example. I introduced my present class to the Norman period, by making them draw up a picture, part of which I have reproduced in Fig. 1. Some of the signs and symbols, which are a great feature in the method, I prefer to describe rather than reproduce, because, being likely to appear somewhat fantastic, they might prejudice those who have not seen how effectual they have been in practice, not only to the young student, but even, I may add, to the more advanced. Not being arbitrarily chosen, they are easily understood, and when once understood it is wonderful what an amount of accurate information they are capable of presenting to the boy's eyes in a small space.

At the top of Fig. 1 we see a red* flag at half-mast indicating

* As it has been impossible to reproduce the colours, the illustrations are necessarily less clear. An attempt has been made in some places to supply the defect in other ways. A small R indicates that the words after which it stands should be written in red.

the death of a King or of one of royal blood. Underneath this would be drawn a small red figure, seated on a simply drawn throne, with a line above showing he was the son of Godwin. On the chart of a reign in which the King's near relatives have played a conspicuous part a table indicating the pedigree is arranged over the throne, so that the boy is never at a loss to know who the great actors are. On the right hand of the figure we have the difficulties of Harold's short reign depicted in a way which requires little explanation. Tostig joins Harold Hardrada and sails up the Humber early in September. Edwin and Morcar hurry to the defence of their country, but are defeated at Fulford.

When the boys had carefully reproduced this "chart" they had a very good knowledge of the events leading up to William I's reign, they knew the sequence of events, they did not mix up the two Harolds, they knew the geography exactly; and, moreover, any other information they may pick up they will connect with this picture, and thus have it well ordered and in a fixed place in their minds. How much more eloquent is all this than the abstract terms of the text-book!

The "charts" are drawn up on long pieces of unruled paper, and only on one side of it; they are arranged chronologically.

As all the events of the reign are either indicated by striking representative signs, or expressed in a form absolutely concrete,

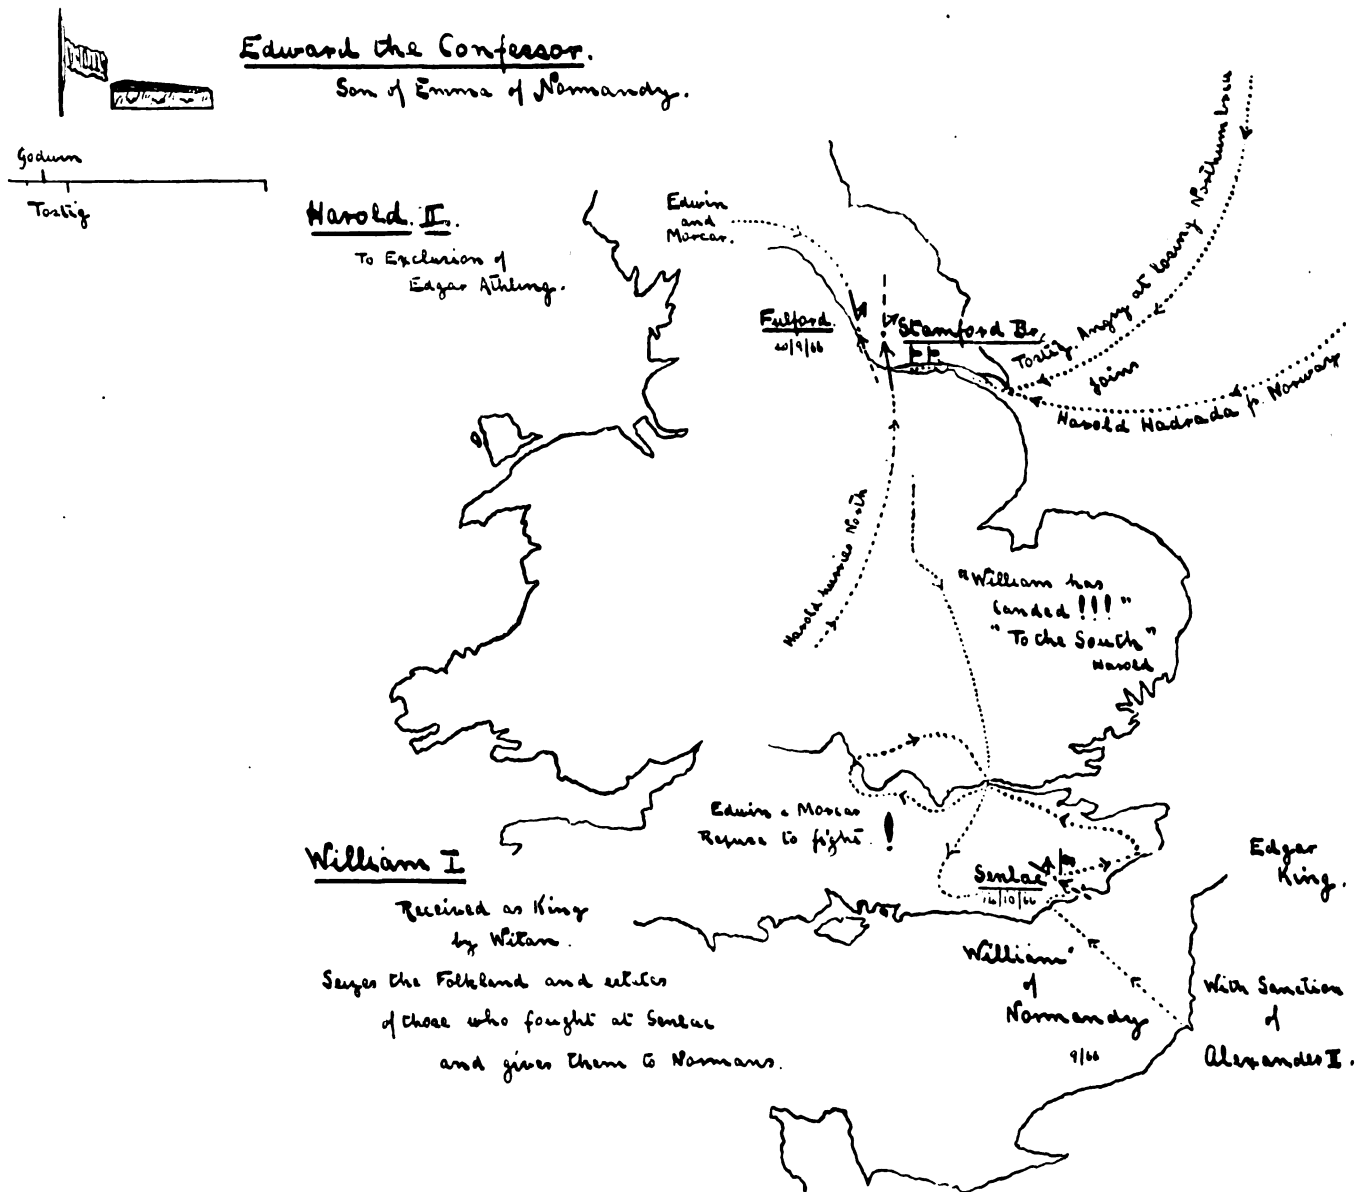

FIG. 1.

This defeat is shown by their arrow (red) being bent. Harold hurries north, meets the enemy at Stamford Bridge, and, as we see from the condition of the enemy's arrow, is victorious. The two small flags at half mast show that the two leaders of the enemy, Harold and Tostig, were killed on the field. The indication of the months shows how well chosen was the time of the enemy's attack, the greater part of Harold's army having been called off home for the crops. At the bottom of the figure we have the great battle, the death of Harold, the march of the Conqueror on Dover, then round by Southwark, Wallingford, and Berkhamstead, and finally to London.

Then in a conspicuous position would be drawn another and more imposing throne, with a figure representing William I.

the boy can see the whole reign at a glance without turning over any pages, and with very little reading. Moreover, he can scarcely fail to see at once the main features of the years he is studying. As the hostile arrows are always set on a small traced map of the surrounding country, he sees, for instance, that such a reign was taken up with war abroad, and concurrently he may see Parliament demanding redress of grievances, just in proportion to the money the King is forced to ask for: e.g.,

"? Money for the War." (R) "Confirm the Charter."
"I must have money!" (R) "Ministers responsible to nation."

or he may see the kingdom distracted by Civil War, with the evils following in its wake. He sees this King keen on legal

reform, and that keen on conquest. He sees similar causes producing similar effects, and he may be made to infer important principles.

It is important to notice that contemporaneous events are set *side by side* on the chart, an arrangement which is next to impossible in the text-book, and not usually followed in synopses, though it is in almost all cases highly desirable. Thus, in the chart of Edward III.'s reign, *side by side* with the map representing the Crécy campaign and the subsequent siege of Calais, there is a map showing the attempted invasion of the Scots and its disastrous result at Neville's Cross.

As to the symbols referred to above, though each teacher will find little difficulty in inventing them for himself, it will not be

Fig. 2.

out of place to describe one or two of those which have proved most useful.

Of the use of different coloured arrows for illustrating battles nothing more need be said except that the magnitude of the defeat can be indicated by the size of the angle at which the arrow has been bent. Irritation or rivalry may be well represented as in Fig. 2a. Looking down a chart, one may see the curves become more and more threatening until a climax is reached, in the form of war, assassination, execution, or reconciliation. A treaty or truce may be written in the colours of the contending parties. A red line under a figure or name indicates a King's man. His displacement, violent or otherwise, may be shown by representing him as standing off the red line, or falling off it, or being forcibly cast from it, according to the circumstances, while another is represented as taking the vacated position. A siege may be represented as in *b*(1). Notice how strikingly the influence of the Maid of Orléans is thus brought out *b*(2). A straight line we take to illustrate a Parliament. The work of the particular Parliament is written underneath. The line may be broken in two to show Parliament divided against itself, or it may be separated into small pieces to represent an important dissolution. It will be evident how easy it thus becomes to follow the history of Parliament in a given period. Gibbets,

blocks and axes, guns, swords, coffins, flags, danger-signals, bishops' mitres, crosiers, notes of exclamation and interrogation, can with a little ingenuity be made wonderfully eloquent.

The example given above will not, I fear, illustrate one point claimed for the method at the beginning—namely, that it stimulates interest in incidents which usually make little appeal to the mind of a young boy. It is hard to find an illustration which is at the same time easy of reproduction and sufficiently brief for insertion here. A fair judgment on this point can scarcely be formed without a brief examination of one or two *whole* charts. The following examples may, however, to some extent tend to supply the deficiency, as well as illustrate the way in which historic incidents may be made real by being expressed in a concrete manner. Instead of reading in his text-book: "Lancaster, Warwick, and Hereford, exasperated by the insolence of Gaveston, determined to undermine his influence and destroy him once and for all," &c., the boy, having watched the progress of the quarrel down his chart, will come to something like this:

"! Down with this fellow !"
He shall not live

Lancaster
Warwick
Hereford

A little map on the right would show, by means of the arrows, the result of the fight at Scarborough, and an axe and block at Blacklow Hill would be none the less expressive.

Again, will not a boy get a far better grasp of the causes of the renewal of the French War in 1414 if he finds them put somewhat as follows?—

(? Shall I to war with France?

'Twould distract attention from affairs at home.

My nobles tire of peace, my merchants want new markets.

'Twould give employment to my unruly subjects.) (R.)

"The Crown of France is mine." (R.)

"To Crown of France you have no shadow of a claim."

! WAR !

One more example. Charles V. of France summons the Black Prince to answer the charge of excessive taxation.

"You must come to Paris, Sir, and answer for this conduct."
Ch. v.

WAR
RENEWED,
1369

"We will go to Paris; but it shall be with helmet on head and 60,000 men." B.P.
(R.)

Let me make one more extract from a chart which the boys have just completed. The picture (Fig. 3) has been somewhat reduced in size, and this has necessitated certain unimportant omissions; but, puzzling as it may appear to those unacquainted with the signs, a few words will, I think, suffice to make it plain. Just as Henry V. was about to set out for France, a dangerous plot was discovered. The blocks and axes on the right sufficiently indicate the severity of the punishment meted out to the ringleaders before the King left Southampton. Following the red dotted line over the Channel, we are led to a bold red arrow threatening Harfleur. The defeat of the French and the capture of the town are shown by the blue arrow being bent, and the position of the English flag.

In spite of his enormous losses, the King, repudiating the suggestion that he should return home, makes his way through Normandy, and endeavours to cross the Somme, as Edward had done some seventy years before. The blue arrow shows that the French are in force at Blanchetague. They have so guarded all the fords and bridges that the English march as far as Bethencourt before effecting a crossing. The result of the attempt of the French to block the road to Calais is sufficiently shown by the condition of their arrow. The number of the killed is given alongside the small flags at half-mast.

The joy of the English people at home when the news of Agincourt reached them would be represented by a number of simply drawn figures in attitudes expressive of high spirits. A little lower down, on the left, we come across a Parliament. That it was well pleased with the King is evident from its generosity. Moving a little to the right we see, just by Paris, two peculiar arrows, the meaning of which has been explained in Fig. 2. They are both of the same colour, and represent, of course, the Armagnacs and the Burgundians. The boys have been watching these arrows throughout their charts of Henry IV. and his son. Their shape at the present time sug-

gests that the climax has come, and that the hostile parties are ready to spring on one another in deadliest enmity. The alliance between Burgundy and the English would be made striking to the eye by being written with the alternate letters red and blue. The rest of the figure needs no explanation. The splendid campaign ending in the fall of Rouen, the ungenerous murder of Blanchard, the great Conference at Montreuil resulting in the murder of Burgundy, the disgust of Philip and Isabella leading to the treaty of Troyes—all are recorded in a manner which, while appealing to the imagination, is calculated to give a sound knowledge of the historic events, and at the same time is eminently suggestive of their causes and results. It may be objected that the reproduction of such a figure must take up a great deal of the boy's time.

may be varied by assigning different parts to different boys: *a*, the King, for instance; *b*, the Church; *c*, France, &c., &c. He is made to write accounts of reigns or periods from the chart, translating the signs and symbols into ordinary language. Questions are put, the answers to which, though contained implicitly on his chart, have to be deduced by the boy himself. When a campaign is being studied the boy is made to depict the operations with coloured chalks, on a large blank map.*

The teacher must not think that his task is finished when the charts are done. These latter should be finished in the first half of each term, and the second half should be spent in the important work of explaining, illustrating, and expanding what has been depicted in brief.

It is hardly necessary to add that the boys should be made

FIG. 3.

This cannot be denied. In reply I can only venture to predict that the teacher will be surprised at the amount of knowledge gained by his pupil in the mere reproduction of his chart, and will be ready to admit that in the long run much time has been saved. From the description here attempted the reader can hardly be expected to gather anything more than the main outlines of the experiment. For anything beyond this he would have to study a number of complete charts for himself, and further see how work is carried on in the schoolroom when the charts are completed. The difficulty of reproduction prevents me from supplying the former defect, and but few words must suffice for the latter. The boy is made to give a full account of the reign, first with his chart before him, then without it. This

quite familiar with the literature of the reign, either by private reading or by hearing it read in the class-room. This, however, should be insisted on, that during all explanation or illustration or reading their charts should be open before them. Little difficulty, it may be added, has been experienced in dictating the charts in rough to a class of twenty boys. The position of maps, &c., as they are to be reproduced, can easily be indicated on the blackboard.

By these means the history lesson has acquired quite a special interest, which the writer is inclined to look upon as the

* For an easy way of making such maps see a letter of Rev. E. King, S.J., *School World*, March, 1905.

greatest achievement of the method. It has turned abstract terms into concrete fact perceptible to the eye, it has ensured a knowledge of the geography connected with the period, and also brought into prominence the connexion between geography and history; it has made more intelligible social and political questions of comparative difficulty, and in general has tended to produce that larger view of history which makes it useful as a means of culture. This has been accomplished in a manner so attractive to the boys that it has been a difficulty to restrain the majority of them from devoting to this work too large a portion of their free time. In conclusion, let it be said that it would be quite alien to the writer's purpose, and indeed he has no wish, to claim originality for the experiment here described. Though he is not conscious of having heard of its being used anywhere else, it seems almost impossible that others should not have made use of a means so simple. He has put it before the reader in this particular form because it is in this form that he has found it so useful, and he was desirous of suggesting to others engaged in the teaching of a difficult subject a means which has been so beneficial to himself.

THE MODERN LANGUAGE ASSOCIATION.

THE Annual General Meeting of this Association was held at University College, London, on Thursday and Friday, December 21 and 22, 1905.

FIRST DAY.

The proceedings began at 11 a.m., the President, Mr. T. H. WARREN, President of Magdalen College, Oxford, occupying the chair.

Assistance (the Interchange of Teachers).

Dr. HEATH said that he had been asked by the Committee to say a few words in explanation of the scheme which had been agreed upon between the Governments of France and of Prussia and of this country with regard to what he might call the loan of modern language teachers. He was very glad of the opportunity of doing so, if only because he hoped that the united wit of the Association might succeed in discovering a suitable portmanteau word to explain shortly what he was about to explain at length. Some time ago the French Government approached the Board of Education, asking whether that Board would be prepared to help in an arrangement by which intended or actual modern language teachers might be nominated for positions in the French *lycées* and *collèges*, and they asked that in return the Board of Education should bring the proposal before the head masters in England with a view to their throwing open their schools in the same way to French teachers. The proposal was the outcome of a very important change which was made in France about four years ago in the system of modern language teaching. The French Minister had come to the conclusion that a great deal more attention ought to be given to what was called the "direct" method of teaching foreign languages and to the handling of them as living speech. He felt it important that the teachers during the years of their teaching should remain at concert pitch, and have every opportunity of keeping their pronunciation pure and studying delicacies of idiom. The best way of obtaining this result seemed to be the paying of frequent visits to the foreign country, and having on the staff of the school well educated young teachers from the country whose language was being dealt with. Incidentally, the scheme would have the advantage of helping big boys to speak the foreign language with a native; but the Minister thought that it would be a mistake to throw upon the foreigner the duties of class-teaching. It was, therefore, proposed that the English teachers going to France should only take a small group of boys in conversation, without having any responsibility for discipline, and that the average amount of teaching entrusted to the foreign teacher should not exceed two hours a day. It was proposed that, in return, the foreign teacher should receive free board and lodging, having the rest of his time available for his own studies and for intercourse with the professors of the *lycées*. Stress was laid upon the advantage to the pupils. He had been told by head masters—and he was glad to hear it—that their staff of modern language teachers was so competent that they could learn nothing from the presence in their midst of a highly educated young man just fresh from the University, who could discuss possible difficulties with them, and that their command of the foreign language was so perfect that the pupils could learn it as well from them as they could from a native. But that view was not one which, on the whole, commended itself to head masters in England, and a very considerable amount of support was now being given to the scheme by English head masters and head mistresses. When the Board of Education agreed with the French Minister to help forward the scheme, they confined themselves at first to bringing it

privately before those head masters who would be likely to make the experiment. This was the reason why only a comparatively small number of foreign masters had been placed in English schools, whereas over fifty English teachers had been placed in schools by foreigners. The Board of Education had issued a circular to their Inspectorate upon this matter, and the subject had been brought before the Local Education Authorities, and there was every prospect that from the beginning of the next school year a relatively large number of schools would appoint either French or German teachers on a plan parallel to that which he had explained with regard to English teachers in France. The head mistresses had taken up the scheme far more enthusiastically than the men. The proposal made by the French Minister had been repeated by the Prussian Minister to this country, who had approached the Board of Education, with the result that a similar agreement had been made between England and Prussia. The English schools had been able to supply as many teachers as had been asked for, but they had not had an opportunity of finding places for young German teachers, and he was afraid that the progress in German was likely to be slower than the progress in French. There was no doubt that, on the whole, the qualifications of the men and women teachers who had been sent to France had been very satisfactory. The standard required by the French Government for a modern language teacher in a *lycée* was considerably higher than in secondary schools in this country. No man was in the least likely to obtain an engagement in France without a mastery of the French language, which was very rare among Englishmen. The qualifications of the men that England was sending over were more obviously related to the teaching of modern languages than was the case with young men coming to England. Young and energetic modern language teachers were using the opportunities afforded by the scheme as a means of improving their command of the literature and the spoken language and ways of modern France; but this would not be sufficient by itself for raising the standard of modern language teaching in this country to what it ought to be, although it was a help in that direction. This needed to be carefully borne in mind. There was one other matter which it was worth while to call attention to. We had in England a very much larger number of day schools than there were in France, and consequently, if a day school desired to have one of the foreign teachers on its staff, it was necessary for it to do something by way of providing a substitute for the board and lodging which the French Government or the Prussian Government offered; and after mature consideration the Board of Education had estimated the value of the board and lodging at, roughly, from £65 to £70 a year, and in this matter no distinction was made with regard to sexes. He had heard it said that this was a very grave mistake, because for very little more than the £70 they could obtain an English University woman who would give the whole of her time. The Board of Education believed that the sum he had mentioned represented a bare subsistence allowance, and that that was the least that could be offered for the two hours' services. There were many ways in which the work of the foreign teacher could be made useful in all schools, but experiments had shown that the two hours' work would be most useful if it was done outside the ordinary time table of the school, rather than within it. At a school which he knew part of the time was spent by the foreign teacher with the pupils during the luncheon hour. At other schools a great deal of use was made of the playground and the playing field. These places offered opportunities of very great value for free intercourse. There was much gain in taking the conversation class in the open air. The number of topics of conversation would be greater than they would be in a schoolroom. The foreign teacher could also be made useful in giving dictation and in the reading of selected passages from good authors. If the scheme was widely used, it might improve the standard of modern language teaching in two ways: first, by getting the young teachers at the beginning of their career into close touch with the life and ways of foreign countries under conditions which threw but a small burden upon their purses; and, secondly, by helping modern language teachers who are in the middle of their work in England to come into touch with the newest, youngest, freshest, and brightest thought of the foreign country.

The PRESIDENT informed the meeting that a very distinguished professor, whom he might call an ambassador from France in this matter, was present. It was M. Garnier, the representative of the Société des Professeurs des Langues Vivantes. Dr. Heath, who had addressed the meeting, was a very old friend of the Association, and needed no introduction; but he (the President) would like to recall to the recollection of the members the very important position which Dr. Heath occupied and the authority with which he spoke. They all knew that Dr. Heath succeeded the eminent gentleman who held the office which he (the President) now held—Dr. Sadler, the President of last year. Dr. Heath succeeded Dr. Sadler as the Director of Special Enquiries for the Board of Education, and from a semi-inside position with regard to the Board he (the President) was able to speak as to the value of Dr. Heath's work. It was very good of Dr. Heath to come to the meeting at that early hour to give them so much assistance.

Mr. W. L. PAINE, of Oundle School, gave a highly realistic narration of his experiences as an assistant at the Amiens *Lycee*. His main complaint—and it is a serious one, that must be remedied—was that he

lived and boarded with the *surveillants*. He describes these youths as good fellows at bottom, but wholly unrefined, with manners none and customs beastly. "My table companions conducted most of their conversation in a slang that was for months unintelligible to me. I came at length to understand it from mere force of contact, and that much to my disgust. To put it mildly, *l'esprit gaulois* was prominent. But why should I put it mildly? That conversation would have brought a blush to the cheek of Petronius; and, as one had to eat to live, there was no getting away from it." His second complaint is the dirt and discomfort both of the refectory and of the small room assigned to him in the *surveillants'* passage in which he slept, worked, and had his being. Of the professors he saw nothing (except of one, a fellow-countryman) and his conversation with them was limited to the ten minutes' interval. He remarks somewhat bitterly that on the eve of his departure, after a year's residence, he received no less than five invitations to dinner. This is the seamy side which is emphasized; but of the essentials of the system his report is altogether favourable. He found his French pupils docile and well behaved. He made friends among their parents. He had ample time for private study, and followed with profit the course of a brilliant *Professeur de Philosophie*. And against his comic description of the German assistant who bolted after a day's trial we may set the glowing panegyric of the French assistant in an English school.

Mr. W. G. LIPSCOMB, Bolton Grammar School, gave a full account of a year's experience of the French Assistance Scheme. One young Frenchman had been at Bolton from January last to July, and another had joined them last September. He believed that the Frenchman to whom Mr. Paine had referred was his assistant, and he was delighted that to one of the parties the arrangement had been wholly satisfactory. It was too early for him to report of the results, but he had no doubt that his best boys had profited. To join the conversation class was held out as a privilege, and in only one case out of forty had he seen occasion to withdraw the privilege. The function of the assistant, as he had ventured to expound it to him, was to interest boys in all that concerned France, to make them appreciate and respect the country. This he could only do by himself entering into their daily life, their games, and home interests. He must make friends of the boys. It was a great drawback that boys had to be withdrawn from their regular class work, and he held that the assistant should be employed as a sort of *répétiteur*, to give wholly or partially lessons in the presence of the form master, to read and give dictation, &c. He had heard such a lesson—an account of a great fire at Bolton—given by the Frenchman and reproduced by the pupils. The results were most creditable. In conclusion, he considered it a radical mistake to limit the time given to two hours a day. This was inadequate for the pupils, and with the assistants only led to loafing. Three distinguished leaders of the reform method had begun as full masters in English schools, and all three had found ample time to pursue their scientific studies.

M. GARNIER, representative of the Société des Professeurs des Langues Vivantes, said that he had learned a great deal from what Mr. Paine had said as to his experiences at the school in France, and he should take advantage of the facts which Mr. Paine had stated. The scheme was quite an experiment in France, and there was a great deal to be done to improve it. The "assistant" was a kind of individual whom he had never known personally. He thought that it would be fair that more facts should be brought forward as to the working of the scheme, so that what Mr. Paine had said should not be extended to the whole of the French Universities and *collèges*. Mr. Paine had been placed in that new kind of *lycée* in which there was a sort of home rule, and especially home rule with reference to financial matters. The scheme was an entirely new departure in the French Universities. Under the old *régime* everything in the way of management was done for the head masters and by the central power—that is, by the State or municipality. Under the new system head masters did not live with the boys and did not sleep on the premises. This kind of school work was done by the *surveillants d'internat*. These were not schoolmasters, but very ordinary kind of people, because they had simply to do with material matters and keeping watch over the boys. He was entirely against this new method in France, and he thanked Mr. Paine for his testimony. It would be a very strong argument for him to use with the *Inspecteur-Général* in fighting against the new kind of institution. It would have been worth his while to come to London, if only to obtain the testimony which Mr. Paine had given with regard to *lycée* life and *collège* life in France.

Dr. HEATH, replying to Mr. Paine's remarks, said that no good thing was ever done without difficulty. It was of the utmost importance that people should get the right perspective with regard to this matter. M. Garnier had given valuable information about the change of system which had taken place. The difference was due to the fact that the *répétiteur* had been released from certain duties, and this compelled the French Government to give the discipline of the institutions to officers of a new rank, and these men were not of the social and academic position of the old *répétiteur*. The *surveillants* undoubtedly had shortcomings, and they had not had any great experience of the work. They would require a little time to understand

the duties which they had to perform, and they undoubtedly failed to appreciate the standing of the men who had been sent from England to France. He could assure the meeting that in no single case in which he had received a complaint and had sent it on to the French Ministers had they hesitated to deal with it without delay and to put the matter right. On more than one occasion they had sent an *Inspecteur-Général* to look into the matter, and they had acted with the utmost promptness, a promptness which he felt certain would not have been shown in this country. One fact which it was of no use to blink was that life in France was very much simpler and conducted upon harder lines than it was in England. He would say quite frankly that in his eyes it was not a disadvantage that young University men should have some hardships to undergo. Hardship was a very good thing for them all. He quite agreed that men need not be expected to suffer from dirt, but dirt was one of the easiest things to get rid of. He did not think that he had had a single complaint from any English lady who had gone to France. He wished to give one word of practical advice. If there was anything wrong in a *lycée* or a *collège*, let the one who had to complain go at once to the *proviseur* without taking any intermediate steps.

Miss LAWRENCE asked whether, generally speaking, many English schools would be able to give £60 or £70 a year to French teachers coming to England.

Dr. HEATH said that a large number of English schools had adopted the scheme. At boarding schools the actual expenditure would not come to much. As to day schools, it was not expected that they should actually pay the money to the foreign teacher. What was intended was that they should make arrangements for their board and lodging.

Prof. SCHÜDDERKOPF said that some of the students from his University had been to France, and some of them had returned, and he had had an opportunity of discussing with two who returned last summer their experience of French life, and of seeing the progress which they had made. The opinion of both those students was extremely favourable. They were very well treated by the authorities of the *lycée*, and were not overworked. They had plenty of opportunities of studying, and both were situated at towns in which were Universities. Both those students were now in Germany, and he had had letters from them in which they stated that they were quite as content there as they had been in France. It was of very great importance that it should be arranged that the students who went to French or German towns should go to towns in which were Universities.

Harmony.

M. W. L. BRANDIN, Professor in the University of London, gave a discourse in French on "L'Harmonie du Vers Français."

The PRESIDENT said that he was sure that he should be expressing the sentiments of all the members if he thanked M. Brandin for the very eloquent and artistic and suggestive lecture which he had delivered. He congratulated the University of London on possessing a professor who could give lectures with so much grace and so much good sense.

The proceedings were suspended for a short time and resumed at 3 o'clock.

Report.

The Report of the Council was laid before the meeting by the SECRETARY.

There has been a marked growth in the membership of the Association. The present number is 567. The return visit of the French professors which should have taken place last Easter was unavoidably postponed, but arrangements are being made for holding it next year. Mr. R. H. Allpress, of the City of London School, succeeds Mr. Payen Payne as Treasurer, and Mr. W. Osborne Brigstocke succeeds Dr. Edwards as Honorary Secretary. Mr. A. C. Benson has accepted the Presidency for 1906. There is a balance at the bank of £95. 9s. 3d.

The HON. TREASURER presented his report for the year.

Prof. RIPPMMANN, editor of *Modern Language Teaching*, reported that that magazine was going on well. He invited suggestions from members of the Association.

Mr. STORR moved a vote of thanks to Prof. J. G. Robertson, editor of the *Modern Language Review*, and to Prof. Rippmann, editor of *Modern Language Teaching*, for their services in connexion with those publications. He thought that it was a wise thing for the former magazine of the Association to bifurcate and spread into two publications. While the *Modern Language Quarterly* existed the editors did as far as possible combine the two somewhat distinct features of an organ of learned research and an organ of pedagogics, but those two things must necessarily appeal to somewhat different classes of persons. The Association owed a great debt of gratitude to both editors.

Mr. CLOUDESLEY BRERETON suggested that all notices of books which appeared in the publications should be signed by the writers, instead of being left as if written by the editors.

The vote of thanks was seconded by Mr. NORMAN, and carried unanimously.

President's Address.

The PRESIDENT (Mr. T. H. Warren) then delivered his address. He said:

Ancient and Modern Classics as Instruments of Education.

Cardinal Newman in a well known passage in the "Grammar of Assent" speaks of the power over the mind of the ancient classics. "Lines," he says, "the birth of some chance morning or evening at an Ionian festival or among the Sabine hills, have lasted generation after generation for thousands of years with a power over the mind and a charm which the current literature of to-day, with all its obvious advantages, is utterly unable to reveal." Matthew Arnold again speaks of the influence of the ancients upon the mind producing a steadying and composing effect upon our judgment, not of literary work alone, but of men and events in general. "Those," he says, "who are familiar with them are like persons who have a weighty and expressive experience." "They are more truly under the empire of facts than others, and more independent of the language current among those with whom they live." His father, Dr. Arnold, speaks no less strongly of the great variety of political and moral lessons to be derived from the ancient classics. Rousseau, commonly counted the most independent and revolutionary of modern thinkers, still in making his famous return to Nature returns largely to Plato. Mr. Frederick Myers in an eloquent passage claims for the Greek language and especially for that of Homer pre-eminence over all languages and literatures. Can modern classics be expected to teach the same or similar moral and mental lessons as the ancient have so long supplied? The question is one of pressing and present importance. The ancient classics are losing their general hold over education, and it is largely to the modern that we must look for training in culture and more moral and mental elevation. It would seem that no one modern literature at present is so rich in examples of every style as are the Greek and Latin literatures, which may be said to form a single whole, or, at any rate, are like the Sun and Moon illuminating the World with a common light. Greek literature offers specimens of almost every kind of writing and great examples. If anything is wanting, it is supplied by Rome. To find parallels to these we have to go not to one modern literature alone, but to all.

The ancient classics again, like the ancient heroes, have the advantage of simplicity, of being detached from petty detail and freed from the association of ecclesiastical or political prejudice. They thus supply a fixed and common standard. Some few of the greatest of the moderns, such as Dante, Shakespeare, Molière, and Goethe, have the same fixity, but even they, if they add to the world of the ancient, do not replace it. The fact is that the ideal culture wants both; yet the modern literatures have many natural advantages. They are more easily apprehended, and they come home more to the modern mind. We should recognize that the great modern writers are classic, and for the same reason that the ancient are classic—not because they are old, but, as Sainte Beuve and Goethe agree, because they are excellent, "energetic, fresh, and lively." We should then in education make use of them; only we should use the best parts and authors, and use them in the same kind of way. We should have as high a standard of scholarship. We should not merely employ the more fleeting and feeble authors, but those who would really elevate and instruct the mind. The conclusion is that those who wish to give their lives to literature should study both, and that the teachers of the modern languages should, if possible, be acquainted also with both, or at any rate should have the same ideal and be able to give to their pupils the same kind of discipline and culture and inspiration for the human soul which is necessary to it, and which education and mathematics and physical science alone, valuable and important as they are, cannot give.

Prof. BRKUL, in moving a vote of thanks to the President of the Association for his address, said he wished at the same time to thank the President of Magdalen for his strenuous endeavours to further the scholarly study of modern languages at the older Universities. The aim of his address had been to point out that there was no breach of continuity between the classics and modern languages, and that both would gain by a study of both.

Dr. HEATH seconded the vote, which was carried by acclamation.

The PRESIDENT, in reply, said that he valued exceedingly the opportunity of being present, and he highly appreciated the honour which the Association had done him in asking him to be President. If he could do anything to advance the interests of the Modern Language Association, he should be glad to do so. He was aware that in his address he had been led away by his great love for the classics; for that was a feeling which always revived when he thought about that subject. He doubted not that, if the past had been great and glorious, the future would be equally so if scholars would only hold the highest standards constantly before them.

Election of a General Committee.

The meeting then proceeded to the election of members to serve on the Grand Committee, and voting papers were distributed. Mr. STORR requested the members to add the name of Dr. Schüddekopf to the papers, it having been accidentally omitted.

At a later period of the meeting it was announced that the following members had been elected:—H. G. Atkins, M.A., King's College, London; Henry Bradley, M.A., Clarendon Press, Oxford; H. G.

Fiedler, Ph.D., Birmingham and Oxford; F. B. Kirkman, B.A., London; W. G. Lipscomb, M.A., Head Master, Bolton Grammar School; C. H. Parry, M.A., The Charterhouse, Godalming; G. C. Moore Smith, University College, Sheffield; D. L. Savory, Goldsmiths' College, New Cross; A. A. Somerville, Eton College; A. E. Twentyman, Board of Education Library; Dr. Schüddekopf, D.D.

Use and Abuse of Conversation.

Mr. F. B. KIRKMAN summed up the letters published in *Modern Language Teaching* on "The Use and Abuse of Conversation in Modern Language Instruction." He said that, as the letters occupied thirty-four full pages and were from ten different writers, he hoped that he should not be expected to do more than try to make clear the various issues which were involved in the correspondence. The questions were: "What are the complaints against the use of conversation in modern language instruction—are they justified?" and "What is the proper place of conversation in modern language instruction regarded as part of a general education?" The definition that was given for the purpose of the discussion was that conversation was the use of the spoken foreign language. Dealing with the last question first, he would make a distinction which was made by the first contributor to the discussion, Mr. Longsdon—the distinction between end and means. Modern language teachers had got into difficulties by losing sight of that distinction. Conversation was of secondary importance as an end, but it had its value in preparing a way for the technical institute. It was the business of general education to prepare the groundwork for certain specialized subjects, and the ability to read a foreign language unlocked the literary treasure-house of the foreign nation to which the language belonged. But as a means or method of instruction conversation was of supreme importance. For a moderate facility in the use of a language two things were essential—namely, a rich vocabulary and a good store of idioms, and familiarity with inflexion and construction. It seemed to him that the oral method had a supreme value as a means to this end, because it gave a maximum of practice in a minimum of time, and it also taught spelling. The reformed method had shown that it was capable of being applied in the teaching of grammar. The object of teaching grammar was to put the pupil at any given moment in a position to use an inflexion or a construction without conscious effort and without having to think of a rule or an exception. The oral method was the only one which would succeed in doing this. The object of the old method was to turn out grammarians, and he was bound to say that it succeeded; for he believed that many English schoolboys knew more of the intricacies of French grammar than some eminent French professors who taught their own language in their own country. A second advantage of the oral method was that it bound the foreign word directly to its meaning. They all knew that some amount of mental translation was unavoidable, and they also admitted that translation had a legitimate place as a means of making clear the meaning of words. What they had to avoid was allowing translation to become an habitual practice. He did not associate himself with his friend Mr. Storr in his enthusiasm for the good old-fashioned method of construing; for he believed that that was one of the relics of Mr. Storr's unregenerate youth. His answer, then, to the question as to the proper place of conversation was that conversation was of secondary importance as an end in itself, but that it was of supreme importance as a means to the end, the power to read the spoken language. This naturally brought him to the question of the complaints which were made against the reformed method. He did not think that anybody would dispute that a great deal of the work was disgracefully slipshod; but the reason was that they had not found out the way of using the oral method sufficiently and systematically. He also questioned whether candidates who had started with the reformed method from the beginning had ever been sent to the examinations in any large quantity. He did not mind prophesying that a great deal of the slipshod work would disappear when the candidates were, for the most part, persons who had been taught on the reformed method from the start. The real problem was how they were to secure the conditions which would make it possible to deal with the modern language instruction in a thorough and systematic way. He hardly needed to say that there were at present many difficulties in the way. One was the existence of two sorts of teachers. One was the modern language specialist, who was very well up in his philology, but whose notions of the reformed method were very rudimentary; and the other sort was the scholar who did not profess to know anything about the language that he had to teach. It was merely a matter of common sense that the instruction must be in efficient hands before the reformed method could be applied. It was often found that one class was doing translation and another class was doing exercises in the grammar, and there was no organic connexion between the two. He did not wish to say anything against the Inspectors, and especially against modern language Inspectors; for they were doing their work as well as they could under difficulties. But there were Inspectors who did not know anything about modern language teaching, but who, unfortunately, had to express an opinion upon the subject. As to the examinations, he must speak very strongly. Being an examiner

himself, he knew something about the subject. Certain examining bodies conducted what was called an oral examination in French. What he protested against was that the conversation was to be upon what was euphemistically called "general topics," such as the weather, the theatre, the garden, and matters of that description; and it was said that this was necessary because, if the conversation turned on certain books, the books would be crammed. His reply to this was that these subjects were likewise crammed. There must be cramming. Learning a language was cramming. It was the learning of symbols by which to express thought. He would conduct oral examinations upon set books, and he would let the schools choose their own books. He wished to thank heartily those present who had taken part in the discussion in the magazine.

An interval for tea took place, and the remainder of the afternoon meeting was presided over by Mr. W. G. LIPSCOMB.

Mr. STORR wished to define his position on this question. He belonged to the "left centre," that is to say, he was a progressive, but his motto was "Festina lente." His first note was with regard to co-operation. The want of this was one of the serious conditions which the advocates of the reformed method had to face. There was some of the old leaven left even in the best of schools, and teachers had to accommodate their method more or less to it. As to examinations, he should be inclined to bar them altogether in the present discussion. Teachers must do what is right in spite of examiners and inspectors. Then he came to Prof. Findlay's "argumentum ad hominem." It was true that in reading Molière or "Faust" he did not construe. It had been laid down by a great authority that the full knowledge of a language came when the learner ceased to translate; but that stage was not attained until he had gone through the grind of translating word by word and knowing what the meaning of each word was. As to grammar, he had expressed his view in the contribution which he made to the discussion in *Modern Language Teaching*. It had not been much modified by his critics. His experience was that a modern language master had to teach general grammar through the particular language, whether French or German. It was said that what grammar was required could be imparted in the foreign language, and that the mass of non-essential material invented by grammarians could be cut out. He wished that they had Prof. Findlay there to define for them what was essential and what was non-essential. He would take one single point. One of the hardest things in learning or teaching French was the use of tenses. That could be acquired partly, and perhaps wholly, by conversational methods. At the same time, if the teacher could give the theory of the tenses and explain the rationale, that, at all events, ought to be admitted as an alternative method of teaching. Under present conditions the teachers who now had to teach a foreign language must use their native tongue in order to move freely when they came to the higher literature or the higher criticism. Then he passed to another criticism—that of Mr. Andrews, who simplified the matter by his proposition of "the three aims," viz., the power to understand written language and to read it intelligently aloud; the power to write the language; and, the power to understand and use the language. The third, according to Mr. Andrews, as the greater, must include the two others, the less. But, if they dismissed the reading aloud intelligently as unimportant, it was perfectly plain that the first and second points could be gained without the third. They knew, for instance, that classical masters did not speak Latin and Greek or know it conversationally, and yet they pretended—he used the word in the French sense—that they understood and appreciated the classics. He remembered his old tutor, the late Bishop Westcott, telling him that he had read far more German than he had English, but, he added, "I could not put half a dozen words together. I am utterly unable to speak a word of German." It seemed to him that there was some need of a compromise in this matter. He was a Modern Language Balfourian. He had no quarrel with the whole-hogger, the conversational Chamberlainite, but he considered it a counsel of perfection not yet attainable. He would like to ask how many even of the elect, the members of the Modern Language Association, were equal to conversing with the same ease on French or German literature as they would on English literature. And how many of those who felt themselves equal to that task would also profess their ability to carry their English class with them? In the course of a long life he had met some four or five men whom he should really call bilingual—that is to say, who could both talk and write two languages with equal facility; and it would be allowed that such men were very rare. Members were all agreed that the first stage must be conversational; but the difficulties began when they proceeded to the higher stages. How far was the teaching throughout to be conversational? Here he would quote a very remarkable article by Dr. Lloyd on Esperanto, in which he said: "The educational value of learning a language is exceedingly slight in the earlier stages." This he thought Mr. Kirkman would allow. Conversational French or German was valuable as a means to an end, and he agreed with the reformers that it was by far the most effectual means. It was only when they came to what the President had so eloquently set before them, the claims of literature, whether ancient or modern, that he began to feel hesitation. In a recent report of an Inspector he had read that conversation was the "summum bonum," the

crown, of modern language teaching. To this he would say "No, a thousand times no!" It was only a means to an end. Defining the end in a single word, he should say that it was the power to understand; and that power to understand was shown by the power to translate. This was, he thought, not only theory, but practice. The greatest translations which had been made had been made by men who had little or no conversational power. Take, for instance, Coleridge's "Wallenstein," or FitzGerald's "Omar," or Carlyle's "Wilhelm Meister," or Taylor's Faust. Certainly those men had not learnt the languages conversationally. Perhaps a supreme instance would be the translators of the Authorised Version of the Bible. If he might end with a classic passage, he would quote Dr. Arnold's letter to his friend Justice Coleridge, in which he said that his aspiration would be to teach Shakespeare to a class of young Greeks in regenerate Athens, and to dwell upon it line by line and word by word in the very way that nothing but a translation lesson would ever enable them to do, until, after a time, one would almost give out light in the dark in consequence of having been steeped, as it were, in such an atmosphere of brilliance. Arnold went on: "How shall this ever be done without having the process of construing as the grosser medium through which alone all the beauties could be translated, because else one would travel too fast and more than half of it would escape us?" His (Mr. Storr's) last word was an apology for translation, not construing—a very different thing. He thought that translation must be an integral portion of modern language teaching.

Prof. BREUL said that among the various obstacles enumerated by Mr. Kirkman the chief consideration was the teacher himself. The very best method might not be good in the hands of a particular teacher. The teacher might be a scholar, but he might not be an artist, as, to a certain extent, he ought to be, in order to change himself into a Frenchman or a German during the teaching. This change might be made even under the old method of teaching, as he knew from personal experience. He was brought up under the old method, and English was the foreign tongue which he learnt. He learnt the language from a teacher who was certainly far from being educated under the new method; but, still, he inspired him with an interest in the English language and the English nation. This man managed not by conversational methods, but by his personality and his very enthusiasm for England and the English, to arouse in his pupils a similar enthusiasm and to make them read a great deal, though they did not speak very much. His second English master, Prof. Napier, of Oxford, taught on the old method, and yet the results which he achieved in some cases were considerable. This was because he was the right man. Really very much always depended upon the teacher and the attitude in which he approached his subject. This point ought not to be forgotten when they talked about method. He desired to enter a plea for the specialist, who had been rather hardly dealt with by one of the contributors to the printed discussion. It was true that a three years' course at an English University was a wholly inadequate preparation for a modern language teacher. Far more than this was required of the teacher in Germany. To a philological knowledge of French or German he must add an intimate acquaintance with the language and literature of to-day, the life and thought and sentiments of the people. In England they were still far from attaining this ideal, but to decry the specialist was, he held, to cut off the branch on which their ladder rested. Perfect knowledge must be built on a scientific foundation laid at the Universities.

Mr. SAVORY said that the specialists to whom he referred were men who, having taken the Medieval and Modern Tripos at Cambridge, thought themselves competent at once to teach French or German, though they could not speak a word of the language. The oral examiner in that Tripos had told him that only one of the candidates had been able to carry on a conversation in French for five minutes. Such a thing could not happen in France or Germany.

Prof. RIPPMAHN disputed Mr. Kirkman's contention that spelling could best be taught by the oral method. The eye must be a better guide than the ear.

Mr. T. N. CROFTS, having tried both methods, pronounced almost wholly in favour of the old, or at least of a *via media*, a mixture of the two. When he tested boys taught by the new method he found that they had not really grasped what they had read. They did not understand when the medium of instruction was the foreign language. It was not necessary to translate every word, but English must be freely used.

Mr. VON GLEHN differed fundamentally in principle from the last speaker. He would not make a fetish of "no English," but a sound rule for the teacher was: Never English if I can help it.

Mr. KIRKMAN having briefly replied, the meeting was adjourned.

SECOND DAY.

The members assembled at half-past ten, Mr. WARREN, President, in the Chair.

Esperanto.

Dr. R. J. LLOYD, of Liverpool University, read a paper on "The Uses and Abuses of the Esperanto Language." He dwelt on the extraordinarily rapid progress that the study had made, as testified by

the Boulogne Congress, where a score of nations met, and for the first time since Babel conversed freely in a common tongue. He prophesied the time when in schools classical boys would cease to learn French and German and the modern side to learn Latin, both sides learning instead Esperanto. The bulk of the paper was devoted to a defence of the subjunctive mood in Esperanto, which, it would seem, is threatened by the extreme left.

Dr. J. C. O'CONNOR, the introducer of Esperanto into England, defended at once the subjunctive mood and his own consistency.

Mr. STORR said that he did not wish to interfere in a domestic quarrel. The subjunctive mood had been an apple of discord not only at the Board of Esperantists. He believed that Esperanto had a great future before it, but it was the same sort of future that shorthand writing and telegraphy had. In another thousand years it might produce a great literature; but till then he should deprecate any attempt to turn out two or three great modern languages in favour of it. For the present generation Esperanto must be a purely technical subject.

Miss LAWRENCE said that Esperanto as an international language used for the utilitarian purposes of life would effect a great saving of time; that "Cassell's Popular Educator" and "Harmsworth's Educator" had taken it up and issued courses of instruction in it. The Christian Endeavourers were using it in their magazines. The Japanese were learning it, and within the last fortnight a medical review in Esperanto had been published.

On the motion of Mr. CLOUDESLEY BRERETON, seconded by Prof. RIPPMAHN, a vote of thanks to Mr. Lloyd for his papers was put by the PRESIDENT, who apologized for his inability to put it in Esperanto.

The Poetic Touch in Ancient, Medieval, and Modern Times.

The PRESIDENT, in calling upon Mr. Bourdillon to read the next paper, said that the author of the paper was himself a poet, and spoke not only as a critic, but himself an artist.

The PRESIDENT said that he hoped that Mr. Bourdillon would give the members an opportunity of reading the paper *in extenso* as soon as possible. He was sure that they would agree that the poetic touch had never been better or more humanly exemplified in a lecture than it had been in the paper which Mr. Bourdillon had read.

The late Sir Richard Jebb.

The PRESIDENT said that it had been suggested that a message of condolence should be sent to Lady Jebb, the widow of that distinguished and delightful scholar who had recently died, and who was so much esteemed in the whole civilized world and beloved in proportion as he was known. They would remember the phrase about the death of a famous man eclipsing the gaiety of nations. He thought that they might say without exaggeration that the death of Sir Richard Jebb had eclipsed the illumination and the sense of glory of English-speaking scholars. He should like to have the privilege of moving from the Chair that a letter be sent to Lady Jebb expressing the sincere condolence of the members of the Association with Lady Jebb and the other members of the family on the death of Sir Richard Jebb. He would ask Mr. STORR, who could speak in some sense for the Association, to second the proposal.

Mr. STORR, in complying with the President's request, said that Sir Richard Jebb was one of his oldest friends. He knew him from the year 1859. He was one of his colleagues at Trinity College, and he had kept in close touch with him ever since. This was, perhaps, the youngest of the learned societies which had expressed condolence and sympathy with Lady Jebb, but the expression was none the less sincere.

The motion was unanimously agreed to, and the PRESIDENT said that perhaps the meeting would leave it to Mr. Storr and him to arrange that the vote of condolence should be suitably sent.

The Form Master System.

A paper on "The Form Master System in Public Schools in relation to Modern Language Teaching" was read by Mr. D. L. SAVORY, of Goldsmiths' College, New Cross.

Mr. SAVORY said the stock argument in favour of the form system was that it enabled the master to be acquainted with the character of each individual member of the form; but it would not hold water. There was no more continuity in a substance divided into longitudinal sections than in one divided vertically. If the force of the concentrated influence of one master on the boy for a whole term, or even for a whole year, were pressed, he would point out that the magnetic repulsion, as well as the magnetic attraction, between boy and master has to be reckoned with. To inspire and stimulate the pupil the teacher must himself be inspired by love of and belief in the subject he teaches, but few, if any, teachers can feel this enthusiasm for half a dozen different subjects. There was more force in another objection—the narrowing influence on the teacher. This applied especially to the mathematician, and, least of all, to one who had so wide a range as modern languages afforded. Nothing could be worse than the present practice of entrusting French to classical form masters who despised a language they did not understand. One classical head master objected to modern language scholarships on the ground that he did not wish to encourage the importation of French nurses. System there was none. On one

classical side he knew of four different French grammars used in the four forms. And the evil was not confined to the classical side. On many modern sides the form master—a mathematician or science man—took the French, or form masters were imported from the depleted classical side. No similar anomalies or absurdities could be found in French or German schools. His ideal was that every school should be organized and classified by departments with a specialist at the head of and responsible for the teaching of each leading branch of the school curriculum.

Mr. VON GLEHN was entirely in favour of the specialist system, but he noted one difficulty in English schools that did not occur in France or Germany. It was necessary—at any rate in small schools where there was only one specialist for each subject—that classes should be moved or promoted as wholes; whereas the system of individual promotion was an ingrained tradition in the English system. In the lowest classes there was much to be said in favour of the form master.

Mr. KIRKMAN asked leave to propose a resolution referring the whole question of the existing conditions of modern language teaching in schools to the Committee to report upon at the next General Annual Meeting.

A LADY MEMBER desired, before seconding, to ask whether the motion was intended to apply to girls' schools. She believed that in girls' schools they had successfully solved the problem of preserving the form as a unit and employing the specialist.

Mr. KIRKMAN answered that his resolution was intended to be quite general, and without prejudice.

Mr. LIPSCOMB agreed in the main with the opener, but pointed out difficulties. First, the juniors required a form master. It was wicked to send little boys jumping about from one specialist to another. Secondly, it was impossible to frame a time-table so as to provide a specialist for every class in every subject.

The PRESIDENT said that it was quite clear that the topic which had come on at the end of the meeting was a very interesting one, and it was unfortunate that there was not more time for discussing it. He thought that it would be well for the Association to discuss it further. It was desirable that a Committee should take steps to focus the views of the members and prepare the subjects for discussion at a future time.

The motion was agreed to.

Mr. STORR then moved a vote of thanks to the President, Mr. Warren, for his services as Chairman. This had been one of the most successful, if not the most successful, of the Annual Meetings of the Association, and the success was due in no small measure to the Chairman. While he had been watching the Chairman, a line of Browning came into his mind—

"Where sits Rossini patient in the stalls."

The President had sat patient, but he had done more than that, for he had known how to interpolate *le mot juste*.

The motion was seconded by Dr. BREUL, and carried by acclamation.

The PRESIDENT, in acknowledging the vote of thanks, said that he had been very much interested in the last discussion, and he had been specially struck with the vigorous and able paper which had been read by Mr. Savory. He had also been much interested in the remarks of Mr. von Glehn and Mr. Lipscomb. What he had wanted to express in his own address was that it was not merely knowledge and erudition that they had to consider as the effect of modern language teaching, but it was character also. Character had been a very great element in English teaching. It was for the teachers of modern languages to see that, so far as they took a large and increasing part in the education of the country, they produced a no less fruitful result and a no less elevated type of character than the older subjects had done. It had been a great privilege and honour to him to preside over the meeting, and he could assure the members that he had learnt a very great deal which would be most useful to him.

CONFERENCE OF HEAD MASTERS.

A CONFERENCE of Head Masters was held at the College of Preceptors, Bloomsbury Square, London, on Thursday and Friday, December 21 and 22.

THURSDAY.

The members of the Conference assembled at two o'clock. The Chair was taken by the Rev. G. RENDALL, Litt.D. (Charterhouse School).

Inspection.

The Rev. H. M. BURGE, D.D. (Winchester College), moved:

"That the Conference, considering the intimate relations that exist between the schools here represented and the Universities, and being of opinion that it is of the greatest importance that alternative forms of inspection should be left open to the governing bodies of secondary schools, approves the action of the Board of Education in entrusting University bodies with the work of inspection."

He said that there were two points which he wished to mention. The first was that they, the Head Masters represented at the Conference, cordially accepted the general principle of inspection. Secondly, though they might all accept the general principle of inspection in itself, the particular means and methods and the application of that principle were quite another thing. It was easy to measure cubic space, and to deal with the orientation of windows and so on; but the inner spirit of secondary schools, the spirit in which subjects were taught and learned, the spirit in which the life of the place was lived, was of importance and of significance beyond all definition and all understanding. He considered that it would be most disastrous to the whole system if they were encouraged to lay such stress on externals, on uniformity of methods, on the mechanism of education, that they should direct their attention and their eyes only to the things that are seen.

The Rev. H. B. GRAY (Bradfield College) seconded the motion. He said that the schools represented at the Conference and the Universities had most intimate relations, and in the position on the one side of dominance and direction, and on the other side of subservience and deference, it was most desirable and most natural that they should look for inspection from those great and august bodies. On another point, the resolution should be passed, because such a system of inspection as that referred to secured greater elasticity. Again, when there was an alternative of masters, those in service acquired thereby a *quasi*-independent existence, because, if they were discontented with one master, they could change. He did not know whether it would be possible for the mover to accept a slight modification of the wording of the motion. It seemed to him that as it stood it might alienate the sympathies or stifle the votes of those who did not like inspection at all. According to the terms of the motion, it would appear, by what it did not say, that there was some compulsion in inspection; but inspection was only compulsory on those schools that had to earn a grant thereby. He would suggest the insertion of the words "grant-earning" after the word "secondary," and, instead of the word "inspection" at the end of the motion, the words "inspecting such schools." If the mover of the motion did not accept the suggestion, he (Dr. Gray) should be glad to second the motion as it stood.

Dr. BURGE said that he quite appreciated Dr. Gray's point; but inasmuch as the suggestion would, to his mind, narrow the scope of the resolution, and would exclude a large number of secondary schools represented in the Conference, he should be very loath to insert the words.

The motion as moved was then carried *nem. con.*

Mr. F. FLETCHER (Marlborough College) moved:

"That in the conduct of inspections the Conference think it of the utmost importance that the reports of inspectors, communicated to governing bodies and head masters, should be treated by the inspecting board as strictly confidential, and that the judgments of the board itself should be deliberate and collective."

It was of the utmost importance that the verdict should not be merely the arbitrary and perhaps pedantic judgment of one individual, but the considered and reasoned decision of the board. It was also of the greatest importance that the reports of inspectors should be full, detailed, frank, and confidential.

The Rev. A. W. UPCOTT (Christ's Hospital) seconded the motion.

The motion was carried.

The Rev. H. B. GRAY, D.D. (Bradfield College), moved as a rider the following:—"That in cases where two or more inspectors are engaged in inspecting a school the inspecting body should insist on previous collaboration between the different inspectors before any report is issued on any special department of the school by an individual inspector."

The Rev. A. J. GALPIN (King's School, Canterbury) seconded the motion.

The Rev. C. E. TANCOCK, D.D. (Tonbridge School), said that the suggestion contained in the rider seemed to him to be altogether outside their province as those who were inspected, and to be making conditions which it was almost impossible for the board always to be able to comply with, and on these grounds he should decidedly vote against the rider.

Dr. GRAY, in answer to Dr. Tancock, said that in the resolution they suggested a condition with which the inspecting board should comply, and therefore it did not seem to him to be autocratic to make one more condition.

The rider was put to the meeting and lost, the voting being 9 for and 22 against.

The Rev. J. GOW (Westminster School) moved:

"That the Conference desires to emphasize the principle that inspection should take into due consideration the aims and circumstances of the school inspected, and regard intellectual methods and results as of greater weight than material equipment and appliances."

At the present time there was a general opinion on the part of the public—an opinion that was shared by a great number of teachers of science—that very great expenditure was necessary for effective scientific

teaching, and schools were invited to compete with one another in mere expense, and inspectors were apt to see whether the appliances were very costly, and, if they were not, to condemn them. Competition of the kind he had referred to was bad, because schools were of different degrees of wealth, and some schools were in positions where a very large expenditure would not procure the same advantages as a small expenditure would procure elsewhere. At Westminster £5,000 had had to be given for a piece of ground which would have cost £30 or £40 in the country. The competition was also bad for the teachers and for the boys. If it was put into a boy's head that he could not learn a subject without great expenditure, and could not continue it without equally great expenditure, he would at once get the notion that it was no good learning the subject unless he was going to make use of it afterwards. His (the speaker's) opinion was that the better the teacher the less apparatus he wanted. No more was proved by an experiment costing £10 than by one costing 10s., and a good teacher would prefer the 10s. experiment to the £10 one. He admitted that manipulation and accuracy of observation must be taught in the laboratory, and that for that purpose some apparatus was required; but even here far too much expenditure was very frequently incurred. He would suggest that in a school which was not rich a great deal of that work which might be done in a physical laboratory, but which the school could not afford to do, should be done in the drawing school and also in the mathematical teaching. Great weight should be given to the personality of the teacher in the school, and, if the results were remarkably good, credit should be given for them irrespective of the humble means which might be employed in procuring them.

The Rev. R. WATERFIELD (Cheltenham College) seconded the motion. He said that it was most important that the fact that some schools were able to spend a very large amount of money in scientific apparatus should not prejudice the inspectors against other schools which were less happily circumstanced, and therefore less brilliantly equipped.

The motion was put to the meeting and carried *nem. con.*

Mr. R. C. GILSON (King Edward's School, Birmingham) moved:

"That, as the purpose of inspection differs from that of examination, inspections should be conducted at such intervals of time as will best secure reality and thoroughness and prevent waste of time, energy, and expenditure."

He spoke as one who believed in inspection. He believed, further, that inspection and examination should go hand in hand. The examination was an examination of products; the inspection was an inspection of the machinery, in the widest sense, including the human agents by which the products were turned out. The two things were, and ought to be, correlative and supplementary to one another. There was this difference between inspection and examination: examinations must necessarily be repeated at fairly frequent intervals, because the boys were passing through the schools, and, unless there were examinations pretty frequently, some would escape; on the other hand, inspection was an examination of things which did not shift so rapidly as the boys shifted. Two things followed. One was that there should be great elasticity in accepting one form of inspection in place of another, and the other was that inspection should not take place too often. His own opinion was that in most instances inspection once in three years would not only be altogether effective, but would be more effective, because it would be carried out in a more thorough and comprehensive manner. It would be a full-dress inspection, not a casual one, and the men who undertook it would probably be better men and better paid. It would be done with far less disturbance of that process of actual education in the school which all the machinery was intended not to impede, but to promote.

The Rev. C. E. TANCOCK (Tonbridge School) seconded the motion. He said that there was great expenditure of time and energy in all inspections, and it was most important that they should not be called off too often to serve tables and to fill up tables. He felt certain that an inspection which was not anything like annual, but either triennial or quinquennial, would be much more efficient in every way, and would tend much better to the useful employment of the time of all masters, than one that was annual.

The Rev. W. A. HEARD (Fettes College) said he thought that on the whole inspection was a very beneficial thing. He had found the reports of inspectors fair and suggestive.

The Rev. E. C. OWEN (St. Peter's School, York) supported the motion.

The motion was carried.

Special Inspection.

The next item upon the agenda was the consideration of the following motion standing in the name of the Chairman:

"That the Conference is of opinion that, now that the same validity has been given to the qualifying as to the school-leaving examination, the requirement of special inspection, which is applicable to schools only, and not to candidates, for the qualifying examination should either be withdrawn or made as

little burdensome as possible. They submit that an inspection certificate of efficiency should be valid for a term of five years, except in cases where the certifying board recommend or the War Office expressly direct reinspection after some shorter term."

During the speech of Dr. Rendall introducing this subject the Chair was taken by Dr. TANCOCK.

Dr. RENDALL said that it would be remembered that some two or three years ago in the new regulations issued by the War Office suddenly inspection was imposed on all schools which were preparing candidates for the Army if they desired to hold the qualifying examination at the school rather than send up their boys to the alternative qualifying examination that was organized for the public. The term, he thought, was introduced perhaps somewhat hastily into the War Office regulations. The inspection was quite clearly inspection of a very special kind. It was inspection for a restricted purpose, namely, to ascertain whether the school in question was capable of efficiently preparing candidates for the preliminary examination of candidates who desired to enter the Army. Really for that purpose inspection did seem to him in the case of a very large number of schools preparing candidates for the Army to be something quite gratuitous. The difficulty that was raised was that that inspection for a very restricted purpose was not the kind of inspection contemplated by the Board of Education or by the Joint Board of the older Universities or, he imagined, by the newer Universities who undertook the inspection of schools. It seemed unreasonable that year after year for the purpose of ascertaining the efficiency of a school of perfectly recognized efficiency inspection should be imposed by the mandate of the War Office. Therefore he had taken an active part in bringing such influence as he could command to bear on the authorities of the War Office to define a reasonable term of years for the inspection of schools. It was quite clear that, unless the War Office was prepared to accept inspection at reasonable intervals of time, it would be the policy and indeed the necessity of every school to send up candidates for the public qualifying examination, for which no kind of inspection was required, and for which candidates from private teachers could come as freely as candidates from public schools, rather than submit to inspection in order to gain the privilege of having the leaving examination. He was glad to say that quite recently he had received letters from the War Office, which formed a notification of the decision which had been arrived at. The first letter was dated December 11. It said: "Sir, I am commanded by the Army Council to inform you that the subject of your letter of November 17, as Chairman of the Committee of the Head Masters' Conference, has been fully considered, and that they have decided that the inspection of 'approved' schools shall not take place more often than once every five years, except in cases where the inspecting body recommends or the War Office expressly requires inspection after a shorter term. I am further to say that the Army Council are still very anxious that the bulk of the candidates for the Army shall come from properly inspected and approved schools after undergoing a regular curriculum, and that it is hoped that this decision and other decisions which will be communicated to you in a separate letter will have the effect of inducing more schools to come forward for inspection and for the privilege of having their boys examined for the leaving certificate at the school at the end of ordinary term time." The second letter was as follows:—"December 15. Sir, I am commanded by the Army Council to inform you that it has been decided to publish a list of schools approved for presenting candidates for the leaving certificate in the monthly Army List, and also in other publications, such as the 'Guide to the Various Ways of obtaining a Commission.' It is hoped that this course will commend itself to the schools which have been 'approved.' I am also to notify to you the following decisions of the Army Council:—(1) Inspection of approved schools will not take place more often than every five years, except in cases where the inspecting body recommends or the War Office expressly requires inspection after a shorter term. (2) That the only alternative to the leaving certificate in the case of candidates for the Royal Military College or the Royal Military Academy is the qualifying certificate (and for a short period the 'exempting certificate' as described in the regulations), and that the qualifying examination will be held in London and Dublin only in the months of March and September. (3) That no leaving certificate will be accepted for Army purposes which does not include all the subjects required by the regulations—that is to say, that a leaving certificate cannot be completed by attendance in single subjects at the Army qualification examination, with the exception of those subjects provided for in the footnote to paragraph 10 of the regulations, namely, geometrical drawing, practical geometry, and practical measurements. (4) That a modified standard for the leaving certificate will be accepted, providing it is at least equal to that of the qualifying examination. I am further to bring to your notice that the syllabus of the qualifying examination has been slightly altered as regards the number of pieces to be set in Latin and the method of conducting the oral in modern languages. These alterations will be embodied in new regulations shortly to be issued." He would move, instead of the motion standing on the

agenda: "That the Conference have received with satisfaction the intimation of the Army Council that inspection of approved schools will not take place more often than every five years, except in cases where the inspecting body recommends or the War Office expressly requires reinspection after a shorter term."

The Rev. H. M. BURGE formally seconded the motion.

The Rev. W. H. FLECKER (Dean Close School, Cheltenham) said that he would be prepared to move: "That the Conference regrets the attempt of the War Office to insist on the inspection of schools whose pupils wish to compete for entrance at Woolwich and Sandhurst." He was quite sure that, if his school were inspected, the first thing an inspector would do would be to insist on a very large expenditure for a new chemical laboratory. He was not prepared to recommend that expenditure for the sake of a few boys who were going into the Army.

Mr. F. FLETCHER sympathized with what Dr. Flecker had said.

Mr. F. H. A. JAMES (Rugby) was inclined to move a rider to the following effect:—"That this Conference demurs to the publication of an official list of schools which have signified their willingness to accept inspection."

The Rev. W. H. CHAPPEL (King's School, Worcester) seconded the rider. He entirely agreed with what Mr. Flecker had said with regard to the smaller schools.

After some further discussion, the Rev. A. W. UPCOTT (Christ's Hospital) moved: "That it be an instruction to the Committee of the Conference to hold further communication with the War Office on the subjects of (1) inspection, and (2) publication of a list of schools which submit to inspection."

The Rev. A. F. RUTTY (St. John's School, Leatherhead) seconded the proposal of Dr. Flecker.

Dr. Flecker's amendment was then put to the Conference in the following form:—"That, while recognizing the good will of the War Office in adopting a five-years term of inspection, the Conference regrets the attempt of the War Office to insist on the inspection of schools whose pupils wish to compete for entrance at Woolwich and Sandhurst."

The amendment was lost.

The motion, as proposed by Dr. Rendall, was then carried, with one dissentient.

The rider moved by Dr. James was seconded by the Rev. W. H. Chappel and carried, there being 23 votes in favour of it, and 6 against.

The Rev. A. W. UPCOTT's rider, in the following form, was seconded by Dr. James and carried:—"That it be an instruction to the Committee of the Conference to hold further communication with the War Office on the publication of a list of schools which submit to inspection."

Hours of Sleep allowed to Boys in Public Schools.

The Rev. A. W. UPCOTT moved:

"That this Conference recognizes the importance of the question as to the number of hours of sleep allowed to boys in public schools, and refers the matter to the careful consideration of the Committee of the Conference."

The motion was seconded by the Rev. H. W. MOSS (Shrewsbury School, and, after a short discussion, was carried.

The Conference then adjourned till ten o'clock, Friday morning.

FRIDAY.

The Chair was again taken by Dr. RENDALL.

Joint Examination qualifying for Matriculation in Oxford or Cambridge.

The Rev. the Hon. E. LYTTELTON moved:

"That the Conference commend to the Universities of Oxford and Cambridge the desirability of establishing a joint examination, to be held at schools, qualifying for matriculation in either University."

He said that the two great evils which a great many of them discerned in the entrance examinations of the Universities were, first, a lack of rational readjustment of the old studies, and, secondly, an increasing tendency to lower the standard so much that it was very difficult for head masters to feel that there was any uplifting influence from the Universities on them in the matter of the teaching of their boys. It was quite clear that in both those things the isolated action of the Universities made things more difficult.

The Rev. S. R. JAMES (Malvern College) seconded the motion. He asked whether a slight verbal alteration would not be desirable, because at the present time there was no qualifying examination for matriculation. "Matriculation" was the wrong word.

The Rev. LIONEL FORD (Repton) suggested the following rider:—"And exempting from Responsions or Previous Examination."

The CHAIRMAN called attention to the importance of the words "to be held at schools."

The Rev. A. W. UPCOTT ventured to express the earnest hope that

the resolution would not be passed hastily, and for three reasons. In the first place, if the proposed joint examination were introduced, there would be a tendency to lower the standard of qualification for the the University; secondly, there would be a multiplication of examinations; and, thirdly, the joint examination would be premature.

The Rev. H. M. BURGE was sorry to say that, though he always liked to support the Head Master of Eton, he could not find any ground for supporting the resolution.

Dr. JAMES hoped that the Conference would pass the motion. With regard to the colleges, the position would be left exactly as it was at present. He would be glad if the idea contained in the resolution, which had been well thought out, though not yet in all its details, were accepted by the Conference.

The Rev. W. H. FLECKER said that what they wanted to do was to abolish Responsions and the Previous Examination.

The Rev. R. D. SWALLOW (Chigwell) hoped that the Head Master of Eton would not give way, or let his original motion be altered. There was a great advantage in being a little vague in the matter at the present time, because the whole question had yet to be threshed out. They were quite justified in using the word "matriculation." He hoped that the Conference would pass the motion as it stood originally.

Mr. Ford's rider was not seconded, and therefore fell to the ground.

Dr. BURGE moved the previous question, on the ground that he did not think that the Conference was in a position to vote on the motion.

Dr. TANCOCK (Tonbridge School) seconded the motion.

The motion was carried.

The School Year.

The Rev. H. B. GRAY (Bradfield College) moved:—

"That, in the opinion of this Conference, it would be of advantage to the cause of secondary education if the school year were divided into four terms instead of three, each of shorter duration than at present."

He said that he had noticed a perceptible degree of brain fog on the part of both masters and boys after ten weeks of term, and their work after that time tended to become stale, flat, and unprofitable. With regard to the medical aspect, medical officers of schools seemed to agree that the congregation of boys in the same physical atmosphere for so long a period together, thinking the same thoughts, doing the same things, and moving round the small circle of educational interests, was not hygienically the best condition for growing minds and bodies. As to the high moral aspect, the boys lived, confessedly, in a monastic atmosphere—in one sense a non-natural atmosphere—at a time when character and body were being developed with startling rapidity for good or evil, at a time when passions and emotions were very often strong, and reason and logic very weak, and when they were taken away from mothers and sisters. He did think that there ought to be a continual reversion at as frequent intervals as possible to the domestic circle.

The motion was not seconded.

Army Examination.

Dr. JAMES (Rugby) moved:

"The Conference regrets that, notwithstanding previous representations made to the War Office, nothing has been done (1) to avert the practical exclusion of Latin and German from entrance examinations for the Army, or (2) to bring preparation for Sandhurst more nearly into line with preparation for Woolwich. They desire to point out that the simple increase of optional subjects from two or three in the competitive examination for Sandhurst would go far to correct both these defects, and commend this change to the consideration of the War Office."

He thought that they would all agree in deploring the fact that Latin and German were cut out of the Army Examination: as to Latin because it lay at the root of so much of English education, and German because it was surely important that a certain proportion of officers in the Army should have a good acquaintance with that language.

The motion was seconded by Mr. LYTTELTON.

The Rev. T. FIELD (Radley) said that the gulf between the Army class and the rest of the school had been made so much deeper by the regulations that he thought that they ought to use every opportunity in their power to get them changed.

Mr. J. E. KING (Bedford), in whose name the motion stood on the agenda, explained that he had not moved it because he had not seen the exact terms of it before, and when he did see them he thought that it was a little too strong to speak of "practical exclusion." In schools where preparation for the Army could go on independently of an Army class, owing, perhaps, to the number who were thinking of going into the Army, there was a class of boy who would well be able to do Latin. He did not say that of the Woolwich candidates so much, but there were boys who were weak in their mathematics who would have to find a substitute for that subject.

The Rev. C. EPPSTEIN (Reading) said that certainly those who had

watched the working of the new regulations were convinced that they would have the effect of excluding Latin and German. It would be a great pity if the Conference was not absolutely unanimous in making the recommendation proposed.

After a further short discussion the motion was passed *nem. con.*, in the following form, after the words "nothing has been done":—
"(1) to avert the depreciation, amounting in some important schools to the practical exclusion, of Latin and German," and so on.

Military Training.

Dr. JAMES (Rugby) moved:

"That the military authorities be requested to issue a short memorandum of instructions for the guidance of head masters and officers of public-school cadet corps."

He said that the motion as it stood was somewhat misleading. It was intended to apply to general military training and drill. There seemed to be a certain amount of vagueness in the minds of the masters to whom he had talked both at his own school and at others about the nature of the drill and the nature of the training that were proposed. It was important, if there was to be this drill, as he thought was very desirable, in view of the appeals which had been made to schoolmasters as patriotic people to have the boys trained in their boyhood in view of possible invasions of the country, that they should be told what the authorities held should be the lines which the training should follow.

This motion was seconded by Dr. BURGE.

The Rev. W. H. CHAPPEL moved the following rider:—"And to consider the possibility of financial assistance towards the cost of instruction in rifle shooting and ammunition in such corps and school rifle clubs." He wished to speak on behalf of those smaller schools which were not able to run uniformed corps and which to-day were starting rifle clubs. The whole cost, with the exception of a small grant from the National Rifle Association, if the school was affiliated with it, fell on the school. He maintained that, if this matter was one of national importance, the schools ought to be able to get from the Government financial help.

Mr. F. FLETCHER seconded the rider. He had always felt that, if the Government demanded from the schools that they should do its work, it ought also to assist them to do it. The schools had no right to put an additional compulsory expense on the parents.

The Rev. S. J. GALPIN supported the rider.

The Rev. E. C. OWEN (St. Peter's School, York) said that they might go further and say to the Government that it was the only possible condition on which the thing could be made a success.

The Rev. A. W. UPDEOTT supported the rider. He should like to go as far as possible in the matter. Perhaps it would be possible to include some reference to a grant towards the expenses of field days. That would be of great assistance to Christ's Hospital. The boys at Christ's Hospital could not afford to go for field days at all at present, and they lost a very valuable part of the necessary training.

The Rev. H. W. MOSS (Shrewsbury) said that, in addressing such a request to the Treasury as that contained in the rider, the schools were not animated by any selfish object. They desired to subserve a great national purpose. With regard to the question of the lack of officers, it was precisely from such schools as those represented in the Conference that useful officers might be drawn for the needs of the Army and the needs of the nation.

The motion and the rider were carried.

Notes in Classical School Books.

The next item upon the agenda was a discussion "whether the fullness, and sometimes the excellence, of the notes in many classical school books now in use does not detract from the effectiveness of classical teaching in the schools."

The Rev. H. W. MOSS, in introducing the subject, said that in his school days the boys acquired the power of entering into the mind of the author, and of looking at things through his eyes, and the power of using their own brains in order to make out his meaning. Now, a great change had come over the spirit of scholastic dreams in this matter. Now, almost every author who was read in schools was cut up into fragments and annotated, sometimes by very competent editors, sometimes by editors who were less competent, and the boys lost the advantage of having to make out the sense for themselves, because they found, whenever there was a difficulty, that it was explained for them by the editor. Naturally, great interests had gathered round the system. The publishers were of course in favour of it, and the editors themselves were in favour of it. Certainly the existence of good notes and easily accessible notes to those authors was very useful to private students, and useful also to inferior scholars—and there were some inferior scholars even, he supposed, in public schools; but it was doubtful whether the new system was equally advantageous to the people who, after all, he supposed, deserved some consideration—the boys. What happened? For one thing, the practice which

existed in old times of taking down what was said by the master had fallen largely into abeyance. The boys relied on the notes for examinations. They knew that they could cram the notes during the few days which boys generally gave to the preparation of the subjects in which they were about to be examined; but they read them in a perfunctory sort of way, and they had no genuine interest in the notes. The question was whether the old system, with all its narrowness and all its defects, did not do a great deal towards strengthening and developing the boys' intellect, and the modern system aim at little more than the imparting of information from outside, without producing much real permanent effect on the minds of the boys. Another thing. Supposing that the notes were copious and good notes, there was a temptation for the master to make them a kind of text for discursive and sometimes critical remarks. Instead of teaching the meaning of the author, he commented on the comments of the editor, and the effect was that less of the author was read. In addition to that, the consecration of the thought of the author was interrupted by these comments. What was to be done? It was precisely because he did not know what was to be done that he had suggested that this question should be discussed, and had not ventured to move a resolution. They did not want to drive boys to the use of cribs. Cribs were worse even than notes. Then, again, in some editions schoolmasters must find much that was valuable to themselves, stimulating to their own thought, and helpful to their own teaching. Perhaps there might be used in a larger degree passages for unseen translation.

Mr. LYTTELTON agreed most heartily with what Mr. Moss had said. He suggested that they should all try to read some books to the boys without notes. A master would never get to know the state of things till he tried boys who had been relying on notes with an author without any notes, and then he would see the feebleness and bewilderment of mind into which they fell, and how serious the weakening of the moral fibre with regard to learning lessons had been. One difficulty was that boys varied so very much in knowledge, and in the wish to acquire knowledge, and in their power. But that simple fact was really a very strong argument against notes as now used. It was perfectly absurd that exactly the same amount of information should be given in print to a set of boys who differed so much in capacity. The ideal was that the teacher should be able, by proper help at the time when a boy was construing, to give him just the required assistance. Another difficult subject was the preparation of the lesson beforehand. It was a very common trouble that for many boys the lesson was too difficult, if they were conscientious. The difficulties which he had referred to were not made any worse by doing without notes.

Dr. JAMES agreed that the multiplication of notes had tended to reduce the educational value of books. He could see no solution except that certain books should be read without notes.

Mr. R. C. GILSON agreed with Mr. Moss. He had one suggestion to make (it applied only to the top form), and that was that there should be an extensive practice of *viva voce* unseen translation.

Dr. ROUSE (Perse School, Cambridge) suggested doing without notes till the boys were trained to do the most part of their work without them and were shown how to use them when they got them. There were in most authors one or two things which no boy could find out. Those things the master must pick out beforehand. There were two ways in which he might do that—either *viva voce* as a preparation for the lesson, or have the points printed in the form of a pamphlet.

Dr. BURGE said that at Winchester they had a regular system of reading what they called unseen books. He should like to know whether it would not be possible to use books where the notes were really suggestive as incentives to the boys to get up an author with the notes and so forth entirely by themselves quite apart from any class teaching.

Mr. B. H. TOWER (Lancing College) said that he had been reading to his upper and middle sixth at Lancing some of the works of Robert Browning, and it occurred to him at the beginning of the term that before every lesson he would give out what particular poem he was going to read out next time, and that they should read it and write down what they could make of it. He believed that that had been really a most valuable bit of work for those boys, because it helped to teach them to think.

The Rev. W. C. COMPTON (Dover College) said that, if the Conference impressed publishers with the idea that schools wanted little or nothing in the way of notes, and that in any case a book was barred or objected to if it contained translations, it would have done something towards influencing the output.

The Rev. W. H. MOSS briefly replied.

A vote of thanks to the College of Preceptors was unanimously passed.

On the motion of Dr. BURGE, seconded by Mr. GILSON, a vote of thanks to the Chairman was carried with acclamation.

The meeting then terminated.

In the course of the proceedings it was decided that the Conference next year should meet at Malvern.

SIR RICHARD JEBB.

ON December 9 there passed away at his Cambridge home a man of many gifts and accomplishments, the first classical scholar of this generation, a writer of firm and nervous English, an orator not of the highest order, but in his own style perfect, and a statesman who, though he never rose to office, yet, by his clear-sighted judgment and temperate counsels, exercised no small influence on public measures. The facts of his life are so well known and have been so recently related in the public press that there is no need to repeat them. All that we would here attempt is to add a few personal reminiscences of one who for forty years was a valued friend and a contributor to these pages.

When Jebb came up to Trinity in 1859 he brought with him from Charterhouse (still the old "Slaughterhouse" of Thackeray's day) the reputation of a brilliant classical scholar; but there was nothing in conversation or habits to distinguish him from the ordinary undergraduate, whose first concern was to have a good time of it. He took no part in athletics, but he rode, he joined the Trinity Whist Club, and, what was rare in those days, he had in his rooms a piano, and was an accomplished player. Reading was apparently a *parergon*, but he won in his first year the Porson Scholarship; and there is little doubt that, had he gone in for the Classical Tripos of that year, he would have been placed among the first three or four, if not as Senior. Such was the unreformed Classical Tripos of those days. He had read singularly little—in Greek some half-dozen plays, a book of Herodotus and one of Thucydides; but what he had read he knew almost by heart, and had, so to speak, absorbed them into his system. He possessed not only a marvellous memory, but a marvellous power of concentration. The present writer happened to sit next him at the examination for the Craven Scholarship. There was a long and difficult passage of Thucydides set for translation. For the first half-hour or more Jebb sat with his head buried in his hands. Then he flung away the paper and wrote off his translation without once turning back to the original.

It was after he took his degree that his serious study began, and then he developed an infinite capacity for taking pains. One instance from later life may be given. Early in the '90's there was held in London a great meeting for the promotion of University Extension. Among the orators were the leaders of both Houses and the chiefs of both Benches; but the speech of the day was Jebb's. He had procured from the three secretaries a *précis* of what seemed to each the main facts, and had combined them in a closely wrought and perfectly expressed argument. When the Bryce Commission was appointed this journal in an uninspired and ill informed phrase described Mr. Jebb and Lady Frederick Cavendish as "the ornamental members." Jebb, though naturally grieved, bore no ill will, and we were afterwards able to expiate our error by the statement that Jebb was among the hardest-working of the members and that the literary excellence of the Report was in great measure due to his draftsmanship. That Sir W. Anson should have been preferred to him as Parliamentary Secretary to the Board of Education was, as his friends knew, a bitter disappointment, but he bore it with calm equanimity and continued loyally to support the Government in its educational policy.

A word may be added on his Latin and Greek compositions. Where they can be compared with the versions of great masters, such as Calverley, Evans, Kennedy, they seem to us easily to bear the palm. In Jebb there may be fewer happy hits, exact correspondences of idiom; but he is the true translator, expressing in another medium the very soul of the original. Some of the best were written in examinations: for instance, "Home they brought" with the exquisite line:

Tu puer in vita cum morer, inquit, eris.

We remember an almost equally happy version of the sea-fight in Chaucer, done in the Trinity Fellowship examination, which ended:

Mars veniente die, Mars decedente manebat,

though, if truth must be told, it contained a bad false quantity. Such slips were rare, and the detection of a doubtful quantity in his published verses ("quotidianus" in a pentameter) gave Jebb a sleepless night. How short-lived is fame! The *Athenæum* quoted as a supreme instance of his felicity the rendering of

"It must be by his death," *ὅλα τὸ πρᾶγμα*—enough to make Jebb turn in his grave. But we cannot better the final epitaph of the same journal: "A great scholar and a great humanist."

History.

The Political History of England: 1066-1216. By George Barton Adams, Professor of History in Yale University. Longmans, 7s. 6d. net. 1216-1377. By T. F. Tout, Professor in the University of Manchester. 7s. 6d. net. Vols. II., III.

[Prof. Adams's is the second volume of the series, and the second in order of publication of the History of England, the first volume of which by Dr. Hunt, one of the joint editors, was reviewed at length in our last number. The chief secondary authority for this period is, of course, Bishop Stubbs. Of him it is said: "While he neglected a wide range of material of great value to the historians of institutions—the charters and legal documents—yet the keenness with which he detected in imperfect materials the real solution of problems to be solved is often marvellous."]

Italy and Sicily. By F. Marion Crawford. *Macmillan.* 8s. 6d. net.

[A history of the "Rulers of the South" down to the Peace of Cambray, with a hundred original drawings (scenery and ancient remains) by Henry Brockman.]

Introduction to the Study of Organic Chemistry. John Wade, D.Sc. New and Enlarged Edition. *Swan Sonnenschein & Co.* 8s. 6d. net.

GIFT BOOKS.

The Adventures of Punch. By ASCOTT R. HOPE. Illustrated by S. B. DE LA BERE. (6s. A. & C. Black.)—"Punch," the learned tell us, is a Hindu word signifying "five," applied to a beverage of that number of elements. Ascott Hope, a polytath who has ranged the four quarters of the globe and knows the language and the lore of every habitable part, has unbent for an hour from the labours of his "Universal Gazetteer" to brew for the children a punch-bowl compounded in equal parts of "Jack the Giant-killer," Hans Andersen, "The Arabian Nights," and Joe Miller, with a flavouring of "Mrs. Caudle's Lectures" for spice. It is a cup that cheers but not inebriates, brimming over with innocent fun and harmless fooling, without a touch of vulgarity or a hint of impropriety. The coloured illustrations are first-rate.

Creatures of the Night: a Book of Wild Life in Western Britain. By ALFRED W. REES. (6s. net. Murray.)—These studies of animal life appeared as articles in the *Standard*; but they have been recast in book form. The otter, the water-vole, the field-vole, the fox, the hare, the badger, and the hedge-hog are the chief *dramatis personæ*, and Mr. Rees has the art of making their distinct personalities known to us, not only by their forms and actions, but by their passions and affections. The illustrations are from original drawings by Miss Laverock.

Highways and Byways in Oxford and the Cotswolds. By H. A. EVANS. With Illustrations by L. GRIGGS. (6s. Macmillan.)—This is an itinerary, not a guide-book—an account of a summer excursion made by the author in the district that lies to the north and west of Oxford, bounded by the Cherwell on the east and the fringe of the Cotswolds on the west. Mr. Herbert Evans is an antiquary, and he tells us all that is to be known of the ruins, the churches, the manor

(Continued on page 83.)

On Oxford India Paper, 8s. 6d.

GREEK READER. Vol. I.

Selected and Adapted with English Notes from Prof. VON WILAMOWITZ-MOELLENDORFF'S "Griechisches Lesebuch." By E. C. MARCHANT. Crown 8vo, cloth, 2s.

The Journal of Education :—"As to matter, this Reader is culled from a 'Griechisches Lesebuch' that was prepared by Prof. von Wilamowitz-Moellendorff, acting for a committee appointed in 1900 by the Prussian Minister of Education. Being thus a selection from a selection, and that a selection by one of the foremost Greek scholars in Europe, it should be the very finest flower of reading-books. Issuing from the Clarendon Press, it is, of course, correctly printed with excellent type. . . . Mr. Marchant gives quite enough for a term's work. . . . Teachers of Greek should certainly look at a copy of the Reader."

COMBINED GERMAN READER, WRITER, AND GRAMMAR.

By H. G. SPEARING, M.A. 8vo, cloth, 3s. **Memory Test-Book** for use with the foregoing. 6d. net.

DER UNGEBETENE GAST, and other Plays.

By E. S. BUCHHEIM. Short German Plays. Second Series. Extra fcap. 8vo, cloth, 2s. 6d.

School World :—"Teachers will welcome the six little plays which Miss Buchheim has written, for they are bright and simple. The notes are brief, and consist mainly of renderings of idiomatic phrases."

OXFORD HIGHER FRENCH SERIES. Crown 8vo.

NOTRE DAME DE PARIS.

By VICTOR HUGO. Edited by LEON DELBOS, M.A.

MÉMOIRES DE MADAME CAMPAN.

[Shortly.]

OXFORD MODERN FRENCH SERIES. Crown 8vo.

BALZAC'S LES CHOUANS.

Edited by C. L. FREEMAN. 3s.

NODIER'S JEAN SBOGAR.

Edited by D. L. SAVORY. 2s.

ERCKMANN - CHATRIAN'S HISTOIRE D'UN HOMME DU PEUPLE.

MA PREMIÈRE VISITE À PARIS.

Par A. E. C. Being an Illustrated Elementary French Reading-Book. Crown 8vo, cloth, 1s. 6d.

A PRIMER OF CLASSICAL AND ENGLISH PHILOLOGY.

By W. W. SKEAT, Litt.D. Extra fcap. 8vo, limp cloth, 2s.

School World :—"Here is a book which has been very much wanted, since Peile's primer has become out of date. . . . As a series of philological notes the work is likely to be useful, and, as we have said, it has at present no rival. It will be most useful as a collection of cognates under the head of certain English roots. Prof. Skeat is, of course, well up to date in his knowledge, and his English illustrations are especially full."

ANGLO-SAXON PRIMER.

With Grammar and Glossary. By HENRY SWEET, M.A. Eighth Edition, Revised. Fcap. 8vo, limp cloth, 2s. 6d.

SCENES FROM OLD PLAY-BOOKS. Introduction to Shakespeare.

By PERCY SIMPSON. Crown 8vo. [In the Press.]

THE JUNIOR GEOGRAPHY.

By A. J. HERBERTSON, M.A., Ph.D. (The Oxford Geographies, Vol. II.) Crown 8vo, cloth, with 166 Illustrations, 2s.

School World :—"This excellent book of Dr. Herbertson's is Vol. II of the 'Oxford Geographies,' the first volume of which, dealing with physical geography, is in course of preparation. We shall accordingly look forward with zest to the appearance of the preliminary work, for this—the second—promises much. It is good everywhere, but best of all where the author is teaching rather than writing. . . . The sketch-maps are a distinct feature of the book. For the most part, they are really very good, most interesting, and most instructive."

ELEMENTARY MODERN GEOMETRY. Part I.

Experimental and Theoretical (Ch. i-iv), Triangles and Parallels. By H. G. WILLIS, M.A. Crown 8vo, cloth, 2s.

Athenaeum :—"Conforms to the new ideas which have ousted Euclid's sequence of problems. Mr. Willis has evidently ample experience of teaching, for his book is admirably lucid and practical. He brings the subject well into touch, too, with actual life. There is a set of exercises attached to each proposition, and the book is a thorough and very satisfactory exposition of the new principles. We expect to see it widely adopted."

EXPERIMENTAL AND 'THEORETICAL' COURSE OF GEOMETRY.

By A. T. WARREN. With or without Answers. Third Edition, with Additions. Crown 8vo, cloth, 2s.

AN ELEMENTARY TREATISE ON PURE GEOMETRY.

With numerous Examples. By JOHN WELLESLEY RUSSELL, M.A. New Edition, Revised. Crown 8vo, cloth, 9s. net.

School World :—"We remember the great pleasure we had in reading this book when it first appeared, and are glad to welcome this new edition. . . . The changes that have been introduced are evidently the result of experience in the use of the book, and seem to be all in the right direction."

ELEMENTARY CHEMISTRY.

Progressive Lessons in Experiment and Theory. By F. R. L. WILSON, M.A., and G. W. HEDLEY, M.A. 8vo, cloth, with many Diagrams. Part I, 3s.

School World :—"The authors have produced a satisfactory course of experimental work introductory to the study of chemistry, which teachers of the subject who are not already provided with a good laboratory manual would do well to examine. . . . The book is attractively printed and illustrated."

A CLASS-BOOK OF ELEMENTARY CHEMISTRY.

By W. W. FISHER, M.A., F.C.S. Fifth Edition. Crown 8vo, cloth. Revised and Enlarged, with 59 Engravings on Wood. 4s. 6d.

New Catalogue of Clarendon Press School Books post free on application.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

houses, and the battlefields of a district rich in historic remains. There is no attempt at word painting, but an accurate description of the landscape, and the maps at the end of the volume will enable the pedestrian or the cyclist to follow in the author's footsteps. Mr. Griggs is a first-rate draughtsman; but some of his sketches are disfigured by the black foreground: they were evidently not intended for full-page illustrations. *De landibus*, on page 208, is an obvious misprint for *de laudibus*.

Highways and Byways in Derbyshire. By J. B. FIRTH. Illustrated by NELLY ERICHSEN. (6s. Macmillan.)—This adds another excellent volume to a delightful series. The author takes us along most charming byways and tells us anecdotes of places and people which are full of interest and amusement. The country is rich in literary and historical associations. In the village of Ellaston we have the Hayslope of "Adam Bede," Chatsworth is the Pemberley of "Pride and Prejudice," or, to turn to history, taking names at random, Mary Queen of Scots, Johnson, Garrick, Byron—all have had connexion with some old town or hall in Derbyshire. Miss Erichsen's illustrations are on the whole very good. The architectural drawings are not so happy as the landscapes. Some of the best are those in which a broad sweep of country and cloud effects are depicted: these are many of them excellent.

Beautiful Joe's Paradise. By MARSHALL SAUNDERS. Illustrated by C. L. BULL. (3s. 6d. Jarrold & Sons.)—This is a sequel to "Beautiful Joe," and friends of the dog "Joe" will rejoice to hear more of him in the Animals' Paradise. Sam Emerson, a merry school-boy, is allowed to visit the island by reason of his kindly feeling towards animals on earth. He tells his adventures in this sequel, and it makes a bright and lively story. The illustrations are distinctly attractive, but they would gain much in effect if a stronger line had been used for outlining the figures of the animals.

A Trip to Santa Claus Land. By VIVIAN PHILLIPS. Illustrated by PATTEN WILSON. (5s. Gay & Bird.)—A nicely got up story-book for small children. The language is simple and the story suitable for little ones. There are full-page pen and ink illustrations, which are strongly put in and effective.

The "Told to the Children" Series. Edited by LOUEY CHISHOLM. —(1) *King Arthur's Knights*; (2) *Stories from Chaucer*; (3) *Stories from the Faery Queen*; (4) *Stories of Robin Hood*; (5) *Robinson Crusoe*; (6) *Uncle Tom's Cabin*. (1s., or 1s. 6d. with gilt edges. T. C. & E. C. Jack.)—These stories are well and simply told, and we welcome the attempt to give to children to-day tales such as (1), (2), (3), and (4), which always keep their freshness, because there was something of the child spirit in the original telling of them. (6) Seems out of place in such a series. We should as soon think of including "John Inglesant." The meaning and beauty of the book make their proper appeal to the adult mind. The coloured illustrations are good, except in (1) and (3), where they are decidedly poor. The books are neatly and prettily got up and the print is excellent.

Wilful Cousin Kate. By L. T. MEADE. (5s. Chambers.)—We should call Cousin Kate ill-mannered and ungrateful, and a good many other things besides "wilful." However, she shows some powers of self-devotion where her mother is concerned, and enlists the reader's sympathy when that mother behaves so unexpectedly towards her. "Molly" is a nice child, and well drawn. She is, indeed, the most natural character in the book, and, if she could not attain to Kate's highest flights, she was a much pleasanter person to live with.

Chums in the Far West. By EVERETT MCNEIL. (3s. 6d. Chambers.)—Two boys are chosen from a school to go for a hunting trip in the Far West with a famous scout and Indian fighter. At first, of course, tricks are played on the "tenderfeet," but they come in for a great deal of pleasure before the tragic day when they and a little girl companion are captured by Indians. Then follow a series of exciting scenes. They are rescued from a bad fix by an old hermit, who appears most opportunely. It is a pity that his wonderful electric rifle could not be handed down to posterity. The book has several illustrations.

Her First Term. By OLIVIA POWELL. (Gall & Inglis.)—Little Joan Maydew and "Pat" Temple, a big sixth-form girl, divide the heroineship between them. Both are given to mischief, but are straightforward, honourable girls. Of course, there is a black sheep in the flock of girls, for whose misdeeds others have to suffer. One would think that Minnie's spying and tale-bearing are too patent to have much power for harm, but all comes right in the end.

River and Forest and *The Lost River*, by EDWARD S. ELLIS (Cassell) are short stories (about 150 pages) of adventure in California and Ohio, where dangers from hostile Indians and gold seekers beset the unwary. They would do well for school prizes. Each volume has four illustrations, those in "River and Forest" being by A. Pearse; in the other book by Gordon Browne.

Zeph Miller. By JESSIE ARMSTRONG. (3s. 6d. Jarrold & Sons.)—"Zeph" strikes us as a somewhat mythical personage. He is impossibly long-suffering, and he would have been a more helpful brother to the worthless Tony if he had occasionally given him a thrashing, instead of trying to coax him into good behaviour, and taking undeserved punishments for Tony's misdeeds. Miss Marshall's

(Continued on page 90.)

Edward Stanford's Publications.

STANFORD'S "LARGE" SERIES OF SCHOOL WALL MAPS.

Stanford's "Large" Series includes Twenty-one Maps in all. The Maps are extensively used in Public and Private Schools throughout the British Isles and the Colonies, and have gained the Highest Awards at the great Exhibitions.

(on a uniform scale)

SPECIAL FEATURES:—

BOLD,
CLEAR,

ACCURATE,

ATTRACTIVELY COLOURED.

Size, 50 by 58 inches. Price, Mounted on Rollers and Varnished, 75s. each.

Prospectus post free on application.

JUST PUBLISHED.

NEW OROGRAPHICAL MAP OF AFRICA.

Compiled under the direction of H. J. MACKINDER, M.A., Reader in Geography in the University of Oxford, and Director of the London School of Economics and Political Science. Size 50 by 58 inches; 115 miles to an inch (1:7,286,400). Price, Coloured, Mounted on Rollers and Varnished, 20s.

"An excellent wall map for schools."—*Geographical Journal*.

NEW OROGRAPHICAL MAP OF EUROPE.

Compiled under the direction of H. J. MACKINDER, M.A., Reader in Geography in the University of Oxford, and Director of the London School of Economics and Political Science. Size 60 by 54 inches; 53.1 miles to an inch (1:4,000,000). Price, Coloured, Mounted on Rollers and Varnished, 20s.

These Maps are primarily intended to depict the Physical Features of the Continents, but, by the employment of the device of grey, almost transparent, lettering, many names have been inserted without spoiling the graphic effect of the colouring, and political boundaries are indicated. The contour lines have been drawn at the same intervals above and below the sea level.

Prospectus gratis on application.

NEW OROGRAPHICAL MAP OF LANCASHIRE AND CHESHIRE.

Reduced from the Ordnance Survey, by E. G. W. HEWLETT, M.A., and C. E. KELSEY, M.A.

Size, 42 by 60 inches. Scale, 2 miles to an inch (1:126,720). Price, Coloured, Mounted on Rollers and Varnished, 15s. net.

A graphic representation of the physical features of the area covered. County Boundaries, Railways, Canals, Rivers, are all laid down, and the principal Towns and Cities shown by symbols which enable the student to discern at a glance the approximate populations.

Prospectus gratis on application.

STANFORD'S GEOLOGICAL ATLAS OF GREAT BRITAIN.

WITH PLATES OF CHARACTERISTIC FOSSILS.

By HORACE B. WOODWARD, F.R.S., F.G.S.

Comprising 34 Coloured Maps, and 16 Double-page Plates of Fossils, with 149 pp. of text, illustrated by 17 Sections and Views. Crown 8vo, cloth, price 12s. 6d. net. (Postage, 4d.)

"This is a remarkably interesting and useful book."—*Glasgow Herald*.

Prospectus gratis on application.

OUTLINES OF GEOLOGY. An Introduction to the Science for Junior Students and General Readers. By JAMES GEIKIE, LL.D., F.R.S., Murchison Professor of Geology and Mineralogy at the University of Edinburgh. With 400 Illustrations. Fourth Edition. Large post 8vo, cloth, price 12s.

THE STUDENT'S HANDBOOK OF STRATIGRAPHICAL GEOLOGY. By A. J. JUKES-BROWNE, B.A., F.G.S., late of the Geological Survey of England and Wales. Illustrated with Maps, Diagrams, and Figures of Fossils. Based on the same Author's "Student's Handbook of Historical Geology." Large post 8vo, cloth, 12s. net.

PHYSICAL GEOLOGY AND GEOGRAPHY OF GREAT BRITAIN. By SIR ANDREW C. RAMSAY, LL.D., F.R.S., &c., late Director-General of the Geological Survey. Sixth Edition. Edited by HORACE B. WOODWARD, F.G.S., of the Geological Survey. With numerous Illustrations and a Geological Map of Great Britain, printed in colours. Post 8vo, cloth, 10s. 6d.

THE WAY THE WORLD WENT THEN. By ISABELLA BARCLAY. With Illustrations. Crown 8vo, cloth gilt, 4s.

A CENTURY OF CONTINENTAL HISTORY, 1780-1880. By J. H. ROSE, M.A. Crown 8vo, cloth, with Maps, 6s.

determination to make the boy out to be her nephew has convenient results for him, absurd as the notion is. Kate Ryan is a good soul, and nicely drawn.

Cast away among the Philipinos. By W. SEATTER. (Gall & Inglis.)—There is plenty of dramatic material here, but Mr. Seatter somehow fails to make the most of it from an artistic point of view, and gives us rather a rambling narrative of danger and discomfort, pain and peril. Certainly there was enough and to spare of all these, and few men endure in a lifetime what was compressed into two years or so for the prisoner in the hands of the Philipinos, who displayed considerable ingenuity in the art of torture. No doubt Bovril can be enjoyed more when properly mixed; but we fancy that starving men in a boat at sea would scarcely have rejected it as "unpalatable." There are four good illustrations.

Messrs. Gall & Inglis send us *The Wild Man of the West*, by R. M. BALLANTYNE—an exciting story of Indians and trappers. The print is clear, though small, and there are two effective illustrations.

The Happy-go-Luckies. By M. H. CORNWALL LEIGH. (3s. 6d. Wells Gardner, Darton, & Co.)—An amusing story of the bringing up of a large family of children by parents whose income is in inverse proportion to the calls on it. The father is an inventor whose inventions never come to anything; the mother a plucky little Australian, who manages in some mysterious manner to turn out the children in spick and span attire on special occasions, but otherwise lets them "tumble up" as they can. Life on the schooner "Happy," which comes cheaper as a residence than a house, is well described, while the surroundings of the eldest girl, who is adopted by a rich aunt, form a striking contrast.

Gladwyn. By JENNIE CHAPPELL. (2s. 6d. Nimmo, Hay, & Mitchell.)—The second title, "A Circle of Fortune," gives a key to the story. Gladwyn believes herself to be heiress to Redland Manor, and finds on her uncle's death that she is penniless and must earn her own living. She works hard to get into the Post Office, and after some months of economizing in a small suburban villa she has a handsome legacy left to her, and returns to her old home. She is a bright, straightforward girl, and deserves her good fortune.

His most dear Ladye. By BEATRICE MARSHALL. (Seeley.)—The story is told by Jeanne Trefusis, an orphan, whose guardian (Master Meredith) is rector of a small parish close to Wilton House, and the "dear ladye" is Sidney's sister, Mary Countess of Pembroke. She takes a fancy to Jeanne partly because of her enthusiastic admiration for Sir Philip's writings, and often has the girl with her; and so we get many pictures of the home life of the countess, as well as of the great folks who visited her—Lady Arabella Stuart and others—and echoes of what was passing at Elizabeth's Court. The story is well written, and contains much that is interesting. The book is very well got up, and has some pretty illustrations.

Stories of the Crusades. By the late Rev. J. M. NEALE. (3s. 6d. S.P.C.K.)—This is a reprint of "De Hellingley" and "The Crusade of St. Louis," which are interesting pictures of the times and of the various orders of knights who fought for the recovery of Jerusalem.

Squire and Page. By G. I. WHITHAM. (2s. Blackie.)—One of the usual tales of adventure, connected with the conspiracy of Cambridge, Grey, and Scrope. It is pleasant reading. There are three illustrations, and the print is good.

Crab Cottage. By RAYMOND JACBERNS. Illustrated by J. MENZIES. (3s. 6d. Chambers.)—A suitable book for girls, who will follow with interest the doings of the Selwyn family at their poultry farm. There is plenty of variety in the characters of the book, and the tale goes with great spirit to a happy conclusion.

The Black Adventure Book. (5s. Cassell.)—This is a fresh volume from "The World of Adventure," edited by A. T. Quiller-Couch. The adventures are of very varied kinds, famous battles by sea and land, shipwrecks, imprisonments and escapes, in all quarters of the globe. It is well printed in large type, and has some coloured plates as well as a large number of excellent black and white illustrations. The volume is a most attractive and interesting one.

We are glad to see a new edition of *In Freedom's Cause*, by G. A. HENTY. (3s. 6d. Blackie.)—This tale of Wallace and Bruce was popular among Mr. Henty's earlier stories, and its reappearance will be welcomed. It is well illustrated.

The Children of the New Forest. By Captain MARRYAT. (1s. 6d. Blackie.)—To those of an older generation it seems impossible to separate this story from Gilbert's illustrations to the old edition, but the present volume, which is prettily bound and has a frontispiece by Harold Copping, will be a welcome gift to any child.

We have received from Messrs. C. A. Pearson new editions of *John of Strathbourne*, by R. D. CHETWODE (2s. 6d.); *Two Boys in War-time*, by JOHN FENNIMORE (2s. 6d.); *Prince Uno*, by W. D. STEVENS; and *Little Miss Robinson Crusoe*, by Mrs. GEORGE CORBETT (2s. 6d.).—The two first are full of stirring adventures; "Prince Uno" is a fairy tale; and the fourth book tells the experiences of a shipwrecked girl.

Messrs. Blackie send us a new edition of *Tanglewood Tales*, by NATHANIEL HAWTHORNE (2s.). The book is prettily bound, and the print is clear; it has four illustrations by A. A. Dixon.

WM. BLACKWOOD & SONS.

A NEW SERIES OF READERS.

OCCASIONAL NOTES.

THIRD among the factors which determined the General Election we should undoubtedly put education. Passive resisters formed but a small minority of the voters, but they had an acute grievance and commanded wide sympathy. As is usual, the late Government gained little credit for their good deeds—the Act of 1902, and all that followed from it—and they suffered more than the full penalty for their sins of commission and omission—their compact with the bishops and their *laches* in the matter of educational rating. Questions that in our eyes are of supreme importance were swamped in the general flood, and we have scanned in vain election addresses and speeches to find a single reference to the training or supply of teachers, the Register, inspection of schools, or the relation of the Central to Local Education Authorities. On the main educational issue we have nothing to add to what we said last month. The speeches not only of Mr. Birrell, but of Mr. Lloyd-George, should convince our clerical friends that their fear of confiscation or spoliation was a bugbear, and also that the more real danger of secularization may be dismissed. As Prof. Sadler expresses it, we are assured that the place of denominational schools in English education will be discussed in a spirit of sympathy and conciliation, and that we shall see established by the Amendment Bill prefigured in the King's Speech a national system of education, with publicly controlled schools in every district, affording facilities for religious or moral instruction according to parental preference, but not under denominational control.

STATESMEN apart, the new Parliament will be an undistinguished Parliament. The local politician will predominate, and it will contain no soldier, or sailor, or doctor, or man of science of the first rank. Let us reckon

up our chief losses and gains among the representatives of education. In the primary grade Dr. Macnamara and Mr. Yoxall have been returned with increased majorities; but we have to regret the rejection of Mr. Ernest Gray, who made such a gallant stand for rate-racked East Ham. Sir R. Jebb, whose death was equally deplored by both sides of the House, is worthily replaced by Mr. S. H. Butcher, an *emeritus* Scotch Professor, like Sir Richard, who has, like him, also served on two Royal Commissions. As Chairman of the Teachers' Guild Mr. Butcher has been brought into contact with teachers of all ranks, and on questions such as registration, inspection, and tenure he will know the views of teachers and speak with authority. Education on its municipal side could have no abler representative than Sir William Collins; while Sir Philip Magnus represents the City and Guilds Institute, of which he has been Director for a quarter of a century, and the College of Preceptors, of which he is Vice-President and Fellow. Sir William Hart-Dyke, one of our best Vice-Presidents of Council, and, from the first, Chairman of the Consultative Committee, will be greatly missed, as will Mr. Henry Hobhouse, who retires.

THE President of the Board of Education has lost no time in nailing his colours to the mast. Speaking at Bristol on January 2, Mr. Birrell said one thing was plain, that there could be no settlement of the education question unless and until every public elementary school in the country should be placed under complete popular control, including, of course, the appointment of teachers. On the religious difficulty he spoke no less plainly, though here he professed to be giving only his personal convictions. He denied the right of parents to dictate what religious instruction should be given to their children, but he was anxious that their wishes should be consulted. He had no doubt that the vast majority of parents desired that their children should be taught the simple elementary truths, "the Fatherhood of God, the responsibilities of man, and a future state." He hoped that these truths (which it was a libel to call a kind of sectarianism) would never be banished from schools. Lastly, he hoped that arrangements might be made by which the minority of parents who desired denominational teaching for their children might receive it, "not indeed as part of the public school curriculum, but, nevertheless, on school premises, if need be, though out of school hours." In any other country of the world such a proposal would be considered generosity itself.

SPEAKING at Towcester, Mr. Birrell scored a point against his clerical antagonists. Their cry was: You must consult the wishes of parents and provide the kind of education that they desire for their children. Mr. Birrell agreed, but with a distinction. The only parents he wished to see consulted were the parents whose children attended the national schools, not the parents of other children. He knew no better persons to ascertain their views than the Local Education Authorities. Further, he did not believe that it passed the wit of man to devise a scheme whereby the wishes of parents should be consulted as to the kind of religious instruction they desired, or as to how and when they wished it to be given. We have maintained from the first that the religious difficulty was a chimæra of the platform and the pulpit, except in the case of Roman Catholics and Jews. These persuasions form, after all, but a fraction of the population, and it certainly should not pass the wit of Mr. Birrell to meet this exceptional case.

Mr. Birrell
on Parents and
Parents.

IN "Almond of Loretto" (reviewed in another column) there is a remarkable letter on "The Religious Difficulty in Schools," which puts in a concrete form the views that we have persistently maintained in the abstract. There were at Loretto, or had been recently, when the letter was written, boys of various denominations, including Roman Catholics and Unitarians; yet Almond tells us that he had never in thirty years had any experience of "the religious difficulty." Boys were all taught alike, and the only distinction made was that before Confirmation, or its equivalent, boys of different creeds received special instruction from their respective ministers. On the question of "free entry" we must quote textually:

The proposal that the representatives of various denominations should be allowed to come to a school at the same hour, and teach, each of them, the children of his own sect, appears to be admirably calculated to destroy all belief and respect for religion in children. On all other subjects they see their teachers in accord. What can be the result of the object lesson of their differences in religion being forcibly obtruded before their eyes at a time when they must heartily wish that they were of the number of those happy ones whose parents have exempted them from all special religious teaching?

We may add that the test for head teachers for which Anglicans are prepared to fight to the last ditch would undoubtedly have excluded Almond, the most religious of teachers.

"A SCHOOLMASTER" in the *Morning Post* gives one of the reasons, if not, as he thinks, the chief reason, for the futility of the Head Masters' Conference. Public schools are nowadays organized in different departments, and in only one of these can the head master claim to be an expert. "The men who really manage the science school, the Army class, the rifle corps, the games, who really organize the teaching of modern languages, of history, of literature, of mathematics, in our most important schools are chiefly conspicuous by their absence." Hence it is that the lead in educational reform is passing into the hands of associations like the Classical and the Modern Language Associations, where heads and assistants meet on common ground. In former days the Head Masters' Conference used to invite experts like Mr. E. E. Bowen and Mr. C. M. Bull to advise them on modern subjects of which they themselves were ignorant. Have head masters since then grown wiser, or only wiser in their own conceit?

CANON MOORE EDE amplifies, in a letter to the *Standard*, some views that he had expressed at the North of England Education Conference on the subject of inspections and inspectors. He is quite right in saying that Local Authorities must have at their command some one with knowledge of the schools in the area. Therefore they appoint their own inspectors, thus greatly increasing the cost of inspection. It is true that the reports of the Board's Inspectors are not sufficiently full to give a committee all the information it might need. But, on the other hand, the recent reorganization of the inspectorate is so arranged that each Local Authority should feel able to make use of a particular Inspector as a source of information. And, although the Inspectors cannot be summoned at the will of the Authority, they are always ready and willing to be consulted and to give their views. We cannot think it possible that the Board will agree to hand over their Inspectors entirely to the Local Authorities, which is what the Canon would wish, although at one time the proposal

seemed to have a chance of being adopted. Naturally, the Inspectors themselves would be opposed to such a change. On the grounds of public policy it is well that the inspectorate should be absolutely removed from the slightest possible suspicion of being tempted to prophesy smooth things for the sake of retaining their posts.

MR. R. F. CHOLMELEY adds two interesting communications in the *Times* to the "sleep-at-school" controversy. In the one he rebukes Mr. Page for assuming that anything that affects a boy's life can be outside the purview of a house master, and he looks forward to a time when it may be generally recognized that the proper work of a house master may be a good deal more than can be managed in the spare time of a hard-worked teacher. The contention is absolutely true; yet the solution of the difficulty is not an easy one. The house master has so many duties, and needs to possess so much specialized knowledge, that it would seem at first sight that he might well be relieved entirely from the work of teaching. But the life of the house is so bound up with the life of the school that great loss would result from an attempt to dissociate a house master altogether from the work of teaching. Mr. Cholmeley's other contribution is an apposite suggestion that nowadays a boy's life is so completely organized that he gets no time for rest or repose during any part of the day. Muscular effort produces mental fatigue; but this fact appears to be overlooked in school life, where a boy is supposed to rush from the football field into Latin prose. Some repose is essential, and boys are compelled to take it in the form room, choosing, of course, the opportunity when they are in charge of a not too severe or stimulating teacher. Hence, perhaps, the reason for the cry of a want of intellectuality in our public schools.

PROF. CLIFFORD ALLBUTT is nothing if not paradoxical. In his address to the Classical Association he was determined, like the Fat Boy in "Pickwick," to make their flesh creep. He began by telling them that no language could live as a dumb thing in a book, and that nothing but prejudice and convention could have blinded classical teachers to this obvious fact; and he ended by admitting that Greek was to us an unpronounceable language, and, therefore, non-existent except for scholars and specialists. The very object of the Association, as the chairman the next day expressed it, is to make Greek not a luxury of the erudite, but a living force in the community at large. But, while we hold with Mr. Butcher rather than with Dr. Allbutt, we sympathize largely with the plea for speaking Latin. There is no reason why, at least in the early stages, the oral method, that has wrought such wonders in modern language teaching, should not be applied to Latin. Yet even here we think that the physiologist exaggerates. Without disputing "the predominance of the function of speech in its phylogenetic derivation," we deny the fact that "the child in the nursery who speaks a foreign language with his *bonne* does not forget it, or can recall it without difficulty." Indian-born children who for the first six or seven years of their life have spoken Hindustani as their native tongue forget in a year or two every word, and are not helped by phylogenetic derivation in reacquiring the language at a later stage. We have known Siamese educated in England after six or seven years unable even to understand Siamese when spoken to them.

THE President of the Private Schools Association stated at the annual general meeting that legislation in favour of private schools was now generally regarded as within the range of practical politics. We

Private Schools. do not quite know what legislation is either possible or desirable; but we feel sure that the powers possessed by Local Authorities to encourage private schools might be more actively exercised. Pupils educated at private schools ought, in our opinion, to be eligible to compete for the county scholarships that lead from the school to the University. The ground on which these scholarships are given is not that a particular type of school should be protected or encouraged, but that the most promising candidates in the area, who would otherwise leave school in order to begin at once to earn their own livings, should have opportunities provided of continuing their education. It seems fair that a candidate for such a scholarship should be elected on merit alone, without reference to the place of previous education. If the private school is inefficient, and the public school efficient, it follows that the candidate from the latter will have the greater chance in the examination. But, if a parent for any reason prefers a private school for his child, it is not fair that he should be thereby deprived of the opportunity of a University education for his child at the public cost. He also is a ratepayer as much as the parent who uses the public school.

THE speakers who dealt with the subject of physical training at the North of England Education Conference were divided in opinion as to the relative value of military drill and games. The best plan, no doubt,

Physical Training. is a combination of the two. Mere muscular exercise, unaccompanied by a feeling of enjoyment, is not truly recreative. Games have an advantage, in that they are generally enjoyed. On the other hand, in large town schools, and for less privileged schools, space for games is more difficult to acquire. In such cases second best must not be despised. One speaker objected to military drill, on the ground that we do not want to make soldiers. This is a wide-spread feeling, and one in which we share. We do not want to encourage unduly in schools the spirit of militarism. But the more serious objection to military drill and to training in rifle-shooting is to be found in the difficulty of maintaining an interest in these pursuits. Lord Roberts would base the interest on patriotism, but it may be doubted whether such a motive would be found active, except while the idea is new, or in moments of national excitement or danger. A few boys will take keenly to rifle-shooting, just as a section is devoted to the gymnasium; but the rather dreary waiting for one's turn is a severe check to enjoyment. Where funds and space are ample the best plan is the one that we understand is to be introduced at Eton, by which every boy will pass through a period of instruction in rifle-shooting, while the usual games continue as before.

THE vote of the I.A.H.M. declining to refer proposals for a Federal College to a special general meeting—virtually to the executive of the Association—is a serious set-back to the movement. As the Association has been the originator and chief

The Federal College. promoter of the scheme, this means postponement for at least another year. In spite of this check the Federation Committee have met and drawn up a draft constitution on the lines indicated in our last number. It is to us astonishing that one practical measure towards attaining the objects aimed at has not been even broached—

we mean the amalgamation of the Conference and the Association. The distinction is purely a social one, and there is no reason why the Conference should not continue its existence as a year-end dining club. We would throw out another suggestion. Why should not the Head Masters, whether combined or in two bodies, follow the example of the N.U.T. and run a member or a brace of members? They would thus be able to speak with their enemies in the gate, Government Inspectors, Local Authorities, and Inland Revenue. And there can be little doubt on whom their first choice as a candidate would fall. What better spokesman could they find than the orator who pleaded the cause of federation before the Assistant Masters?

THE Medical Officer of the London County Council schools is doing a public service in calling further and urgent attention to the matter of teeth. Soft food and

Teeth. hurry are the two chief enemies to be combated. If, owing to the slushy nature of the nourishment, the teeth get little chance

of active work, they remain undeveloped, and decay, just as an arm would do were it fastened to the body in such a way that the want of movement prevented the blood from bringing nourishment to the muscles. Life in towns, where we try our best to live up to the American standard of "hustle," has also much to answer for. Food, generally served in a pulsome state, is swallowed without allowing the teeth to perform their proper function. Compare the agricultural labourer, who quietly and steadily munches his dry bread and cheese, with the town boy, who washes down unmunched bread with copious draughts of tea. There can be no doubt which of the two is better nourished, or which has the better teeth. Our forefathers, who rolled tiny sips of Madeira on their tongues until they had extracted all the flavour, were wiser than the modern who gulps down his whisky almost without tasting it. It is natural to eat and drink slowly, and to enjoy taste. Give a child—not overfed—a single lollipop, and it will eat slowly, and with evident enjoyment. Put a box of the same before it, and a desire to eat as many as possible before the box is taken away results in rapid swallowing, inefficient mastication, and indigestion. Bite!—Mr. Gladstone's thirty-four bites—should be the parent's constant cry at meal times.

LORD WILLIAM CECIL (*Times*, January 2) appeals to Churchmen to save the Christianity of the rising generation by returning a Unionist majority. The new Government, he assumes with good cause, intend to abolish tests for teachers. But, he added, if a teacher of religion does not satisfy the double test of knowledge and faith, his teaching must, to say the least, be inefficient. Did it never strike Lord William that his argument is double-edged? It is only to head teachers that the test now applies. It follows by his own showing that, under the present dispensation, four-fifths of the teachers of religion in Church schools are inefficient.

IN the same column of the *Times* there is a letter from the Rev. C. Baumgarten, who poses as a Liberal and a Welshman. Unlike Lord W. Cecil, he is not satisfied with the Act of 1902, and desires to see it amended in a Liberal sense. The Government are bound to provide univers-

A Clerical Faith-healer. ally religious teaching in accordance with the wishes of the several parents, and, if rates are still levied for the maintenance of that "moral master," undenominational religion, his Liberal principles will compel him to turn passive resister. There is no arguing with such individualism run

mad which masquerades as Liberalism, but we may suggest a parallel. The State provides medical inspectors, officers of health, Army and Navy doctors. By a parity of reasoning it is bound to appoint homœopaths, faith-healers, and herbalists to suit the idiosyncrasies of its several subjects, and every Liberal should protest against "the intolerable burden" of allopathy.

WE noted at the time certain changes proposed by Mrs. Ussher in the *Hibbert Journal* for the improvement of religious teaching and worship in public schools, and it is instructive to know how far they commend themselves to the new Head Master of Eton. His reply, however, is mainly negative, and adds little to our information. He declines to take Mrs. Ussher seriously: she is discussing moral teaching, not religion, and to argue without a common basis would be a pastime "a *délassement* already provided by golf." Even her suggestions for the reform of public school worship cannot be entertained. "They do not pretend to teach fidelity to the Church formularies, and therefore cannot be acceptable to those parents and schoolmasters who regard this fidelity as an essential equipment in a Christian's equipment." "The proper meaning of worship in a school chapel is not the improvement of good conduct, but to pay honour to God." The opposite view is set forth in "Almond of Loretto," reviewed in another column.

EVERYTHING in the United States—railway accidents, fires, strikes, and charitable foundations—is on a larger scale, and we see, as through a magnifying glass, our own defects and virtues. "Hazing" is the American equivalent of our "ragging," and Mr. A. Maurice Low, the Washington correspondent of the *Morning Post*, reports from Kenyon College a case of "hazing" which beggars all the brutalities of Woolwich and Sandhurst—now, let us hope, a thing of the past. The story in brief is that a student, as part of the initiation into one of the secret societies known by Greek letters which are a characteristic feature of American undergraduate life, was left bound to the rails of a railway line, and mangled by a passing train—a special, for which the initiators had not calculated. Three years' imprisonment with hard labour would not be too severe a sentence for such diabolical thoughtlessness; but the worst feature of the case is that the College authorities sought to hush up the matter, and, when the coroner was not to be hoodwinked, to screen the offenders. Mr. Low reports brutalities almost as fiendish that have occurred at the Naval Academy, and tells us that a Bill was actually passed in Congress, and signed by President Roosevelt, reinstating cadets who had been expelled for "hazing," in violation of the oath that every cadet has to take on entrance that he will not "haze." "Boys will be fiends" appears to be the American version of "Boys will be boys."

SIR WILLIAM ANSON'S sentiments as President of the Association of Technical Institutions were admirable, but, if we may say so without disrespect, too much like a copy book. "Education does not consist of laboratories and a curriculum, but of teachers who can teach and students prepared to learn"; "The multiplication of subjects is a weariness of the flesh—'Non multa, sed multum'"; "The teacher must understand the technique of teaching"; "The one thing needful is a diffused belief in education." Admirable headlines, but the virtue lies in the application, and we should have preferred to hear what

the late Government had done for the training of teachers, for improving their status, for ridding students of the many-headed monster of examination. There is more comfort in Mr. Lough's prophecy that ten years hence the Board of Education would be the chief spending Department of the State.

THE first administrative act of the new Government has been to recall the minute for decreasing the grant for children under five in public elementary schools. This decision, it is stated, involves a reconsideration by the Board of the manner in which some measure of relief can best be afforded to those areas where the burden of the education rate is specially heavy. This is a welcome announcement. We protested at the time against the monstrous injustice of robbing Peter to pay Paul.

MRS. HUMPHRY WARD, writing in support of her son's candidature, denounces the forthcoming Education Acts Amendment Bill, so far as outlined by Mr. Birrell, as "grotesque in its injustice," and has no doubt that the rent to be paid for Church schools will be "calculated in a vindictive spirit." She agrees with Mr. Lathbury in deeply regretting some of the provisions of the Act of 1902—to wit, the giving to the ratepayer the partial control and management of voluntary schools. We regret to find so distinguished a writer so utterly in disagreement with ourselves, and we are compelled to add that this *præjudicium* does not show the sweet reasonableness that we should have looked for in a relative of Mr. Matthew Arnold, nor the sympathy with freedom of thought which we admired in "Robert Elsmere" and his prototype, Mr. J. R. Green.

LOCAL AUTHORITIES.

THE report of the Principal of the Huddersfield Technical College shows that the governors are carrying out the suggestions contained in Prof. Sadler's "Report." In the past higher and more advanced work has been rendered difficult by the number of students who have been either too young or insufficiently prepared for the studies they wished to pursue. With regard to the day school attached to the college, the governors decided to admit no fresh scholars. Consequently the first-year batch has already disappeared, and in the following session there will be no second-year. Scholars intending to become pupil-teachers are now educated at other schools in the town, and will not come to the college until the age of sixteen. With regard to the evening work similar changes have been made or are in process of being carried out. The evening continuation school that had been attached to the college has been discontinued. Students who are not qualified to take advantage of the special courses must go to continuation schools established by the Education Committee. But the governors have instituted a preliminary technical course and a preliminary commercial course for students who have passed with credit through the higher standards of an elementary school or have attended one of the higher evening schools through the preceding winter. Freed from the dead weight of ill-prepared students, the work of the college ought to go ahead gaily.

WE learn from the minutes of the Central Education Committee of the Wiltshire County Council that the managers of one of the elementary schools in the county have been informed that, unless an assurance is received, given by formal resolution of the managers, that in future no children will be taken to church during school hours, the Committee will consider the advisability of refusing to maintain the school. On the subject of the cost of training pupil-teachers the following important resolution was passed, in support of a similar resolution passed by the County Council of Somerset:—"That the Board of Education and H.M. Treasury be informed that the Committee are of opinion that the present grants are inadequate for the instruction and training of rural pupil-

teachers, and also that the Committee are of opinion that it is desirable to maintain the supply of teachers from the country in order that rural schools may be largely staffed by teachers drawn from the country." In reference to the Marlborough Grammar School there is a proposal to reconstitute the governing body by adding five representative governors, to be appointed as follows:—two (both of whom shall be women) by the Wiltshire County Council; one each by the Marlborough Technical Education Committee, the Pewsey Rural District Council, and the Ramsbury Rural District Council.

THE Warwickshire Education Committee has issued a neat little handbook, of a size convenient for the Councillor's pocket, containing statistics of the higher and elementary education of the county, together with a summary of the work accomplished during the two years preceding publication. There is an interesting point as regards public schools for girls. Of these there appears to be a serious deficiency. The quickest, and, we may add, the cheapest, way of supplying this deficiency seemed to be to enter into relations with some of the private schools for girls already in existence. After inquiry and investigation it was decided to recognize provisionally the following schools:—the Collegiate School, Leamington; the Convent of the Compassion, Olton; The Laurels, Rugby; Arnold High School, Rugby; and Allerton High School, Sutton Coldfield. The importance of this step justifies us in giving the full list of the advantages extended to these private schools. They are: payment of school fees of pupils intending to become pupil-teachers; tenure at the schools of minor county scholarships; tenure at the schools of pupils intending to become uncertificated teachers; loans of books and other objects; lectures on educational subjects; aid in instruction in physical exercises; and "other assistance useful to the school, and within the power of the Authority to accord."

THE Twopenny Rate. It has been clear from the first that a rate of 2d. in the £ for the purposes of higher education would prove quite insufficient for Authorities that endeavoured to exercise fully their powers under the Act. Unless and until the Treasury can be induced to allow a much more generous contribution towards the cost of the preliminary training for teachers in public elementary schools, the greater part of the rate must go for that purpose, leaving comparatively little for the general development of secondary and technical education. We do not think any one can accuse the Local Authorities of extravagance in the matter of higher education. Everywhere there are demands for more money for secondary and technical schools. Certainly these, in comparison with the public elementary schools, are to some extent starved. It seems certain that the Local Government Board will soon have to deal with requests from many parts of the country for permission to raise a higher rate. The county of Lancashire, in its estimates for the coming year, has already exceeded the limit by $\frac{1}{4}$ d., and it has been decided to apply for power to increase the rate up to 3d. in the £, in view of the fact that the cost of secondary education must go on increasing.

THE West Riding Education Committee has decided to take another step forward in the movement towards gaining full control of the non-provided schools. The following resolution has been carried:—"Inasmuch as the managers of certain non-provided schools have thus far failed to carry out the reasonable requirements of the Local Education Authority relative to the repair or improvement of their schools, resolved that, in the continued failure of such managers to carry out such requirements, the Accommodation and Attendance Sub-committee be empowered to take the necessary steps for giving statutory notice of the intention to provide new schools and for the provision of new accommodation." Mr. C. D. Nicholson, who stated that he spoke as a friend of the non-provided schools, said that the managers had received reasonable notice and had had sufficient time to make the necessary alterations. He did not see that they had any excuse for delay, and, if they had been dissatisfied with the demands of the Education Committee, they could have appealed to the Board of Education. It was also stated at the meeting that the amount received by the schools in question from the State (in the form, we suppose, of building grants) was £59,426, and the amount received in voluntary subscriptions £127,790.

THE Geographical Association's Annual Report for 1905 states that the number of members is now 503—an increase of over 50 on the last year. Several local branches have been formed. The organ of the Association, the *Geographical Teacher*, has grown in interest and circulation. The catalogue of lantern slides which the Diagram Company were to have issued has been delayed, but a large number of view slides can be borrowed by members.

A SCHEME OF GEOGRAPHY TEACHING FOR THREE YEARS.

By W. EDWARDS, M.A.

THE teaching of geography in England is too often thoroughly unsatisfactory. Great efforts are made to fill boys' minds with dry-as-dust lists of names of capes, rivers, and counties, varied by the heights of mountains and statistics of population. Too much importance is attached to unimportant details, general principles are neglected, and it is but rarely that any attempt is made to organize the work according to a progressive scheme. The fault in the last case rests often with the Local Syndicates and other examining bodies, and conscientious teachers are compelled against their will to adopt with their senior boys schemes of work which do not form a suitable continuation of those followed in the case of juniors. Most examinations prescribe a special portion of the world as their geography subject, and it frequently happens that boys leave school with a fairly detailed knowledge of a few countries but with an appalling ignorance of geography in general. This evil could be remedied to some extent if an introductory course of general geography were followed in the lower school by boys who have not to be presented for any of those public examinations to which schoolboy flesh is heir. Those entering the junior school at nine or ten could work through a course lasting over three years before they undertook the special work required for any examination; and, if two periods a week were allotted to geography, it would be possible to obtain a very fair foundation of general knowledge on which the later special work might be based.

Of the two hours a week available in the first year one might be devoted to teaching how to draw and read maps of England and the other to general physical geography. The first step in map drawing would be the construction of a plan of the classroom which should be drawn to scale, and this task will be rendered easier if the art master gives at the same time some lessons in drawing to scale with squared paper. The position of the tables and chairs should be indicated, and thus boys will get an idea of the meaning of a plan of a horizontal surface. By making plans of the walls an idea will be obtained of the use of a plan to represent a vertical surface, and this will make it easier for boys to understand the method of indicating mountains on a map. The plan of the classroom should be followed by plans of the school and playground and of the most important streets in the town. If a plan were also made to represent the journey from the home to the school, the value of this part of the work would be greatly increased, but it is obvious that this would be a difficult matter in the case of boys living at a distance. The starting point of geography will be the school. Then follow the home and the places between the home and the school. Maps of the immediate neighbourhood of the school might then be constructed, and, if relief maps of the district could be modelled in clay or plasticine, an excellent start would have been made. Such work postulates a sound knowledge of local geography on the part of the teacher, and by making the knowledge of the scholar the basis of the instruction it lays the soundest of foundations for future work. The Ordnance maps will be most useful at this stage, and it would be well to use both the map of the parish with a scale of twenty-five inches to the mile, and the map of the county with a scale of six inches to the mile. If the classroom has been drawn to a scale of one inch to a foot, the boys should have a fair idea of drawing to scale by the time the local map has been made.

Ample opportunity will be afforded in this early part of the course of giving the boys certain standards of measurements to which frequent reference might be made later. The width and height of the classroom, the length of the playground, the meaning of one mile, the distance from the railway station or general post office, the height of the nearest hill, and the population of the town might be learned as occasion arose. The scholar's power of observation will have been exercised in the construction of these plans and his power of imagination will be used to understand the direction of local streams, the difference in size of the town and its neighbouring villages, the importance of rivers for commerce, the meaning of local place-names, and the reasons for the position of local industries.

The next step in the course is the consideration of the county in which the school is situated, and this constitutes an import-

ant departure. Up to this time the subject has been mainly physical geography. With the county we get the beginning of political geography, and this involves the new conception of arbitrary division. In studying the county the leading features should be carefully considered, but it is most important that the clearness of the general picture should not be obscured by multiplicity of details. A competent observer states that the great attention given to the details of the canton sometimes prevents Swiss boys from gaining that sense of proportion which is so important in geography. The details selected for consideration must be typical, such as the general lie of the county, the importance of the chief rivers and mountains, the industries of the country districts, of the inland towns, of the seaports, the difference between industrial towns and cathedral cities, the importance of well known castles and abbeys.

It will be impossible in studying the county to rely upon the child's own knowledge, as when local geography was studied, but frequent use must be made of the wall map, the atlas, and, above all, of the relief map of the county. The relief map must be used to supplement the wall map, and the judicious use of both, following the previous training already indicated, should enable a boy to form a fairly accurate idea of the physical features of his native county, and should, at any rate, save him from the mistake of the luckless youngster who thought that mountains were "centipedes wriggling across the map."

Map drawing is often of very little educational value. Boys are frequently required to draw a map as a preparation for a lesson in the geography of the country in question, and frequently the whole of the country has to be drawn. A good teacher requires no map until the subject has been thoroughly explained, and before drawing a map of the whole country the leading features should be drawn separately. The function of a map is to sum up details already given, to show the relation between the whole and the parts which have been already studied separately. "Map drawing should be a constructive exercise and not mere copying."

The lessons devoted to local geography and to the geography of the native county will afford opportunities for the exercise of the inductive method in making definitions. The system often adopted whereby the scholar learns by heart the definition before he has gained any knowledge of the thing defined is to be deprecated strongly. Boys should be encouraged to make their own definitions, and the definitions generally accepted should be taught only after the ideas involved have been worked out by the boys themselves. The definition then comes, not as a statement of an unknown fact, but as the best form of expressing a truth already well understood.

By the end of the second term of the first year the boys will have gained a fair knowledge of their own county, and in the third attention should be directed to the geography of England and Wales, and the scholars' outlook will be broadened by the consideration of a wider subject. But we must not lose sight of the wood for the trees, and the lists of capes and rivers, of counties and county towns which some of us learnt in our early days need not be inflicted on our more fortunate successors.

The chief mountain chains, the most important rivers, the position of a few of the leading industries, will afford sufficient material for this term. But the teacher must remember that the great question of geography is not What? or Where? but Why? and the boys must be led to consider some of the simplest questions arising from physical features and local position, such as the part played by the Cambrian Hills in the struggle for Welsh independence, the importance of the Thames, the reasons for the greatness of London, Liverpool, and Newcastle.

The second hour devoted to geography in the first year should be used to give the boys general ideas as to the shape of the globe and the results of the movements of the Earth in causing day and night and the seasons; the atmosphere; forms of moisture; the action of winds and ocean currents; the conditions that prevailed in the glacial and later prehistoric periods. This is not a difficult matter, and much may be done with the simplest apparatus. The use of a globe and a lighted candle in a darkened room will greatly help to explain the succession of day and night owing to the diurnal motion of the Earth. Evaporation and condensation may be illustrated by the drying of damp cloths and by the moisture running down

the window-panes in a hot room; and the form may perform simple experiments such as the measurement and registration of the varying length of the shadow of a stick at noon for one, two, or three months, and the registration of the reading of a thermometer.

The work in the first year will be mainly independent of text-books, and notes taken by the boys should render any text-book unnecessary. But an exception may be made in the case of "The Child's Geography," by Mr. Barrington Ward, published by George Bell & Sons, which will render the instruction in physical geography more efficient, and the use of appropriate books for reading is desirable. Messrs. Arnold & Co. publish a series of Local Geography Readers, which seem specially adapted for this work, and of these "The Story of Yorkshire" and "The Story of the North Country" deserve particular mention, although they are somewhat difficult for very small boys. Two or three books included in Stead's "Books for the Bairns" could be used to supplement the teaching of physical geography, such as "From January to December" and "A Story Book of Country Scenes," and Miss J. B. Reynolds's "Word Pictures and Problems" contains many excellent pictures.

In the second year the lessons available should be devoted to a more detailed study of the British Isles, while the general geography of Europe may be made the subject of lessons in reading. The wider scope of the British Isles will admit of the consideration of the importance of place-names. The boys will be told that names ending in "chester," "ham," or "by" indicate respectively Roman, Saxon, or Danish occupation. The syllable "dun" suggests that the nucleus of London was an old British fort placed upon an eminence. In his book on "The Scenery of Britain and the Causes to which it is due" Lord Avebury points out that no less than seventeen towns (like Winchester) are built on the sites of ancient fortifications, twelve (like Exmouth) at the mouths of rivers, twenty-five (like Bideford) at fords, and eight (like Tonbridge) near bridges. He therefore concludes "that our ancestors did not avail themselves of bridges until a comparatively recent period of our history." Another interesting and instructive question is the connexion of certain industries with particular places, and the necessary explanation should be given where possible. The position of London is important, for it lies at the highest portion of the Thames that can be reached by ocean vessels and the lowest that can be bridged. Their proximity to the Continent led to the rise of the Cinque Ports, and the woollen industries of Norfolk owed much to their nearness to Flanders. The development of steam power accentuated that tendency to transfer the woollen trade from Norfolk to the West Riding which the restrictions of the Norwich guilds had started. Consideration should also be given in this connexion to the water supply (for example, the importance of the hard water of Burton in the brewing of Bass's ale) to the use of water power and water carriage; to railway facilities, to the presence of minerals, the neighbourhood of a port, and the influence of physical features.

The study of Europe will afford opportunities for considering differences of religion and forms of government; differences of vegetation, industry and national characteristics due to differences in climate.

The limitation of time will prevent the teacher from devoting one hour a week to physical geography, but there will be ample opportunities of dealing with glacial action in the British Isles and Switzerland, with the effect of denudation, and with the action of the ocean on the coasts of Great Britain and Norway. A good teacher will not rely upon any text-book, but Geography Readers will be of great use and Messrs. Blackie's "Europe" has been found of particular value. If the form library contains a judicious selection of the works of Jules Verne and Henty, the teacher's task will be rendered easier.

If possible three periods a week should be devoted to geography in the third year's course, and of these two should be given to a more detailed study of Europe and the third to the geography of the British Empire. This will enable the teacher to give a much broader treatment of the subject than was possible in the earlier stages, and some attempt should be made to deal with historical as well as geographical questions. Some idea may be given of diversity of national growth as shown by the examples of Great Britain,

Where freedom slowly broadens down
From precedent to precedent;

of France, with its premature centralization resulting in the

French Revolution; of Germany, where the Mark of Brandenburg became the Kingdom of Prussia and the King of Prussia became Emperor of Germany; of Russia, still concerned with questions of land tenure, of feudal oppression, of peasant right, just as England was in mediæval times. The consideration of the British Empire will afford opportunities for referring to such early explorers as Drake and Raleigh, to great colonial governors, Warren Hastings, Dalhousie, and Grey; to soldiers like Wolfe and Clive. Some account might be given of the attempts of the French, Spaniards, Dutch, and Portuguese to found colonial empires, and the reasons for the great success of the British as colonists might be briefly considered.

The study of the British Empire will lead to some knowledge of the continents in which our colonies are found, of ocean currents and tides and their influence on climate and commerce, of the formation of coral islands; and thus the knowledge of physical geography gained in the first two years will be extended.

Other subjects which will arise from time to time are the religions of the World and the attitude of Great Britain to the religions of subject races; the good fortune of Great Britain in securing coaling stations on the chief trade routes; the importance of place names, Quebec and Montreal reminding us of the French occupation of Canada, Gibraltar recalling the Moorish conquest of Spain, Boston and New Plymouth with their association with the Pilgrim Fathers.

"The Voyage of the Sunbeam" is an excellent reading book for boys at this stage, and it is not difficult to obtain a supply of books for the form library which afford, under the guise of travel and adventure, much useful information as to national habits and local customs.

Oral instruction is the only means of teaching geography successfully to young boys, and an epitome of fresh information given by the teacher should be written on the blackboard and carefully copied into the note-book with which every boy should be provided. Maps, plans, and sketches should be drawn in these note-books rather than in special map-books, as by this means it is far easier for boys to grasp the idea of the unity of the subject. It is essential that all work so copied should be corrected by the teacher, and, if this practice were generally adopted, the writing and spelling in our lower forms would be greatly improved. In imparting information the teacher must rely partly upon the intelligent "exploration" of the map, partly upon a rapid succession of questions and answers following a brief statement of new facts. Questions should be so framed as to compel thought and to appeal to the scholar's reasoning powers. Every answer, at any rate in the case of younger boys, should consist of a complete sentence which must be something more than the rearrangement of the words of the question, and so must involve the exercise of the scholar's constructive imagination. The greatest care must be taken to convey clear ideas, and for this it is essential to limit the number of details. Many teachers make the mistake of "leading their pupils into the search for alluring details instead of teaching just enough facts for the purpose of clear and simple generalization."

A NEGLECTED ASPECT OF COMPOSITION.

It has been said that English, though generally considered the easiest subject, is in reality the most difficult one to teach as it should be taught. And composition after its early stages is the most difficult branch of English. It is generally considered that the subjects for composition should be objective rather than subjective; that essays should be given on historical, literary, or scientific subjects. The chief aim of composition is looked upon as being to teach the logical arrangement of facts, and the best manner of expressing ideas: more attention is given to the style than the matter of an essay. All this is good in its way, and at the proper period, but when the above aims have been achieved there is another aspect to the teaching of composition, which is too often neglected.

"As it should be taught" the aim of composition lessons, after the art of building up sentences and connecting them has been mastered, after the value of taking trouble over the form in which ideas and facts are expressed has been appreciated—the aim should then be to arouse thought and imagination. The

raison d'être of composition for older pupils about to leave school has gone unless the exercise has ceased to be mechanical and grammatical, or even rhetorical, and has become a stimulating intellectual and ethical one. In its last stage, when the generally accepted ideas regarding composition have been satisfied, the primary objects of the lesson should be, in ascending order of importance, (a) to strengthen the power of expression (of ideas, not facts) in writing, and, indirectly, in speech; (b) to stimulate, and provide subjects for, the imagination; (c) to cause thought on various subjects which might otherwise never be considered, and therefore to *give* ideas.

Some results of this teaching would be (a) to encourage individuality, and to discourage the commonplace; (b) to bring about, through discussions, that friendly intercourse between teacher and pupil, so desirable, yet so often lacking.

The chief faults in the usual system of treating composition lie in the subjects chosen, in the treatment of the subjects, and in the frequency of the exercises. A great many of the subjects given might be set as exercises in the history, English, or science lessons; and any subject which can be studied from a book, and which requires the reproduction of facts mainly, such as the time-worn "Travelling one hundred years ago and to-day," fulfils none of the above objects. This kind of thing causes pupils to look upon an essay as something external to themselves, as something to be "got up" instead of "thought out."

With regard to the frequency of the exercise, at least three, if not four, lessons should elapse between each essay. The pupils need from one lesson to the next to think about, and discuss, the subject. The notes for the essay should be made out under the teacher's guidance, though not under his direction. When the exercise has been written and corrected another lesson should be taken up in criticizing and discussing the work sent in. • The habit of giving the pupils an essay to write every lesson precludes thoughtful-expression or imagination.

The choice of subjects should depend on what the pupils are, and should be such that the subjects touch the lives and interests and opinions of the class. The essay ought not to involve search in books or newspapers, but searchings of mind and heart. What has been gathered from outside is not what is wanted, but what has come from within. The great thing is to get the children's own personal private opinion. They have one; for young people think far more than their elders think they do, but they are extraordinarily sensitive over their thoughts. It is a comparatively easy matter to teach the young idea how to grow, when it has once been wooed above ground. And the usual composition exercise, like the usual educational system, gives little opportunity, and less encouragement, to the expression of individuality. We are so much of a pattern nowadays that it is a positive relief to meet any one who is different from other people and is not afraid of showing it.

The way in which the teacher treats the subject and the aspect of it which he presents to the pupils are no less important than the subject itself. This treatment and aspect should be as negative as possible; that is, it should *give* very little, and make way for the children to give of their own. Let them write *anything* at first so long as it is their own. Let them feel that whatever they write will be appreciated and not ridiculed—that it will be read by a friendly critic. Of course faults in judgment and taste will appear, and, perhaps an excess of frankness: this gives the teacher his opportunity to guide and restrain. As in all other subjects, almost everything depends on the personality of the teacher. Young ideas, just above ground, are sensitive to the most delicate touch, and grow or shrivel up according to the cultivation given them.

A great aid to the expression and cultivation of opinions is a kind of amateur debating society formed in a class, with the teacher as chairman. Let the pupils choose their own subjects—it is better to have, at first, slightly undesirable rather than undesired ones. Here again the teacher's guiding and restraining hand can make itself felt later, but at the start very few pupils will speak, and those will only say a sentence or two. Under careful and sympathetic management the thing will grow, and serve many other purposes beyond aiding the composition. It is not advisable to set the discussions as exercises—such a prospect will be sufficient to freeze any "genial current" of speech—but others suggested by the spoken discussions might be written. The following were among many

chosen entirely by a class of the average age of fifteen:—(1) Should boys and girls mix freely together? (2) Is capital punishment justifiable? (3) If a person does a wrong thing, without knowing it is wrong, is he really doing wrong? Perhaps, if some such debates were held in all senior classes, the future men and women might find other subjects of conversation besides cricket and blouses.

The following are a few suggestions for essays on the lines indicated in this article:—(1) Autobiographies of inanimate objects such as a mirror, a pencil, a drop of water. These will be inane at first, but after seeing one or two examples many pupils will produce really good things. (2) An ideal school. If the real opinions of the writers can be obtained, the teacher may find many valuable unconscious hints. (3) Is it better to be a boy or a girl? (4) Descriptions of school friends without mentioning names. (5) The description of an imaginary picture. This causes alarm at first; but, if some pupils are allowed to illustrate history or poems or to paint landscapes, others will imagine original pictures, which, in some cases, are of surprising merit. (6) The things most worth having—which essay in being criticized will give the teacher an opportunity of introducing ideals.

An ingenious teacher who really cares for the characters as well as the intellects of his pupils can find, with some little difficulty, subjects more suitable for his particular form. Something depends on the kind of class, but most depends on the kind of teacher, and in default of something better, not obtainable under our present curricula, the composition lesson can, in capable hands, become an influential medium for instilling ideas and ideals into our pupils.

E. M. WHITE.

COLONIAL AND FOREIGN NOTES.

FRANCE.

At the Musée Pédagogique the courses that are to give professional training to first year candidates for the *agrégation* (Sciences and Letters) have been begun. The opening session, attended by one hundred and forty students, was presided over by M. Liard,

Training of Secondary Teachers.

Vice-rector of the Académie de Paris. M. Langlois, Director of the Musée Pédagogique, delivered the inaugural address, and commenced by recalling the arguments advanced by the supporters of tradition against the new departure; then in the second part of his discourse he explained why these objections had been overruled, why it had been deemed necessary to give professional training to future secondary teachers, and in what that preparation would consist. Let us endeavour to sum up this second part as briefly as may be. The theory contained in the maxim "*Magister non fit, sed nascitur*," the theory of the teacher by the grace of God or by natural selection, is, said M. Langlois, on the whole sound. Aptitude for teaching is a natural gift. But so are all aptitudes, and notably that for conducting scientific investigations. Education, however, can and ought to assist Nature. Almost useless, if you will, for those who are specially gifted, it is indispensable to others, who form the majority. If it cannot do everything, or even much, it can nevertheless do something. Vainly is it urged that the mere love of a subject will make a man a good teacher of it. The world abounds with learned men zealous for science, but notoriously unable to teach. Nor is it true that teachers learn to teach by teaching; more than one, for lack of warnings and preliminary exercises, has begun with blunders, and has continued in them from force of habit. The thesis laid down by the Prussian Minister of Public Instruction in 1864 is irrefutable: "Scientific culture, in whatever degree, is not the whole of the special preparation requisite for the work of a teacher in secondary schools."

Many persons, continued M. Langlois, strive for the office of a teacher in order that it may serve as a stepping-stone to other careers. Yet at least 80 per cent. of those who enter on it with vast hopes, and without any great vocation, will remain teachers. Something must be done for them—something more than has been done hitherto. But what is that something? It has appeared to the promoters of reform that the *régime* about to be established will triumph over traditional inertia and hostile prejudices only on two conditions. The first is, there must be no excess of zeal. Pedagogy may properly be introduced into the course of University studies for secondary teachers; but not over much pedagogy—only those main lessons of it that cannot be neglected without injury. On the other hand, it is essential to inspire a clear consciousness of the services that a habit of scientific reflection on the

problems of education can render, and a sense of the ends and the dignity of the scholastic profession. The second condition of success is that both the speculative interest and the practical utility of instruction in pedagogy should be evident to the student. It will profit him little if he regards the subject as only one piece of drudgery more. There must be none of the pedagogy that has always discredited the science to finer minds—the pedagogy full of truisms, childish nonsense, and stale scraps of philosophy, psychology, and ethics.

M. Langlois proceeded to set forth what was contemplated. Candidates for masterships in secondary schools are to be initiated into those professional questions of which it is not proper for them to remain ignorant.

This is to be done by means of the practical training of probationers, by means of a special Course and of supplementary lectures. The training for probationers will not be organized for some months. The Course will review the history of secondary education in such a way as to explain the present through its origins. The four sets of lectures parallel to the Course proper will treat of: (1) psychology as applied to education; (2) hygiene; (3) school law and administration; (4) problems of secondary education abroad.

So has a most important reform been begun in France. The practical training for probationers, which is to be arranged in the course of this year, is particularly interesting. The students will be divided into groups, according to the *agrégation* at which they are aiming. Each group will receive from eminent teachers brief theoretic instructions as to the methods of the discipline selected; then, as soon as possible, the students will pass to practice. First they will pay visits to a primary school and observe how collective teaching proceeds. Afterwards they will be attached in sets of three or four to the most experienced teachers in the *lycées* of Paris. These teachers will initiate them into class teaching, and, once a week, will show the reasons of the methods that they themselves adopt. The period of trial for probationers will vary in duration according to the subject or subjects that they are ambitious of teaching.

"It seems to me," said Prof. Sir John Seeley more than thirty years ago, "that the schoolmaster generally confines himself to studying methods and processes of teaching, and neglects the more important question: What should be taught?" We never knew the secondary teacher in England give undue attention either to the methods or to the matter of instruction; just as an army officered mainly with sea captains would occupy itself little with military strategy or cavalry manoeuvres. In France the matter of instruction was the subject of the reform of 1902; now the secondary teacher is called on to study the methods. As our readers will know, we are watching the effects of the earlier movement with curiosity. The latest statistics that have been compiled point to the gradual extinction of Section A (Latin and Greek). We will not trouble ourselves and others with figures, but say simply that, both in Paris and in the departments, the tendency to desert it is strikingly marked. Public favour, which lately inclined towards C, now runs rather towards B (Latin and modern languages). The reservation of Greek for an *élite* is proving, as we anticipated, deadly to it. The Latinless Section D still enjoys considerable popularity.

With respect to this new movement, which has the adequate training of secondary teachers for its object, we need hardly say that we regard it with interest and sympathy. But enough about reforms. Let us end this note with an expression of regret for the death of M. Rambaud, Member of the Institute, and once Minister of Public Instruction. He rendered in his day good service to the cause of education; moreover, he will be known to students of history. He wrote the "*Histoire de la Civilisation française*," and was joint editor with M. Lavisse of the great "*Histoire générale du IV^e siècle à nos jours*." Many French teachers will long retain a kindly memory of him.

GERMANY.

That Latin and Greek composition will be deposed from its supreme place in English education is not probable, so long as Universities and schools hold out their rich rewards of scholarship and prize for attainment in it. Nor would we deny that the practice of it yields profit and delight to many. But education has to consider not absolute, but comparative, values; and it might be well if some authoritative body—let us say the Head Masters' Conference—would set itself seriously to determine what would be the general effect on education in England if the time devoted to classical composition were given over to natural science. Abroad, be it for good or evil, the tendency of the day is unmistakable: it is to give a fuller recognition to mathematics and science at the expense of literary and linguistic studies. An interesting report of a Committee connected with last year's *Naturforscherversammlung* at Meran has lately been issued. It gives adherence to three general

The Modern Tendency.

Death of M. Rambaud.

Tendencies.

What is being done.

principles:—(1) That education in higher schools ought not to be one-sided, not exclusively based either on languages and history or on mathematics and natural science. (2) That mathematics and science are educational instruments of no less worth than languages. (3) That parity of right should be universally accorded to the three higher schools. To the statement of principles particular recommendations are appended. In mathematics no addition to the number of hours is required; but the curriculum should be freed from worthless special studies in order that room may be won for education to functional thinking ("Erziehung zum funktionalen Denken"). In the *Real-gymnasium* mathematics should part with time to science, especially to biology; so that boys may get at least the minimum of scientific knowledge that is necessary for the understanding of modern life. The *Gymnasium*, too, should acknowledge the claims of biological studies; to mathematics it should allot as many hours as does the *Real-gymnasium*. Physics ought to be treated not as mathematical, but as natural, science. The subject should be pursued in such a way as to bring out the general method of winning knowledge in the domain of the experimental sciences. Moreover, the learner must not merely see experiments done: he must be trained to perform experiments himself and to make his own observations. And, "side by side with physics, chemistry and the biological sciences must receive a full measure of regard in the time-tables of all higher schools, as being subjects essential to the comprehension of modern culture. Chemistry is the fundamental science of the substances which compose the world about us. Biology, so progressive in the last fifty years, is the science of life, of the phenomena, laws, and history of the organic world—a science including man himself as an integral element, and awakening human interest in the most various ways. To open a road to the understanding of the relations of world and man, and at the same time to exercise the faculties of observation upon the concrete forms of Nature, seem to the Committee to be indispensable additions to the task of the higher school, which hitherto has cultivated in undue proportion abstract matters of instruction, such as languages and history."

All over Europe the same pleas are being urged in some form or other. Of course, it is to be dreaded that too large a concession may be made to the utilitarian school in education. If we put secondary education under popular control, we may end, if we are not careful, in finding it all "bills of parcels," typewriting, and commercial French. Literature must always occupy a foremost place in any wise scheme of education. But the world is changing about us. Modern science is making its influence felt even in literature. If our boys concentrate their attention on longs and shorts, they will soon be unable to understand the best that men are thinking and saying about them. And it must be remembered that the science gaining ground in German schools is, as we have before shown, science regarded as an instrument of education, and not science as the slave of commerce. If our schools ever cease to be places of education and become vestibules to the shop, we shall have to abandon our wide realm to the nations that can train citizens to be capable of empire.

UNITED STATES.

The evening school, that useful supplement of the primary school and antidote to the baneful education of the streets, seems to prosper unusually well in America. Thus the Brooklyn Evening Trade School was thronged last year, so that the pupils had to be put on "part time." There are, moreover, some twelve hundred young men and women still waiting for admission. The Evening High School and the Evening Elementary School are both reported to be full. In like manner, at Philadelphia the evening schools are steadily growing in popularity. The ages of the pupils that attend them vary in a remarkable degree. The average age is twenty years, but a large number of students are between thirty and forty; 411 are between forty and fifty; whilst 88 have actually exceeded half a century of life. In the foreign quarters of the town whole families, even to the grandfather and grandmother, spend their evenings in getting the rudiments of an English education. Many teachers have learned Italian in order to give instruction to the numerous Italian settlers. So does the school perform its mission to render the American people as homogeneous as may be. So it is proved that, if the evening school will consider the wants of those about it, no compulsion of law is required to fill it.

Much has been said and written in England about Rhodes Scholars; and we ourselves would fain say something more. But we are concerned here chiefly with the reporting of American opinions and news. It is an American authority from which comes the statement that in 1904 five States or Territories failed to qualify a candidate for a Rhodes Scholarship on the Responsions standard, while no fewer than ten failed in 1905. The States failing in 1905 were Alabama, Arizona, Arkansas, Montana, Nevada, North Dakota, South Dakota, Oregon, Utah, and Wyoming.

There is much talk in the United States just now of music, and of the "new muscular education." The latter consists, so far as we are able to understand, in teaching comprehension of music by actual hearing. The pianola has been introduced into several normal schools, where teachers can acquire through this instrument some knowledge of the treasures of music with a view to imparting that knowledge subsequently to their pupils. Again, Harvard has entered into what are called "reciprocal relations" with the New England Conservatory of Music, courses pursued at the Conservatory being counted for the University degrees and University lectures being open to students of the Conservatory. Lastly, the two lady members of the Chicago Board of Education are advocating an extended use of music in the public schools as a corrective to the greediness, the frantic rushing and pushing, and the depravity of city life. Of the benign influences of music we are fully convinced; the pianola, however, must stand on its own merits, not on any recommendation from us.

ORANGE RIVER COLONY.

The Education Report to June 30, 1905, shows that the year was occupied mainly with the endeavour to bring educational facilities within the reach of children living outside of the towns, and with the general organization of the Education Department. It deals, moreover, with two matters as to which our readers will desire fuller information than the newspapers supplied. The first of these is the concordat. Towards the end of 1903 the Dutch Reformed Church, after its failure to obtain certain concessions for which it had been negotiating since the declaration of peace, decided to start its own schools, and a considerable number of such schools were opened throughout the Colony during the following year. This unfortunate division was put an end to in March, 1905, when a conference of representative men arrived at terms of settlement. Under the agreement reached the general supervision of education in each district—which it was decided should be as large as possible—is to be placed in the hands of a School Committee, the bare majority of which will be elected by the public, and the rest nominated by the Lieutenant-Governor. Education at all schools, with the exception of three high schools, will be free, and each School Committee will for the first time since the war be responsible for a local contribution towards the cost of education, the amount of the contribution to be meantime only one-sixth of the total expenditure. School Committees will, subject to certain conditions, have the right of nominating teachers for vacancies, but all appointments and dismissals rest with the Lieutenant-Governor. It was also agreed to introduce compulsory education subject to certain limitations as regards age, health, and school supply.

A later conference succeeded in removing the religious difficulties that had arisen in connexion with the schools. The clause in the Ordinance of 1903 to which exception was taken was one which permitted alternative religious instruction of a dogmatic character to be given by ministers of religion to the children of their own faith during the school hours usually set apart for the teaching of Bible history. All the religious denominations, with the exception of the Anglicans, Roman Catholics, and Jews, objected to this clause, and the Evangelical Church Union, which includes the Dutch Reformed Church, urged that religious instruction in schools should be limited to undogmatic Bible history, to be given exclusively by the teachers. But again a meeting and discussion resulted in an arrangement satisfactory to all parties. It was decided that schools should be opened by the repetition of the Lord's Prayer, and by the teaching of Bible history according to an approved handbook, such instruction to be given by the teachers immediately before or immediately after the secular work of the school.

This provision met the views of the so-called Free Churches. Those who desired the right of entry were met by a provision that for an hour on one day in each week clergymen should have the right, at the request of parents, to get the use of school premises for the giving of definite dogmatic instruction to the children of their own faith immediately after the secular work. In order that children might not come to this lesson fatigued at the end of the ordinary day's work, it was provided that the usual Bible lesson on that day should be omitted and the afternoon session of the school shortened by the time thus saved. The views of the secularists were met by a conscience clause which enables parents to withdraw their children from the school altogether during the time set apart for Bible history.

TEXT-BOOKS FOR STUDENT TEACHERS, By J. H. COWHAM, Lecturer on Education, Westminster Training College, S.W.

The following works on the Theory and Practice of Education have been revised and are brought up to the most modern requirement. Chapters on Nature Study, Physical Training, and Student Teacher Preparation have been added.

1. **COWHAM'S PRINCIPLES OF ORAL TEACHING AND MENTAL TRAINING.** New Edition, with added Chapter on "Nature Study." Price 3s. 6d.

"With admirable skill, Mr. Cowham has epitomized the results of his long experience. The method is based on the scientific principles of psychology and ethics, with which the author shows himself thoroughly acquainted; and the ability with which these principles are applied to practical class teaching is perhaps the most striking feature of the book. . . . The hand of the skilled teacher is visible on almost every page. . . . The best book of its kind for students in training."—*The Journal of Education*.

2. **COWHAM'S NEW SCHOOL METHOD.** Price 4s. 6d. In this work the most approved methods of teaching the ordinary subjects of instruction are fully expounded, especial care being taken to make clear the reasons for each method.

The Educational Times writes: "Mr. Cowham's excellent 'School Method.' The use of this book by those who are beginning educational work in secondary schools will save an infinite amount of time, energy, and temper."

3. **SCHOOL ORGANIZATION, HYGIENE, AND DISCIPLINE (Elements of Ethics).** New Edition. Price 3s. 6d. A complete and fully illustrated guide to the practical Equipment and Management of a thoroughly well-disciplined and healthy school.

4. **GRAPHIC LESSONS IN PHYSICAL AND ASTRONOMICAL GEOGRAPHY.** Price 4s. 6d. Fully illustrated Model Lessons on the Form and Motions of the Earth, Seasons, Tides, Eclipses, Winds, Currents, Latitude and Longitude, &c.

"Exceedingly well done."—*The Journal of Education*.

5. **COWHAM'S MANUAL OF WRITING.** Price 1s. **Supplementary Exercise Book**, price 9d. A complete preparation for the Practice and Teaching of Writing.

6. **FRACTIONS AT A GLANCE.** Price 2s. 6d. A Chart designed to make the Teaching of Fractions both intelligible and interesting.

7. **COWHAM'S SCHOOL JOURNEY.** Price 2s. 6d. Three School Journeys fully illustrated by Maps, Plans, Sections, and Photographs. A form of NATURE STUDY.

Prof. SEALEY in *School World* writes: "An excellent record of what has been done in a school outing."

Spoken by W. H. D. ROUSE, Litt.D. (Camb.), Head Master of the Perse School, Cambridge; J. E. SANDYS, Litt.D., Public Orator in the University of Cambridge; and A. W. VERRALL, Litt.D., Fellow and Lecturer of Trinity College, Cambridge.

ENGLISH SERIES.

Spoken by Mr. F. R. BENSON (Shakespearean Actor); the Rev. S. A. DONALDSON, M.A., Master of Magdalene College, Cambridge; and H. C. WYLD, M.A. (Oxford), Professor of English in the University of Liverpool.

For Prospectus giving full particulars of each series, apply to the Publishers.

W. HEFFER & SONS, CAMBRIDGE, ENGLAND.

IS YOUR PENCIL A KOH-I-NOOR OR ONLY AN IMITATION?

There are no better pencils made than L. & C. Hardtmuth's Koh-i-Noor Pencils. Many manufacturers have tried to equal this wonderful Pencil—and have failed. The merit lies in the lead, in the selected wood, and in the workmanship. Using a Koh-i-Noor is like drawing silk over paper—so smooth.

Koh-i-Noor Pencils are one price everywhere—4d. each or 3s. 6d. for one dozen. Of Stationers, Photographic Dealers, and Artists' Colourmen. Dainty Booklet on Pencils post free from L. & C. HARDTMUTH, 12 Golden Lane, London, E.C.

TO TEACHERS AND SCHOOLS.—Suitable selection PARCELS OF MUSIC to value of one guinea, sent on approval on condition that at least one third of value of parcel is kept. Returns and settlement at the end of the term. Catalogue gratis.

WICKINS' RAPID PIANOFORTE TUTOR. Price 2s. 6d. each net, post free. "Marvel of simplicity and thoroughness."—ANTOINETTE STERLING.

WICKINS' RAPID VIOLIN TUTOR.

"Best popular violin school before the public."—ALFRED GIBSON.

HINTS ON FRENCH SYNTAX.

By **FRANÇOIS STORR, B.A. Camb.**

Extract from Author's Preface.—At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

CATALOGUES ON APPLICATION.

Messrs. J. M. DENT & CO.'S TEMPLE ENGLISH LITERATURE SERIES FOR SCHOOLS.

In view of the Education Department's New Regulations for the teaching of English Literature and Language in Secondary Schools, Messrs. Dent & Co. are publishing a large proportion of the books mentioned in the scheme, and they will add a certain number of the volumes each year according to the demands and needs of teachers. This series, each book edited by Scholars who are familiar with the special subjects entrusted to them, is prepared according to the lines laid down by the Education Department; Annotation is avoided wherever possible, and Notes are only given where they are absolutely essential. To attract the pupil's interest special attention has been paid to the *format* of the volumes, which has been made as delightful as possible, and far away from the dullness generally associated with a school book. The price in almost every case will be 1s. net, but it may be found necessary to slightly increase it in the case of a few volumes of more than average length.

The volumes marked with an asterisk are now ready.

ENGLISH POETRY. Selected, with an Introduction and Notes, by ARTHUR BURRELL, M.A., Principal of Borough Road Training College, Isleworth. 1s. net per vol.

***COLERIDGE'S ANCIENT MARINER.** With an Introduction and Notes by R. MCWILLIAM. Limp cloth, 3d. net.

***WORDSWORTH'S SIMPLER POEMS.** Limp cloth, 3d. net.

The last four texts will be issued separately in limp cloth at 3d. net per vol., or the four bound in one vol., 1s. net.

***FRESCOTT.** Selections by OLIPHANT SNEATON, M.A. 1s. net.

VOYAGES and TRAVELS. Selected by HENRY WILLIAMS, M.A. 1s. net.

BURKE'S FRENCH REVOLUTION. With Introduction and Notes by Rev. Professor SMITH, D.D., LL.D. 1s. net.

THE SPECTATOR.—A Selection.

Of this series, both generally and in particular of separate volumes, the Press has written in the highest terms of praise. We append a few criticisms.

LAYS OF ANCIENT ROME.

STORIES from LE MORTE D'ARTHUR and THE MABINOGION.

THE LIFE OF NELSON.

THE SONG OF HIAWATHA.

"In a series of very pretty little volumes, Messrs. Dent place in the hands of teachers and students a selection of short English works in prose and verse. The subjects are well chosen for their purpose; and the treatment is very suitable. The text is, in the main, left to do its own work; but a sufficiency of notes is provided in an Appendix; and there is, in each case, a brief but serviceable introduction, biographical of the author, explanatory of the period and circumstances of the work. The little volumes may well be regarded also in the light of gift or library books. They are light and compact, not too large even for the pocket, clearly printed, and furnished each with its portrait-frontispiece. The series is lengthening out, and already makes an important list."—*School Government Chronicle*.

ENGLISH POETRY.—Lyrical.

"In every section the selection is brilliant."—*School World*.

"A fine selection of the most musical poems in the language from Chaucer to the present day."—*Scotsman*.

SELECTIONS from SHAKESPEARE.

"The selections have been read and tried with classes of children, and are very suitable for school use. The little volume is pleasant to look at and handle, and the print is clear."—*School Guardian*.

STORIES FROM THE ODYSSEY.

"This version of the story of Odysseus told in lucid English makes good reading. . . . The book is adorned with remarkably beautiful illustrations."—*School World*.

TALES and STORIES from the FAERY QUEENE.

"The most gracious invitation to the Spenserian banquet. . . . most admirably and effectively told."—*Westminster Gazette*.

Please write for our Complete Education Catalogue post free.

London: J. M. DENT & CO., 29 Bedford Street, W.C.

Cloth, pp. xii, 864. Price 7s. 6d.

The Journal of Education.

BOUND VOLUME for 1905. Volume 27. (New Series.) 37th Year of Issue.

"As the organ of a hard-working and often underpaid profession, and as a means for bringing together and expressing the opinion of those scattered units who make up the body of English schoolmasters, it has long held a deservedly high position."

THE TIMES, December 29, 1905.

"The notes and news and critical matter are excellently handled and proportioned, and the general outfit of the journal is to be commended in every way. There is richness, too, in the way of schoolboy humour, as, for instance, when we learn of prodigies who construed 'integer equus' as 'an equal number,' and 'felix prole virum' as 'a happy man with a family.'"

THE PALL MALL GAZETTE, December 30, 1905.

London: Mr. WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

Messrs. METHUEN'S NEW SCHOOL BOOKS

Please write for Messrs. Methuen's New Educational Catalogues

A Junior French Prose. By R. R. N. BARON, M.A., Modern Language Master at Cheltenham Grammar School. Crown 8vo, 2s. [Methuen's Junior School Books.]

This book has been written for pupils beginning continuous French Prose. It contains: (1) Examples and Rules in Syntax. These are not professedly exhaustive, but deal rather with points in which the two languages are seen to differ; and, as they deal with such points occurring in over a hundred passages and exercises, it is hoped they may be found sufficiently complete for the general purposes at which the book aims. (2) Exercises in *everyday language*, illustrative of the rules. (3) Graduated continuous passages.

Both the exercises and the continuous passages are accompanied by full vocabularies.

French Prose Composition. By R. R. N. BARON, M.A. With Vocabularies and Notes. Second Edition. Crown 8vo, 2s. 6d. KEY, 3s. net.

This book has been carefully revised, and additional military passages added. Suitable for use in Upper Forms and for Candidates for Army Examinations.

In use at Dulwich; Marlborough; Westminster; Bishop's Stortford College; Technical School, Blackburn; Grammar School, Burnley; Grammar School, Burton-on-Trent; Grammar School, Cheltenham; Durham School; The Academy, Daniel Stewart's College, and Episcopal Training College, Edinburgh; Eltham College; Owen's School, Islington; Maritzburg College, Natal; University College, Nottingham; Mathematical School, Rochester; Trinity College, Stratford-on-Avon; Grammar School, Swansea.

Nouvelle Grammaire Française. By J. G. ANDERSON, B.A., Examiner to London University, the College of Preceptors, and the Welsh Intermediate Board. Crown 8vo, 2s.

Except an important Introduction on Phonetics, with Diagram, this work is written in French for English-speaking students who have reached the stage when a systematic but rational study of Grammar is necessary. It also contains matter for reference purposes. Emphasis is laid on points where English and French differ. The conjugation of the verb is simplified. Other new and special features are The Formation of Words, Concordance of Tenses, Parsing and Analysis, Punctuation, &c.

Exercices de Grammaire Française. By J. G. ANDERSON, B.A. Crown 8vo, 1s. 6d.

This book is primarily intended as a companion to the "Nouvelle Grammaire Française," but it may be used in conjunction with any Grammar.

"Will be of great service to most classes in schools, as the exercises pass by easy gradations from simple accidents to the difficulties of syntax and punctuation."—*Athenaeum*.

The Gospel according to S. Luke. With an Introduction and Notes by WILLIAM WILLIAMSON, B.A., Author of "Dictation Passages." With 3 Maps. Crown 8vo, 2s. [Methuen's Junior School Books.]

This book contains the special features which have made Dr. Rubie's "St. Mark" and "The Acts" so popular. It contains all that is required for the Oxford and Cambridge Junior Local Examinations.

A School History of Surrey. By H. E. MALDEN. With many Illustrations. Crown 8vo, 1s. 6d.

A School History of Middlesex. By VICTOR PLARR and F. W. WALTON. With many Illustrations. Crown 8vo, 1s. 6d.

A Handy Digest of British History. Comprising an Analysis and Commentary with Appendices illustrative of the points of contact between Great Britain, her Colonies, and Foreign Nations. By C. E. SNOWDEN, M.A. Demy 8vo, 4s. 6d. net.

Easy Stories from English History. By E. M. WILMOT BUXTON, Author of "Makers of Europe." Crown 8vo, 1s.

"Of elementary English histories this is quite the best that has recently come under our notice, and should make a solid foundation for later teaching."—*School*.
"The stories are well chosen and well told. A capital bird's-eye view of the whole course is given."—*Journal of Education*.

Latin Passages for Unseen Translation. By E. C. MARCHANT, M.A., and A. M. COOK, M.A., Assistant Master at St. Paul's School. Crown 8vo, 1s. 6d.

This book contains the first part of the same author's "Latin and Greek Passages for Unseen Translation" (Third Edition, 3s. 6d.). It contains two hundred Latin passages, arranged in order of increasing difficulty. Has been carefully compiled to meet the wants of V. and VI. Form boys at the Public Schools, and is also well adapted for the use of Honourmen at the Universities. Prose and verse alternate throughout.

Let Youth But Know: a Plea for Reason in Education. By KAPPA. Crown 8vo, 3s. 6d. net.

"There is much to interest boys, parents, and schoolmasters in these concluding chapters, and indeed the whole book is worth reading."—*Athenaeum*.

The Rights and Duties of the English Citizen. By H. E. MALDEN, M.A. Second Edition revised and brought up to August, 1905. Crown 8vo, 1s. 6d.

The Student's Modern and Historical Atlas of the British Empire. By C. GRANT ROBERTSON, M.A., Fellow of All Souls', Oxon., and J. G. BARTHOLOMEW, F.R.S.E., F.R.G.S. 4to, 4s. 6d. net.

This is an Atlas to illustrate the historical development of the British Empire from the earliest times to the present day. The Atlas contains 64 Maps, with numerous insets, Historical Tables and Notes, an Introduction, a Historical Gazetteer, a Bibliography, and an Index. The combination of modern maps on physical geography, trade, industry, &c., with the special and extensive historical maps of the Empire as a whole and of each part of it (e.g. India, Canada, &c.) gives the Atlas a character and completeness not hitherto afforded by any other Atlas. It will be found equally useful for modern or for historical geography, and should therefore prove indispensable in Schools and Universities and to all teachers and students of geography and British history. It is the cheapest Historical Atlas in existence, and the one best adapted to use with Mr. George's "Historical Geography of the British Empire."

Please write for a Specimen Map.

A Historical Geography of the British Empire. By H. B. GEORGE, M.A., Fellow of New College, Oxford. With a Coloured Map. Second Edition, revised. Crown 8vo, 3s. 6d.

Set Book for Section 6 Oxford Local Examinations, 1906.

A New Trigonometry for Beginners. By R. F. D'ARCY, M.A., Lecturer at Gonville and Caius College, Cambridge. Crown 8vo, 2s. 6d.

Among the special features of this book are:—The introduction of experiments in practical geometry to lead up to many of the topics considered; the use throughout the book of four-figure tables; the relegation of the special consideration of the trigonometrical ratios of angles of 30, 45, 60, 120, 135, and 150 degrees to a few worked-out examples. The book is provided with a large number of examples.

Examples in Physics. By C. E. JACKSON, B.A., Senior Physics Master at Bradford Grammar School. Crown 8vo, 2s. 6d.

The object of this work is to supply a collection of suitable problems covering the average Physics course in Secondary Schools.

An attempt has been made to cover the whole ground, and it is believed that any pupil who can work through these examples will be well up to the standard of a University Scholarship.

Elementary Experimental Chemistry. By A. E. DUNSTAN, B.Sc., Head of the Chemical Department, East Ham Technical College. With 4 Plates and 109 Diagrams. Crown 8vo, 2s. [Methuen's Junior School Books.]

"A good course in elementary chemistry written by an experienced and successful science master, which covers the subjects of typical preliminary examinations. The illustrations are numerous and clear."—*School World*.

"This work is something more than a mere cram book and we can recommend it thoroughly. Each fresh step is illustrated and almost every page of the book gives directions for simple experiments bearing upon the theory of the subject."—*Knowledge*.

An Elementary Text-book of Inorganic Chemistry. By R. LLOYD WHITELEY, F.I.C. With 137 Illustrations. Crown 8vo, 3s. 6d.

"It is well arranged and clearly written. The section devoted to chemical theory should enable elementary students to understand the principles of the subject without outside assistance."—*Glasgow Herald*.

Manual Training Drawing (Woodwork). Its Principles and Application, with Solutions to Examination Questions, 1892-1905. Orthographic, Isometric, and Oblique Projection. By F. STURCH, Staff Instructor to the Surrey County Council. With 50 Plates and 650 Diagrams. Imperial 4to, 5s. net.

A guide to the Examinations in Manual Training Woodwork of the City and Guilds of London Institute, the Board of Examinations for Educational Handwork, and the Examinations of the N.U.T., and it should prove useful as a text-book for use in Secondary Schools and Training Colleges, for it deals with the requirements in Geometrical and Mechanical Drawing of the Education Department, University of London, London Chamber of Commerce, &c. The questions and solutions are not obtainable elsewhere, and these, with the large number of new questions and diagrams which can be used early in the session, should make the book invaluable to teachers.

Please write for a Specimen Page.

Messrs. METHUEN have just issued a New and Illustrated Catalogue of all their publications. As only a small number have been printed, early application should be made for copies, which are sent free on application.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION Office, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

SCHOOL ATTENDANCE.

By G. J. HILL.

I HAVE a weakness, for which I apologize, that of trying to make myself practically acquainted with any work with which I am brought into relation. I have another weakness, that of wandering through the slums and ghettos which form the ragged fringe of great cities. I have walked about High Street and Canongate in Edinburgh, Gallowgate in Glasgow, Scotland Road in Liverpool, Ancoats in Manchester, Digbeth in Birmingham, Sneinton Market in Nottingham, Whitechapel in London, the Faubourg St. Antoine in Paris, Bowery in New York. Everywhere the hungry, dirty crowd, without which civilization appears to be unable to exist. Will it ever be so?

Having an afternoon's holiday, I spent it—strange taste—in accompanying one of the attendance officers on his round through one of the most squalid quarters of Liverpool. The work of these officers brings them, of course, into contact with the worst specimens of the poor. Even an afternoon's experience makes the heart sink. The perpetual dirt and wretchedness contrast terribly with the bright blue sky of this warm afternoon of early spring, and one ruminates ruefully how it might have been spent in paying the annual visit to one's old friends—the hazel catkins on the hedge; star buttercup and stitchwort and mercury below them; coltsfoot in the rougher meadows; primroses in moist places; and above, here and there, a thrush, whistling his fullest notes.

Our friend is popular in his district. He combines firmness and tact. He confides to me—not in set terms—that one secret is, while prepared for the worst, to think the best of those whom he visits. I am sympathetic, I think, with the poor, but he required, it seemed to me, all the power of a strong imagination.

As in other departments of scientific research, in looking for a certain result, one unexpectedly meets with another. A visit such as mine throws light upon the question of the housing of the poor, and one concludes that the faults are not entirely on the side of the ground landlord. Bad tenants repeatedly move or "flit." The best reference for a landlord is a satisfactory weekly rent-book; the bad tenant borrows a friend's

satisfactory book, and shows it to the landlord's agent (who later on discovers his mistake) as her own. Balustrades, paper on the wall, any woodwork will be pulled down for firing. After a few weeks, rooms will be left in filthy condition, to be renovated for, possibly, a similar tenant. The furniture may consist of little more than a box or two. "Flitting" is not a difficult process, and, in some cases, at least, rent can be obtained on Monday morning by threats and bullying only. The rent collector is not always a popular character.

In this connexion it is curious to remark that, while the surrounding houses, even to their cellars, swarm with occupants, not one of a row of good cottages erected by the Liverpool Corporation is let.

The following are one or two characteristic tales, told me by the way. The attendance officer called at a house one Monday morning. Almost immediately upon knocking thereat, the door flew open, discovering a gigantic Irishman brandishing an axe. After glaring upon our friend for a few seconds, the tenant exclaimed: "I beg your pardon, sorr, I thought you was the landlord."

The poor in Liverpool are very clannish, and live strictly in districts according to nationality or religion. We are upon the border of an Irish Roman Catholic district, but just out of it, only an occasional straggler being found in ours. Ours is English, the husbands nearly all dock labourers or seamen (firemen and the like), and one peculiarity of the women is that, while they will, and do, travel round hawking, they consider it *infra dig.* to go out washing or "charing," or to any service in another person's house, although occasionally some of the younger women may become "step girls."

The officer came one day suddenly upon a party of ladies who were unbending the bow by pelting one another with over-ripe onions, the surplus stock of a lady whose honesty (and the sagacity of her customers) did not allow her to sell it. The proprietress, whose tendency to *embonpoint* prevented her from taking an active share in the game of skill and chance, was seated on the handle of the barrow, much interested in the sureness of hand and eye shown in the throwing of the missiles, only equalled by the nimbleness and agility displayed in avoiding them. One of the players, all flurried, looked up, and, unexpectedly, saw our officer. "Look out; here's a 'tec'!" she exclaimed. "No," said the peripatetic merchant; "it is only the School Board, God save him!"

"Where's Johnny Dash?" said the officer on one occasion. "Well," said his mother, "he broke his leg yesterday afternoon; but he is coming to school to-morrow." "Coming to-morrow?" "Yes; it is a wooden leg," replied Mrs. Dash. It appeared that the boy had broken his wooden leg, and his father, a constructor of clothes-props, was making a new one.

I have, one way and another, in very different parts of England, been brought into relation with the very poor. And, in common with others who have had similar experience, familiarity has produced sincere admiration and respect for the courage, the good temper, the neighbourly fellow-feeling with which many suffer their pathetic condition—which Mr. Booth and Mr. Rowntree have helped to teach us—is less often deserved than we are disposed to imagine.

There are, of course, wasters and undeserving, and certainly the mothers of these bad attendants at school did not appeal to my sympathy. There was one example of a woman who appeared to be genuinely ill, and who had kept her little daughter at home to help her, but, as a rule, the cases gave me the impression of listless idleness, drink, and untruthfulness. Some affected surprise that so much fuss should be made over keeping children away two half-days per week; others disputed the absence. More than one woman had had enough to drink; others showed evidence of drinking habits in their faces, or, as Dickens says somewhere, if they did not drink, they might have brought an action for libel against their countenances and recovered heavy damages.

Here are details of some of the cases. In those of two truants sympathy might be felt for the relatives in charge. The first was a little boy of over seven. His mother was dead. His father had deserted the children. The boy was kept by an elder brother, who was at work, and a sister, a bright-eyed girl, whom we saw at home. The boy is beyond his sister's control, steals his brother's money, and perpetually roams the streets. The attendance officer says he is a persistent liar, and he thinks the most impudent youngster he has

ever met. The next is a boy of nearly fourteen; he has always been a truant, is now in the third standard only, and, being big for his age, shame partly keeps him from attending. His father is a seaman, and he also is beyond his mother's control. The mother is assured that, unless he do attend regularly until he can claim exemption, he will be sent to an industrial school for two years.

At one house, and one only, a girl of "flash" appearance answered the door; at another, on a sympathetic remark to the mother that her six small children all around her (more than one of them afflicted with ophthalmia, the reason of absence from school) were rather a large family, we received the retort that, had she a dozen, it was no business of ours. One lady had arrived at that stage of untruthfulness that, to speak charitably, one might alter for her unfortunate case Charles Kingsley's words upon the swearing Squire Lavington: "It is hardly a sin with her now, I think. She has become so habituated to it that she attaches no meaning nor notion whatsoever to her own untruths." She was what an impolite member of her own sex might have termed a "brazen hussy," yet a woman still young, as, indeed, many of those upon whom we called were. "Why had her boy" (a little fellow, by-the-by) "been away?"—"He had not been away." "Yes, he was away last Thursday afternoon."—"Begging your pardon, he was not." "Oh! yes he was."—"Well, would you send him to school, when his teacher, Miss Bessie, hit him with a stick across the face; you could see the welt if he were here; hit him under the ear with a stick as thick as your middle finger?" "Was the boy at home now?"—"No, he was not." Proof, therefore, was not forthcoming, and the officer told me the recital was a tissue of untruths.

We were fortunate in finding one man only at home. This individual was seated over the fire, smoking, in a room where his better half was wringing out some washing. He was in the condition known as "slightly in beer," and was apparently, like some others of his class, I am disposed to think, somewhat of a public-spirited politician. After removing his pipe and exhorting in the fire, he apostrophized in indignant disdain: "What I want to know is, what do they learn them at these Board schools, do they give them a *good* education?" The officer replied civilly that he was not answerable for the quality of the education, and wished him good day.

At one house that we visited the absentee's near relatives, quite exceptionally, occupied the whole house. This had white curtains to its windows, was clean and sweet, and stood out conspicuously from its neighbours. The officer believed the occupiers were moneylenders. The woman made the excuse that the absent girl went to a private school, and the matter is curious. It appears that a person living in one of these poor houses will open one room, have a few forms and books, and establish a school. Twopence per week, perhaps is charged, and, provided the children could pass the minimum standard requirements of their age, it was doubtful, at any rate before the passing of the Act of 1902, whether such a case could be touched. The temptations of this system and its attendant evils are obvious.

And here, one has the passing thought whether all is well with the attendance of secondary schools, especially with the attendance of private schools for girls. Punctual and regular attendance at school is important for all classes of the community, and it is an open question whether the Local Authority is fulfilling its duty by promoting school attendance—as the Gothenburg system does temperance—among the poorer classes only.

May I add a sentence or two as to cost? Our officer looks after the attendance of two schools, one a Council school of, in all its departments, an average attendance of 970 children; and a voluntary school (Church of England), of 500, roughly 1,500 children. Of course, in more scattered districts, country places, the number looked after by one officer must be much smaller. His salary probably is £80 per year, and other expenses would be moderate at £20. A minimum cost of £100 for 1,500 children, or 1s. 4d. per child. There is, apparently, a serious widespread, deeply rooted fallacy, that the *taxes* do not come from the community, out of our own pockets. I have heard a County Councillor solemnly declare that money in the provision of attendance officers was well spent—because, the school children would "earn" it over and over again in increased grants from the Government. Doubtless the disinclination to

employ the Robson Act in the agricultural counties is due, in great measure, to the loss of grant from diminished attendance which would follow its adoption. But, beneficial as improved attendance is, the increased grant is little more than taking money from one pocket and putting it into another.

TEACHERS' GUILD NOTES.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE Master of Downing College, Cambridge (Mr. Alex Hill, M.D.), has accepted the office of President of the Teachers' Guild for the year 1906, in succession to the Rev. J. Franck Bright, D.D., Master of University College, Oxford. Dr. Hill will give his Presidential Address on the occasion of the Annual General Meeting of the Guild in the early summer.

AMONG the representatives of the Universities in the new Parliament are the Chairman of Council of the Teachers' Guild (Mr. S. H. Butcher), senior member for Cambridge University, and a Vice-President of the Guild (Sir Philip Magnus), member for London University.

THE arrangements for the General Conference of the Guild at Sheffield at Eastertide, 1906, are nearly completed. The Sheffield Branch, which received our first provincial Conference in 1889, is making active preparations, and the hospitality of the Branch, public and private, promises to be very ample. A general invitation will shortly be sent out by the Branch, and will show how excellent a welcome they are preparing. The subjects for debate have been carefully chosen, and the openers of discussions have been selected. A preliminary programme of the Conference will be issued with the Branch invitation. Oxford, Cambridge, Cheltenham, Bath, and a few other centres have attractions of their own which no manufacturing city can claim; but great interest attaches to the industries of Sheffield, which can be studied by members during their visit, and the neighbourhood of North Derbyshire, especially of the Peak District, gives the excursions from Sheffield a special charm. The opening of the new University buildings and the reorganization of the secondary education of Sheffield supply new features of interest—the former particularly—as the University buildings will be the home of the Conference.

THE death of Mr. J. R. Langler, a member of our Council for many years, and an ex-President of the National Union of Teachers, on January 8, has deprived the Council of a familiar and much respected colleague, who was also an active member of three of our chief Committees. Mr. Langler was a regular attendant at Council and Committee meetings, and did much to keep the Guild in touch with the problems of primary-school education. He had reached the ripe age of seventy-nine years, and preserved his activity almost to the last.

MR. ARTHUR SIDGWICK has consented to give the third lecture of the session to the Teachers' Guild Education Society in late May or in early June. The spring lecturer has not yet been secured.

MEMBERS of the Guild in London and their friends should endeavour to keep open the date and hour (Tuesday, March 13, 8 p.m.) when Prof. John Adams will lecture to a conjoint meeting of the London Sections, organized by Section C, on "The Art of Forgetting." The lecture will be given in Bedford College, York Place, Baker Street, W. (close to Baker Street Station, Metropolitan Railway).

THE circular giving first notice of the arrangements for the Teachers' Guild French, German, and Spanish Holiday Courses in August, 1906, at the same centres as in 1905 (Tours, Honfleur, Neuwied-on-Rhine, and Santander), is nearly ready.

Preliminary study in preparation for the lectures in the different centres is very valuable, and the announcement of the subject-matter of the lectures and of the books recommended in the circular gives intending students half a year to prepare to derive full benefit from the lectures. The lecturers will be the same as in 1905. Mr. J. W. Longsdon, ex-Chairman of the Holiday Courses Committee and a representative of the Guild in several previous courses, has consented to be the representative at Tours; Mr. E. W. Buck will go again to Honfleur, and Mr. S. de Ste. Croix, Chairman of the Committee, to Neuwied. Don Julian Fresnedo de la Calzada and Mr. E. Beirne, of Astillero, Prov. Santander, will again act as representatives of the Committee at Santander. The circular is sent *gratis* to applicants from the Offices of the Guild, 74 Gower Street, London, W.C.

"HOLIDAY RESORTS JOTTINGS" in the *Teachers' Guild Quarterly*, March, 15, 1906, will give useful hints on travel in Palestine, Greece, and Sicily—three lands of special interest to students of Bible and classical history. The hints will be of a practical character, and, as far as possible, such as are not to be found in the ordinary guide books.

CORRESPONDENCE.

EMPLOYMENT AGENCIES.

To the Editor of The Journal of Education.

SIR,—I noticed, in yesterday's papers, Mr. C. A. Hardy, M.P., submitted to Tuesday's meeting of the London County Council report of by-laws to be supplied to all agencies in London "for the employment of governesses, of domestic servants, or of women in any capacity whatever." He explained that the object was to prevent fraud and immorality. "Sir Melville Beechcroft expressed a hope that it would be made compulsory for the keepers of such agencies to exhibit the by-laws in their offices."

Now as an educational agent, with a governess employment branch, established in London since 1881, I write to protest against compulsory exhibition of by-laws that appear outrageously suggestive of wrongdoing and degrading to any respectable person to have exhibited in a conspicuous place on their premises. By-law No. 10: "No agent shall knowingly transact business with or register any person known to be a prostitute or otherwise of ill-repute, or to be connected with a house of ill-fame." 11: "(c) No agent shall suffer any person of ill-repute to frequent or otherwise use the registered premises, or (d) permit such premises to be used for any improper purpose."

Governesses and private-school teachers are drawn from the educated and cultured classes; is it seemly to class them with domestic servants, and to apply by-laws made for the control of servants' registry offices to offices dealing only with gentlewomen? In Paris, only people whose probity and antecedents will bear the closest scrutiny are qualified for registration as employment agents. Is not a similar qualification in England, rigidly enforced, backed by approved referees acting as fidelity guarantees, what we require? Are not good agents as much needed as good doctors and lawyers? Is not the law for the protection of the innocent and punishment of the guilty? I have always welcomed the prospect of registration, believing it would not only suppress fraudulent agencies, but would guarantee for the registered business dealings that are above suspicion. If it is now considered necessary to exhibit on "registered premises" such "shall nots" as above cited, can registration ever be so interpreted?

I append extracts from clients' letters on other clauses of the proposed by-laws. You will observe that many employers also strongly disapprove the proposed inspection of books at any and every period, deeming such espionage an infringement of the liberty of a British subject, likely to cause needless annoyance and to defeat the object in view. The general opinion is that such inspection should follow only on grave suspicion of malpractice. But, as I welcome inspection, I refrain from comment.—I am, Sir, yours faithfully,

13 Regent Street, S.W., January 25, 1906.

E. S. HOOPER.

THE GRAMOPHONE AS A SCHOOL APPLIANCE.

To the Editor of The Journal of Education.

SIR,—We are much indebted to Mrs. Frazer for her very interesting article on "The Phonograph as a School Appliance." After experimenting with the phonograph for some time, I was invited by the Gramophone and Typewriter Company to experiment with their instruments, a privilege of which I gladly availed myself. During the last

two years I have been enabled to form an opinion as to the value of the gramophone for the recording of the spoken language.

I fully endorse all that Mrs. Frazer says with regard to the importance of the record maker. I have tried various voices, and some failed through lack of volume, others through faulty enunciation. I have heard many records made by well known actors and actresses, and have observed with some surprise how unsatisfactory some have been. The records spoken by Coquelin *cadet* and by Sarah Bernhardt suggest their voices, but are certainly not good records.

Indeed, there are as yet few speech records published by the company which can be considered models; but these are wonderfully good. Given the right voice, and the gramophone is certainly superior to the phonograph; this is not only my personal opinion, but that of all who have had an opportunity to hear both. I have had some records made of spoken English for experimental purposes which I have never heard equalled. It is to be hoped that further records of classical passages from English literature will soon be obtainable. The best published gramophone records in French are by M. Delaunay, of the Comédie Française: he has spoken four of Lafontaine's fables in masterly fashion. Soon there will be a series of thirty-one dialogues, the text of which has been written by Mr. S. Barlet: the records of these seem to me most successful. There are also some very good German records by Amanda Lindner (speeches from "Faust," "Maria Stuart," and "Die Jungfrau von Orleans," and Heine's "Wallfahrt nach Kevlaar"), Josef Kainz (Goethe's "Totentanz"), Otto Sommerstorff (monologue from "Faust"). Two comic poems by Ernst von Wolzogen are perhaps the most perfect German records I have heard.

I am inclined to think that as models, and especially for class use, the gramophone records are the best. There is no metallic ring about them, and the volume of sound is considerable. For the use of the student who wishes to record his own speech the phonograph is alone available; the process of recording on discs is a difficult one, and is kept secret. There is no likelihood of the secret being divulged.

Any one desiring to form his own opinion of the records which I have singled out from the lists of the French and German branches of the Gramophone Company can hear them at their offices (21 City Road, E.C.). The records of Mr. Barlet's dialogues will probably be published before this letter appears.—I am, yours faithfully,

WALTER RIPPMAUN.

JOTTINGS.

THE General Powers London County Council Act passed last Session by Parliament, and which came into force on January 1, affects scholastic agencies for governesses and women teachers. Such agencies must register name and address and may be required to keep books and make entries therein as the Council may direct; they must also admit at any reasonable time the Council's authorized inspectors. Agencies that charge no entrance fee or preliminary payment before the situation procured is entered on are exempted from provisions as to keeping special books. As our correspondence column shows, there has been a lack of discrimination.

THE Minister of Public Instruction in France has decided to admit to primary training colleges English student-teachers (women) on the following conditions:—They will pay 400 fr. (= £16) for the full scholastic year's board and lodging, including holidays, and will be treated in all respects like the French students. They will be required to devote one and a half to two hours a day to teaching English conversationally; for the rest of the day they will be free to attend all college lectures. Candidates must be between the ages of eighteen and thirty, must have passed some University examination, and will be required to show some knowledge of French. Application should be made to the Director of Special Inquiries, St. Stephen's House, Cannon Row, S.W.

Mr. GERRANS and Mr. Matheson on behalf of Oxford, and Mr. Gross and Dr. Keynes on behalf of Cambridge, write to the *Times* to deny that there has been any lowering of the standard in Responsions or the Previous Examination respectively. They might, in confirmation, adduce the unsolicited evidence of Mr. Cookson before the Classical Association that the Greek grammar paper was a burden on the intelligence, not to say the morality, of candidates, and that of the Warden of Wadham, that one third on an average were plucked for Responsions and another third ought to have been plucked.

"ETONENSIS" sends us a characteristic reminiscence of Lord Randolph Churchill's schooldays:—"He was sent for one day by the master of my division, when the following dialogue passed:—Master: 'Late for chapel, Churchill—a hundred lines.' Churchill: 'Thankee,

Sir.' M.: 'Two hundred.' C.: 'Thankee, Sir.' M.: 'Four hundred.' C.: 'Thankee, Sir.' M.: 'I shall send you up to the Head Master.' Churchill departed with the conventional order for a flogging, apparently dumbfounded, with his tail between his legs, but as he closed the door behind him he looked back, and, smiling sweetly, let fly a Parthian 'Thankee, Sir.'"

AT the Incorporated Head Masters' dinner the jest of the evening was made by Dr. Marsh, who responded for the guests. He had been informed that many distinguished guests, including Mr. Birrell, had excused themselves at the last moment on the plea that they were trembling for their seats. He could well understand their anxiety in the presence of that august assembly. "You employ yourselves," he continued, "in planting and nurturing that most graceful of forest trees, and the tenderest and most lasting of my boyhood memories is the afforestation of the Marsh."

SIR PHILIP MAGNUS, in returning thanks after his election for the University of London, announced that the Departmental Committee appointed two years ago to inquire into the working of the Royal College of Science and School of Mines and their relation to cognate institutions had reported in favour of amalgamation. He prophesied that, if their recommendations were carried out, London would soon possess a school of science and engineering in close connexion with the University which would compare favourably with any similar school in Europe or America. Sir Philip, in conclusion, promised to place his advice and experience on educational matters as freely at the disposal of the present Government as if the Unionists had returned to power.

DR. MACLURE, who returned thanks for the officers of the Association, described his search for a Treasurer in place of Mr. Easterbrook. He had appealed to his old friend Mr. Rushbrooke to step into the breach, and Mr. Rushbrooke had replied: "I know nothing of finance, and am a very bad hand at figures." "I showed," said Dr. MacLure, "the letter to my fellow-Secretary, Canon Swallow. He read it, and exclaimed: '*Heureka!* That's the man for us!'"

MR. F. W. BOURDILLON, who responded for the guests at the Modern Language Association dinner, traversed a recent article in the *Journal* condemning the importation of foreign words. He was a free-trader, and held that each language should import the peculiar products of foreign languages. He had been reading Mr. Rose's "Napoleon," which told how the Emperor, when threatened with the loss of the West Indies, exclaimed: "Maudit soit le sucre, maudit soit le café, maudites soient les Colonies!" How far more forcible the imprecation had he used one short English monosyllable!

HISTORY repeats itself, and the remarks of Mr. Crawford in his "Southern Italy and Sicily" (noticed in our "Reviews" of last December) on the Servile Wars throw an illuminative light on the present events in Russia. These wars, he tells us, were not isolated attempts to obtain freedom, to be referred to local causes only. "In times of insurrection and change it often seems as if many movements were directed by one leader, when there is, in fact, no leader at all; but when the national understanding in different parts of the world has been produced by the spreading of an idea which brings about similar results in similar conditions. . . . The instinct of a nation is almost always as unerringly logical as the instinct of a wild animal."

"I HAVE often been amused at the zeal on behalf of 'denominational education' professed for political purposes by men who send their sons to public schools. When I went to Eton there were numerous services in chapel at which attendance was compulsory. Some to which the choir of St. George's, Windsor, came were extremely beautiful. Others merely saved the Head Master from the trouble of calling 'absence'; and there was a 'conduct,' whose lungs, and legs, were such that, if the lessons were short, he could be in a five-court at a quarter past three, after saying 'When the wicked man' at three o'clock precisely. The other recognitions of the Christian faith, about which the Fellows, mostly inaudible, were understood to preach on Sunday, were a lesson in the Greek Testament on Monday morning, 'Sunday questions' answered from books of reference, and 'Sunday private' with one's tutor."—HERBERT PAUL, in *Independent Review*.

"GREAT diversity exists also with respect to the item for education. In Eastbourne it is 3d.; Cheltenham, 4d.; Bournemouth, 4½d.; Grant-ham, Torquay, and many other places, 5d.; London, 1s. 6d.; Oldham, 2s.; Edmonton, 3s.; West Ham, 3s. 2½d. This is in addition to £13,106,129 from the Exchequer for education in Great Britain and £1,402,451 in Ireland. The tendency has been to increased costliness, . . . owing to the insatiable demands of teachers for larger salaries, fewer hours, longer holidays, additional pay for evening classes, and

retiring pensions. When it is remembered that their duties occupy some thirty hours on five days of the week, with about seven weeks' holidays in the year, and pension on retirement, their remuneration cannot be deemed inadequate, in comparison with that of the bulk of professional men and tradesmen."—*Quarterly Review* for January.

THERE are two letters on the same page of the *Times* (January 25) in curious juxtaposition. "Vindex" calls upon the Government to bring in a Bill making it a misdemeanour, punishable by imprisonment, for any one who, "with intent to influence or procure a vote, wilfully or recklessly utters or publishes false and fraudulent statements." Sir Carne Rasch writes of Lord Goschen and "presumably Mr. Elliot and Lord H. Cecil" as "candid friends, who, having stabbed their party in the back and on every occasion rubbed in the salt and split them up, are now alarmed at the monster they have raised."

GENERAL information paper in girls' high school.—"Complete the quotation: 'On, Stanley, on! Were the last words of —.'" Girl fills in "Livingstone." Asked for explanation: "I knew Livingstone had something to do with Henry Stanley."

WE have received from the Moral Instruction League their Syllabus of Moral Instruction and Training in Citizenship, and we heartily commend it to the consideration of teachers, even of those who are radically opposed to the principles of the League. It provides a well considered and carefully graduated course of lessons in morals, and on the necessity of systematic moral training all educators are agreed, however widely they may differ as to the ultimate basis of morals and the methods to be employed.

A PROBLEM for the *Educational Times*:—Draw the graph for "a point which, if continued much further, is likely to arrive at breaking strain."—FRED. DUTTON, in *Times*, January 26.

REVIEWS AND MINOR NOTICES.

Almond of Loretto. By R. J. MACKENZIE.
(12s. 6d. net. Constable.)

This is a happy title for a book which is as much a history of Loretto School as a biography of its founder. The two subjects are in fact one, and Almond is more closely identified with Loretto than Thring is with Uppingham—far more so than Arnold is with Rugby. No better historian could have been found for the task than the ex-Rector of the Edinburgh Academy, a favourite pupil and a life-long intimate of the Head, a schoolmaster who has tested for himself the pedagogics that he learnt at Loretto, and (as this volume proves) a clear and vigorous writer.

There is indeed some ground for the criticism that the disciple overshadows the master. As a fact, we have comparatively little of Almond's authentic utterances, and a very limited selection from the letters of one of the most prolific and voluminous letter-writers of this generation. On the other hand, Mr. Mackenzie makes us feel that he is so inspired with the spirit of his master that we may implicitly trust his exposition of the doctrines. The *Life* is its own justification; but, for the benefit of those who may be doubting whether it deserves a place on their shelf of educational reformers, we will quote a paragraph from the introduction. After a vivid portraiture of Almond as he appeared in his last years, there follows the biographer's apology:

The old gentleman had had no very remarkable success in life from a material point of view. He had been a Scotch schoolmaster all his days, and his school had never numbered a hundred and fifty boys. He had made no figure in general society, and it was only of recent years that he had begun to attract much attention in the great world that thinks (or, at least, writes) on education. But he was one of those original men who have power to break up the barren crust of convention with the ploughshare of new ideas; and when he died a couple of years ago it seemed to those that knew and loved him best, and to some whose professional experience had given them the right to form an opinion, that his life should not be left without a memorial, and, in particular, that the ideas for which he had lived, and the results that he had achieved in the way of realizing these ideas, were worthy of a wider currency than he himself had been able to give them.

Almond was a true evangelist. He preached the gospel of "sanitas sanitatum," and, unlike the inventor of that among other catchwords, he practised what he preached. It cannot be said of him that he was "cradled into poetry by wrong," for there was no spark of poetry in his composition, save the poetry of action: he proclaimed himself a born Aristotelian, not a Platonist. Yet it is true that he "learnt in suffering what he taught." His five years as a Glasgow student, with no opportunities for games or outdoor exercise, nearly ruined a naturally robust constitution, and of his fellow Snell Exhibitioners at Balliol all more or less broke down, and all died young. He himself was saved by boating, and the one great lesson that he took from Oxford—a place to which otherwise, in spite of his successes, he was never attached—was the supreme virtue of open air and exercise. He went back to his native land, which was still lying in darkness, first to practise and then to preach the new gospel. It was an uphill struggle, and in the early years of Loretto he was more than once on the verge of bankruptcy. By his countrymen he was regarded as a dangerous lunatic, and by his own boys as an amiable crank; but by faith and "dourness" he prevailed, and, thanks in a great measure to Almond, cricket and football are now as much at home in Scotland as golf is in England.

Were this all his gospel, he would, to us Southerners at least, be no true prophet. But athletics with him were no end in themselves: he laid no store by personal prowess, and against competition in any form he steadily set his face. The Eton and Harrow match at Lord's was to him, as we happen to know, an abomination.

But it is in matters of domestic economy, of housing, of feeding, dressing, and sleeping, that English public schools have most to learn from Loretto. Thus the field that one great school purchased with the profits of the tuck-shop was to him Aeldama, and the turn-up bedsteads of another famous school he called "whited sepulchres." In this year of grace our Head Masters have discovered that the regulation of a boy's hours of sleep is a question worthy their attention, and they have referred the matter to a Committee. Almond worked out the problem for himself, and the best report that the Committee could make would be a recommendation to carry out the rules given on page 234.

Almond was no fanatic, but he was an enthusiast, and it must be admitted that the swing of the pendulum, the reaction against the sedentary life of the Scotch student, carried him too far, and made him lose the just balance. Not that he exaggerated the importance of physical conditions—that were hardly possible—but he was to some extent indifferent to the intellectual development of his pupils. Reversing the satirist's injunction, he prayed for the sound body, convinced that the sound mind would necessarily follow. His biographer goes, as it were, one better than the master, and actually maintains that athletic distinction in a school is a pretty safe sign of general health and vigour. We have no space to argue, but must be content to pronounce this *ex cathedra* rank heresy. Almond himself was sometimes dangerously near to talking nonsense—for instance, when he assigns as his reason for preferring the classics to modern languages as a school study that Germans are a spectacled and stove-loving race, while the Greeks went bare-necked and bare-footed.

No less important than his physical reforms were the new relations that Almond established between master and boys. That Loretto masters discarded the cap and gown and Loretto boys came to school in flannel shirts and shorts was only an outward and visible sign. Loretto was a true republic, and the Head Master resembled the President of the United States. He was hail-fellow-well-met with his subjects, and no new law was passed that had not first received their general approval. He "whopped" them freely, but they suffered "whopping" gladly; and, if any thin-skinned boy objected to the personal indignity, he would commute the punishment. He considered it his first duty as a Head to study each boy's character, and to make of him, if possible, a personal friend—and, as this "Life" shows, he generally succeeded in so doing. What higher tribute could be paid to a head master? He hardly taught at all—only Divinity lessons—and latterly he spent more than half of the school year at his Highland lodge, taking with him relays of select pupils, and leaving the actual administration of the school to a vice-gérant.

It is a platitude to remark that the ordinary head master

who took Almond for a model would come to utter grief. High ideals, enthusiasm, reasonableness, physical vigour, and a magnetic personality—these are a rare combination of qualities that meet once in a generation.

But Almond, though inimitable, is none the less a shining example. He should teach head masters, and assistants too, that the disregard of the laws of health is a survival of monasticism; that conventionalism is a foe to all life and progress, and should be nipped in the bud; that not only their teaching, but their *ethos*, needs to be humanized. What matters it if Almond smoked with his prefects and helped to set a booby trap for one of his staff, if he thought that a head master improved, like wine, with age, and should reach maturity about eighty (if he wore flannel)? These were harmless idiosyncrasies, and in originality and force of character he outtops most of Mr. Howe's 'Six Great Schoolmasters.'

The Origin and Influence of the Thoroughbred Horse. By WILLIAM RIDGEWAY. (12s. 6d. net. Cambridge University Press.)

It would perhaps be scarcely too much to say that this is an epoch-making book, for here, for the first time, we have a problem, hitherto considered to be one for the biologist and the breeder, tackled by a scholar and an archaeologist, and, as the present writer, himself of the biological wing, freely and frankly admits, with results of the highest value to the subject as a biological study.

The pedigree of the horse has passed into one of the commonplaces of manuals on evolution, though these manuals almost invariably refrain from giving the real difficulty of the pedigree—namely, that the fossil forms on which it is based almost all belong to the American continent, where there were no horses in modern times until they were imported by colonists from Europe. Evidently, therefore, there are great difficulties in supposing that the American horse is the descendant of these fossil animals. The pedigree of the horse—of our present breeds of horses—is a matter which has attracted a very large share of attention in late years. Prof. Cossar Ewart's work, as detailed in the "Penicuik Experiments," has been of the greatest value, and those who were present at the Cambridge meeting of the British Association will remember the great interest which was shown in the Celtic pony exhibited on that occasion in connexion with a discussion on the subject treated of in the work now under review. Prof. Ridgeway agrees with some other writers—for example, Mr. Barclay, who has recently maintained the same thesis in an interesting little volume—that the small pony of the Shetlands and of other parts of the western fringe of the British islands and of islands still further north is a perfectly distinct variety—perhaps one might even use that much-contested word *species*—from the horses of the more southern parts of our islands. Where were these horses derived from? Above all, where did the thoroughbred derive his "breeding" and his attributes? Such are some of the questions which Prof. Ridgeway sets before himself in this book. Probably nine out of every ten persons, if asked to reply offhand to them, would say: "From the Arab steed, so famed in story and in poetry." Not so Prof. Ridgeway. He holds that this view has no historical foundation whatsoever; in fact, believes that the Arabs only obtained their fine breed of horses from North Africa at a period later than the Christian era. Where, then, did the thoroughbred come from? According to the Professor, he is derived from the Libyan horse, of the existence of which, as an unmatched animal, there is clear evidence for a thousand years before the Arabs ever bred a horse. It is this Libyan horse which is portrayed on the monuments of the XVIIIth Egyptian Dynasty, prior to 1500 B.C.—a horse of a bay colour, with a white blaze in the forehead, and often with white bracelets or stockings. From this North African stock all the best horses of the world have sprung, and it is a variety entirely distinct from the clumsy, thick-set, slow horses of Europe and Asia. With what wealth of knowledge and critical acumen the thesis thus set forth is maintained, those who are familiar with Prof. Ridgeway's previous works will well understand. One singular point, of great interest to the biologist, which comes out in the course of this work is in connexion with the striped Kathiwar horses which Darwin believed to be the typical examples of the primitive dun-coloured striped animal from which all our domestic breeds

have come. This view, in the light of Prof. Ridgeway's observations, becomes more than doubtful.

We have shown that this book is of great interest to the biologist, for it approaches an old problem from a perfectly new angle. It is no less interesting to the classical scholar, who will find a vast amount of information throwing a vivid light upon early classical archæology. The scientific breeder will profit greatly by the illustrations, and he will learn a valuable lesson as to the importance of knowing something about the history of the horse as he studies the remarks concerning the possible pending destruction of the old Irish hobbie by the careless introduction into that breed of alien blood through hackney sires introduced in ignorance by the Congested Districts Board. We can strongly commend this masterly work to the attention of all intelligent readers.

A Primer of Logic. By E. E. CONSTANCE JONES. (1s. 6d. John Murray.)

This is the age of primers—one of many attempts to reduce large and abstruse subjects to a treatment so small and simple that the most untrained and unlearned can obtain—or, rather, can fancy they obtain—a knowledge of them. There is, however, no royal road to the true benefits of knowledge, and few indeed are the primers devoted to giving an introduction to a difficult science that are not failures. They either give too much and become unintelligible through condensation, or give too little and leave the beginner with a wholly inadequate and probably false conception of the subject. It is to be feared that logic is one of the sciences that refuse to contract themselves into the few small pages of a primer and retain their value; hence we cannot but feel that Miss Jones is attempting, in these 150 small pages, something which no mortal could make successful, and which does not do her proved powers as a lecturer justice.

The primer is written with vivacity and clearness, and the ability and fine training of the author are everywhere conspicuous. Nevertheless, a long experience in teaching forces us to think that few beginners could really learn logic from this primer (or any other) without a teacher; and that, given the teacher, he and his pupil would be better without the primer.

The chief difficulty—as it is the supreme value—of the subject, for the student of logic, lies in thoroughly grasping the strict conditions on which *proof* depends in deduction and induction respectively, and in clearly seeing the nature of the errors that make thought untrustworthy. The space allotted here to inference and the amount of explanation given leave no room for this. Few students could proceed to reason logically themselves after studying this book. The portion on "Induction" is interesting reading to a logician; but a beginner would hardly gain from it, we think, a clear view of the nature of inductive thought and what constitutes conclusive evidence.

Perhaps it would have been better if Miss Jones had omitted a good deal of the more advanced and debatable questions in logic touched on in chapters vi., vii., and viii., and given more space to the cardinal principles and methods of logic, which are of high practical value to every one.

It is somewhat surprising to find that the author adheres to Mill's views on many points, and seems to think his four methods a satisfactory account of inductive proof. It has been long recognized that the methods give only a very minor help in obtaining that proof. In the first place, metaphysics and physical science now necessitate a very different conception of cause and effect from that reached in Mill's day. Also the methods cannot be used until nearly the whole of the essential work of investigation is done; hence no guidance in that work of discovery is given by them, and even when they are used they do not give proof. Mill's canons can never be carried out as he required, and the methods are all based on the wholly external Baconian test of the conjunction or separation of the effect and the supposed cause, which is incapable of affording logical evidence.

The primer is interesting to an advanced student from the vigour and point of the style, and from many excellent views and elucidations and very happy illustrations it contains; but to a beginner, from the nature of the subject, we fear it will fail to give a clear view of the principles of logic or power to use them practically.

A Grammar of Greek Art. By PERCY GARDNER, Litt.D.
(Macmillan. 7s. 6d.)

Prof. Gardner treats the subject of Greek art from a novel point of view, looking upon it not merely as a record of the manifestations of the Greek spirit under the various forms of architecture, sculpture, and painting, but rather as interpreting the psychological laws according to which the artists worked. Instead, therefore, of enclosing his facts in water-tight compartments (so commonly the fault of text-books), he endeavours to show the *relations* of things, to draw up a grammar, the accidence of which is concerned with the relationship between the parts (as, for example, the symmetry and rhythm in forming the figures on a frieze or a vase), and, as syntax, the broad interaction of sculpture and poetry, picture and literature.

Admittedly writing for the advanced student, Prof. Gardner takes a wide outlook over the facts that have been industriously gathered by the best authorities. At the same time his own interpretations are full of interest. We may instance his excellent description of the Parthenon, which, again, forms the groundwork for some valuable suggestions as to the unity of the whole sculpture—in pediments, metopes, and frieze.

Most of his conclusions are controversial, but are none the less valuable. His statement that Greek art "was from first to last ideal" will not be universally admitted. But the mathematical relationship between the parts of a temple and the care taken to discount visual errors will be hardly questioned; nor his endorsement of Lange's law of *frontality* in early sculpture. His careful consideration of sculptural types (in the best period) is most interesting; while his contention that typical rather than historical personages appear in sculpture is to the point, in spite of the fact that other authorities instance the introduction by Pheidias of the sculptor's own portrait on the celebrated shield of Athena. The remarks on spacing, balancing, and perspective on vases are well considered. If the Pompeian mosaics and paintings are really derived from ancient Greek sources, it would appear that, in frescoes at least, the Greeks were well able to deal with a foreshortening and a perspective less conventional than would appear from the vase designs, fixed largely by religious traditions.

Prof. Gardner contends that literature and painting (that is, vase-painting) proceed along independent lines; and he acutely draws attention to the fact that comparatively few of these paintings have for their subjects scenes from Homer or even the greater tragedians. Even where such subjects were selected, the artist did not work according to the text, from which it follows that an attempt to reconstruct the scene, as it appeared on the Greek stage, from a vase-painting is open to error.

There are many other points of similar interest dealt with in a lucid and attractive manner. The illustrations are numerous, well produced, and to the point. The book will be welcomed by thoughtful students, who can hardly fail to look at our great national collections with an added interest after a careful study of Greek art on these intelligent lines.

Harvard Lectures on the Revival of Learning. By JOHN EDWIN SANDYS. (4s. 6d. net. Cambridge University Press.)

These lectures are interesting, for they combine the scholarly treatment of a subject close to the mind of a scholar and are written with due regard to the fact that his readers are not likely to have the same profound knowledge as the writer. The lectures here written out were given to an American audience, and expectation of the quick, alert, sympathetic audience seems to have been an inspiration in the writing. Points of special interest to Americans are introduced, and these are not unacceptable to the English reader.

The seven chapters deal with topics of great attractiveness to every cultivated reader. They are: (1) "Petrarch, 'the First Modern Man,' and Boccaccio"; (2) "The Age of Discovery of the World and of Man"; (3) "The Theory and Practice of Education"; (4) "The Academies of Florence, Venice, Naples, and Rome"; (5) "The Homes of Humanism"; (6) "The History of Ciceronianism"; (7) "The Study of Greek."

The chapter on "The Theory and Practice of Education" shows that Dr. Sandys understood the American interest on the

practical side even of the Renaissance. He manages to get a great deal into the chapter. He occasionally in a sentence gives the heads of what would make another chapter. For example, speaking of "virtue," he says the word meant manliness in the Roman age and goodness in the Middle Ages, whilst in the Revival of Learning it meant merely the knowledge of Latin. His quotations are well chosen. We quickly perceive the atmosphere of the age to which we are introduced when the words of Aeneas Sylvius Piccolomini are quoted: "For neither the star of morning nor the evening star is fairer than the wisdom that is won by the study of letters." It is an age of the return to the classics. The educational authors referred to by Dr. Sandys are Vergerio, Lionardo Bruni d'Arezzo, Maffeo Vegio, Aeneas Sylvius, Vittorino, Guarino. All but one of these are familiar to those who have read the translations in Prof. Woodward's "Vittorino da Feltre." There are, too, in the same chapter references to Bishop Creighton's "Historical Essays and Reviews." Dr. Sandys, therefore, it must be added, has given us little that is new in the education of the Renaissance. So, too, the reader of Burckhardt's "Italian Renaissance" and Symonds's "Revival of Learning" has little to learn from the rest of this book. Still, it is an excellent *résumé*, attractively and concisely given, and a good introduction to the historical study of the Renaissance—just such a book as a boy well up in a classical school, and with an inclination towards reading, might be expected to read with zest. The slight sketches of men connected with Florence, Arezzo, Certaldo, Siena, Venice, Padua, Verona, Mantua, Ferrara, Bologna, Rimini, Urbino, Rome, not to mention other places, are such as to attract the English and American traveller in Italy, and the book is quite the right kind to recommend to those about to go to Italy, particularly if they have any acquaintance with the classics. In short, it is a pleasant, concise, introductory, and withal scholarly account of the Italian Renaissance. It will make classical scholars and those interested in the history of education more than ever expectant for Dr. Sandys's promised History of Scholarship from the dawn of the Revival of Learning to the present day.

The Poems of William Cowper. Edited by J. C. BAILEY.
(10s. 6d. net. Methuen.)

This may justly claim to be the most complete edition of Cowper's poems. It does not, indeed, include the translation of Homer, but it has three unpublished pieces of verse and a number of others that have hitherto appeared only in magazines or in Mr. Thomas Wright's supplementary volume. There are, further, given in an appendix thirty-five unpublished letters. The verses are trifles that add nothing to Cowper's poetic fame, but the letters—of which we cannot have too many—serve still further to reveal his clinging affection and his natural grace of style and manner.

But it is the illustrations that will undoubtedly prove the most attractive feature of the volume. Of Cowper himself we have the Romney, the Abbott, and the Laurence portraits. Next there are excellent portraits of Mrs. Unwin, Lady Austen, and Lady Hesketh, which help us to realize what manner of women they were who divided Cowper's heart. Would it had been possible to add one of Theodora, who was to Cowper what his cousin Amalia was to Heine, widely as the course of the two loves differed! Then we have "My Mother's Picture," by D. Heins—the greatest, in our judgment, of all Cowper's poems, and, we may add, the greatest poem ever prompted by a picture. Lastly, we have various landscapes illustrating the poet's homes, and two designs by W. Blake drawn as illustrations of Winter and Evening, and never before reproduced.

The editor has done his work of collation with care and judgment, and many inaccuracies have been removed from the text. The introduction is "genial" in the German sense of the word—appreciative, but in no way idolatrous. It points out very happily Cowper's place as a link between the eighteenth and the nineteenth centuries: his affinities to Gray and Crabbe on the one hand, and to Wordsworth and Tennyson on the other. Sometimes it seems to us that Mr. Bailey hardly does justice to his subject. Thus, we should be inclined to rank Cowper as a hymn-writer (not as a writer of sacred poetry) far above Keble. We find more to admire in "Tirocinium" than "its one passage of pure poetry: 'We love the play-place of

our early days.' The attack on the classical education of the eighteenth century, ending with the famous couplet—

Dismiss their cares when they dismiss their flock,
Machines themselves and governed by the clock—

is satire of a high order, and the sentiments would have commended themselves to "Kappa."

With Cowper's religion and his religious teachers the editor has dealt daintily, but he has not feared to point out the sinister influence of Newton, and has exploded the mythical Teedon of Mr. Wright's "Life," proving from Cowper's own words that, so far from regarding the Olney schoolmaster as his guide and counsellor, the poet in his sane moments shunned him as the most intolerable of bores.

It is a safe prophecy that this is destined to be the standard library edition of Cowper.

International French-English and English-French Dictionary.
Phonetic Script. (T. C. & E. C. Jack.)

The general editor of this, which is intended to be the first of a series of phonetic dictionaries, is Mr. R. M. Pierce. For the French pronunciation of the present volume M. Paul Passy is responsible, and for the English Dr. Hempl. The translation is, in the main, that of the International Phonetic Association.

Let us first award its due meed of praise to the get-up of the volume. Type and paper are all that heart could wish, and it opens and stays open so readily that it is a pleasure to turn out a word.

It is a defect in the French pronunciation that no notice is taken of *liaison*. The subject, we are all aware, is surrounded with difficulties, but at least the obvious pitfalls for an Englishman might have been noted—*le lis de la vallée* and *fleur de lis*; *tous les garçons* and *nous sommes ici tous*; *petit chat* and *chat échaudé*; *sang-froid*, and *suer sang et eau*.

Again, it seems to us pure waste of space to give in title-place fourteen parts of so-called irregular verbs, *obtenir*, *retenir*, &c., and, instead of the usual apostrophe, to repeat each time with the *h* aspirates "no precedent linking or elision."

Great care has been exercised in the vocabulary by way both of exclusion and inclusion, and we can fully endorse the editor's profession that the reader will generally find the word he is looking for. In view of the revision which we are led to expect, we will note a few omissions. The "Dictionary" will not enable us to order from our Paris tailor a morning coat, a shooting coat, or a suit of dittoes; or at the restaurant a savoury, or custard for our apple-tart, or a brandy (not *eau de vie*) with our coffee. If we are cycling, we shall not be able to explain that we have punctured or require a spanner. Photographers will not find "snapshot" or the proper word for "films." The schoolboy will not discover the difference between *version* and *traduction*, or what *la classe de philosophie* means. Other absentees are: half-pay officer, ticket-of-leave man, casual ward, relieving officer, Home Office, Civil Servant.

Select Documents illustrating Mediæval and Modern History.

By EMIL REICH. (21s. net. P. S. King.)

This is "a work of reference such as has not been attempted yet, either here or on the Continent." We may endorse the editor's remark, though he might well have left it for others to make. Dr. Reich professes himself a specialist in general history, if we may be allowed a seeming contradiction in terms, and we must wait for his forthcoming "General History," announced in the introduction, for the full explanation and justification of his choice of documents. Meanwhile he can say that he has compiled a mass of original documents which, with the brief introduction and the very full general index, will be a priceless boon to the advanced historical student. Part I. contains ten international treaties, from that of Westphalia to the Second Peace of Paris. Part II., entitled "Church History," starts with the Edict of Milan (313), and goes down to the Bull on Papal Infallibility (1870). Then follow "General Institutions of the Middle Ages," "The Byzantine Empire" (only two documents), "The Holy Roman Empire," and various other parts under the head of "European Countries and America." There is nothing we could wish omitted; but there are many *lacunæ*. For instance, the student of Imperial Federation will find little

or no help, and Stubbs is in no way superseded. The documents are given only in the original, except the German and Dutch, which are translated. Why all historical students should be supposed to know Greek, but not German, we cannot divine; nor does it seem quite logical to refrain from translating mediæval Latin because it "bristles with difficulties."

If Dr. Reich will take a friendly hint, we advise him to submit the proofs of his "General History" to a native. The English of his introduction is creditable for a foreigner, but peculiar.

The Electra of Euripides. Translated into English Rhyming Verse, with Explanatory Notes, by GILBERT MURRAY. (2s. net. G. Allen.)

The "Electra" of Euripides compared with the "Electra" of Sophocles is modern, romantic, nearer in sentiment to Ibsen than to Homer. We might almost call it a problem play. As such it has attracted Mr. Murray. By the help of rime, of stage directions, of endless delicate touches such as a restorer might give to an old picture, he has still further modernized it, and we look forward to seeing it put on the stage. The heroine, we agree with him, is a profoundly studied character; but to us she is not in the same degree sympathetic. She is not, like Orestes, the inspired instrument of divine vengeance. Her motives throughout the play are mainly personal and selfish. She has been wronged of her dower, condemned to poverty, and cut off from the chance of suitable marriage. It comes as a shock to us when, red-handed still with a mother's blood, she is led off to the altar by Pylades. Even Mr. Murray finds the "lived happy ever afterwards" a little disturbing, and pleads that Euripides had no choice but to follow the accepted legend. Can this have become so firmly rooted in the interval between Sophocles and Euripides?

As a free translation—sometimes rather a paraphrase—Mr. Murray's play is masterly, particularly happy in the chorus. For metre he has chosen the free-linked couplets of Morris, with loose rimes that are often only assonances. It has nothing in common with the Pope metre, and the *stichomythia*, where the polished epigram would have seemed appropriate, is deliberately expanded into speeches varying from one and a half to three and a half lines. There are several omissions (a considerable one on page 26), for which we cannot account. We wish that space allowed us to quote. Of the added touches the first line is a good instance:

Old gleam of the face of the world, I give thee hail,
River of Argos land!

The original has simply: "Old-world Argos, streams of Inachus."

The Development of the European Nations, 1870-1900.

By J. HOLLAND ROSE. (18s. net. Constable.)

Dr. Rose has made for himself a name as an historian of Napoleonic times, and he now essays the more perilous task of carrying the story down to the present day. We know him as a singularly pains-taking and fair-minded chronicler, and, more than that, as one who can discern the signs of the times. The two dominant forces of the period—nationality and democracy—sometimes conspiring and sometimes opposed, are both clearly grasped, and Bismarck, its Napoleon, is painted with a sympathetic pencil, though there is no ignoring of the wars. The pages which will attract most attention at the present moment are those which trace the rise and establishment of protection in Germany. Next to these in immediate interest comes the chapter on Nihilism and Absolutism in Russia. It is a book that no publicist, and, we would add, no teacher of history who holds the views of "Kappa," can afford to neglect.

- (1) *The Gospel of St. Mark in West Saxon.* Edited, from the MSS., by J. W. BRIGHT, Ph.D. (2s. 6d. net.) (2) *The Gospel of St. John in West Saxon.* Edited, from the MSS., with Introduction and Notes, by J. W. BRIGHT, Ph.D. With a Glossary by LANCELOT MINOR HARRIS, Ph.D. (3s. 6d. net.) (Heath & Co.)

These two dainty little volumes form part of "The Belles Lettres Series," Section I., "English Literature from its beginning to the year 1100," under the general editorship of Dr. E. W. Brown, Professor of the English Language and Literature in the University of Cincinnati.

They are admirable specimens of exact textual scholarship. The available MSS. have been collated with the most minute care, and all the variant readings carefully noted. The result is that the student now has placed at his disposal an ideal edition of these texts, supplemented in the case of the latter of the two volumes by valuable critical and philological notes and by a glossary and introduction. As Mr. Bright remarks in his preface to the edition of St. John, "The historical importance of the Gospels in West Saxon is raised to unquestioned significance by characteristics that make the version a subject of fruitful study to the professional student of English and to the professional student of Scripture." The critical importance of the version is bound up with its connexion with a type of Latin text which often preserves old Latin readings. The introduction to the edition of St. John deals with the following points:—(1) Vernacular Scripture in Anglo-Saxon Times; (2) Bede's Translation of the Gospel of St. John; (3) The MSS. of the West-Saxon Gospels; (4) The relation of the MSS. to the Original; (5) The Authorship of the Version; (6) The Latin Source of the Version. There is also, in the same volume, an excellent bibliography. We cordially commend these volumes to the student of English literature and to those who are interested in the critical study of the Latin versions of the Bible.

Valerius Catullus. Selected Poems rendered into English rhymed Verse. By L. R. LEVETT. (1s. 6d. Cambridge: Heffer.)

The title given to one of the poems, "A Pretty Picture," suggests the apt word to sum up our impression of the whole work—pretty paraphrases.

"And Acme, as he bent his head
To kiss, looked up and answer made:
'Thou only my dear lord shalt be,
Septimius; may I worship thee
With endless love, and may my life
Prove me a loving, faithful wife!'"

So runs the second stanza of the "Pretty Picture." There is more here of the Church of England marriage service than of Catullus. "He," we may charitably suppose, is a misprint for "she." Catullus must needs be expurgated, but he need not be emasculated or tonsured. Why, again, should the final stanza of the Sappho translation be omitted and a *coda* added to the "Epithalamium"? Why, in the latter poem, when Catullus compares the bedded bride to a milk-white lily or yellow poppy, is this perverted into "like to the poppies' crimson glow"?

Ballads Ancient and Modern. Edited by OLIPHANT SMEATON. (Dent.)

Messrs. Dent have the art of getting up their works prettily, and this volume is attractive both outside and inside. As to the matter, there is no exception to be taken to the ancient ballads, but we cannot say that the editor has been equally happy in his selection of modern ballads. No definition of the ballad, however elastic, could be made to include Mrs. E. B. Browning's pretty "Romance of the Swan's Nest," still less Eliza Cook's moral tale of "Bruce and the Spider," with its bad grammar, to say nothing of a bad misprint.

Poems and Extracts chosen by William Wordsworth for an Album presented to Lady Mary Lowther, Anas, 1889. Printed from the original Album, with Facsimiles. (2s. 6d. net. Frowde.)

All students of Wordsworth (except Mr. Gosse) were aware from the presentation sonnet that the poet had made for his young friend selections from the poems of Lady Winchelsea with extracts from similar writers, but we, at any rate, had no conception of the extent of the anthology. We are grateful to Mr. Roger Rees, the happy possessor of the album, for permitting that reproduction, and to Prof. Littledale for his painstaking editing. The album includes twenty-three poets besides the Countess, ranging from Shakespeare down to obscurities such as Thomas James and James Weston. The book is invaluable as giving an insight into Wordsworth's literary predilections, and it is, in some degree, "a refutation of the stupid remark that Wordsworth cared for no one's poetry but his own." At the same time, it shows, in our opinion, that there was some foundation for the criticism. It shows, or goes to show, that Wordsworth cared mainly for poetry that was akin to his own. He could find no poetry in Dryden, and Pope is represented by one minute translation from the Latin. For the choicest passages in his anthology he was indebted to Lamb. The point will not bear pressing; for Milton, whom Wordsworth greatly admired and to whom he owed most, is likewise absent; but we have said enough to justify our dissent from the editor's estimate of Wordsworth as a critic.

A Manual of Carpentry and Joinery. By J. W. RILEY. With 923 Illustrations. (6s. net. Macmillan.)

This book is specially adapted for students preparing for the examination of the City and Guilds Institute; but it is the very reverse of a cram book. Everywhere there is an appeal to general principles, to geometry and mechanics, and to common sense. So plain is everything made and so clear are the illustrations that the amateur carpenter will find no difficulty in following directions. He will likewise find useful hints as to the choice of tools.

The Garden of Childhood. By ALICE M. CHESTERTON. Illustrated by GERTRUDE M. BRADLEY. (2s. 6d. net. Sonnenschein.)

This is a revival of the moral tale on which our grandparents in the nursery were mainly fed: "Goody Two-Shoes," "Rosamund and the Purple Vase," *et hoc genus omne*. The stories are written to illustrate the "Graduated Syllabus of Moral Instruction for Elementary Schools." We like the plain stories such as "Doris and the Jam-pot," incidents of child life related with some dramatic power, but the stage machinery works stiffly, and at times creaks. Nothing is gained by putting into the mouth of a caterpillar the advice not to cry when you tumble down. Miss Bradley's boys and girls are capital, but she, too, fails to draw a fairy.

"Blackie's Little French Classics."—(1) *About's Les Jumeaux de l'Hôtel Corneille*. Edited by H. HAVELOCK. (2) *Merinde's Le Siège de la Rochelle*. Edited by J. E. MITCHELL. (3d. each.)

(1) The novelette has been discreetly cut down to the required length, and makes an excellent reader. The notes are somewhat scanty and the derivations are *de trop*. Thus, *candidat à l'école normale* in the first line screams for a note, and in the prefatory sketch of About, which is well done, it should surely have been mentioned that he, too, was a *normalien*. *Garçons de caisse* are not "shop porters"; the context might have suggested that porters do not usually sport blue coats with pearl buttons. "*Jarrets*, 'hams'; O.F. *garret*, diminutive of the obsolete *garre*; Prov. *garre*, Bret. *gdr.*" How will this help the pupil who has to translate *Il avait des jarrets solides*? A helpful note would have been a reference to "He has a leg" of "The Egoist." On page 12 there is a confusing misprint.

(2) This chapter from the "Chronicle of Charles IX." is a graphic narrative of the famous siege of 1572, and the notes give just the right amount of historical and biographical explanation without the vagaries of the preceding volume.

Our Island Story: a Child's History of England. By H. E. MARSHALL. With thirty coloured Illustrations by A. S. FORREST. (7s. 6d. net. T. C. & E. C. Jack.)

What a world away from "Little Arthur's History of England" to this splendid tome with its gorgeous illustrations, which will evoke from the child of to-day King Alfred's exclamation, as here reported, "Oh, isn't it lovely?" The author dates from Melbourne, and the story is written for the benefit of Spen and Veda, who have yet to learn what home means to their parents. Salient points in the history are well seized, the biographical element predominates, and myth is not excluded. All this is as it should be, and the style is plain and attractive. There might, we think, with profit be more of the life of the English people—the characters of Chaucer's "Prologue," early colonization, the growth of commerce and factories. All this can be made intelligible or interesting to a child. Such a thorny question as the Boer War had better have been omitted entirely; Mr. Arnold Forster would say all reference to Bright and Cobden, but we are glad that Mr. Marshall has not followed this precedent. Some of the statements need revision, as that ever since Alfred's day Britain has ruled the waves, that Hadrian's wall can still be seen to this day, that Edward VI. built many schools that are called after his name; but these are trifles.

The Elementary Part of a Treatise on the Dynamics of a System of Rigid Bodies. Being Part I. of a Treatise on the whole subject. With numerous Examples. By EDWARD JOHN ROUTH, Sc.D., LL.D., F.R.S. Seventh edition, revised and enlarged. (14s. Macmillan.)

The principal changes in the present edition of this well known textbook are:—(i.) (pages 140–142) the discussion of the work done by an impulse; (ii.) the theory (page 348) of Appell's general equations of motion, which have the advantage over those of Lagrange of not being restricted to holonomic systems. There are also two additional notes at the end, one on the moment of inertia of the figure corresponding to a tetrahedron in space of n dimensions, the other on moments with higher powers. The book is now so voluminous that many students would like to have an abridgment in which only the important portions would find a place, and these treated by modern methods.

"Cambridge Physical Series."—*The Theory of Experimental Electricity.* By W. C. D. WHETHAM. (8s. net. Cambridge University Press.)

The author has managed to strike a happy mean between the kind of book which would interest a mathematician alone and that which would be appreciated by the pure experimentalist, with the excellent result that all will find here a most stimulating account of the present position of scientific thought as regards magnetism and electricity. Although each section is attacked *ab initio*, yet the treatment would not be suitable for junior students, and appeals rather to those who have already mastered the elements of the subject. The mathematical portions have been kept well within the range of the student who has a working acquaintance with the elements of the calculus, and this without sacrificing clearness and neatness of method. At the same time, the text is not overloaded with minute details of experimental work. The great advances made within the last few years in the study

of electrolysis, electric waves, the passage of electricity through gases, and radio-activity have all received much fuller treatment than one is accustomed to find in a book of this size, and we have nothing but praise for the excellent manner in which the most recent results have been set forth. It is quite refreshing to find the author acknowledging from time to time the tentative nature of the hypotheses advanced, and indicating the lines along which investigation is urgently needed. We strongly recommend this book to all earnest students who wish to obtain a general review of the whole subject from the modern standpoint.

John Conybeare, Schoolmaster, 1580-94. Edited by F. C. CONYBEARE. (10s. 6d. net. Frowde.)

This Elizabethan MS. is edited mainly for the Conybeare clan. As the editor remarks, it is some satisfaction in an age when the House of Lords is recruited mainly among brewers and pawnbrokers to know that for three centuries and a half one's family has consisted of scholars and gentlemen. To the public the most interesting part will be the autobiography of the editor's grandfather, W. D. Conybeare, Dean of Llandaff, and of geological fame. It furnishes a valuable account of Oxford studies at the end of the eighteenth century, and gives a vivid portraiture of the then Dean of Christ Church, Cyril Jackson. There are likewise odds and ends of interest. In one of the prescriptions of "Mr. Edward professor of Phisicke in Oxforde" we read: "You may take your powder in any of these signes, Cancer, Scorpio, Aquarius, Piscis: So that neither the chaunge of the moone, nor the full bee uppon that daye." The schoolmaster is strangely at sea with the renderings of some of his adages—copied mainly from Erasmus—and the editor seems not to know the common proverb: "fluctus in simpulo."

Boys and their Management in School. By H. BOMPAS SMITH. (2s. 6d. net. Longmans.)

The exact words of the title should be noted—"in school" not "at school." Mr. Bompas Smith deals only with the day school, and with day boys only when in school: not at home or in the playground. The scope of the book is thus limited; but it is marked throughout by sound common sense, and we rarely find ourselves disagreeing—as on the subject of caning. The advice is practical and tersely put, with no attempt at fine writing or tall talk of any description. Some concrete illustrations would have given it more life and colour. Mr. Bompas Smith writes with his eye on the object—of that there is no doubt—but readers like to get a glance now and then of the object itself—the Eric or the Stalky & Co., as the case may be.

The Translation of French Unseens. By EUGENE PERROT. (2s. net. Ralph, Holland.)

A very fair selection of simple extracts in prose and verse with a vocabulary. The introduction, giving hints as to how to set about an unseen, with some specimens worked out, does not seem to us of much practical value. Assuredly none of the fair copies offered would have obtained a first class in our Prize Competitions. Take the first: "Maître Gabissol était l'aigle du barreau de Mende; aigle un peu déplumé par cinquante hivers."—"Maître Gabissol was the leader of the bar at Mende; somewhat bowed with the weight of his fifty years." This is paraphrase, and a very loose paraphrase—not a translation. "The eagle," the notes tell us, "is a bird that soars high, and therefore 'the chief'; in legal language, 'the leader.'" By parity of reasoning we should translate "Scipiares duo fulminia belli," "those eminent field-marshal, the two Scipios." The next two pieces are more literally rendered, but there are careless omissions, and the finer nuances are missed.

The Story of an Old-fashioned Doll. By J. CONOLLY, illustrated by N. AULT. (3s. 6d. D. Nutt.)

The autobiography of a doll may have been suggested by Andersen's "Little Tin Soldier"; but the execution is quite original. We have a delightful picture of an English nursery in the early Victorian age, evidently drawn from the life, but brightened by fancy and gleams of Irish humour. Campbell and Janie and Ben are all real children; Aunt Addie is the dearest of old maids; and the nurse Matilda is a genuine ogress. Each character, however slightly sketched, has its proper individuality. If we have a fault to find, it is that Mamma's story of the ape who carried off the baby—a thrilling one for the nursery—is somewhat out of proportion.

What shall I tell the Children? By the Rev. G. V. REICHEL. (3s. 6d. Allenson.)

Thirty-seven object sermons to children with anecdotal illustrations. The anecdotes are not hackneyed, and the author knows how to tell a story. It is left, however, to the teacher to adapt the language to a childish audience. If the teacher is wise, he will not heed the text prefixed, which has no more relevance than is usual in sermons. Nor will he trouble his class with the spiritual significance of the seven primary colours, nor inform them that "chameleon" means "camel lion."

The Management of Babies. By Mrs. LEONARD HILL. (2s. and 1s. Arnold.)

Infant mortality is engrossing much public attention nowadays, and on all sides attempts are being made to stem this veritable "murder of

the innocents" that is going on all around us. Ignorance is the cause of this evil in the majority of cases—an ignorance that is not surprising when one remembers that the average girl belonging to the lower classes (to the upper classes also, but in these cases the results are not so fatal) marries without the least knowledge of babies and their management. Again and again in the coroners' courts an appalling condition of ignorance is revealed. Babies are fed on tinned goods of the most deleterious nature; tea is regarded as a suitable beverage; bed-time is a movable arrangement, the unfortunate infant being played with up to all hours of the night, when it retires to a room from which all fresh air has been excluded. Could all prospective mothers be given a copy of Mrs. Leonard Hill's little book, such a state of affairs need not last much longer. Mrs. Hill writes in a simple, easy style intelligible to all on the feeding of infants, the value of fresh air, the clothing and cleansing of children, &c.; she gives details which are so necessary to a book of this nature and shows a practical knowledge of children which is the result of a long experience of them. The tables of diet for the first nine months of life, and for the one-year-old child, should be of great value to young mothers, whose inexperience of infants often leads to overfeeding or unsuitable feeding. The writer shows herself thoroughly modern in her advocacy of fresh air, and believes that infants should be out in all weathers if properly guarded. A few sensible words are devoted to the objections to patent foods and the value of the natural mode of baby feeding.

Counsels and Ideals, from the Writings of William Osler. (4s. net. Frowde.)

As a rule the New World borrows its learning from the Old and pays its debt in dollars—heiresses in return for professors. Dr. Osler is an exception to the rule, and Oxford has begun to redress the balance by importing her most distinguished professor from the Johns Hopkins University. A pupil, who modestly keeps his name from the title-page, has collected and classified extracts from Dr. Osler's lectures and addresses. Though appealing mainly to the medical student, the volume may be read with profit and interest by all. Dr. Osler is a man of wide culture, equally conversant with Plato and with Darwin, with Goethe and Walt Whitman, and he bears his learning lightly. His own "modern instances" are most apt. What can be happier than this anecdote?—In a clinical class the question was once raised, how long it took for the nail to grow from root to edge. "A majority of the class had no further interest; a few looked it up in books; two men marked their nails with nitrate of silver, and a few months later had positive knowledge on the subject."

Qu'est-ce que cela veut dire? By H. P. SLIGO DE POTHONIER. (3s. 6d. Sands.)

It is refreshing nowadays to find a book of phrases not written for schools, and such is certainly the case with the volume before us. It is, as Mr. de Pothonier tells us, for the use of those "who have left school, but still retain their taste for study." But it is a study that must be pursued either in France itself or at least in the company of a good dictionary, for the words, though included in good sentences, do not in most cases explain themselves. It seems doubtful, therefore, whether the gain of having so much concentrated information compensates for the loss of interest and facility of comprehension found in the reading of a piece of good modern prose. Still, the book is an excellent one of its kind: the sentences are idiomatic and well chosen, and the whole easy of reference. Any one who has mastered its contents may boast a fairly thorough knowledge of current French idiom.

Modern Electricity. By HENRY and HORA. (5s. net. Holder & Stoughton.)

The authors state that this book has been prepared with a view of meeting every emergency that might confront the electrical engineer and inventor, and of enabling every apprentice and artisan to gain a complete knowledge of the fundamental principles and applications of electricity. One might therefore anticipate that the contents would be practical and technical rather than purely theoretical, and this is indeed the case; but we cannot agree that the very comprehensive claim made above has been justified. Much of the subject has been set forth simply and lucidly, and there are many useful numerical exercises of a practical nature worked out in full. But numerous blemishes exist in the more purely theoretical part of the work, and we think that the beginner in electrical engineering who relies upon this book alone will certainly fail to gain a complete knowledge of fundamental principles. For example, the explanation of Wheatstone's bridge will, we venture to think, be unintelligible to a beginner, and the confused and inaccurate description of thermo-electric phenomena would be much better omitted altogether. The paragraph on galvanometers is entirely inadequate, and the law of the sine galvanometer is wrongly stated. On page 53 the valencies of ferrous and ferric iron have been interchanged. On page 68 a gallon of water is stated to weigh 8½ lbs., and in the table on page 354 there is quite a crop of mistakes: carbon is placed among the metals, the formula for potassium bichromate is wrong, and the colours of cadmium sulphate and of cupric oxide are given respectively as yellow and red.

"Cuentos Castellanos." (Heath & Co.)

The editors have rightly endeavoured to give their readers as great a variety of style as possible: hence each of the eight short stories is by a different author.

(1) JUAN VALERA is represented by his well known, charmingly told *El Pájaro verde*—a model fairy tale, full of mystery, magic, and love.

(2) The *idilio nupcial* of Susette and Recaredo (in which the petted blackbird is determined to take his part) is sketched in simple, dainty language by RUBÉN DARÍO. Susette is so deeply in love with her husband and so attractively natural that, in spite of her almost childish jealousy, the reader will sympathize with her action and will readily understand her vast satisfaction and relief when she exclaims to Recaredo: "¡Ha muerto ya para tí la emperatriz de la China!"

(3) There is a vein of sadness running all through "¡Adiós, Cordera!" by LEOPOLDO ALAS. Antón's plucky, but unavailing, struggle for independence, the love of Pinín and Rosa for each other and their touching affection towards La Cordera, the heart-breaking farewell scene when Pinín is carried off to be "carne de cañon para las locuras del mundo"—all are told with charming simplicity and true pathos.

(4) EUSEBIO BLASCO tells the story of the marvellous Dr. Busting and his accomplished, but romantic, daughter. The tale is saved from being commonplace by occasional sallies of wit and the unexpected dénouement.

(5) Excepting for a few neatly expressed aphorisms, the *Rip-Rip* of MANUEL G. NÁJERA is rather feeble, and is scarcely worth a place in this collection.

(6) In his *Modelo de Esposos* LUÍS TABOADA gives us a picture of a long-suffering husband who, at any cost, tries to satisfy the caprices of a selfish, extravagant wife. Although this sketch is written in a light, jocular vein, it contains a serious lesson for wives.

(7) EMILIA PARDO BAZÁN (Sra. QUIROGA) has been styled "la escritora más apreciable que España ha producido durante el siglo XIX." Her contribution to this collection (*El Talismán*) is exciting and remarkably well written.

(8) *Una Corrida de Toros* is a model of descriptive writing. The little groups excitedly discussing the fight in anticipation; the noisy, crowded masses of humanity pouring into *la plaza* from all directions; *los palcos* filled with beautiful ladies "llevando sus mantillas blancas"; the fantastic, but picturesque, dresses of the *alguaciles*, *banderilleros*, *picadores*, &c.; the heroic daring of Ricardo, Elena's lover; the details of the combat, and the absolutely maddening effect upon the sight-seers produced by a clever death-stroke—all these are vividly described by that great master of diction D. EMILIO CASTELAR.

The book contains a brief notice of the authors; short, but explicit, notes; and a full vocabulary. Students of the Spanish language will thank the editors for their excellent selection.

"Blackie's Latin Texts."—*Horace: Odes*. In Four Books. Edited by W. H. D. ROUSE. (Each 6d.)

These neat, well printed, and cheap little volumes carry their own commendation. The only criticism we offer on the present set is that pupils capable of profiting by the Introduction on Manuscripts and Principles of Criticism do not need quantities marked in the text. Dr. Rouse damns his author with faint praise. Horace does sometimes show an appreciation of natural beauty, but "he was sometimes translating the work of others; and, moreover, a sense of natural beauty is only one of the ornaments of poetry, not its essence." Would Dr. Rouse maintain that we could strip this sense of beauty from Wordsworth, Shelley, Keats, Tennyson, and leave the essence of their poetry unimpaired?

Voltaire: *Le Blanc et le Noir*. Edited by H. H. HORTON. (4d. Blackie.)

This innocent little *conte* makes an excellent reader for beginners. It is a mistake to tack on to it a moral which it will not bear. The only inner meaning is that suggested by Voltaire—the relativity of time. To our taste there is too much grammar in the notes. What is the good of giving a list of conjunctions requiring a subjunctive, or attempting in a note to polish off the distinctions of *c'est* and *il est*? To compare "au sortir de Cabul" with "un je ne sais quoi" as "a sort of compound noun" is peculiar.

"Oxford Modern French Series."—*Histoire de la Révolution Française*. By FRANÇOIS A. M. MIGNET. Edited by A. DUPUIS. (3s. Clarendon Press.)

The title is somewhat misleading, as only a portion of Mignet is here given—from the opening of the States General to the death of Louis XVI. The notes are full and satisfactory, being supplemented by a dictionary of biographical and geographical names. Mignet's style is so simple and straightforward that grammatical and linguistic notes are rarely needed, and the editor has been well advised to forgo them altogether. The only defect is a lack of colour and picturesqueness. A few of Carlyle's mordant epigrams, of Taine's vivid metaphors, would have served as labels for the more prominent characters. As it is, the average pupil will be lost among the crowd of unknown personages with nothing but, as it were, lapidary inscriptions affixed to their names.

A School Manual of English Grammar, with Exercises and Examination Questions. By THEOPHILUS D. HALL. New Edition, Revised and Enlarged. (3s. 6d. Murray.)

We congratulate Dr. Hall, who must almost be our *doyen* among authors of school-books, on the issue of a greatly enlarged and emended edition of his "Grammar," which has stood the test of thirty years. The province of grammar is ill defined, and it is hard to determine how far a school grammar should deal with phonetics, linguistics, and comparative philology. We incline, ourselves, to think that the last of these subjects lies outside the range of the schoolroom—that, for instance, it does not concern the young student of English to speculate about the cradle of the Indo-European family. So, too, we doubt whether it is possible to treat satisfactorily in five pages *Lautverschiebung* or to expound Grimm's Law with no mention of Verner. Again, the origin of our alphabet is still *sub judice*, and the latest researches do not point to Egypt; nor can the introduction of phonetic script be disposed of in a summary phrase. These, however, are only the *prolegomena*, and those teachers who hold our view can begin at chapter vi. The body of the "Grammar" has been greatly improved by simplification and the introduction of new examples. Here Dr. Hall has wisely abstained from Anglo-Saxon, except when the older form directly throws light on modern usage. The least satisfactory section of the "Grammar" is the prosody. Here Dr. Hall has followed the conventional scansion by feet, and we have lines marked thus:

"Tó the | ócean | nów I | fý."

"Now that the hearth is crowned with smiling fire."

Notwithstanding these defects, the "Grammar" fulfils its aim of being "a really serviceable school-book."

"The Red-Letter Shakespeare." Edited by E. K. CHAMBERS.—*King Richard III.* and *Henry the Fifth*. (6¼ × 4¾ in., pp. 173 and 141; 1s. 6d. net in leather, and 1s. net in cloth. Blackie.)

Two volumes of a new Shakespeare—scholarly, dainty, and popular. It is called "the Red-Letter" Shakespeare because the names of the characters, which are given in full, are printed in red, as are the headings of the pages. Mr. Chambers supplies a short and excellent appreciation of each play, giving the latest views and criticisms; and the hard words are explained at the foot of each page. The edition is described as "for the general reader and the book-lover"—and certainly neither could require, nor could find, a prettier and more handy set of little volumes than these. Our readers already know the Shakespearean scholarship of Mr. Chambers, and his introductions are admirable.

The Dream of the Rood. An Old English Poem attributed to CYNEWULF. Edited by ALBERT S. COOK. (6½ × 4½ in., pp. lx, 66; 3s. 6d. Clarendon Press.)

This is a good and scholarly little book which Mr. Cook, Professor of the English Language and Literature in Yale University, has produced and has prevailed upon the Clarendon Press to publish. There is a very small amount of text—less than ten pages—and the rest of the volume is taken up by prolegomena, notes, and glossary. But the poem is so little known, except to scholars and by name, that we gladly overlook the disproportion. The introduction tells us of the manuscript, editions, translations, and argues the *pros* and *cons*. of authorship with various opinions of the same, ending up with the view that, on the whole, the weight of the argument inclines to Cynewulf and not to Caedmon. Then the literary characteristics of the poem are pointed out, and a bibliography given. The notes, which are well done, are devoted almost exclusively to linguistic matters. An appendix and a carefully compiled glossary conclude the volume; in the former short specimens of translations of all versions which include the first twelve lines of the poem being given. We may say of this edition what Prof. Cook says of the poem: "Admirable in itself, it gains still further lustre from being indissolubly associated with that monument which Kemble has called the most beautiful as well as the most interesting relic of Teutonic antiquity."

Nature Study Lessons for Primary Grades. By MRS. LIDA B. McMURRY. With an Introduction by CHARLES A. McMURRY. (7¼ × 4¾ in., pp. xi, 191; 2s. net. Macmillan.)

Dr. McMurry continues his books on "Special Method." This book is practically an introductory volume to the "Special Method in Elementary Science," in which many of the "Lessons" originally appeared. They are suggestions as to "how" and "what" to deal with in studies of plant and animal life as it presents itself in one locality. Teachers will, of course, differ as to what things they will choose to notice and as to the method they employ to stimulate and direct childish interest in them; but there are many matters which they can avoid and many to which they can attend in dealing with Nature study for children. For instance, they will do well to avoid the precocious introduction of children to ideas of system and classification in work of this kind—there will be plenty of time for both later on—and should aim rather at enriching their positive knowledge, their keenness of observation, and their powers of expressing these well and clearly. So Mrs. McMurry has given many sketches of lessons in this book, not for teachers slavishly to imitate and reproduce them, but that

young teachers may see how experienced persons have handled these matters, and so gain an insight into the spirit and method of the plan they adopt. Nineteen sketches are given of animal life, and ten of plant life; and very interesting they are. Some extend over a term and some over a much shorter period. Those of animal life, with which children are more competent to deal than with plant life, are much the fullest, and, as it seems to us, better dealt with. But all are good.

"The King's Classics."—*The Vision of Piers the Plowman*. By WILLIAM LANGLAND. Done into Modern English by the Rev. Prof. SKEAT. (6 × 4½ in., pp. xxix, 151; 1s. 6d. net. De La More Press.)

A dainty little translation by Prof. Skeat, who has put into English verse the B text of the poem. After an introduction dealing with the characteristics of the poem and its versification—as far as may be reproduced here in Modern English—we are given a chronological table, with references from the poem. Then follow the Prologue and Passus i. to vii. of the poem, and notes and an index conclude the volume. Of the scholarly care of this version of the text there is no need to speak; and the notes are brief and to the point. Prof. Skeat has given us an excellent classic, excellently brought out.

Wild Flowers Month by Month in their Natural Haunts.

By EDWARD STEP. Vol. II. (6s. net. F. Warne.)

This second volume, which carries us from June to September inclusive, fully sustains the reputation that the author has gained by the first. There are no less than 176 illustrations prepared from original photographs taken for the work. Only the photographer can tell the skill and patience that have gone to the making of these studies of still life. We have never seen anything more perfect than the plate of oyster mushrooms. Though the pictures are the main attraction, yet the letterpress is not to be despised. Mr. Step has the art of chatting simply and naturally about the flowers of the field; and, though he eschews all learning save the Latin names, yet the young botanist will gather from him much useful information as to the families, the habitat, and the physiology of plants.

"The Guide Series."—*Rural Calendar*. Second Edition, fully Revised and Enlarged. By A. J. EWART. (1s. net. Davis & Moughton.)

For the young botanist or the countryman who knows nothing of botany this is a capital guide. It will enable him to identify all the common wild flowers. The notes on birds, butterflies are slighter, and "farming operations" seems to us an excrescence. There are blank pages for memoranda.

French Genders Conquered. (Clifton: J. Baker.)

This card, which when folded in two measures 6 × 5 ins., has the great merit of showing in a single sheet of moderate dimensions rules and exceptions. On the first page nouns are classified by final letters, all feminines being treated as exceptions. The second page is devoted to masculines in *e* mute. A difference of type for masculine and feminine would be an improvement. We would by no means taboo doggerel altogether, but its use should be restricted to cases where reason fails. For instance, why need *bru* and *virago* be noted among exceptions? We note two or three misprints. There is no indication of price or of author, though in the accompanying note he writes in the first person.

The Progress of Hellenism in Alexander's Empire. By J. P. MAHAFFY. (5s. Fisher Unwin.)

Emeritus Professor Mahaffy's "first American book" consists of six lectures delivered in the University of Chicago. "Hellenism" is for his present purpose the substantive corresponding to the adjective "Hellenistic," and expresses Greek culture in the post-classical period. Of this Hellenism, with its widened outlook and fertilized by external influences, he regards Xenophon as the precursor, making him the subject of his first lecture. Then he sketches in three lectures the fortunes of Hellenism in Macedonia and Greece, in Egypt, and in Syria, gives a fourth to general reflections, and the fifth to the effects of Hellenism on Christianity. All five are interesting and valuable, although the last is not convincing in every detail. The matter has not been compiled from compilations, but is an outline of the epoch by an author who has laboured at it for more than twenty years. If there is an occasional looseness in the phrasing, it was perhaps designed by the lecturer in order to put his audience at ease. A bull reminds us that the American book was, after all, begotten in Ireland and not at Chicago: "None of the early Successors thought he had succeeded to the empire, if he had not recovered the ancient seat of the monarchy and laid his bones in the royal sepulchre at Aegae." What the Successor thought in his tomb is, alas! not history. But historical inquiries will be stimulated by these pages.

Medieval British History: a Student's Guide. By J. G. LINDSEY. (Heffer & Co.)

This is an invaluable guide to the student of history, especially if he is working by himself. It tells him not only what books he should read and what books he should consult, but what points he should attend to; and the model answers to questions set a standard by which he can gauge his own attainments and progress.

The Guide for the Perplexed. By MOSES MAIMONIDES. Translated by M. FRIEDLÄNDER. (Price 7s. 6d. net. Routledge.)

Dr. Friedländer, in translating the most notable work of Maimonides, of Cordova, called the "last of the Geonim as regards time and the first as regards worth," from the Arabic text, performed a laborious task. His toil met with the reward of many readers. Now, in a new edition, the three volumes of the first issue are reduced to one, the notes having been cut out and Hebrew words discarded when not transliterated. The book, which dates from near the close of the twelfth century, is important in the history of opinion among the Jews. It still possesses interest and value both for the student of theology and for those who believe in a continuous development of the human mind.

In Confidence to Boys. By H. BISSEKER. (Price 1s. net. Adlard.)

Sex in relation to schoolboys is a topic that was, now some years ago, freely and fully discussed in our columns, and we have no intention of reopening a question that is best heard *in camera*. We must be content simply to inform head masters and others whom it concerns that the author, sometime a house master, deals with the evil in perfectly plain language, without exaggeration or morbid sentiment. To those who believe in such treatment we strongly recommend the book, which has been revised by the Council of the Medical Officers of Schools Association.

"Routledge's Miniature Reference Library."—*In Praise of Books: an Encheiridion for the Book Lover*. By H. SWAN. (Price 1s.)

A book on books is like to be a big book, and therefore a big evil, according to an adage we do not find included. Mr. Swan has skilfully gathered, in a hundred and twenty pages, the most famous sentences of English authors from Chaucer to living statesmen, Mr. A. J. Balfour and Mr. John Morley. We miss the famous quatrain from Omar Khayyám.

Pippa's Holiday, and other Stories for Children. By WOUTRINA A. BONE. (J. Curwen.)

These stories, some of which have appeared in *Child Life*, are echoes from the kindergarten. The author has the gift of story-telling. "Hiawatha," in particular, is excellently recast so as to bring it within a child's comprehension.

Birds in their Season. By J. A. OWEN. (Price 2s. 6d. net. Routledge.)

All the common British birds are here described—their haunts, their notes, their nesting habits—under the four seasons of the year, and of these most are figured in coloured plates. It makes an excellent present for a young naturalist, and the price is remarkably cheap.

Battles of the Nineteenth Century. To be completed in twenty-four fortnightly parts. (Price of each Part 6d. net. Cassell.)

The modern war correspondent had his prototype in the Raleighs and Frobishers of the Elizabethan age, and combines the dare-devil of adventure with the pen of a ready writer. It was a happy idea of Messrs. Cassell to engage the services or secure the copyright of men like Archibald Forbes, Arthur Griffiths, and G. A. Henry to compile a history of the wars of the nineteenth century. When we add that among the illustrators are Caton Woodville, J. Finnemore, and Paul Hardy we have said all that is needed to commend this most fascinating serial.

Swedish Recreative Exercises for School and Playground. (8¼ × 5½ in., pp. 94; 2s. net. McDougall.)

These are the games of the Nais course which are taught under the direction of Herr Salomon. The exercises are suitable for boys and girls alike, and can be used in any sized class. Doubtless they are well fitted to be enjoyed by the young folk for whom they are made, and will be very readily learned.

Butterflies and Bees: the Insect Folk. By MARGARET W. MORLEY. (7¼ × 5½ in., pp. vii, 267; 3s. Ginn.)

The insects dealt with in the present volume are butterflies, moths, flies, fleas, beetles, social bees, solitary bees, wasps, &c. The volume is well illustrated with sketches by the author, and is very interestingly put together. Of course, children will require to see the strange creatures for themselves and to observe them, and observe them again. But meanwhile they will get no harm from reading about them in this pleasant, chatty book; only measures must be taken to prevent their stopping at reading. The illustrations will serve as guides to indicate what to observe.

"The English Counties."—*Upper Thames Counties*. (7 × 4¾ in., pp. 128; 8d. Blackie.)

A well printed and well illustrated supplementary reader, dealing with matters concerning the counties of Oxford, Berks, and Bucks.

"Our Empire Series."—*Canada, England's Largest Colony; with a Chapter on Newfoundland and Labrador*. By A. L. HAYDON. (6½ × 5 in., pp. xi, 206; 2s. Cassell.)

A well illustrated little book, well printed and tastefully bound. It contains a good deal of information, well put together. It is unambitious but interesting, and contains something about almost every industry in Canada. It is briefly introduced by Lord Strathcona.

Hermann Sudermann. By HENRI SCHOEN.

(3 fr. 50. Paris: H. Didier.)

M. Schoen evidently brings much sympathy to his discussion of the works of Hermann Sudermann, and doubly so, no doubt, from finding in them many points of likeness to the French realistic school. His intimate knowledge of the German stage and the German literary and social world has enabled him to bring us into closer touch with so representative a man. And M. Schoen has not contented himself with criticizing Herr Sudermann's individual work: he has also, in an introduction which is not the least interesting part of the book, both apportioned him his place historically and shown us the many favourable circumstances which conspired just at that time "to facilitate the birth and development of the realistic stage in Germany." We learn to know not only Sudermann, novelist and playwright, but also the man himself—his early struggles with poverty in the unfertile plains of East Prussia or in Berlin, his indomitable courage and resolution to adhere to his chosen vocation, his first failures and his first successes. At the start, like his literary predecessors of the eighteenth century, he falls into the snare of too closely imitating his French contemporaries, but soon, freeing himself from their undue influence, he finds his true sphere in the portrayal of the characters and scenes with which he had grown up and which had become part of his very nature. Through the realism that comes of genuine observation he wins his triumphs both in his novels (e.g., "Frau Sorge") and on the stage (e.g., "Die Ehre"): he is a realist "not from deliberate intention or as a pose, but by natural taste, by instinct, by an irresistible necessity to describe what he has seen and felt." And in this power of external observation M. Schoen finds at once his strength and his weakness—his strength in scenes of detail, in separate incidents, in isolated characteristics; his weakness in the binding together of the action as a whole and in the blending of many features into a psychological unity. We may not agree on all points with M. Schoen's verdict, but no one can deny the ability of his criticism, nor fail to acknowledge the charm of his style. The book is one to be read by all who are interested in German or, indeed, in European literature.

The Englishwoman's Yearbook, 1906. (2s. 6d. net. A. & C. Black.)

This indispensable *Yearbook*, now in the twenty-sixth year of publication, still leaves something to be desired in its educational section. We cannot find Inspectors of Schools or the London Day Training College (except the name) or the Goldsmiths' Institute.

Who's Who, 1906.

This annual grows as rapidly as our trade returns, and the present volume reaches 1,878 pages, not counting advertisements. A new feature this year is the addition of motor and telephone numbers and number of progeny. Something will have to be done in the way of curtailment, and we would suggest that when a contributor's literary progeny runs to double figures it should be enumerated, not named. Who wants a column of the contributions to learned societies of an American professor whose name not one in a thousand readers will know? Of the new M.P.'s few will be found—one of the six A's. This is no reflection on *Who's Who*, but it confirms an observation made in Occasional Notes.

(1) *Who's Who Yearbook*, 1906. (2) *The Writers' and Artists' Yearbook*, 1906. (Each 1s. net. A. & C. Black.)

Each gives information that would not be found in ordinary books of reference—for instance, the Officers and Council of the Primrose League, pen-names (we miss Madame Sara Grand). The General Election unfortunately puts one section out of date. The list of publishers wants bringing up to date: there are some dozen wrong addresses. Among journals we miss the *British Journal of Photography*, the *Electrical Engineer*, and *Modern Language Teaching*.

UNIVERSITIES AND SCHOOLS.

KING'S COLLEGE, WOMEN'S DEPARTMENT.

A course of seven lectures on "Artistic Anatomy," with demonstrations upon the living model, drawings, diagrams, &c., will be given by P. T. B. Beale, F.R.C.S., on Fridays, at 5 p.m., beginning January 26. A course of lectures on "Child Study" will be given by Mrs. Clement Parsons on Mondays, at 3, beginning February 12. Names should be sent in by January 29, as this course will not be delivered unless a sufficient number of entries are received.

CATHOLIC TRAINING COLLEGE, CAVENDISH SQUARE, W.

The results of the recent Examination in the Theory and Practice of Education, held at this College by the Cambridge University Syndicate, are as follows:—Elsie Gompertz, Theory, Class I.; Practice, Class I. Annie Murphy, Theory, Class III.; Practice, Class I. Mary Casey, Theory, Class III.; Practice, Class I. Cécile Steinberger, Theory, Class II.; Practice, Class II. Rosamond Dalton, Theory, Class II.;

Practice, Class II. Agnes Fenwick, Theory, Class II.; Practice, Class II. Margaret Raleigh, Theory, Class III.; Practice, Class II.

The report of the Inspector, Mr. Oscar Browning, M.A., of King's College, Cambridge, runs thus: "I was greatly impressed with the evidence of excellent training shown by the students, while the manner of the pupils and the general eagerness to learn showed how well their ordinary education had been directed. The notes of lessons were admirable, and the illustrations most praiseworthy. In two cases where I did not award a First Class the fault lay not in the ability or skill of the teacher, but in the fact that the lesson was in some respects above the head of the class, and was, therefore, not a practical success. I consider that in an examination on practical teaching a First Class can only be given where theory and practice move together in perfect harmony. The arrangements at Cavendish Square are so admirable that it is always a pleasure to inspect the College."

OXFORD.

Though two months have elapsed since my last letter, the University vacation, covering, as it does, all but a crowded week at each end of that time, leaves little to record of its normal academic life and activity but a few fragmentary notes.

By the death of the Regius Professor of Medicine, Sir John Burdon-Sanderson, which occurred on November 23 (just too late to be mentioned in my last letter), Oxford has lost one of its greatest men and most striking personalities. Prof. Gotch, than whom no one is more competent to speak, in an obituary notice contributed last term to the *Oxford Magazine*, dwelt most forcibly on Burdon-Sanderson's numerous physiological researches, his great contributions to hygiene, his valuable and fruitful labours in the creation of a Medical School in Oxford on scientific lines; and laid stress particularly on his high standard of self-criticism, "the consistency with which he maintained a broad point of view while keeping his gaze directed to the bedrock of his subject," and the inspiring power of his work, his teaching, and, above all, his personal character. The death of such men, he concludes, is a national loss.

Other losses recorded since the end of November are as follows:—Captain R. St. John (Balliol), an expert in several Oriental languages, for some years Teacher of Hindustani; C. J. Price, formerly Fellow and Tutor of Exeter; Rev. F. Meyrick (Trinity), Rector of Blickley (Norfolk) and Prebendary of Lincoln; Rev. W. P. Trevelyan (Worcester), late Rector of Calverton; A. E. Haigh (Corpus), a distinguished scholar, tutor, and lecturer, whose loss (at the age of fifty) will be much felt by his college and his friends in Oxford; and Sir Clinton Dawkins, an able and valuable public servant, whose early death (at forty-five) will be deplored by a very wide circle of friends.

The only statistics of which notice has yet been given in this first week of term are all concerned with minor amendments and adaptations of existing arrangements, and need not be here dwelt on. They relate to such points as research degrees (allowing candidates who have failed to apply again), revising statutes "where the language has become obsolete," altering fees payable by candidates or to examiners, amending the rules for books offered in Responsions, &c. The only matter of general interest concerns the election of the Professor of Poetry, in the place of Prof. Bradley, whose period has expired. A strong effort is being made in favour of Mr. J. W. Mackail, whose name is widely known as one of the most distinguished of former Balliol scholars, author of William Morris's Life, a poetical translation of the "Odyssey" (in the Omar Khayyam metre), a prose translation of Vergil's "Æneid," and one of the best literary sketches ever written, a short survey of Latin literature from the early beginning in the Republican times down to the Silver Age. No better choice could be made than Mr. Mackail, and his nomination paper (the only one yet received) is signed by thirty-six Doctors and Masters of Arts, including seven Heads of Colleges, and other well known names such as H. C. Beeching, A. C. Bradley (the late Professor), Robert Bridges, W. G. Courthope, W. Warde Fowler, R. W. Raper, and Gilbert Murray. It is much to be hoped that such a candidate with such sponsors will not be put to the trouble of a contest.

On December 5 the annual report of the Delegacy for the Training of Elementary Teachers (for 1904-5) was presented to Convocation. The numbers are still small, and at the close of the academical year the number on the books was 22. On the other hand, the success of the students in the academical courses continues to be decidedly encouraging. In the Honour Schools 5 students obtained Honours, 2 Second (Science and History), 2 Thirds (Science and History), and one Fourth (History). Others obtained the following distinctions:—two college scholarships (Hertford and University), two Toynbee Scholarships, and two Leathersellers' Exhibitions open to all non-collegiate students. Besides the Honours in Final Schools, several passes in Preliminary and Intermediate Examinations were obtained by students. Nine of the students entered at (or migrated to) the colleges, and the rest are non-collegiate. There appears to be again some dissatisfaction on the part of the Delegacy with the unfavourable comments of the Inspector on the Day Training College, "mainly on the ground that its resources do not allow it to provide a common room, library, and museum of its own, with a full staff of officers and

teachers . . ." The difficulty (as so often in Oxford) appears to be financial; but the correspondence between the Delegacy and the Board of Education will not appear till the next report. And, meanwhile, the public have not complete data for forming a judgment.

The Faculty of Modern History has had a singular fate in the course of the last year, from the lamentable deaths first of Prof. York Powell and later of the *emeritus* Professor (on the Chichele foundation) Montague Burrows. The two official Heads of the Faculty have been changed and a third has been added—the new "Beit" Professor—all within a few months. Prof. Firth succeeded Prof. York Powell; Mr. Oman has (as every one hoped and expected) been elected Chichele Professor in succession to Mr. Burrows; and the new Beit Professorship of Colonial History has been admirably filled by the selection of Mr. H. E. Egerton (Corpus), well known for his studies in colonial policy. Mr. Egerton was recognized from his Oxford days, and even from his Rugby days, as a man of ability and independent judgment; and the electors must be congratulated in having found, under exceptionally difficult circumstances, so excellent a candidate.

A word must be added of deep regret at the sudden and premature death of Sir Richard Jebb, the foremost representative of classical learning in England. Not in Cambridge only—where his loss is the greatest—but in every home of scholarship and classical study, and particularly in Oxford, profound sorrow will be felt for the close of a career marked by exceptional gifts and unremitting service.

The following announcements have been made:—

Congratulatory Addresses: to the University of Belgrade on its foundation; and to the University of Melbourne on its jubilee.

Appointments: Beit Professorship of Colonial History—H. E. Egerton (Corpus Christi). Chichele Professorship of Mediaeval History—C. W. C. Oman. Delegacies: (1) Lodging Houses—Provost of Oriel (C. L. Shadwell), to be perpetual delegate; A. B. Poynton (University). (2) Secondary Teachers' Training—E. C. Marchant (Lincoln). Taylorian Teachers: Lecturer in Old French and Romance Philology—H. Oelsner (M.A. Camb., Ph.D. Berlin). Lecturer in German Philology, O.H.G. and M.H.G.—G. Fiedler, Professor of German (Birmingham), Ph.D. Leipzig. Committee for Anthropology: Secretary—J. L. Myres (Christ Church). Co-opted—Dr. Farnell (Exeter), Prof. Macdonell (Corpus Christi). Committee for Geography: Notices of Lectures and Classes. Committee for Economics: Notices of Lectures and Classes.

University Scholarships: Mathematics: Senior—A. Holden (Balliol). Junior—A. V. Billen (University). Exhibition—J. Hodgkinson (Jesus). Locke Scholarship—H. L. Stewart, B.A. (Lincoln). Hebrew Scholarship Prize—J. W. Smallwood (Keeble).

Degrees: Hon. D.D.—Ven. Archdeacon Smith, Bishop elect of Knaresborough.

CAMBRIDGE.

The most important occurrence in Cambridge since last I wrote you is the death of Prof. Jebb. Sir Richard Jebb last summer received the distinction of the Order of Merit. It meant that his name stood with those of

John Morley and George Meredith as in the highest degree representative of letters in England; and it must be owned that in the world of scholarship there was no one else to whom the honour could have been awarded with such unanimous approval from every one interested in classical learning. There are other men to whom many will feel that they owe a deeper debt than, perhaps, any one will feel he owed to Jebb, but, all the same, Jebb stood at the head of living scholars. He was surer than any one else; and, but for the timidity which forced him to withdraw into himself—if, like the poet Gray, with whom he has been compared in the *Cambridge Review*, he had "spoken out"—his influence might have been very great. As it is, it is from Glasgow that the warmest utterance of feeling for his work as a teacher comes. Here the atmosphere is chilly: we live to detect one another in misprints and petty inaccuracies; and Jebb was too sensitive to such imputations—to criticism, in fact—and he has gone to his grave with the somewhat doubtful praise of never having made a mistake. There is hardly any one left to represent his type of scholarship.

Before this number of the *Journal* goes to press, Jebb's successor as Greek Professor will have been elected. Anticipation gathered vaguely about the names of one or two scholars who have not been closely identified, at least of late years, with Cambridge work; but when the list of candidates was published it appeared that the new professor is to be one of ourselves. The five candidates are to deliver prelections between January 23 and 26 on subjects of their own choosing. The electors, who are bound to hear all five prelections if they are to vote, are the Council of the Senate—perhaps of all electoral bodies known to the University the most generally trusted. They will have to choose between Dr. Adam, Dr. Headlam, Dr. Jackson, Prof. Ridgeway, and Dr. Verrall—not an easy task at all, where so much distinction in such various directions is gathered; but, at all events, most of the prelections will be interesting, and one or two of them should of themselves repay the trouble of hearing all and making so serious a decision.

Sir Richard Jebb's death left Cambridge with one representative in the Parliament that so suddenly and mysteriously vanished to meet no more. For reasons which

The Election.

your correspondent owns, like Herodotus, that "he knows, but does not think it 'canny' to mention," some of the electors did not wish to return Sir John Gorst again, and they took means to secure his defeat. These, too, may be left undiscussed here. Suffice it to say, Prof. Butcher, of Edinburgh, an entirely fit representative for a University (if University constituencies are really represented by academic distinction, which, considering the vast mass of University electors, I beg leave to doubt), and Mr. Rawlinson, Commissary of the University, were elected. But, before the election was over, other things happened elsewhere—in Manchester, for instance—and people began to change their minds, and rumour hints that we are to have greatness thrust upon us. Palmerston and Pitt were members for Cambridge University and Prime Ministers. The new combination will not be quite the same.

A new pair of members might well consider whether, in keeping up the benefaction of former members, as in duty bound, they might not devote their gift to something better than a Latin Essay Prize.

Mr. R. P. Brereton has left the University an estate understood to be worth £6,000.

So.

Mr. Ludwig Mond has made a gift of £1,750 to the University to maintain the Stokes and Cayley

Lectureships in Mathematics.

The arrangements are being completed for the course in Forestry leading up to a Diploma.

A long report has been issued on the work of the selected I.C.S. candidates of 1905 and the newly chosen of 1906. £1,200 is being spent on them, towards which the Government has granted £500 and the University £750.

Appointments: J. E. Leatham, M.A. (St. John's), University Lecturer in Mathematics; C. T. R. Wilson, M.A. (Sidney), University Lecturer in Physics (reappointed); Hájji Mirzá 'Abdu'l-Husayn Khán, University Teacher in Persian; Prof. Kirkpatrick, Council of Senate; G. C. Macaulay (Trinity), University Lecturer in English; J. A. Crowther (St. John's), Research Studentship at Emmanuel College.

Prizes, Scholarships, &c.: Jeremie Septuagint Prize—G. F. Upton (Emmanuel). Seatonian Prize—A. C. Deane, M.A. (Clare). Walsingham Medal—W. S. Perrin (Caius). Whewell Scholarship—N. de M. Bentwich (Trinity); R. Burrows (Trinity Hall) and C. B. L. Tennyson (King's) (re-elected). Crosse Scholarship—J. R. Darbyshire (Emmanuel). Members' Latin Essay Prize—A. Petrie (Trinity). Members' English Essay Prize—N. Bentwich (Trinity). Burney Prize—L. Alston (Christ's).

MANCHESTER.

The rise in numbers at the Grammar School has necessitated the

Grammar School.

adaptation of the large masters' common room as a class-room, the board-room being now used as a meeting place for the staff. Recent successes of Grammar School boys include a postmastership at Merton College, Oxford, a mathematical exhibition at Queen's College, Oxford, and the Senior Hulmeian Scholarship at Brasenose College, Oxford. The Chair of Chemistry at the University of Sheffield has fallen to an Old Manchester boy, and among several Old Mancunians who have obtained secretaryships to members of the new Ministry may be mentioned Mr. J. S. Bradbury, of Brasenose College, Oxford, who has been appointed Secretary to the Chancellor of the Exchequer. At the last meeting of the Governors the Dean of Manchester (himself an old boy) was appointed Chairman of the Governors in succession to Mr. H. J. Roby, whose resignation was accepted with much regret. It may be mentioned that not only has Mr. Roby held for many years the post of Governor of the school, but, on one occasion, during an *interregnum*, he filled for some months the position of High Master. Mr. E. B. Hickinbotham, B.A., late Scholar and Bible Clerk of Queen's College, Oxford, Mr. C. E. Fry, B.A., formerly Postmaster of Merton College, Oxford, and Mr. B. Neuendorff, Ph.D., of the University of Berlin, have joined the staff. The manual training staff has been strengthened, and a beginning has been made with the provision of teaching in commercial subjects. Among coming changes, there are rumours of a slight lengthening of the school hours after midsummer, and of an attempt to secure a second playing field in South Manchester. Both at the Grammar School and at the University mock elections have excited much interest.

January is the month for the celebration of Founder's Day at the Manchester High School for Girls. On January 19 the Manchester High School for Girls celebrated its thirty-second anniversary, the address on this

occasion being delivered by Mrs. Tout, M.A., the wife of the Chairman of the Governors. Three days later the Pendleton High School for Girls celebrated its twenty-first anniversary. The special visitor on this occasion was the Vice-Chancellor of the University, who expressed the hope that he would see many Pendleton girls at the University. Miss Butcher, the late Head Mistress, gave an interesting review of the

(Continued on page 136.)

OXFORD UNIVERSITY PRESS.

OXFORD CLASSICAL TEXTS.

Vols. XLI-XLIII. Crown 8vo, paper covers or limp cloth.

Academy.—"It is right that every word of introduction and comment in these invaluable volumes should be written in the language of European scholarship—Latin—for they are *a lingua et dei*, not to English speaking students and scholars only, but to the whole civilized world."

CICERONIS ORATIONES PRO ROSCIO, CLUENTIO, MURENA, CAELIO, IN CATILINAM. Edited by A. C. CLARK. 2s. 6d. and 3s.

TIBULLI CARMINA. Edited by J. P. POSTGATE. 1s. 6d. and 2s. Together with CATULLUS and PROPERTIUS, on Oxford India paper, 8s. 6d.

Guardian.—"A mature and worthy performance, conservative in tone, and free from the transpositions of lines which have sometimes characterized previous texts edited by the same distinguished scholar. . . . We are glad to see that the volume contains an index of proper names."

BUCOLICI GRAECI. (Theocritus, Bion, and Moschus.) Edited by U. VON WILAMOWITZ-MOELLENDORFF. 2s. 6d. and 3s.; on Oxford India paper, 4s.

XENOPHON, HELLENICA. Text by E. C. MARCHANT and Notes by G. E. UNDERHILL. Crown 8vo, cloth, 7s. 6d. net.

GREEK READER, Vol. I. Selected and Adapted with English Notes from Prof. VON WILAMOWITZ-MOELLENDORFF'S "Griechisches Lesebuch." By E. C. MARCHANT. Crown 8vo, cloth, 2s.

The Journal of Education.—"Being a selection from a selection, and that a selection by one of the foremost Greek scholars in Europe, it should be the very finest flower of reading-books. Issuing from the Clarendon Press, it is, of course, correctly printed with excellent type. . . . Mr. Marchant gives quite enough for a term's work. . . . Teachers of Greek should certainly look at a copy of the Reader."

COMBINED GERMAN READER, WRITER, AND GRAMMAR. By H. G. SPEARING, M.A. 8vo, cloth, 3s. MEMORY TEST-BOOK, for use with the foregoing. 6d. net.

Teachers' Monthly.—"It is a first grammar-book in the attractive guise of a reader. Grammar is taught, but learnt from the language. The plan is very good, and it has been worked out most skilfully."

DER UNGEBETENE GAST, and other Plays. Short German Plays. Second Series. By E. S. BUCHHEIM. Extra fcap. 8vo, cloth, uniform with the First Series. 2s. 6d.

School World.—"Teachers will welcome the six little plays which Miss Buchheim has written, for they are bright and simple. The notes are brief, and consist mainly of renderings of idiomatic phrases."

OXFORD MODERN FRENCH SERIES.

Edited by LEON DELBOS. Crown 8vo. Vols. XVIII, XIX.

NODIER'S JEAN SBOGAR. Edited by D. L. SAVORY. 2s.

RECKMANN - CHATRIAN'S HISTOIRE D'UN HOMME DU PEUPLE. Edited by R. E. A. CHESSEX. 3s.

Athenaeum.—"The annotation is brief but satisfactory. . . . In the hands of a capable teacher this series ought to do very well."

MA PREMIÈRE VISITE À PARIS. Par A. E. C. Being an Elementary French Reading-Book. Crown 8vo, cloth, with 26 Illustrations. 1s. 6d.

A PRIMER OF CLASSICAL AND ENGLISH PHILOLOGY. By the Rev. WALTER W. SKEAT, Litt.D. Extra fcap. 8vo, cloth, 2s.

Notes and Queries.—"In the present little volume Professor Skeat adds one more to the excellent series of handbooks with which he has revolutionized the study of English in this country. . . . There cannot be found a more trustworthy introduction to a subject of fascinating interest."

AN ANGLO-SAXON PRIMER. With Grammar, Notes, and Glossary. By HENRY SWEET, M.A., Ph.D. Eighth Edition, Revised. Extra fcap. 8vo, stiff covers, 2s. 6d.

SCENES FROM OLD PLAYBOOKS, arranged as an Introduction to Shakespeare. By PERCY SIMPSON, M.A. With Reproduction of the Swan Theatre. Crown 8vo, cloth, 3s. 6d.

THE JUNIOR GEOGRAPHY. By A. J. HERBERTSON, M.A., Ph.D. ("The Oxford Geographies," Vol. II.) Crown 8vo, cloth, with 166 Maps and Diagrams, 2s.

Teachers' Monthly.—"It contains the regional geography necessary for the Oxford Junior Local Examinations. Very numerous illustrative maps are a leading feature. The descriptions of countries, river basins, &c., are graphically given, such as to produce a clear perception of the areas dealt with. The amount of detail is also well regulated."

ELEMENTARY MODERN GEOMETRY. Part I. Experimental and Theoretical (Chaps. I-IV). Triangles and Parallels. By H. G. WILLIS, M.A. Crown 8vo, cloth, 2s.

Athenaeum.—"Conforms to the new ideas which have ousted Euclid's sequence of problems. Mr. Willis has evidently ample experience of teaching, for his book is admirably lucid and practical. He brings the subject well into touch, too, with actual life. There is a set of exercises attached to each proposition, and the book is a thorough and very satisfactory exposition of the new principles. We expect to see it widely adopted."

EXPERIMENTAL AND THEORETICAL COURSE OF GEOMETRY. By A. T. WARREN. With or without Answers. Third Edition, with Additions. Crown 8vo, cloth, 2s.

School World.—"This book, which has now reached its third edition, has commended itself to many teachers as one of the best that has been issued since the long reign of Euclid came to a close. . . . Some of the papers are exceedingly good."

AN ELEMENTARY TREATISE ON PURE GEOMETRY. With Numerous Examples. By JOHN WELLESLEY RUSSELL, M.A. New and Revised Edition. Crown 8vo, cloth, 9s. net.

School World.—"We remember the great pleasure we had in reading this book when it first appeared, and are glad to welcome this new edition. . . . The changes that have been introduced are evidently the result of experience in the use of the book, and seem to be all in the right direction."

ELEMENTARY CHEMISTRY. Progressive Lessons in Experiment and Theory. Part I. By F. R. L. WILSON, M.A., and G. W. HEDLEY, M.A. Demy 8vo, cloth, 3s.

School World.—"The authors have produced a satisfactory course of experimental work introductory to the study of chemistry, which teachers of the subject who are not already provided with a good laboratory manual would do well to examine. . . . The book is attractively printed and illustrated."

A CLASS BOOK OF ELEMENTARY CHEMISTRY. By W. W. FISHER, M.A., F.C.S. Fifth Edition. Crown 8vo, cloth. Revised and Enlarged, with 59 Engravings on Wood. 4s. 6d.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

early days of the school and the honours gained by former pupils. During the temporary indisposition of Miss Nally, one of the mistresses, her work is being taken by Miss Gowan, B.A. The Pendleton School is now quite full.

At the University Mr. C. H. Lobban, B.Sc. Glasgow, has been appointed Senior Instructor in Drawing, and Mr. C. H. Lander, B.Sc., Junior Instructor in the Department of Engineering. Mr. H. E. Wood, M.Sc., has resigned his post as Demonstrator in Physics on his appointment to the post of Chief Assistant in the Transvaal Meteorological Department. Mr. A. D. Lindsay, M.A., Assistant Lecturer in Philosophy, has resigned his post on his appointment to a tutorship at Balliol College, Oxford. The Physics Department also loses the services of Mr. H. Morris Airey, M.Sc., who has accepted the post of Senior Lecturer in Physics at the Armstrong College, Newcastle-on-Tyne.

The Manchester Branch of the Classical Association held its first meeting for 1906 on January 26, when Canon Hicks, the President, lectured on the light thrown by archaeology on the history of Greece. Prof. Butcher is to address the Association in February.

At a joint meeting of the Teachers' Guild and the Froebel and Child-Study Association, early in February, a discussion will be opened by Miss Caroline Herford and Mr. S. W. Meek, M.A., on "Organized Games in Secondary Schools."

WALES.

A special meeting of the Court was held at Shrewsbury on January 25 for the purpose mainly of defining the duties of the Registrar appointed under the new scheme adopted at a previous Court meeting. The Standing Executive Committee submitted various recommendations, but, taken as a whole, they did not constitute any wide departure from the duties as defined in the University charter. Under the new conditions, some of the functions hitherto discharged by the Vice-Chancellor will be transferred to the Registrar, thus effecting a considerable reduction in the routine business that must be transacted by the former officer. Such matters as making arrangements for the holding of University examinations, preparing the list of candidates for University examinations, &c., will in future be dealt with by the Registrar, and not by the Vice-Chancellor.

There was a somewhat prolonged discussion on a motion by the Warden of the Guild of Graduates that a separate Finance Committee of the University, directly responsible to the Court, should be appointed, but ultimately it was unanimously agreed that the Standing Executive Committee should select six from among its own members to form a Finance Committee. A satisfactory settlement of some of the thorny questions which have troubled the peace of the University for some time past has therefore been reached—a result mainly due to the conciliatory spirit displayed by all members of the Court.

At the same meeting it was resolved to provide for the drafting of a statute to establish a Faculty of Medicine. No progress, however, was made with the draft statutes relating to the affiliation of the colleges.

A second Conference on the Training of Teachers was held at Shrewsbury on January 26. Nearly all the representatives present were members of the different Local Education Authorities, as associations such as the Welsh County Schools Association and the N.W.T. were not invited to send to take part in this Conference. The Local Authorities evidently do not regard the question of secondary training as of a very pressing character, as not a single resolution has any reference to it. It is therefore very probable that, until some satisfactory settlement of the pupil-teacher difficulty is reached, but little progress will be made in the matter of providing additional facilities for the training of secondary teachers. We shall for some time be obliged to remain content with the system adopted by the three University colleges. Several suggestions of a somewhat drastic nature were made with regard to the training of the probationers. Thus, the Denbighshire representative proposed that the Board of Education be requested to allow each Local Education Authority to divide the time between the primary and secondary school, according to the needs and circumstances of the different localities. There was a similar resolution from the Cardiganshire Education Committee. The same Committee also expressed the opinion that no solution of the problem of the training of probationers will be found satisfactory which does not provide for a four years' continuous course of instruction at a secondary school as a preliminary to any specialized training in the art of teaching. Another motion of great interest was that submitted by Principal Roberts, to the effect that the Education Authorities should appoint a competent expert to report on the present position and prospective requirements in respect of training of teachers in Wales and Monmouthshire. As these requirements vary so considerably in different parts of the country, it is manifest that such a report must be of a very voluminous character, and therefore likely to prove very ineffective. The settlement of such a question as this on a national basis must present enormous difficulties,

as the conditions are not by any means uniform throughout the Principality.

The Montgomeryshire County Council have decided to resume the administration of the Education Act, as the Board of Education had decided to pay the grants in full to the County Council. In common with other Welsh counties, it still adheres to the "No Rate Aid" policy; so that no expenditure on the non-provided schools which cannot be met out of the Government grants will be incurred.

Mr. Lloyd-George, in one of his electioneering addresses, states that he has received an assurance that a Welsh National Council of Education would be established, giving Wales complete control of her own educational system. The Education Board contemplated by him will be quite independent of the control of the Board of Education, and will thus differ very materially from the Scotch Education Department. The Welsh Council of Education must be chosen by the Education Committees of Wales, and not nominated by Imperial authority. As the President of the Board of Education is understood to be favourable to some such plan, it is very probable that in a very short time it will be carried into effect. Meanwhile it is of the utmost importance to all members of the teaching profession that they should be prepared with a definite policy with regard to their relationship to the new Council.

SCOTLAND.

A report of the Conference of Representatives of the four Universities on the questions of the extended session and the reconstruction of the Arts curriculum has been submitted to the Court and Senatus of each University. It recommends the adoption of a three-term session of at least twenty-five weeks, the number of class meetings in each session to be not less than seventy-five in the case of ordinary classes and fifty in the case of Honours classes. Any University may, however, arrange that in certain subjects attendance during two of the three terms may be accepted as qualifying for the degree. As regards the curriculum for the degree, the report recommends that seven courses in five subjects be required; but it is suggested that any University should have the power to retain the present seven-subject degree, either alone or as an alternative to the five-subject degree. It is further proposed that, "subject to such general principles as may be determined from time to time by the four Universities in common," each University should have the right to make its own regulations "regarding the definition and grouping of subjects for a curriculum in Arts, ordinary or Honours." The next step will be the drafting of an ordinance to carry these proposals into effect, and, if such an ordinance passes into law, the Universities will have gained a large measure of freedom as regards their purely educational arrangements. It is most desirable that something of this sort should happen. The circumstances, needs, and ideals of the various Universities are by no means the same, and, if they are to progress satisfactorily on their own lines, they ought to be freed from the hard, detailed uniformity that is imposed on them by the existing Ordinances. The discussions of the Conference and the compromises suggested by its report have made this perfectly clear.

The official statement of the number of matriculated students (excluding women) at Glasgow and at Edinburgh Universities during 1905 shows an increase of fifteen students in the case of Glasgow and of ninety-two in the case of Edinburgh. As compared with the statistics of 1889, the numbers for 1905 show a diminution of 273 at Glasgow and of 822 at Edinburgh. For the current session 502 women are matriculated at Glasgow and 385 at Edinburgh. The total number of matriculated students (including women) is 2,310 at Glasgow and 3,165 at Edinburgh.

Lord Mackenzie has resigned his position as Chancellor's Assessor on the University Court of St. Andrews. Major W. R. N. Annesley, D.S.O., Royal West Kent Regiment, has been appointed Lecturer on Military Subjects in St. Andrews University, and in the same University Miss Dorothy Le Couteur has been appointed physical instructress of the women students. Following the lead of Edinburgh University, the St. Andrews Court has resolved to raise the fees for classes qualifying for graduation in Arts to £4. 4s. per session for each class. St. Andrews also proposes that arrangements should be made for holding the preliminary examinations a week earlier than at present.

As a memorial of the late Rev. William Hastie, D.D., Professor of Divinity in Glasgow University, a sum of £1,000 has been given to the University for the foundation of a Lectureship in Theology. The library of Prof. Hastie, along with a bust of him, has also been presented to the University by his relatives.

Sir Thomas McCall Anderson, Professor of Medicine in the University of Glasgow, has been entertained to dinner by his colleagues and the leading members of the medical profession in the West of Scotland, in recognition of his services to the Glasgow Medical School, in which he has been a distinguished teacher for forty years.

Considerable progress has been made with the extension of the Edinburgh University Union. The additions include a large library, a

SECOND EDITION. Crown 8vo, cloth. Price One Shilling.

French Words . . . and Phrases.

By J. G. ANDERSON and F. STORR.

"This little volume contains over a score of classified lists dealing with the common objects and with the business of everyday life. They do not pretend to be exhaustive, but they are thoroughly practical; and teachers will find them useful in enabling pupils to acquire a serviceable vocabulary."—*The Glasgow Herald*.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

AN OLD TESTAMENT HISTORY FOR SIXTH FORM BOYS.

Small crown 8vo, cloth. Illustrated. Price 3s.

OLD TESTAMENT HISTORY.

PART III.—FROM THE DEATH OF JEHOSEPHAT.

BY

The Rev. T. NICKLIN, M.A.,

Assistant Master at Rossall School, which in 1903 had more Divinity Distinctions than any other School in England.

CONTAINING 22 ILLUSTRATIONS AND 3 MAPS.

SOME PRESS OPINIONS.

"An excellent piece of work."—*Spectator*.

"The accurate and scholarly information the author has woven into his book should make it both acceptable and instructive."—*Church Family Newspaper*.

"At the present moment it is specially important to give young people a reasonable idea of the significance of Old Testament history, and we are glad that Mr. Nicklin adopts the right standpoint. He is alive to the fact that sixth form boys are ready for such teaching as will leave them comparatively little to unlearn in after years."—*Christian World*.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,251,779. Annual Income, £406,752.

Bonuses Distributed, £3,723,720.

LOW PREMIUMS.
LARGE BONUSES.

Notwithstanding the **LOWNESS** of the Premiums charged, the **BONUSES** are on an **EXCEPTION-ALLY HIGH SCALE**.

NEW AND SPECIAL
POLICIES.

Application is invited for the **NEW PROSPECTUS** and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one-half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for Cash.

BONUS YEAR 1906.—All With-Profit Policies in force on 1st June in that year will share in the distribution.

IMPORTANT NOTICE.

No Agents employed and no Commission paid for introduction of business, whereby about £10,000 a year is saved to the Members. Assurances can be readily effected by direct communication with the Office,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

reading and writing room, committee-rooms, cloak-rooms, a large new kitchen, and two fives courts. It is expected that the whole of the buildings will be completed for occupation in October, 1906. A sum of £15,000 is still required to meet the present expenditure and to clear off debts, and the Committee is appealing to friends of the University to help them in raising this amount.

SCHOOLS.

CLIFTON COLLEGE.—College scholarships and other distinctions outside the school.—Oxford: classical scholarships—G. E. G. Forbes, D. T. Monteath, Trinity; E. S. G. Robinson, Christ Church; Classical Exhibition; P. P. Reitlinger, Lincoln. Cambridge: classical scholarships—F. R. R. Rudman, King's (in residence since October); P. H. F. Wiseman, Jesus; Classical Exhibition—H. R. Gould, Queens'; science scholarships—H. H. Mathias, King's; E. P. Reynolds, Caius. Woolwich: H. G. MacGeorge (2nd), H. A. Cox (5th), H. Smithson (these three left the school last August); R. G. Purcell, B. S. Raymond. Sandhurst: H. H. Lean (1st), C. B. Adams, J. D. Ogilvy. The concert at the end of last term was one of the most successful we have ever had. "Trafalgar Year" was recognized by a performance of Sir Charles Stanford's setting of Mr. Henry Newbolt's "Songs of the Sea." The composer kindly came down to conduct the chorus and orchestra, and Mr. H. Plunket-Greene—a frequent and always welcome visitor at his old school—sang the solos.

HARROW.—We are to have shortly a new experience—an inspection, and that by the University of London. Why the proposed inspection by the Board of Education fell through is a State secret.

UPPINGHAM SCHOOL.—The following scholarships, &c., were gained from the school last term:—for classics at Oxford, H. Ramsbotham at University College, P. Newbolt at Oriel; and L. R. Fawcus a minor scholarship at Trinity College, Cambridge; F. D. Purser a history sizarship at Trinity College, Cambridge, and R. G. L. Morgan a Johnson Exhibition for science at Emmanuel. W. K. P. French has left us, having been appointed Professor of Arts at the University of Allahabad. A number of lectures were given in the schoolroom last term, the most appreciated, perhaps, being that by Mr. E. T. Reed, of the staff of *Punch*, on "The Art of Caricature," of which he is such a notable exponent. Our Football Fifteen has been very successful, and have won most of their matches, chiefly against college teams from Cambridge; they are to be especially congratulated on their fairly easy victory over Righy School.

WINCHESTER COLLEGE.—The new college roll is as follows:—J. D. Denniston, H. E. G. Tyndale, C. P. Skrine, F. C. Barclay, G. H. Bullock (exhibitioner). G. D. Roehling has been elected to a £30 scholarship at Queens', Cambridge. We welcome this term on the staff Mr. Wilson, of New College, Oxford, and Mr. Robins, also of New College, Oxford, a former prefect of Hall.

PRIZE COMPETITIONS.

The Translation Prize for January is awarded to "Chestnut." There was little to choose between his version and those of "Complex," "J.F.," "Effendi," "Taugenichts," and "Saxon."

The Winner of the Translation Prize for December is Miss Grace I. Masson, St. John Baptist High School, Newport, Mon.

Commynes est avant tout un homme très intelligent, et c'est presque toute sa définition. Il y a des hommes qui sont nés pour agir, et, selon qu'ils ont du bon sens ou n'en ont point, ce sont des actifs ou des agités. Il y a d'autres hommes qui sont nés pour comprendre, et qui ne se lassent jamais. Ils peuvent être actifs aussi, mais comme en seconde ligne. L'homme d'action se sert de son intelligence pour agir, et l'homme intelligent qui est mêlé à l'action ne se sert guère de l'action que pour comprendre plus de choses. Tel était Commynes. Personne plus que lui n'a contribué à faire l'histoire, en ayant l'air de rester témoin curieux plus qu'acteur. Il devait savoir se dédoubler, s'occuper d'une affaire en la conduisant au but, mais en même temps en l'étudiant pour elle-même, et les hommes qui y étaient mêlés, comme objets très intéressants pour le curieux de choses humaines. Très différent en cela de Saint-Simon, à qui du reste on n'a pas eu tort de le comparer. Saint-Simon, parfaitement incapable d'action, est possédé par la curiosité, et, malgré toute sa pénétration, malgré tout son génie, qui n'est pas ici en cause, reste toujours extérieur aux choses dont il est témoin. Commynes est dedans, à l'intérieur même de ces choses-là; il y est mêlé intimement, il les fait; mais il est assez froid pour les observer cependant, et il les observe comme du centre. De là, avec cent fois moins de talent que Saint-Simon, une sûreté, une certitude, une plénitude de sens, un manque merveilleux d'imagination, qui sont des qualités supérieures d'historien.

(Continued on page 60.)

Philips' Comparative Series OF LARGE SCHOOL-ROOM MAPS.

An entirely New and Original Series, COMBINING PHYSICAL AND POLITICAL GEOGRAPHY.

The great success that has attended the publication of **PHILIPS' SCHOOL ATLASES OF COMPARATIVE GEOGRAPHY**, which have received generous recognition from the Geographical Association and the Royal Geographical Society, has induced the publishers to produce this series of Wall Maps, based upon the same principle. They exactly meet the new requirements of the Board of Education.

**PHYSICAL FEATURES SPECIALLY PROMINENT.
POLITICAL BOUNDARIES CLEARLY SHOWN.**

**CAREFUL SELECTION AND SPELLING OF NAMES.
UNIFORMITY OF SCALE AND COMPARISON OF AREAS.**

The Geographical Teacher says:—

"We are delighted to receive a wall map, printed in this country, which can be thoroughly recommended. There can be no hesitation in advising teachers to select this series for their classrooms."

*THE WORLD	80 by 63 in.	18 0
*EUROPE	80 " 63 "	18 0
*ENGLAND & WALES	80 " 63 "	18 0
DITTO (Politically Coloured)	80 " 63 "	18 0
*SCOTLAND	74 " 59 "	16 0
DITTO (Politically Coloured)	74 " 59 "	16 0
*BRITISH ISLES	74 " 59 "	16 0

*ASIA	80 by 67 in.	18 0
*AFRICA	74 " 59 "	16 0
*SOUTH AFRICA	68 " 45 "	16 0
*NORTH AMERICA	74 " 59 "	16 0
*SOUTH AMERICA	74 " 59 "	16 0
*AUSTRALASIA	80 " 63 "	16 0
*NEW ZEALAND	(North Island) 80 " 63 "	16 0
DITTO (South Island)	Shortly 80 " 63 "	16 0

The Athenæum says:—
"Taken altogether, this is the best and most reasonably priced series of maps issued in this country. The World map deserves special mention, and is the best wall map of the World we know."

* A Series of **TEST MAPS** is also issued, uniform in size and price, with full Physical Colouring, Political Boundaries, and Town Stamps, but without names.

THE "GOLDEN MEAN" OF PENMANSHIP.

Adopted by many Education Committees throughout the United Kingdom and the Colonies.

PHILIPS' SEMI-UPRIGHT COPY BOOKS.

Designed to produce **Bold, Legible, and Rapid Writing**, free from all the extravagances of other systems.

In 21 Books. Price 2d. each.

The Publishers have just added Three Books, with headlines in French, Nos. 108, 109, 110, intended to give practice in writing where French is taught.

"We heartily commend these books, as they are among the best we have seen."
—*The Head Teacher.*

PHILIPS' SEMI-UPRIGHT WRITING CHARTS.

An invaluable adjunct to the teaching of Writing in the Lower Classes.

Set of Six Sheets, 30 in. by 22 in.

On strong Manilla Paper, eyeletted, 3s. 6d.; suspended from Wooden Ledge to turn over, 4s. 6d.; mounted on Three Mill Boards, 7s. 6d.; on Cloth, Rollers, and Varnished, 15s. per set.

"In a series of six sheets we have boldly, clearly, and attractively set out what the publishers very accurately describe as the 'golden mean' between upright and sloped handwriting. We can most highly recommend this set of diagrams."—*The Schoolmistress.*

GEORGE PHILIP & SON, LIMITED, The London Geographical Institute, 32 Fleet Street, London, E.C.

BLACKIE'S LIST

IMPORTANT ANNOUNCEMENTS

New Illustrated Classics

General Editor:
Prof. R. Y. TYRRELL,
Litt.D., Fellow of Trinity College,
and Late Regius Professor of Greek
in the University of Dublin.

THESE are four **NEW** Volumes in the Illustrated Classical Series, of which Prof. Tyrrell is General Editor. The "Pro Lege Manilia" is a very careful and thorough Edition by Prof. Woodhouse, late of Cambridge and St. Andrews. The "Captivi" has been edited especially for middle forms by Mr. Henson, whose "Cyclops" of Euripides was so successfully edited for junior pupils. The "Selections from Livy xxxi-xxxiii" are edited by two preparatory-school masters for junior pupils. Mr. Williamson's edition of the "Medea" is as sound and attractive as was to be expected of a Balliol man and Craven Scholar.

CICERO—PRO LEGE MANILIA

W. J. WOODHOUSE, M.A.,
Professor of Greek in the
University of Sydney. 2s.

PLAUTUS—CAPTIVI

Rev. J. HENSON, M.A., Second
Master, Reading School. 2s.

LIVY—BOOKS XXXI-XXXIII (Selections)

J. ASTON, M.A., and W. J.
HEMSLEY, M.A. 1s. 6d.

EURIPIDES—MEDEA

HAROLD WILLIAMSON, M.A.,
Manchester Grammar School.
2s.

Blackie's Little French Classics

"The idea is an excellent one, and admirably carried out."

—**Prof. SAINTSBURY.**

"A considerable boon to teachers and taught."—**SPECTATOR.**

"These little books supply a great want."—**Dr. W. H. ROUSE.**

THIS New Series, which is produced under the most competent editorship, embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many Authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

The Volumes have already found their way into constant use in most of the leading schools in this country, and Examining Bodies, both at home and in the Colonies, are prescribing the books for study during the coming year.

COMPLETE LIST ON APPLICATION.

Price 4d. each book.

HEAD MASTERS' CONFERENCE

THE CONFERENCE OF HEAD MASTERS, at their Annual Meeting on December 22nd, commended the teaching of classical authors **WITHOUT NOTES**. The following series has been especially designed to meet the newest requirements for the effectiveness of classical teaching in schools:—

BLACKIE'S LATIN TEXTS

GENERAL EDITOR—**DR. W. H. D. ROUSE**

This New Series is intended for use during the first two or three years of Latin. The long vowels are marked throughout. Each volume has a short Introduction dealing with the author and subject of the book. No other notes are given. **Price 6d. net.**

THE FOLLOWING SCHOLARS ARE CONTRIBUTING VOLUMES TO THIS SERIES:—

Prof. J. P. POSTGATE
Prof. J. S. REID

Dr. W. H. D. ROUSE
Mr. E. SEYMER THOMPSON

Mr. S. E. WINBOLT
Mr. W. H. S. JONES

Lectures on Art

SIR JOSHUA REYNOLDS' DISCOURSES

Professor J. J. FINDLAY, M.A. 2s. net.

PROF. FINDLAY has here edited a selection of the great Painter's Lectures on Art. It will prove a stimulating book for senior pupils.

Colloquial French

FIRST STEPS IN COLLOQUIAL FRENCH: Part I

A. E. THOUAILLE, M.A., University of Paris. 1s. 6d.

THIS is an Illustrated French Course on the New Method. The whole treatment is conversational; the lessons deal with familiar subjects of home and school; a brief systematic Grammar and a Phonetic Vocabulary are included.

Smith's Oral French

A FIRST YEAR'S COURSE OF ORAL FRENCH

A. H. SMITH, M.A., Whitgift School, Croydon. 1s. 6d.

THIS also is an Illustrated French Course on the New Method. It differs considerably from the one mentioned above, chiefly in the character of the reading lessons.

BLACKIE & SON, Ltd., 50 OLD BAILEY, LONDON, E.C.

By "CHESTNUT."

Commynes was above all things a highly intelligent man, and, having said that, we have said almost everything of him. Some men are born for action, and, according to their possession of common sense or not, they become capable people or busybodies. Others are by nature gifted with understanding, and are never weary of exercising that gift. They may be men of action also, but only in a secondary degree. The man of action uses his intellect as a tool for his work; the man of intellect, who has to take a part in active life, uses his work for little more than to advance his understanding of things. Such was Commynes. No man has contributed more than he did to the making of history, while appearing rather as an interested spectator than an actor. He must have had the power of cutting himself in two, busying himself in the practical conduct of affairs, while at the same time he studied them, and the men who took part in them, dispassionately, as interesting objects to the student of humanity. In this respect he differs greatly from St. Simon, with whom, otherwise, he has been rightly enough compared. St. Simon was essentially not a man of action. His curiosity was insatiable, but he always remained outside the events which he witnessed, notwithstanding all his acuteness and remarkable mental powers, which are not now the question. Commynes was in the inner circle, at the very heart of the matter. Intimately connected with the business of life, and himself an actor in the events, he still remained cool enough to continue an observer, though an observer stationed in the centre. Hence, without a hundredth part of St. Simon's ability, he shows a steadiness of judgment, a certainty of opinion, a fullness of perception, an extraordinary absence of imagination, which are the highest qualities in a historian.

We classify the 222 versions received as follows:—

First Class.—Primrose, E.J.R., Mouse, Corbar, Dudevant, Chem, H.J.C., Saxon, S.W.R., Blackbeetle, Chestnut, De Cede, Stargazer, Complex, Nessko, A.B.M., Taugenichts, Effendi, Eicarg, S.H.C.T., Roger de M., F.J.M., H.H.C., J.F., Vauxhall, Diana, A.P.W.

Second Class.—Jean Savelaur, Parker, Emil, Rivoli, Prammer, Rikkittikittavi, Faroe, Quilp, 22, Fidelis, Seabury, Evadne, Vis, Gabrielle, A.F.A., Crystal, Souris grise, Prig, Chaumont, Q.R., Juanita, M.W., Phosphor, Parergon, Ben-y-Gloe, Altnacaille, Evergreen, Adwrey, Adli, E.K.G., Stein unter Stemen, Daphne, Edova,

Soldat, Olga von Stena, Attington, J.H.H., Malvena, Achnamare, Henrietta, M.C.E.F., M.C., J.C.S., Electra, Eurycleia, Greville, Emilia, Mende, Minar, W.E.G., Iva Roggenfeld, Glenleigh, Chingleput, Machar, G.S., Scriba, Sloyne, M.A.V.N., Roxana, Tom Quad, Jonathan, Sirach, Gothicus, Strebar, St. Fortunat, Gawayn, V.M.F., Genista, Stedye, Cark, Orient, 'Idiots', S.R.H., Furlands, "Nemo," Fortes et Fidelis, Chemineau, Comet, Vanité, Sorbier, 100,000, Great Western.

Third Class.—Gardez bien, Hovis, At spes non fracta, Minota, G.O.A., C.P.I., Prammer (2), Mont Blanc, Iris, Circle, M.C.B., Venus, L.D.P., Flos, Secnarf, Evangeline, Bruno, Ntwaakro, Xmas, G.L.M., Wigtown, Flo, A.D., Chaussy, K.O.T., King Charles, Leodensis, La Chercheuse, Fleur de Lys, Clev, Ingeborg, Flandrins, Sapolio, Tony, E.C.H., Mistral, K.M.L., Llewellyn, Spes, V.M.S., E.M.B., Fiasco (Edinburgh), Corklight, H.C.H.S., Felixstowe, Broomstick, Kelt, M.M.N., Nemo, Papillon, Zilpah, A.S.W., Coythier, Billy, Lux, Missstory, Hedera nostra, T.V.D., Cinq Mars, F.M.D., E.S.P., Fortescue, Gazza, Auteuil, Laureen, Pervenche, D. de V., B.F.A.D., Missoo, Shakspeare, M.L., Meyotte, C.J.B., D. R. Evans, Wilts.

Fourth Class.—Fay, Helena, J.E.M., Sorrel, Grit, 44th, J.B.A., M.E.P., F.T., Beta, Reprah, Francesca, Rosalind, C.H.T., M.A.S., Tête Blanche, Erica, Peggie, L'Oleronnan, Lucy.

Fifth Class.—D.B., Nostis, G.G.B., Absit, Thelema, Pyro, A.S.T., Lucian, Fag, G.O.R., Puny, Owl, Corinne, Haec, Naso, Rutup, Remoh, O.V., F.M.V., Dahlia, First Essay, Hesper, Montes, O.D.

Save for one untranslatable phrase, of which more hereafter, the passage was of average difficulty, and a Second Class was comparatively easy to attain. Yet there was hardly a sentence that did not tax ingenuity and scholarship to preserve the balance of clauses and express the finer shades of meaning. Here, for instance, is a typical rendering of the first sentence, which may serve as a warning: "It is a pretty complete definition of Commynes to say that he was a highly intellectual man." Why depart from the French order—"Commynes is above all else a man of high intelligence, and little need be added to portray him fully"? *Des actifs ou des agiles*: "Agitators" is obviously a mis-translation; the meaning is passive, not active; "restless," a common rendering, is inadequate, and misses the alliteration. *Agiles* implies that these men are not only unquiet spirits, but that they are the driven,

(Continued on page 142.)

HORACE MARSHALL & SON'S LIST.

IMPORTANT HISTORY BOOKS.

A FIRST HISTORY OF ENGLAND. By C. L. THOMSON, late of Somerville College, Oxford, and the Cambridge Training College.

Part VI. (1689-1820) is now ready, and completes this useful history for young pupils. Price 2s. 6d.

The **Schoolmasters Yearbook** (1905) says of Part V.:—"Throughout, the book gives evidence of Miss Thomson's wide experience, careful research, and sympathetic treatment, and is quite the best of its kind at present in the market."

Part I. (B.C. 330-A.D. 1066). Second Edition. Price 1s. 6d.

Part II. (1066-1272). Second Edition. Price 1s. 6d.

Part III. (1272-1485). Third Edition. Price 2s. 0d.

Part IV. (1485-1603). Second Edition. Price 1s. 6d.

Part V. (1603-1689). Second Edition. Price 1s. 6d.

Part VI. (1689-1820). Price 2s. 6d.

ILLUSTRATIVE HISTORY. Fully Illustrated. **Stuart Period** (1603-1714). By J. W. B. ADAMS, M.A., Head Master of the County School, Tenby. *Now ready.* Price 2s. 6d.

MEDIEVAL HISTORY. By M. A. HOWARD, B.A. **ANCIENT HISTORY.** By W. H. SALTER, B.A. Each Illustrated. *Now ready.* Price 2s. 6d.

MODERN LANGUAGE BOOKS.

RÉCITATIONS ET POÉSIES. With Phonetic Transcript (Alphabet de l'Association Phonétique Internationale). Edited by VIOLET PARTINGTON, French Mistress at the Queen's College School. With over Sixty Charming Pictures by A. M. APPLETON. Price 2s.

LES DEUX PÈRES AND OTHER FRENCH PLAYS FOR LITTLE CHILDREN. By VIOLET PARTINGTON. In Decorated Paper Cover. Second Edition. Price 9d.

DES VACANCES A PARIS. By VIOLET PARTINGTON. Illustrated. Price 1s. 6d.

This is a Second Year reading book in French, describing the adventures of a little English girl on a visit to some French relations in Paris.

DEUTSCHE SAGEN. Edited by MARGUERITE NINET. Price 1s. 6d. This reading book in German, adapted for pupils in their third year, contains four charming stories, based on mediæval legends. They are prettily illustrated, and form a very attractive reading book.

LITERARY READING BOOKS.

HAKLUYT'S ENGLISH VOYAGES. Edited by E. E. SPEIGHT, B.A., F.R.G.S. With an Introduction by Sir CLEMENTS MARKHAM. Illustrated by R. MORTON NANCE. *Specimen booklet post free.* Price 2s. 6d.

SELECTIONS FROM PRESOTT'S CONQUEST OF MEXICO. Edited by A. S. LAMPREY, B.A., of the Maidstone Grammar School, formerly Scholar of Corpus Christi College, Cambridge. Illustrated. *Specimen booklet post free.* Price 1s. 3d.

SELECTIONS FROM PRESOTT'S CONQUEST OF PERU. Edited by A. S. LAMPREY, B.A. *Specimen booklet post free.* Price 1s. 3d.

London: HORACE MARSHALL & SON, Temple House, and 125 Fleet Street, E.C.

HODDER & STOUGHTON

have pleasure in announcing the following School Books:—

The Imperial Reader.

BEING A DESCRIPTIVE ACCOUNT OF THE TERRITORIES FORMING THE BRITISH EMPIRE.

Edited by the Hon. WILLIAM PEMBER REEVES, High Commissioner for New Zealand; formerly Minister of Education in New Zealand; Member of the Senate of London University, and

E. E. SPEIGHT, B.A., F.R.G.S., Editor of Hakluyt's English Voyages, the Temple Readers, and other Educational Works.

With Articles by Field-Marshal Viscount Wolseley, Viscount Milner, the Earl of Dunraven, the Earl of Dunmore, Sir H. H. Johnston, Sir Charles Elliot, Sir William Macgregor, Major-General S. S. Baden-Powell, and many others.

FULLY ILLUSTRATED.

Crown 8vo. Price 2s. 6d. net. 450 pages.

A Nature Reader

FOR SENIOR STUDENTS.

BEING AN ANTHOLOGY OF THE POETRY OF NATURE.

Edited by The Hon. Sir JOHN COCKBURN, K.C.M.G., Late Premier and Minister of Education in South Australia; Chairman of the Committee of the Nature Study Exhibition, 1902, and

E. E. SPEIGHT, B.A., F.R.G.S.

This Book deals with the various aspects of Nature as exhibited by the Sea, the Seasons, the Animal World, Woodlands, Inland Waters, Garden and Orchard, Mountain and Moorland, the Heavens, &c., and contains extracts in prose and verse from the writings of such lovers of Nature as Richard Jefferies, A. C. Swinburne, Fiona Macleod, Robert Bridges, John Burroughs, Roden Noel, Thoreau, Wordsworth, Ruskin, Coleridge, Longfellow, Borrow, and many others.

Illustrated from the works of Turner, Constable, Millet, Corot, Linnell, Leader King, Walker, and others.

Crown 8vo. Price 2s. net. 330 pages.

Britain's Sea Story

B.C. 55—A.D. 1805.

BEING THE STORY OF BRITISH HEROISM IN VOYAGING AND SEA FIGHT FROM ALFRED'S TIME TO THE BATTLE OF TRAFALGAR.

With an Introduction tracing the Development of the Structure of Sailing Ships from the Earliest Times.

Edited by E. E. SPEIGHT, B.A., F.R.G.S.,

AND

R. MORTON NANCE.

Illustrated from Paintings representing a Roman Merchant Ship and British Coracles, the Vikings at London Bridge, Cœur-de-Lion's Ships attacking a Saracen Dromond, the Battle of Sluys, the Fleet of Henry V., a Venetian Trading Galley in the Channel, Cabot crossing the Atlantic, the Loss of "The Mary Rose," Sir Humphrey Gilbert's Frigate "The Squirrel," the Flight of the Spanish Armada, the Last Fight of "The Revenge," Blake and Van Tromp, The Battle of La Hogue, Anson's "Centurion" and the Acapulco Galleon, and the Glorious First of June, by R. MORTON NANCE.

Crown 8vo. Price 2s. 6d. net. 450 pages.

COMPLETE PROSPECTUS ON APPLICATION.

HODDER & STOUGHTON,
27 PATERNOSTER ROW, LONDON.

SMITH, ELDER, & CO.'S LIST.

A LIFE OF WILLIAM SHAKESPEARE. By SIDNEY LEE, Editor of the "Dictionary of National Biography." Fifth and Thoroughly Revised Edition. With a Portrait of Shakespeare, a Portrait of the Earl of Southampton, and Facsimiles of Shakespeare's known Signatures. Crown 8vo, 7s. 6d.

Also the *Illustrated Library Edition*, in one volume, medium 8vo, profusely illustrated with Photogravures, Topographical Views, &c., 16s.; and the *Student's Edition*, with a Photogravure Plate and Four Full-Page Illustrations. Crown 8vo, 2s. 6d. net.

Times.—"A marvel of research. . . . Never before has learning been brought to bear upon Shakespeare's biography with anything like the same force."

QUEEN VICTORIA: A Biography. By SIDNEY LEE, Editor of the "Dictionary of National Biography." New, Revised, and Cheaper Edition. With Portraits, Map, and Facsimile Letter. Large crown 8vo, 6s.

Also the *Fourth Impression (Second Edition)* of the Original Edition. With Portraits, Maps, and Facsimile Letter. Large crown 8vo, 10s. 6d.

Quarterly Review.—"Mr. Sidney Lee has performed, with marked success, a work which required, in no common measure, a combination of assiduous labour, skilful arrangement, and unflinching tact. . . . Our interest is sustained from the first page to the last."

THE INDIAN EMPIRE: its People, History, and Products. By Sir W. W. HUNTER, K.C.S.I., C.I.E., LL.D. Third and Standard Edition. With Map. Demy 8vo, 28s.

SHAKESPEARE COMMENTARIES. By Dr. G. G. GERVINUS, Professor at Heidelberg. Translated under the Author's superintendence by F. E. BUNNETT. With a Preface by F. J. FURNIVALL. Sixth Edition. 8vo, 14s.

THE HISTORICAL SERIES FOR BIBLE STUDENTS.

Edited by Profs. CHARLES FOSTER KENT and FRANK KNIGHT SANDERS.

Volumes I. and II.—**HISTORY OF THE HEBREW PEOPLE.** By Prof. CHARLES FOSTER KENT. With Maps and Charts. Seventh Edition. Crown 8vo, 6s. each.

Volume III.—**HISTORY OF THE JEWISH PEOPLE.** The Babylonian, Persian, and Greek Periods. By Prof. CHARLES FOSTER KENT. With Maps. Crown 8vo, 6s.

Volume IV.—**HISTORY OF THE JEWISH PEOPLE.** The Maccabean and Roman Periods. By Prof. J. S. RIGGS, D.D. Crown 8vo, 6s.

Volume V.—**THE LIFE OF JESUS OF NAZARETH.** By Prof. RUSH REES. Crown 8vo, 6s.

BOYS AND THEIR MANAGEMENT IN SCHOOL.

By H. BOMPAS SMITH, M.A.,

Headmaster of Queen Mary's School, Walsall; formerly Assistant Master at Shrewsbury.

"An admirable book of advice to young schoolmasters. . . . Since Mr. Arthur Sidgwick's papers on 'Stimulus' and 'Form Discipline' there has been nothing better of this particular kind."

MANCHESTER GUARDIAN.

LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.

not the drivers. "Men of business or busybodies," was one suggestion; "players or puppets" might serve. *Pour comprendre*, "to mark and learn, and are never tired of learning." The addition is almost necessary to make the sense clear. *Témoin curieux*, "interested on-looker." *Curieux*, as M. Arnold pointed out in "Essays in Criticism," bears in French no shade of disparagement. *Il devait savoir se dédoubler*: "He must have known how to play two parts in one," or, "He must have been able to live a double life." *A qui du reste*: "to whom in other respects he has been justly compared." The tense was commonly missed. *Reste extérieur*: "In all his personal narrative is only an outsider; Commynes is inside, at [not "in"] the very heart of events." *Il les fait*: "He is their author." *Un manque*: "a remarkable absence of imagination." Even then it seems strange to assign this as a virtue in an historian, but, if we translate "lack," it sounds stranger. What Faguet means is that Commynes indulges in no flights of fancy.

A Prize of One Guinea is offered for the best translation in verse, and one of Half a Guinea for the best prose translation, of the following passage from Claudian:—

Ipsa Roma die, nec adhuc ostenditur auctor,
Personuit venisse ducem laetisque Quirites
Vocibus auspiciū certi plausere triumphī,
Muniti Stilichone suo. Quis gaudia vero
Principis amplexus alacres, quis disserat aulae?
Pulveris ambiguum nubem speculamur ab altis
Turribus incerti, socios apportet an hostes
Ille globus: mentem suspensa silentia librant.
Donec pulvereo sub turbine sideris instar
Emicuit Stilichonis apex et cognita fulsit
Canities. Gavisia repens per moenia clamor
Tollitur, "Ipse venit!" Portas secunda per omnes
Turba salutatis effunditur obvia signis.
Non iam dilectus miseri, nec, falce per agros
Deposita, iaculum vibrans ignobile messor;
Nec temptat clipeum proiectis sumere rastris,
Bellona ridente Ceres humilisque novorum
Seditio clamosa ducum: sed vera iuventus,
Verus ductor adest, et vivida Martis imago.

Similar Prizes are offered for the best verse and prose translations of the following lyric of Gruppe:—

Es weicht die Nacht und überm Hügel
Glimmt roter Schein am Himmelssaum,
Noch birgt der Vogel unterm Flügel
Sein traumend Haupt im weichen Flaum.

Nur leise schallen helle Stimmen,
Die bald verhallen überm See,
Im Kloster seh' ich Kerzen glimmen,
Und Nonnen gehn durch zarten Schnee.

Ein stiller Zug von wenig Schwestern:
Es stirbt das Nonnenkloster aus;
Davon verschied die jüngste gestern,
Man senkt sie in des Grabes Haus.

Darauf ein still Gebet der Frauen,
Doch keine heisse Träne rinnt,
Kein Schluchzen tönt und ist zu schauen
Kein trostberaubter Mann, kein Kind.

Es fallen leichte Flocken nieder,
Und nichts ist von dem Grab zu sehn,
Und weit und breit ist Stille wieder,
Und Tag wird's als ob nichts geschehn.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by February 16. addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected.

Professor Meiklejohn's Series.

THE VERY LATEST INFORMATION IN GEOGRAPHY IS TO BE OBTAINED

FROM

THE GEOGRAPHICAL COMPANION. 8d. net.

Arranged by M. J. C. MEIKLEJOHN, B.A. (Oxon.), F.R.G.S.

This little book furnishes a complete digest of the most recent geographical information and territorial change, and can be used to supplement any educational manual on Geography.

Quite New.

Clear Type.

MEIKLEJOHN'S POETRY BOOKS.

A NEW SELECTION.

Book I.—49 POEMS. 40 pp. 2d.	Book III.—63 POEMS. 64 pp. 3d.
Book II.—53 POEMS. 64 pp. 3d.	Book IV.—65 POEMS. 72 pp. 4d.

THESE BOOKS MAY ALSO BE HAD IN CLOTH AT 1d. EXTRA.

OPINIONS OF THE PRESS.

"These small books are attractive in form, and that is half the battle with small children. They are also well graduated in difficulty. The selection shows taste and judgment."—*The Journal of Education*.

"The children will read them through and through of their own accord."—*The Educational Times*.

"The selections are in every way suitable for children, and inasmuch as they open up a new ground they ought to be very acceptable."—*The Practical Teacher*.

"Four neat little books for use in class, printed in beautifully large, clear type. The selection of poems is singularly fresh and good."—*The School Guardian*.

"The selection shows care and taste, whilst its great variety affords teachers an abundant choice."—*The Teachers' Monthly*.

A complete Catalogue will be sent on application.

London: MEIKLEJOHN & HOLDEN, 11 Paternoster Square, E.C.

MR. EDWARD ARNOLD'S LIST.

LINGUA MATERNA.

By R. WILSON, B.A., Author of "A First Course in English Analysis and Grammar," &c. Crown 8vo, 3s. 6d. Intended for teachers who wish to keep themselves abreast of what has been aptly called "The New English Movement."

GUARDIAN.—"LINGUA MATERNA is among the ablest, most thoughtful, and dignified works on the theory and practice of teaching English that we have yet seen; and no English master who wishes to improve his methods, to economise time, to arouse interest, and to make his lessons more perfect as a means of culture, should fail to 'read, mark, learn, and inwardly digest' it during the coming term."

ARNOLD'S ENGLISH TEXTS.

With a view to meeting the requirements of Teachers who, with an Examination in prospect, prefer to place a plain text in the hands of their pupils, Mr. EDWARD ARNOLD has now in preparation a series of texts of English Classics to which nothing has been added but a small Glossary of Archaic or Unusual Words. The first three Volumes, from Arnold's School Shakespeare, will be issued at once. In paper covers, 6d. each; or cloth, 8d. I. *Macbeth*. II. *Henry V.* III. *The Tempest*.

THE ARNOLD PROSE BOOKS.

A New Series of Representative Selections from leading Prose Writers, each book confined to one author. A few explanatory footnotes have been added. 24 books, each 48 pages. Paper ad.; cloth, 4d.

THE LAUREATE POETRY BOOKS.

An entirely New Series of Selections from the best Poetry, in 34 books. Each book 48 pages. Paper ad.; cloth, 4d.

ARNOLD'S FRENCH TEXTS.

General Editor, M. A. GEROTHOHL, B.Litt., L. és L., F.R.S.L., Examiner to the Central Welsh Board and to the Oxford and Cambridge Joint Board. 48 pages. Limp cloth, price 6d. each.

Le Forçat; ou à tout Pénché Miséricorde. Proverb in Two Acts. By Madame de Sévigné.

Aventures de Tom Pouce. By P. J. STAHL.

Histoire de la Mère Michel et de son Chat. By Comte E. de LA BÉOLLIÈRE.

Gribouille. By GEORGES SAND.

Laurette; ou Le Cachet Rouge. By ALFRED DE VIGNY.

La Souris blanche et Les petits Souliers. By HÉGÉSIPPE MOREAU.

La Vie de Polichinelle et ses nombreuses Aventures. By OCTAVE FEUILLET.

Le Bon Père. Comedy in One Act. By FLORIAN.

Crispin Rival de son Maître. Comedy in One Act. By LE SAGE.

Monsieur Tringlé. By CHAMFFLEURY.

Aventures du Chevalier de Grammont. By Chevalier d'HAMILTON.

Histoire d'un Pointeur écossais. By ALEXANDER DUMAS père. 48 pages.

Deux Héroïnes de la Révolution. Madame Roland and Charlotte Corday. By JULES MICHELET.

Trafalgar. By JOSEPH MÉRY.

Marie Antoinette. By EDMOND and JULES DE GONCOURT.

Mercadet. Comedy in Three Acts. By H. DE BALZAC.

ARNOLD'S LATIN TEXTS.

General Editor, A. EVAN BERNAYS, M.A., Assistant Master at the City of London School. The object of the series is to supply short texts, adapted for lower forms, sufficient to provide one term's work. Each volume consists of a short introduction, text, and vocabulary. 64 pages. Cloth limp, 8d. each.

HORACE.—Odes. Book I. By L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School.

• OVID.—Selections. By GEORGE YELD, M.A., Assistant Master at St. Peter's School, York.

OVID IN EXILE.—Selections from the "Tristia." By L. D. WAINWRIGHT, M.A.

CORNELIUS NEPOS.—Select Lives. By L. D. WAINWRIGHT, M.A.

VERGIL.—Select Eclogues. By J. C. STOBART, M.A., Assistant Master at Merchant Taylors' School.

VERGIL.—Selections from the Georgics. By J. C. STOBART, M.A.

PHÆDRUS.—Select Fables. By Mrs. BROCK, formerly Assistant Mistress at the Ladies' College, Cheltenham.

TIBULLUS.—Selections. By F. J. DOBSON, B.A., Lecturer at Birmingham University.

CÆSAR IN BRITAIN. By F. J. DOBSON, B.A.

CICERO.—In Catilinam, I. and II. By L. D. WAINWRIGHT, M.A.

CICERO.—Pro Archia. By Mrs. BROCK.

LIVY.—Selections. By R. M. HENRY, M.A., Classical Master at the Royal Academical Institution, Belfast.

CATALOGUES ON APPLICATION.

London: EDWARD ARNOLD, 41 & 43 Maddox Street, W.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

THE Annual General Meeting of the Association of Head Masters was opened on Thursday, January 11, at the Council Chamber of the Guildhall. About a hundred head masters were present. The LORD MAYOR attended and took the chair, and on behalf of the Corporation of the City of London welcomed the members of the Association.

On the motion of the Rev. J. WENT (Leicester), the retiring President, seconded by Mr. J. EASTERBROOK (Owen's School, Islington), the new President, a vote of thanks was accorded to the Lord Mayor, who then left the Council Chamber.

The President's Inaugural Address.

Mr. EASTERBROOK, after expressing his thanks for the honour done him, said the Association had been in existence for more than sixteen years. It was established to bring together all head masters of schools, under public or corporate control, concerned with secondary education, and it is a feature of the Association that such head masters have a right to be members of it. It numbers between five and six hundred members, and, although it is difficult to state with perfect accuracy the number of public secondary schools, or grammar schools, as they are still more generally named by the public—schools which come between the elementary schools and the University—the lists show that there are about seven hundred in England. They might therefore say that they were fully representative of boys' secondary education in this country.

The Association came into existence when little interest was taken in secondary education by the great mass of the public. Matthew Arnold had been preaching in the wilderness, but practically nothing had been done to organize secondary education, and head masters throughout the country, with the exception of a limited number who were invited from time to time to take part in the Head Masters' Conference, were so many isolated units. When the Head Masters' Conference, founded by Thring, Harper, and a few others in 1869, first began to hold its meetings, the time was not ripe for the formation of any Association on a more popular basis, or, he had no doubt, it would have been done by such liberal-minded men. All this had been altered. They claimed that this Association had been a great factor in making the general public take an interest in secondary education and in bringing together those responsible for it—not only its own members, but also representatives of other educational interests—in helping to break down the barriers which separated school from school, and in infusing a spirit of public helpfulness among head masters and educational bodies alike.

State Organization.

When the Association came into existence the only relation of secondary schools with any State Department was through the Charity or Endowed Schools Commission, which framed the schemes for the reconstitution of the old grammar schools, and then left them to their own resources or want of resources. There was also the connexion with the old Science and Art Department, which encouraged the teaching of science by paying so much per head for passes in certain subjects. Then came the Local Taxation (Customs and Excise) Act of 1890, which led to the formation of Technical Education Boards and to a great improvement in the buildings and plant of secondary schools, especially on their science sides, all over the country. The development in London during the next few years, under the able and broad-minded management of Dr. Garnett, was very great, and there was hardly a school in the Metropolis which did not profit by the change. The difficulties connected with the administration of this Act kept the Council of the Association very busy for some years. They then carried on a long continued agitation for a comprehensive Bill dealing with secondary education. There were conferences at Oxford and Cambridge, and the Royal Commission of 1894. At last came the Government Bill in 1899 for the formation of a Central Authority, and, finally, the Education Bill of 1902. The period of organized science schools had given place to one in which the Board of Education takes a broader and more comprehensive view of secondary education and its needs. Nothing but praise was due for the developments which had taken place in this direction under the late administration. The four years' course as now established and improved in the most recent regulations is a distinct advance on anything which has gone before. The full effects of the regulations will be seen as time goes on; but, if those regulations are administered in the proper spirit, if sufficient liberty is given to the schools to frame their courses according to their circumstances and the needs of their localities, much good will come of it. He hoped that the new Government would carry on the work in the same spirit, and he would strongly urge upon the Authorities to add a fifth year's course to the secondary-school scheme at the earliest opportunity, and to materially increase the Treasury grant.

Local Authorities.

To turn now to the administration of the Act of 1902 by the Local Authorities. Whilst recognizing that much had been done and that progress had been made, they were obliged to state that the Act has not as yet done so much as was hoped for the proper organization of higher education. Local Authorities have been so occupied with elementary education that they had hardly touched the question. In some counties, indeed, when they had considered it, it had only been to decide that they have no funds to set apart for any work beyond the elementary. In other cases secondary schools of an inferior type—secondary in name, but higher elementary in character—had been set up. This policy was not in the true interests of secondary education as they understand it.

London.

The working of the Act in London is being watched with peculiar interest. It will be remembered that the Metropolis was omitted from the Act of 1902, and a scheme was afterwards drawn up by which the County Council here also become the Local Education Authority. But the Committee for all branches of education for this enormous population has only the status of an ordinary sub-committee of the Council, and it contains no direct representatives of professional experience. It remains to be seen whether a Committee so constituted and with such powers can effectively control the education, in all its branches, of such an area, with so many millions of population.

Pupil-Teachers.

The Association has cordially approved of the policy of the Board of Education in requiring that a part of the education of those who intend to be teachers in the elementary schools should be obtained in secondary schools. The scheme is not without its difficulties for us, and there is, especially, the problem of dealing with them in any effective way as half-timers. His own opinion was that neither half-days, alternate weeks, nor alternate terms would be found so satisfactory as complete school-year periods in the secondary school. The pity of it was that they got such poor material for these pupil-teacher scholarships. There was a time when the head master of an elementary school could easily induce his most promising pupil to take up the career of a teacher; but now the case is quite otherwise. Also, the candidates who come forward from their own schools are far from being among their best pupils. It was difficult to see why this was so; for the prospects of elementary-school masters are distinctly better than those in many careers which appear at the present time to be more popular with both parents and boys, who are given too much to looking at the immediate pecuniary advantage only.

Supply of Masters.

He came next to the supply of masters for secondary schools. There is the deplorable fact, adduced by scholastic agencies, Local Authorities, and head masters, that the best men from the Universities are not entering the profession of teaching in sufficient numbers, and the numbers appear to be dwindling year by year. Brilliant men are attracted elsewhere. Several reasons were given for this, one being the vexed question of tenure, which they, in conjunction with the Assistant Masters' Association, had done their best to settle in a manner satisfactory to all interests. But he could not admit that this is the main cause of the decrease in the number of candidates for masterships. The main cause is that the prospects are not sufficiently promising to attract good men. Salaries have improved considerably of late years, and the minimum salary in most schools has been raised, but there is pressing need of still further improvement at the top. The salaries for assistant masters in most schools tend to become stationary far too soon. The great majority of masters nowadays do not take Orders; so they cannot hope for preferment in the Church in their later years, and very few have the chance of being put in charge of boarding-houses. All cannot become head masters, and there are not a few cases of men who have become head masters who affirm that they are not so well off as they were when they were assistant masters. What is wanted is that an efficient assistant master may see a career before him with a sufficient competency in his later years, even although he may never become a head master. He did not despair of the future. A well considered pension scheme, State or otherwise aided, would work wonders.

Training.

If the position and prospects of the assistant master are put on a more satisfactory basis, the public may fairly demand that the master should know his business, that he should not begin his work in complete ignorance of any of the principles of teaching, nor conduct experiments and gain his experience at the expense of his class. The commencing salary, as he said before, in many schools is higher than it used to be, but men begin to teach just as ignorant of the business as they ever did. This ought not to be. There must be a period of training, or at least of probation under supervision. He hoped that very few of them were now bold enough to say that all training is unnecessary. The born teacher, if well educated and clever, may not learn much from training, especially if his first work is with a high or

with the highest form. Even he, if he were put with the youngest boys, might begin to realize that he had much to learn. The man quite unsuited for teaching will gain nothing from training, and the sooner he finds it out the better for all parties. But it is the great intermediate class of average men who commence with a liking for teaching, or at least a leaning towards it, for whom training will do much; but how is this to be brought about? Evidently men cannot be induced to give up time and money to training for a profession which they believe does not offer good prospects of a successful career. Improve the prospects, make the profession attractive, and the rest will follow.

Curricula.

The curriculum, as well as the methods of teaching, in secondary schools had been subjected to much criticism of late. The great danger in the modern secondary school—from which the more purely classical schools are free—is that we try to teach too many subjects at one time, and the boy leaves school not knowing any one subject well. As time goes on and the sum of human knowledge has increased, new subjects have been added to the school curriculum, and not one has been omitted that he had ever heard of except, perhaps, "the use of the globes." And every subject has its partisans who consider it more important than any other subject. In fact the overloading of the timetable has been going on to an increasing degree for years. The whole system is in a state of acute congestion, and the only cure is an immediate simplification. No real progress is made in any subject until a certain degree of mastery is obtained, but, under the present conditions, it is impossible for the average boy to master any subject. The stimulus of enjoyment is therefore sacrificed and a boy's whole time is spent on elements. Mr. Wells (not their member) speaks of the "dullness of the scholastic atmosphere," and he admitted there was room for improvement. One cure is in a simplification of the time-table. A boy must not have to turn his mind to so many different subjects in any one week. He did not say that any boy should leave school totally ignorant of many of the subjects we now teach. But more might be done than is done at present in making a selection. The whole of the subjects which we consider go to make up a good general education may be divided into about five sections according to the faculties exercised, and, roughly, if we take the whole period of school life into account, an equal time would probably be given to each. But in any one year the time given to one or more subjects might predominate over that given to the others: and when we have to add a subject—such as manual work—we might drop another which is allied to it. At present, they generally had too many irons in the fire at one time.

Staffing.

Another desideratum in most schools is a larger staff. If it were possible to draw a proper comparison between the staff of any secondary school and that of a successful business house, or of a Government office, it would be found that there are very few secondary schools in the country which are not much under-staffed.

School Fees.

All this would make secondary education more expensive than it is at present. They required more masters, better trained masters, and better paid masters. He had said nothing of the antiquated state of the buildings of many of the old grammar schools. The income of most schools is from three or four sources—endowments, fees, and grants from the Local or Central Authority or from both. Endowments are either stationary or dwindling. Parents have been taught to expect secondary education for a small fee, and it is doubtful whether it would be advisable to raise the fees to any extent in many localities, although the great development of the scholarship system throughout the country has put it in the power of promising boys to obtain an advanced education at very small expense to their parents. There are very few instances in which a brilliant boy need be debarred from a good education because of the cost of it. He believed that the scholarship system, properly organized and carried out, was one of the best investments the country has made of late years. The raising of fees, therefore, would not be such a hardship as it would have been before the scholarship system was so universal.

Treasury Grants.

There remain the grants. The majority of Local Authorities are either unable or unwilling to increase them to any extent.

Sir W. Hart Dyke well said, a few days ago, that he lamented the indifference which the legislature manifested towards education. He was not throwing stones at any particular party; but he had observed during a long Parliamentary experience that the few hours devoted to the Education Estimates were almost grudged by the members. They heard a good deal about the Army, Navy, and reserve forces, and an enormous amount of time was occupied in considering matters relating thereto; but in his opinion the defensive force of education was quite as important, and should therefore receive more attention. France and Germany and the United States were always marshalling their commercial battalions to the detriment of the industries in this

country, and it was quite as necessary for England to protect her commerce and trade by educating the people as it was to maintain the Army and Navy to defend our shores. Whereas money was lavished upon the other services, it was merely dribbled out for education. He hoped that the turn for secondary education had come, and that, by the aid of an increased Treasury grant, it will be put within the reach of all throughout the country who are fit to receive it.

Regulations for Secondary Schools.

Dr. McCLURE (Mill Hill) moved the following resolution :—

"That the current regulations of the Board of Education for secondary schools are tending to undue restriction of the 'freedom, variety, and elasticity which are desirable in the case of public secondary schools."

He said that they all appreciated the difficulties of the task which the Board had set itself, and sympathized with its endeavour to evolve order out of chaos. It was in no spirit of carping criticism that they raised a protest against a cause which was fraught with danger to those schools that were doing the best work. Their clear duty was to inform the Board courteously, but frankly, how matters stood. There were many schools up and down the country whose only chance of survival was to put themselves under the dominion of the Board, and these found that it was a process of levelling down rather than of levelling up. He hoped that masters who felt the pinch more than he would give their experience.

Mr. TELFORD VARLEY (Winchester) seconded the resolution, which was carried, and then proposed :

"That the policy of minute regulation of details of school work pursued by the Board of Education constitutes a grave danger to secondary schools."

A year's experience of the Board's regulations had raised in him a feeling of alarm, if not of resentment. The control exercised by the Board was of the kind that hampers, not that strengthens. The Board was embarrassed by its antecedents. It inherited the cast-iron system of the Science and Art Department, and had to adapt this both to schools of the higher elementary type and to schools under schemes which gave their direction to their head masters. The Board had to choose between machinery and the men who controlled the machinery, and so far they had chosen wrong. The regulations were vitiated by the fundamental defect that they did not look on the curriculum as a whole. They imposed an arbitrary period of four years. There was a multitude of forms to be filled up—a whole fortnight's work, as a head master complained in *The Journal of Education*. They treated the head master as a child in leading strings, at best as a *director studiorum*. The suggestions on method and scope of teaching were excellent in their way, but Inspectors would look for the adoption of the course they recommended, and they would tend to crystallize and repeat the baneful influence of Codes in primary schools. He suggested a conference to discuss the whole matter. The gods of the Head Masters' Conference might come down to them in the likeness of men and representatives of the Board in the likeness of gods.

Mr. R. W. HINTON (West Hampstead) seconded.

Mr. KINMAN (Hertford) said he should have liked to see "methods" substituted for "regulations." For the last year he had been governed by the irresponsible Memorandum. That it contained merely suggestions was a fiction. His teaching of English had been criticized as "bad," and an Inspector had given a demonstration lesson according to the new method. If that was a fair sample, he hoped that the old, bad teaching might continue.

The resolution was carried.

Mr. W. K. CARTER (Watford) moved :

"That the Board of Education be urged to amend the regulations for secondary schools so as to permit schools taking special courses throughout (a) to have a first and second year course common to all boys; (b) to admit both a science and a literary course in the third and fourth year."

At present no liberty of action was allowed for boys over thirteen to over seventeen. The reply of the Board : "If you do not care to work under one set of regulations, choose the other," was nugatory, for it entailed a loss of half the grant. These schools had been called into existence by the Government and municipal bodies on the strength of the grant offered, and spent large sums on buildings and plant. Now the policy was changed, and schools were pressed to alter their curriculum to suit the needs of the neighbourhood. The old distinction between A and B courses should be swept away, and all grants made on the A scale.

Mr. HITCHCOCK (Southend) seconded. Bifurcation at the age of thirteen as enforced by the Board was absolutely wrong in principle. The Board would not relax their hard and fast rule. His time-table, submitted last September, had not yet been accepted.

The resolution by an amendment was referred to the Council.

Mr. W. H. BARBER (Leeds) moved :

"That in the award of grants special consideration should be given to the case of schools formerly called 'A schools,' of which the efficiency is threatened by the reduction of payments."

The matter had been fully dealt with in the report of the special committee to which he had acted as secretary. The difficulty at bottom was one of finance, and would be solved by more liberal grants. Admission to the special course should be decided by attainments, not by age. What they desired was a five years' course, beginning at twelve.

The Rev. C. J. SMITH (Hammersmith) seconded. The present regulations acted most unjustly, and he believed that the Local Authority under which he was working were spoiling for a fight.

The resolution was carried.

The Rev. A. E. SHAW (Thame) moved :

"That discretionary power should be given to schools to enter pupils for external examinations in the first and second years of the course."

The matter was of importance for smaller grammar schools like his own, where many of the pupils left early, and parents desired for them some certificate.

Mr. MILLER second the resolution, which was carried by 51 votes to 46.

Before the resolutions were put, the Chairman invited a general discussion.

Mr. E. YOUNG (Lower School, Harrow) took exception to the second as a too-sweeping condemnation of the action of the Board. Crystallization was not always a bad thing : if you crystallized carbon, the product was diamonds. Prof. Sadler, in *The Journal of Education*, had urged that all education should be regarded from a national point of view, and that there should be a common curriculum up to the age of fifteen. He preferred the regulations of a Central Board to the irresponsible idiosyncrasies of ever-changing Inspectors.

Mr. R. E. STEEL (Northampton) said he had found H. M. Inspectors most reasonable men, and willing to act as a buffer between him and the Board when a disagreement arose on the authorized curriculum.

Mr. C. W. KAYE (Bedford Modern School) said his experience differed from that of Mr. Steel. Did the Board of Education listen to their views? He had been told by a high official of the Board that circumstances might arise in which the head master should be the last person to know what was going on. No one ever took the school of science for its own sake ; it was always for the sake of the money. He warned them that such schools might prove a Frankenstein, a monstrous prelude to minute regulations as to how and what to teach. Under the head Geography syllabus he found "deep sea products." His acquaintance with that subject had not gone further than guessing what would be the best product of the Board of Education.

A motion (not on the Agenda) was then moved by Mr. J. WENT, seconded by Canon SWALLOW, and carried :

"That, with the purpose of diminishing the present excessive requirements made during the school year by the Board of Education and by Local Authorities for statistics to be furnished by secondary schools, the Association should endeavour to obtain an effective unification of such requirements."

The first question discussed at the afternoon session was :

Treasury Grant for Secondary Schools.

Mr. T. VARLEY moved :—

"That, in the opinion of this Association, State aid is required to maintain and develop the efficiency of secondary schools already existing in areas in which rate aid is being proved to be insufficient."

He said that secondary schools were suffering from insufficient financial support, and, as reliance upon the rates in many districts had broken down, the question should be dealt with as a national one. Up to the passing of the 1902 Act Hants had devoted the whole of the whisky money to secondary education, but since then more than a third of this (£3,500 out of £9,000) had gone to training—i.e., the instruction of pupil-teachers. Secondary schools were even worse off than before the Act.

Mr. L. H. BAY (Peterborough) seconded the resolution.

The Rev. E. F. M. MACCARTHY (Birmingham) supported the resolution on national grounds. The Act of 1902 was full of defects. It gave the Local Authority very little power, no definite duties, and no money in respect of secondary education. It drew a most arbitrary line between primary and secondary schools. Throughout the country the burden of rates was killing education.

Canon BELL said that the expense connected with the training of teachers constituted a serious bar to the supply of masters. Unless serious efforts were made, not only on the part of schoolmasters and Local Authorities, but also on the part of the Central Authority, to get rid of the difficulties surrounding the question, the Registration Act would become entirely abortive in a short space of time. In the result the motion was withdrawn ; and the following resolution, moved by Mr. P. WOOD (Darlington), and seconded by Mr. REITH (Halifax), was agreed to :—"That, in the opinion of this Association, additional State aid is required to maintain and develop the efficiency of already existing secondary schools." It was decided to forward the foregoing adopted resolutions to the Board of Education, at the same time ex-

pressing the view that the Association, in sending them, gratefully recognized the desire of the Board to co-operate with head masters in improving and extending secondary education.

Federation.

Canon BELL moved that

"This Association approves of the proposal to form a Federal Council of representatives of the chief bodies of Secondary Teachers."

He explained how the proposal for a Federal College had fallen through, by reason of the unwillingness of the College of Preceptors to jeopardize their present position. The Jebb Council had proved abortive because it was constituted simply as a discussive society. The proposed Council would be invested with executive powers, but a unanimous vote would be necessary before their powers could be exercised.

The Rev. C. J. SMITH seconded.

Mr. MADELEY inquired whether the scheme when drafted would be submitted to a general annual meeting or only to the Council.

The CHAIRMAN said the proposal was to bring it before a general meeting, but not necessarily the annual meeting.

Mr. GILSON, though he represented a small minority, felt bound to express his dissent from the scheme as a whole.

Canon SWALLOW said that there was a divergence of opinion not only on the Executive Committee, but even among the officers of the Association.

Mr. MADELEY proposed, and Mr. REITH seconded: "that the proposals be laid before the next annual general meeting."

This was carried by 43 votes to 33.

Military Training in Schools.

In the absence of Dr. Gray, Canon SWALLOW read a letter from Dr. Warre, requesting the Association to furnish him with statistics of the number of schools belonging to the I.A.H.M., and the number of pupils in them. His object was to ascertain the annual output of youths who had passed through a secondary school, with a view to remedying the present deficiency of officers in the Army, which at present amounted to nearly four thousand.

It was agreed that the matter be referred to the Military Training Committee, with the request that they would procure for Dr. Warre the statistics.

Classical Education.

On the motion of Canon SWALLOW, seconded by Mr. C. B. GUTTERIDGE (Purley), the following resolution was agreed to:—

"That this Association welcomes the efforts of the Classical Association of England and Wales towards maintaining classical education in secondary schools and improving its methods."

Mathematical Teaching.

Mr. MACCARTHY held that any instruction in deductive reasoning must be preceded by a period of direct experiment with geometrical facts. Familiarity with these facts would be best given in connexion with drawing, but a practical difficulty that he had encountered was that art masters were ignorant of, or did not know how to apply, mathematics.

Mr. WOOD urged the desirability of formulating the recognized order of sequence, if Euclid was abandoned. As things stood it was impossible for an examiner to check the validity of the proof offered.

Canon SWALLOW moved:

"That this Association, desiring to unify the examinations for admission to the Universities of Oxford and Cambridge, approves the action of the Council in appointing a Special Committee, and instructs it to promote a conference between representatives of the Master of Selwyn's Committee and of the Oxford and Cambridge Schools Examination Board, the Delegacy and Syndicate for Local Examinations, the Head Masters' Conference, and the Incorporated Association of Head Masters to consider the matter."

He hoped that the Association would not follow the lead of the Head Masters' Conference and shelve the matter. The Assistant Masters, with the promptitude of youth and something of its rashness, had passed a resolution in favour of a unified matriculation examination, but he thought that a preliminary conference was needed. There were many vested interests involved which must be reconciled. The University Boards named in the resolution were great business concerns, and they would lose money. Then there were resident Fellows, part of whose salaries came from examination fees, and who would suffer principally from the change. Lastly the poll coaches would have to be reckoned with, for when the general standard of efficiency in schools was raised, as it would be by such a measure, their occupation would be gone. He thought he had made out a clear case for a conference.

Mr. RUTTY seconded.

Mr. REITH asked whether recent changes had been taken into account. Since December, 1904, the Oxford and Cambridge Senior Locals and the London Matriculation had been recognized as of equivalent value for all three Universities. It seemed to him that the only way to improve on this was by a reduction of standard.

The resolution was then put, and carried with two dissentients.

FRIDAY MORNING SESSION.

Before the meeting a short service was held in the Church of St. Lawrence Jewry, when a sermon, prepared by the Rev. the Hon. E. Lyttelton, was read by Canon BELL, who announced that Mr. Lyttelton was absent through indisposition. About thirty head masters attended.

The PRESIDENT, on taking the chair, desired to contradict an account of the first day's conference that had appeared in a morning paper. It was false to say that the action of the Board of Education had been "generally condemned."

The War Office and School Inspectors.

Dr. FLECKER (Cheltenham) moved the following resolutions:—

"(a) That this Association regrets the steps taken by the War Office to insist on the inspection of schools of which pupils intend to compete for entrance to Woolwich and Sandhurst; and particularly deprecates the publication of an official list of schools which submit to such inspection. (b) That this Association reaffirms its conviction that a system of school certificates should be established by University authorities acting under a board of control, and its regret that there is as yet no adequate decrease in the number of examinations for entrance into professions."

When the new system of examinations was set up by the Memorandum of the War Office, October, 1904, they had all thought that inspection meant merely that the status of the school would be certified by the Universities. The case of Bradfield had shown them how much they were mistaken. Some head masters would not have inspection at any price, but the majority desired an inspection devised and sanctioned by the State, and entailing no expense to the schools. Where did the War Office come in? The General Medical Council had just as good a claim. Under pressure from the Head Masters' Conference the War Office had allowed a quinquennial inspection. This lessened, but did not remove, his objection. The list of "approved" schools was an arbitrary and ill advised action. It would be used for advertisement purposes. Rugby would not be found on the list. The delay of the Board in the matter of school certificates was most regrettable.

Mr. R. C. GILSON seconded. He had no belief in inspection. Examination was an art that had been practised for generations. Inspection was a novelty, as shown by the crude way in which inspectors interpreted their duties.

The PRESIDENT explained that all the War Office had done was to approve certain inspecting bodies, viz., the Board of Education, the Oxford and Cambridge Joint Board, the Cambridge Syndicate, and the Oxford Delegacy.

Canon SWALLOW read a letter from Dr. Fry, who had been detained at Argentières. Dr. Fry, who represented the Association on the Army Advisory Education Committee, urged that a resolution should be passed welcoming the quinquennial examination and the right of inspected schools to be allowed the qualifying certificate at schools. The aim was to secure that intending officers should have received a liberal education in an efficient school, and in no other way could the object be attained. He approved also the authorized list of schools. To this part of the letter Canon Swallow took exception.

The Rev. R. S. DE C. LAFFAN hoped that the first resolution would not be passed. It would be tantamount to asking the War Office to make no difference between inspected and non-inspected schools. No competitive examination could ever be invented that would differentiate the crammed and the properly taught boy, but this could be done by inspection.

The Rev. D. EPPSTEIN (Reading) said that Dr. Flecker had not been left a leg to stand on. He himself had been inspected both by the Board of Education and by the Joint Board, and he had found both sets of Inspectors sympathetic, suggestive, and helpful.

Dr. FLECKER stated that the War Office would not accept the inspection of the Board of Education, and, when this was denied, gave his authority in confidence to the President.

The first resolution was then put and rejected; the second resolution was carried.

Mr. MACCARTHY then moved and carried a rider that the Secretary of State for War should be approached with a view of receiving a deputation to lay before him the views of the Association.

Education of Pupil-Teachers.

Mr. BOMPAS SMITH (Walsall) submitted the following motion:—

"That, to secure the continuity of the education of boys intended for pupil-teachers, it is the opinion of the Association that the existing half-time system should be modified so as to provide that every pupil-teacher attends, for at least two years, as a full-timer at the school to which he will subsequently be attached as a half-timer."

He laid down as axiomatic that pupil-teachers must submit to all school conditions and must not be taught in separate classes. The prevailing conditions under which pupil-teachers were required to divide their time and energy between learning and teaching were disastrous, and no full solution of the problem had yet been found. The Director of Educa-

tion at Walsall had kindly furnished him with statistics of the practice in 42 counties and 26 county boroughs :

Attend P.-T. centre in morning and school in afternoon	2 counties, 4 county boroughs,
Alternate days	13 " 6 " "
Alternate half-weeks	4 " — " "
Alternate terms	11 " 7 " "

A much superior plan was to teach in elementary schools from August to December in the first year, then two terms in a secondary school, and in the second year two terms in the secondary school, followed by teaching. Thus the pupil-teachers got four consecutive terms of secondary education. Another plan adopted in three centres was for pupil-teachers to attend the elementary school in the holidays and to drop the beginning or end of the term. They were thus enabled to put in the statutory number of attendances and to have two consecutive years in a secondary school with slight breaks. Only 14 counties and 10 county boroughs imposed two years of a secondary school before entering on pupil-teachery; but, if pupil-teachers began as half-timers at sixteen, the system must prove a failure.

Mr. A. W. REITH (Halifax) seconded, and proposed that the following addition should be made to the resolution:—"And that in the employment of the secondary school time of actual pupil-teachers considerable latitude should be allowed." This was agreed to.

The Rev. C. BIRD (Rochester) explained the system of the Kent County Council. 170 junior scholarships were awarded annually, tenable at secondary schools, for boys between eleven and twelve. They were renewable, on the report of the head master, for four or five years. At the end of the second year scholars were asked whether they intended to run for pupil-teachers. Scholars who did received an extra grant of £4 for the first, and £6. 10s. for the second, year. At the age of sixteen the scholar would be attached to an elementary school near to his secondary school, and attend it for a term; but on Saturday mornings he would continue to receive instruction in the secondary school. Then he would return to the secondary school for four terms; but, to make up the statutory hundred half-days, he would be absent for a half-day each week. His last term would be on the same lines as the first of his apprenticeship. The scheme absorbed £15,000 of the £20,000 received as whisky money.

Mr. H. HOBHOUSE thought that they all recognized that the whole of the question was in a very inchoate condition, and that those who administered education ought to attempt any reasonable experiment. Those who had to do with secondary and elementary education recognized the difficulties of the half-time system.

Mr. R. E. STEEL (Northampton) moved the following amendment:—"That intending pupil-teachers should, as far as possible, enter secondary schools not later than the age of twelve years, if not already attending such schools, and should remain there until the age of sixteen years, and then attend at a secondary school as half-timers."

The Rev. E. F. M. MACCARTHY seconded the amendment, which was adopted.

On the motion of the Rev. W. H. HOWLETT (Bury), seconded by Mr. R. C. GILSON, it was agreed :

"That the inspection of pupil-teachers in secondary schools be restricted to His Majesty's Inspectors for Secondary Schools."

Higher Elementary Schools.

Mr. S. H. WELLS (Battersea Polytechnic) next moved :

"(1) That this Association generally approves of the new higher elementary school minute, believing that a properly organized system of education should provide for schools having aims and specialized curricula according to the minute, and intended for pupils who enter the lower ranks of industry and commerce at the age of about fifteen, and for whom a secondary school course, with its different aim and later leaving age, is consequently unsuitable; (2) that, in approving the curriculum of a higher elementary school, the Board of Education be asked to adhere to the requirement of a specialized course of one or two years having a definite relation to the chief occupations of the district in which the school is placed, and not to sanction such a curriculum as is general or secondary in aim and character; (3) that, in view of the comparatively recent definition and organization of secondary schools, and of the fact that many existing secondary schools doing good work are unable to at once meet the requirements of the Board with regard to the "leaving age," this Association urges the Board, before sanctioning the opening of higher elementary schools in the same district, to consider fully how far such secondary schools may at least temporarily supply the specialized curriculum of a higher elementary school."

The new higher elementary schools would occupy a place between the elementary and the secondary school. The demand for the specialized education which would be given in the higher elementary school could not be met by making the elementary school and the secondary school more elastic, so as to fill the gap which it was proposed that the higher elementary school should occupy. The main point about the higher elementary school was that in the last year or two of school life the curriculum should have a definite relation to the immediate

future work of the scholar. The higher elementary school was intended for boys who really did not want to enter the secondary school; and the Board of Education should take care that the former should be of a special technical character, and not general secondary schools.

The Rev. J. WENT (Leicester) seconded the resolution. He said that higher elementary schools had to come: but care should be taken that they were not made sham secondary schools; they should be manual schools in character, and should be called manual or trade schools.

Mr. W. A. KNIGHT (Bruton) feared that the establishment of the higher elementary school would lead to overlapping with secondary schools, especially in rural districts, and in many cases would extinguish those schools. He doubted the advantages of early specialization, especially in rural districts. The managing classes in great industries required specialization, but they would get it at the technical colleges, and not at the higher technical schools. He moved as an amendment:—"That this Association regards with apprehension the new higher elementary school minute, believing that the promoters of the Act of 1902 intended to assist existing secondary schools, and particularly urges the Board of Education not to sanction higher elementary schools in areas which are already supplied with secondary schools."

The Rev. W. MADELEY seconded.

Mr. R. C. GILSON, in supporting the amendment, said that he did not believe in the higher elementary school, and in Birmingham they refused to have anything to do with it. It was only a secondary school in another form, and would cause overlapping of a serious kind. Scholars ought to acquire the manual dexterity they required in the last two years of their elementary school life. It was not true that we suffered in this country from the want of manual skill on the part of our workmen; but what ought to be done was to make the workmen a little more intelligent. No higher elementary school could give manual training in all trades; the real manual training was given in the workshops and not at the school. There was a gap to be filled in the ordinary elementary schools where the able boys now wasted a good deal of time in the last year or two. They did not want the new schools, but they did want the tops of the ordinary elementary schools improved.

Mr. HOBHOUSE said that the Consultative Committee, of which he was a member, had taken a great deal of evidence on this subject, but had not yet arrived at any decision. He might say, however, that some of the Committee had been satisfied that in most of the large towns there was a genuine desire to have some type of school of a higher elementary character, which should be a continuation of the ordinary elementary schools for a limited number of years. He could not doubt that there was a demand for a specialized school in many towns, and it should not be of an expensive character. There was room for some such type of school as was shadowed forth in the minute of the Board of Education. He hoped that those schools would be very carefully defined in any future Code, and that the Central Authority would keep a very tight grasp upon them. The Board must determine whether such schools were wanted and where they could be erected without doing substantial injury to existing schools.

Canon SWALLOW opposed the amendment and hoped that the Association would not pass it.

After further discussion, the previous question was moved, but it was rejected by 32 votes to 31. The first section of the resolution was amended by the insertion of the words "in large centres of population" after the word "schools." Mr. Knight's amendment was then put, and was adopted by 47 votes to 19, and it was afterwards carried as the substantive resolution.

The following resolutions were also agreed to:—

Moved by Mr. F. L. JONES:

"That it is advisable that steps be taken for collecting data of the physical condition and growth of pupils in secondary schools."

Moved by Canon SWALLOW:

"That the Association recognizes the importance of the recent medical pronouncement on hours of sleep in schools, and requests the Council to give the matter careful consideration."

Moved by Mr. F. H. CHAMBERS:

"That, in the interests of national welfare, the influx of pupils from public elementary to secondary schools should be encouraged."

The conference then closed.

THE CLASSICAL ASSOCIATION.

THE second General Meeting was held on January 5 and 6 at King's College. In the absence of the President (Lord Halsbury) the chair was taken by Dr. S. H. BUTCHER.

The Chairman paid an eloquent tribute to Sir Richard Jebb, who only a few weeks before his death had consented to be nominated as President for the ensuing year. No critic had ever combined in equal measure such brilliancy and divining skill with so large and sane and sympathetic a judgment. As a composer in Latin and Greek he

was without a rival. He was in the best sense an "anima naturaliter Græca."

The Report of the Council.

The report of the Council, which was then read, drew attention to the progress of the Association's work. The membership showed a steady increase, standing now at 1,053, of whom 153 had joined during the past year. The Committee appointed to report on the best method of introducing a uniform pronunciation of Latin, and, if they deemed advisable, to consider also the recommendation of changes in the pronunciation of Greek, was not yet in a position to present a report. Local correspondents had been appointed to represent the Association and make known its aims in various parts of the United Kingdom and the colonies. The immediate urgency of a number of problems connected with the teaching of the classics had given a predominantly educational character to the active work of the Association during the past year; but the Council had not lost sight of the fact that the aims of the Association covered a much wider field than the methods of school and University teaching. The range of the Association's activities was, however, conditioned by the funds at its disposal. Only by a large increase in its numbers could it be enabled to perform efficiently the functions which it was founded to discharge.

The report was agreed to, as was also the report of the Finance Committee.

The New President.

The CHAIRMAN proposed the election of Lord Curzon as President for the ensuing year. He said that Lord Curzon's presidency would bring them into touch with the outer world in a way most advantageous for the classics.

The motion was agreed to, and the Vice-Presidents, other officers, and six members of the Council were also elected.

The Name of the Association.

Dr. POSTGATE proposed that the name of the Association should be altered to "The Classical Association" by the omission of the words "of England and Wales." He observed that the original title was adopted out of delicacy towards the Classical Association of Scotland, which was founded slightly earlier; but it was misleading and inconvenient. The Association had members in the colonies and foreign countries.

Prof. BROWNE, in seconding the motion, emphasized the importance of the Association's work in relation to Ireland. Celtic studies were being so zealously advocated that the classics were in some danger of being thrust out.

The motion was agreed to.

The Education of Army Officers.

Prof. CONWAY moved a resolution, which stood in the name of Dr. Rice Holmes, urging the retention of Latin as one of the subjects in entrance examinations for the Army. He also protested against the omission of Latin from the subjects that would be taken by cadets passing out of the Royal Military and Naval Colleges. The effect of the existing regulations was practically to exclude all public-school boys who belonged to the classical side from a military career.

Dr. GREGORY SMITH seconded the resolution.

Dr. RICE HOLMES considered that, unless Latin were made obligatory, its position would not be improved. He was accordingly in favour of a motion in more precise terms, and proposed as an amendment that the Council should be instructed to present a memorial praying for the restoration of Latin to its place as an obligatory subject in the examinations for admission to the Royal Military Academy and the Royal Military College.

Mr. BECKWITH seconded the amendment. He ridiculed the idea that an enforcement of Latin would keep candidates from entering the Army. The dearth of officers was due to the wretched pay of subalterns—less than the wages of an omnibus-driver.

Prof. BURROWS thought it undesirable that the whole Association should commit itself to a particular solution of this difficult subject.

Mr. PAGE was not in favour of speaking with ambiguity to the War Office. Having failed to reform itself, it had now turned its hand to reforming others. Let it be warned that it would not be permitted to destroy classical studies. It had driven out Greek, and now it was endeavouring to destroy Latin.

Prof. CONWAY said the question was whether the meeting was prepared to say that a boy who had a thorough training in German as well as French had not an adequate linguistic equipment for some kind of Army work. Dr. Rice Holmes pledged the Association to an extreme position in the matter.

The amendment was rejected by a clear majority, and the original motion was then adopted.

Mr. D. G. HOGARTH read a paper on "The Religion of Prehistoric Greece," in which he dwelt on the early existence of a Nature goddess worshipped in the Ægean area, from whom later divinities, such as Artemis and Aphrodite, were derived. He thought that, in view of the

results of recent research, writers would be more chary in future of talking about Oriental and Asiatic influences. At Knossos evidence had been brought to light by the side of which anything Phœnician yet discovered was modern.

In the evening the programme included a *conversazione* and short papers by Prof. CLIFFORD ALLBUTT on "The Speaking of Latin," and by Dr. A. W. VERRALL on "The Conversion of the Furies in Æschylus's 'Eumenides.'"

SECOND DAY.

Mr. BUTCHER, who again occupied the chair, announced that to their great regret Mr. Austen, in consequence of a family bereavement, was not able to read to them his promised paper on "The Practical Utility of a Classical Education." The Association hoped to hold a half-yearly meeting, and a warm invitation had been received from Manchester; but as the convenience of their new President, Lord Curzon, must be consulted, he proposed that the settlement of time and place should be left to the Council. This was agreed to.

It was then proposed by Dr. POSTGATE, and seconded by Prof. CONWAY, that the report of the Committee on Latin spelling be received and adopted.

Interim Report of the Curricula Committee.

This Committee, which was appointed last spring, with Prof. Sonnenschein as Chairman and Mr. Christopher Cookson as Secretary, began its work by ascertaining the amount of time at present devoted to classical subjects in boys' and girls' schools, and the distribution of that time among the various branches of classical study. Replies to a letter of inquiry were received from 37 boys' schools and 19 girls' schools. From the returns it appears that in the larger boys' public schools one-half of the total number of school hours is devoted to Latin or Greek. In this calculation the highest forms, where there is much specialization, are not included. In the smaller boys' schools the time is somewhat less, varying from a third in the lowest form to two-thirds in the highest form. In first-grade girls' schools Latin has not more than one-sixth of the total time allotted to it—i.e., from two and a half to three and a half hours per week—till the highest form is reached. Girls' boarding schools have about twice the time. The Committee do not propose any increase in the amount of time now given to classics, but hold that time might be saved by an improved method of teaching Greek. The present system is directed towards the ultimate production of a few finished scholars both in Latin and Greek trained on linguistic lines—i.e., with special attention to grammar and composition—but for the average boy this double training is not profitable. For such there should be the minimum of grammar and composition only in the simplest form.

On this basis the Committee submitted two resolutions, the first of which was moved by Prof. SONNENSCHN:—

"That, in the lower and middle forms of boys' public schools, whereas Latin should be taught with a view to the correct writing of the language, as well as to the intelligent reading of Latin authors, Greek should be taught only with a view to the intelligent reading of Greek authors."

It was generally supposed that the Association existed solely for the maintenance of classics, but it had a second object, the improvement of methods of teaching. In furtherance of that second object, the Committee had been appointed, and the guiding principle it had adopted was to lighten the curriculum. The Committee held that in lower and middle forms (he said nothing of the higher) Greek composition was not a profitable subject for the average boy. He did not intend thereby to exclude simple exercises, which many held to be an indispensable aid to learning the language. By "intelligent reading" he meant such reading as would make the pupil appreciate the mechanism and beauty of the style, not reading in a fog, a divining of the general sense, such reading as was open to the retort: "You might as well read it in a translation." For the average boy Greek composition must be not a τέλος, but a means. The distinctions between this and the old method were obvious. A boy would have no difficulty in recognizing the form of a Greek verb or noun when he saw it, though he could not give you the form himself. So with words. He would know that *φιλανθρωπία* meant "humanity" when he met with it in Demosthenes, though the same boy would be floored if asked to give the Greek for "humanity." Genders, again, would go by the board, and all the Greek syntax he required might be put on two sheets of foolscap. The experiment had already been carried out at Winchester with every prospect of success. It was a reaction against the old verbal scholarship, whereby Greek literature became for the mass a book with seven seals; three of the seven were accident, syntax, and prosody, and two others were comparative philology and textual criticism. Latin stood on a different basis from Greek. Latin had been for centuries the second *sermo patrius* of the civilized world, and Latin composition was a τέλος in itself.

Mr. LYTTELTON, in seconding, said he would confine himself to the practical difficulties that a head master foresaw in carrying out the programme, and the means of overcoming them. First came the objections that were sure to be raised by Atticist colleagues—men brought up on the old lines, who rely on the fact that the orthodox study of the classics has been to them an incalculable gain. "If we teach Greek in this fashion," they will urge, "no sound foundation can be laid for the knowledge of the language." Now, head masters whose teaching is confined to the Sixth might with some justice plead that, as judged by results, the old system was not so bad. But what of the weltering masses below? It was to him astonishing, and almost incredible, that for twenty years and more assistant masters should have been content to carry on a system so barren of results. The teaching of Latin and Greek together, as it was now practised, was a dead failure. In spite of this, any change was resisted. The second difficulty was how, in the future, were they going to distinguish the scholars from the non-scholars. The Committee did not propose to interfere with the satisfactory results now attained by the cleverer boys. These would go on as now, except that one book should be read rapidly for the sake of grasping its literary value. But he did not feel easy about the proposal that all should start together on the new system and then be differentiated. Good boys must have training in accident and syntax, as now, and it would not do to leave them for two or three years without training in composition. But this difficulty need not arise in large schools like Eton. If the school is divided by blocks, the top division in each block could be treated differently from the rest, and the top boys could pass from one top set to another. That was obviously the best way. In smaller schools the proposals of the Committee would have to be adopted, but arrangements must be made for teaching composition either out of school or in small sets. As to the books to be read, they must choose those that would give boys a feeling for Greek literature—Homer, and, for choice, the "Odyssey." The preliminary grammar requisite might be acquired at the preparatory school, which should have brought boys in grammar up to the end of *λύω*. The teacher must not hope or endeavour to make the ruck of boys real scholars—he ought to have abandoned the attempt twenty years ago. There was no fear that lessons under the new method would be too easy. To borrow Sydney Smith's illustration, it was like the fear expressed at the time that Macadamized roads would make horses too fat. Vocabularies of common words should be compiled and learnt by heart. The non-scholars need not be kept wholly distinct from the scholars. Casual vacancies occurring among the latter might be filled by the best of the mediocrities. The time gained under the new method—not more than four hours a week—might well be devoted to Greek history and archaeology, and a portion of it might be abstracted for elementary science teaching. There was far too little of a conciliatory attitude between teachers of different branches, and too much of sectional bickering and sparring.

The WARDEN OF WADHAM could only bring to the discussion his experience as a classical examiner. Of the two thousand undergraduates whom he had examined for Responsions or Moderations one third had passed with more or less credit, a third had escaped disaster, and the remaining third had been hopelessly ploughed. This was a disappointing result of eight years devoted mainly to Latin and Greek. And worse than the failure was the rooted dislike of the classical languages that this education had left on many of the best pupils. The fault lay not with the masters—all honourable men; nor with the boys—they were not stupider than French or German boys; nor with the subject—as to that all there were agreed. It followed that it must be the fault of the system. Against this system the authority of Sydney Smith had already been quoted, and Locke and Milton were even stronger witnesses. The Universities in this matter were much to blame; for it was they who called the tune to which the schools must dance. And they were sinning against knowledge. In exacting compulsory Greek they undoubtedly prevented or retarded the entrance of many candidates who, by any test that might be selected, were well qualified to benefit by a University career. Let them throw compulsory Greek—Greek as it had been taught—to the wolves. By the wolves he meant Prof. Ray Lankester and their scientific friends.

Mr. WATSON, as representing smaller schools, urged that the proposed reforms must not be limited to the Universities, but must include the Joint Board, whose certificates were taken in lieu of Responsions.

Prof. CONWAY moved as an amendment to substitute: "Latin should be taught with a view to a mastery of the language for its own sake by practice in writing and by other means." He objected to putting on the same level skill in composition and appreciation of the literature. The question was important, as in the provincial Universities it was round Latin, not Greek, that the battle was being fought. Composition, after all, was an artistic pursuit, and to boys who had not the artist in them it was a dreary grind.

Mr. T. E. PAGE said that a reforming head master let and hindered by the dead weight of his reactionary assistant was to him a rare and

strange phenomenon. The staff of the public schools with which he was acquainted did not consist of a body of Atticists. He thought they need have no fear for the clever and scholarly boys, who could be trusted to take care of themselves. At Charterhouse the scholars soon passed into divisions to which the resolutions of the Committee did not apply. At Shrewsbury, a school which turned out its full share of Greek scholars, he had never written a line of Greek prose composition. He complimented the Chairman of the Committee on the report. Like a patriarch, he had sacrificed his own offspring on the altar.

The PRESIDENT OF MAGDALEN COLLEGE welcomed the report as meeting the case of the vast majority of public-school boys, who would never be made scholars, however the term might be defined.

Dr. ROUSE had not himself encountered any of Mr. Lyttelton's difficulties. He had found assistant masters open-minded and ready not only to carry out, but to suggest, reforms. The new method must be begun from the bottom of the school; if tried with those who had already been taught on the old method, it would be a failure. This was his experience, not only with Greek, but with modern languages. There must be a complete alteration of time-tables. Hitherto they had only tinkered with them. It was a radical mistake to begin learning two or three languages simultaneously. If they started with French and then tackled Latin, Greek could not well be commenced before fifteen. On this plan some of Mr. Lyttelton's difficulties would arise. After two terms of learning Greek by the reformed method, which should be mainly oral, boys should be able to tackle Homer, Herodotus (Atticized), comic fragments and stories from *Ælian*. With the oral method there would be no need for the dreary grind of learning vocabularies by heart.

Miss JANE HARRISON ventured a plea for retaining one of Prof. Sonnenschein's seven seals—prosody. The first lesson that she gave her class of beginners at Newnham after the alphabet was a poem of the pseudo-Anacreon to learn by heart; then they took the simpler Epigrams, having gained the meaning through Mr. Mackail's perfect translations; next, the choruses of Greek plays. With those who had an ear for rhythm the process was most effective.

Dr. BUTCHER said that the movement had his full sympathy as providing for the average boy, to whose interests the public schools had been hitherto indifferent. The experiment had already been tried in Germany, with apparent success, though it was too soon to judge definitely of results. It was approved by scholars like Wilamowitz. The preamble to the revised programme for *Gymnasien* of 1901 set forth almost identical aims to those stated in the resolution. He thought it would be disastrous if there was a total divorce between the education of the expert and what he might call the ordinary educated man, between those who knew Greek fully and those who knew none at all. Greek literature was permeated by the breath of civic life, and all the greatest living forces in European civilization of to-day were of Hellenic origin. But, if the principle of the resolution was accepted, one corollary seemed to him to follow. We must postpone the study of Greek to a later age, if only for the reason that immature minds could not appreciate its artistic qualities.

Mr. MACKAIL moved, and Dr. POSTGATE seconded, that the clause referring to Latin be omitted; and the resolution, thus amended, was passed.

The second resolution—to petition the Universities of Oxford and Cambridge to abolish the separate Greek Grammar paper at Responsions and the Previous Examination, and substitute an easy paper in sight translation—was then moved by Mr. COOKSON. The first half of the resolution was a battering of open doors. At Oxford the Greek Grammar paper had been tottering to its fall. It was a weight on the intelligence—he had almost said on the morality—of undergraduates. The second and constructive part was not so clear a question. There was force in the objection raised by Oxford dons. "Anything you can get out of ordinary passmen in the way of unseen translation will be worthless." That, he believed, was true at present, and for the next two or three years it would mean a lowering of the standard. By then a generation would have grown up that had been taught Greek rationally and effectively.

Mr. WHIBLEY seconded. As far as Cambridge was concerned, that University would need no conversion. He should like to see a similar proposal as regards Latin.

Dr. GOW supported. He himself held to the teaching of Greek grammar on the old lines, but he was quite willing that his pupils should be tested on the results of their grammar training, their ability to translate.

The resolution was carried, and a vote of thanks to the Chairman concluded the proceedings.

A WARNING.—We are asked to warn our readers, especially principals of high-class schools, against a woman who is obtaining loans of money on the pretence that she has taken a house in the district and desires to place her nephew or niece, or both, in the school. She is about thirty-seven years of age, height 5 feet, has three moles right of neck, goes by various aliases. Any one having information of her is requested to communicate at once with the Superintendent of Police, Guisborough.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS.

THE Annual General Meeting was held on Friday, January 5, at St. Paul's School, Hammersmith. The chair was taken at 10.30 a.m. by the incoming President, Mr. C. H. GREEN, second master of Berkhamsted School.

The report for 1905 stated that the number of members was 1,737, a rise of about 80 on the previous year. The Association had during 1905 been mainly engaged in urging the claims of assistant masters upon the Local Authorities, to whom pamphlets on tenure and salaries had been sent. The question of pensions had not been overlooked. The proposal for a Federal College having fallen through, negotiations are now proceeding for forming a Federal Committee. At the beginning of the year a *plébiscite* of assistant masters in public secondary schools was taken on the question of compulsory Greek. There were 542 votes against 243 in favour of allowing a modern language as a substitute for Greek in the Little-Go.

Mr. G. E. S. COXHEAD, the outgoing President, moved the adoption of the report. The main object of the Association was to correct the lack of the professional spirit among teachers as compared with what obtained in other professions—a defect most apparent among secondary teachers. The absence of control from without had produced those elements of strength which accompany individualist efforts—variety, vigour, and a willingness to experiment; but against these qualities must be set defective independence of aim, overlapping, and, worst of all, the accent of isolation and prejudice. The intervention of the State in secondary education had brought about new conditions—the sense of communion of service and attention to the pupil as a citizen. He would range the activities of the Association for the future under three heads—(1) the sinking of prejudices; (2) the spreading of educational ideas and methods; (3) the raising of the general standard of attainment. (1) The difficulty of bringing about concerted action between secondary associations he ascribed mainly to political prejudices. He hoped that these would be overcome by the Federal Council Committee, of which one of their body, Mr. R. F. Cholmeley, was the energetic Secretary. It was prejudice that still kept the bulk of the staffs of the great public schools from joining the Association. He hoped these would no longer stand aloof, but join the common cause and help to correct the injustices under which the profession now laboured. (2) By arranging discussions, debates, and social gatherings in the Branches the Council had done much to promote intercourse and interchange of ideas among teachers, and in particular to bring men and women together. (3) The failure of the Register was entirely due to the Board of Education and the Treasury. The *raison d'être* of a Register was not for studying the interests of sections of teachers, but to fashion a means for meeting more quickly and more adequately the educational needs of the country. Informal discussions on registration had been held with the N.U.T. and the Association of Assistant Mistresses. The refusal of the Board of Education to act as a court of appeal in cases of dismissal was a serious check, and at the time the Head Masters regarded it as fatal; but the change of *personnel* at the Board brought about by a change of Government had induced the Head Masters to consent again to co-operate with them in their attempt to give effect to the *concordat*. With the increase in number of municipal secondary schools whose staffs are employed on terms similar to those of the pre-*concordat* clauses the question of tenure had entered on a new stage.

Warwick School Dismissal Case.

On the motion of the CHAIRMAN, it was agreed that Resolution 6 should be taken next:

"That this meeting strongly protests against the unprofessional conduct of the Head Master of Warwick School in dismissing a house master on the ground that he did not introduce a sufficient number of pupils to the school."

The resolution was moved by Mr. T. E. PAGE. A long and somewhat desultory discussion followed.

Mr. A. RICHES, the Bursar of Warwick, was allowed a hearing on behalf of the Head Master. He pleaded that the alternative lay between increasing the numbers and closing the school, and hinted that there were other reasons for dismissal in the background which had not been revealed; but he did not attempt to traverse the main facts of the case, with which our readers are already acquainted. In the end resolutions were passed condemning both the Head Master and the governing body for refusing Mr. Richardson a hearing.

Register of Teachers.

"That this meeting recommends the serious condition of the Register of Teachers to the attention of the incoming Government."

Mr. G. G. PRUEN (Cheltenham) moved the resolution in the absence of the Rev. J. F. Tristram. The Register had been hailed with admiration at its inception as an authoritative test of com-

petency; but it had proved a dead letter. It had been hoped that the Board of Education would recognize the schools that did not include on their staffs a certain percentage of registered teachers, and would require all head masters to be registered. Neither of these things had they done. He held that registration should be made compulsory.

Mr. C. H. HEATH (Birmingham) seconded. He held that the Board of Education were guilty of a breach of faith, and should return their fees to those who had registered under false promises. The Board had swept in their guineas by the idle threat that there was no chance of promotion or becoming a head master for the unregistered.

Mr. COXHEAD held that the parsimony of the Treasury was no less to blame than the laxity of the Board.

Mr. J. SCOTT pointed out as another cause of failure the opposition of the N.U.T.

The motion was unanimously carried.

Federal Council of Secondary Teachers.

"That this meeting welcomes the proposal for a Federal Council as likely to promote the co-operation of all associations of secondary teachers in advancing the general interests of education."

Mr. T. E. PAGE said that they might regard his motion as an *obiter dictum*. He only wished he could induce Mr. Birrell to add it to his *Obiter Dicta*. Of the condition of schools for which a remedy was sought there could be no dispute. Where there was no purpose, no agreement of method, nothing could result but slatternly disorder and failure. Among the various obstacles which those encountered who would produce cosmos out of chaos he noted (1) the wishes of parents. "Quot homines tot sententiae," and in this case *homines* included mothers. (2) The fads of doctors, benighted medical gentlemen who pretended to instruct in their duties house masters who had grown grey in the profession. (3) A vast array of psychologists, who dissected for them in the laboratory that great mystery of Nature, a boy's mind. (4) Theorists and writers on education, each with his own nostrum—some, like "Kappa," not without glimmerings of sense; some, like Sir Oliver Lodge, who made alternate excursions into the spiritualist and scholastic world and discovered in each sphere extraordinary phenomena which escaped the observation of the ordinary observer. (5) Examiners. He would leave to his mathematical colleagues the permutations and combinations of 15 things taken 6 together. In this hotch-potch of aims and *farrago* of opinions what hope was there of progress unless one body could be found which would exercise a controlling influence? He passed on to consider the constituent bodies of the proposed Council. First came the Head Masters' Conference. The peculiarity of that body was that its members were men of unlimited authority, and had in the thirty years of its existence done nothing. Like heavenly bodies of the first magnitude, they preferred to move in a celestial order each by himself. Next came the Head Masters' Association. They were, most of them, not too highly placed to remember that they were mortal and had once been assistants, and their co-operation carried with it great promise for the future. Their own Association was composed of men who did nine-tenths of the work, and yet had hitherto had no voice in the conduct of their own affairs. In order to influence the executive in legislation, the profession must combine. The Board of Education would not attend to them unless under compulsion. Their treatment by the Board when he went on a deputation to plead for fixity of tenure combined the extreme of personal courtesy with the maximum of official insolence. It was premature at this stage to discuss the details, but he urged that such a Council afforded the only solid basis on which secondary education in this country could be built firmly, surely, and prosperously.

Mr. C. J. MONTGOMERY (Llandudno) seconded, and the motion was carried unanimously.

Hackney Downs Grammar School Scheme.

Mr. C. W. HALE (Chelsea Polytechnic) moved:

"That the meeting warmly welcomes the provisions for tenure in the revised scheme for the Hackney Downs Grammar School." The clause runs as follows:—"The Council, on the recommendation of the Governors, shall have the sole power of appointing, and may at pleasure dismiss, all assistant masters in the school, but, before making such recommendation, the Governors shall consult the Head Master in such a manner as to give him a full opportunity for the expression of his views."

Mr. COXHEAD urged that the motion should not be pressed. The clause was a step in the right direction, but it did not express the policy of the Association. The Association did not desire that governing bodies should have the power of appointment.

Mr. BRIDGE supported the motion on the principle of the half loaf. They had passed in Council yesterday that, failing an appeal to the Board of Education, an appeal to the Local Authority was desirable. Northamptonshire and Herts in their school schemes had gone far towards embodying the *concordat* on tenure without accepting it in its entirety.

A motion not on the agenda was proposed by the Council and carried, welcoming the proposal to establish a joint examination, whose standard should be higher than that of Responsions and Little-Go, to qualify for matriculation at Oxford and Cambridge.

Lord Roberts on Military Training in Schools.

At the afternoon session Lord ROBERTS delivered an address on military drill and rifle shooting in schools. In order to put into the field five hundred thousand men—the minimum required for national defence—there must be some system of national training for the youth of the nation. A preliminary training given *in statu pupillari* would be not only valuable in itself, but a great economy of time. Instead of being regarded as a burden or an imposition, it should be made so attractive as to be regarded as one of the school pastimes. Lord Roberts then gave statistics as to cadet corps in public and elementary schools which had been furnished him by the editor of the "Schoolmasters Yearbook" for 1906. (There is no need to report them, as the volume is now published.) The time had now come when the Government ought to recognize the value of military training in schools, and it should give liberally towards the cost. The main objection of schoolmasters to the movement was the time that it took up. He hoped he should be excused for travelling outside his brief and suggesting to experts that part of the time now absorbed by classics might be better devoted to the training he had advocated. He expressed his entire agreement with the views on public-school education put forward by Mr. A. C. Benson in a recent number of the *Monthly Review*. Classical knowledge, as now acquired, was a doubtful gain in after life to the individual, and none whatever to the State. His ideal was to develop the schoolboy's body and intelligence by military training, and by the study of modern history, geography, and science; to strengthen his moral character by habits of discipline and obedience, thus fitting him to be a useful member of society in after life and enabling him to be of practical service if called upon to defend his country.

Mr. LYTTELTON said he conceived that the task set him that afternoon was not to criticize or even to traverse any of the highly argumentative topics that Lord Roberts had introduced, but to consider the practical policy by which effect could be given to Lord Roberts's recommendations, that they all approved. These were not, as he interpreted them, to give rifle-shooting to all boys at the same time. That in big schools would be an impossible problem. The desired end would be attained if shooting was made compulsory for a certain block in the middle of the school through which all boys would pass. This should be supplemented by further practice in the higher classes, to ensure that boys should not leave school having forgotten their early drill. Such a scheme would be started at Eton in the course of the next four or five months, but he would not divulge the details, as he had not yet had an opportunity of laying it before his own staff. A preliminary question for schoolmasters to solve was whether this rifle-practice was to be taken out of school-hours or play-time. He suggested a compromise—that the first stage should come out of school-time and the supplementary practice out of play. It might be an alternative to those extras of which we had heard so much. It was a lamentable fact at present that most public-school boys, if, on leaving school, a rifle were put into their hands, would be more dangerous to their friends than their foes. He was reminded of what happened in the days of Irish disaffection, when a nervous Minister refused to attend a meeting of the Cabinet unless a colleague threw out of the window the revolver that he carried. The Volunteer movement was regarded in a very different light now from what it was when he was a boy. Then it was a mere playing at soldiers; now there was beginning to be felt even by boys a serious sense of duty. Rifle-shooting would be useful not only as a part of discipline, but as a training for brain and thought. He looked on this movement as the beginning of an efficient national militia. He should be able to report to Eton boys what Lord Roberts intended to make of them in the future.

Mr. HOARE (Haileybury), Senior Officer of Public School Cadet Corps, reported a vast improvement in musketry during the last five years. Before the shooting used to be limited to Bisley candidates; now at least one-half of the seven thousand who constituted the force received training at the butts. It was impossible to make shooting as attractive as cricket or football. It must always be regarded as a duty, but by disappearing targets and in other ways the element of sport might be introduced. The purpose of drill at school must be rather discipline than the learning of actual movements. In some elementary schools the drill he had seen was so slack and slovenly that it could serve no other object except keeping children in the open air.

Mr. SOMERVILLE (Eton) said the object of the movement was defensive, not offensive; there was nothing of militarism about it. They need not share the alarm of a certain military drill instructor in Tipperary, who, when taken to task for not teaching his men to shoot, replied: "Teach them to shoot! Why, there wouldn't be a landlord left in the country." A more serious objection raised was that the movement might tend to kill existing school corps. He thought this might be met by making the rifle corps a *corps d'élite*, with certain privileges attached which patriotic head masters would not be slow to grant. He hoped that the War Office would meet them half way by giving instruction free of cost and making grants to corps which attained a certain standard of efficiency, whether in uniform or without.

A vote of thanks to Lord Roberts concluded the proceedings.

INCORPORATED ASSOCIATION OF ASSISTANT MISTRESSES IN PUBLIC SECONDARY SCHOOLS.

THE Association held its Annual General Meeting at the College of Preceptors on Saturday, January 13. The number of members is now 890, and there was a full attendance. The chair was taken by the President, Miss I. M. LEWIS. During the routine business it was announced that Miss E. G. Skeat had been elected President for the coming year.

Miss LEWIS, in her address, said she feared her year of office would be remembered by the rise in subscriptions, but the work of the Association could not be carried on without such a rise. Their resolutions on the School-leaving Certificates had been forwarded to the Board of Education, and, though nothing as yet had come of them, she was assured on the highest authority that the matter had not been shelved. At the invitation of the Assistant Masters' Association they had attended a Conference on the appointment and dismissal of the staff. She regretted the tendency of the new governing bodies to take on themselves the power of appointment. This was contrary to the principle on which they had agreed—that assistants should be appointed by the head, but should be the servants of the governing body and not dismissible without an appeal. A leaflet on Salaries of Assistants in Secondary Schools had been drawn up in concert with the I.A.A.M., and had been sent to Local Education Authorities. An Information Committee had been formed to collect news and watch all movements bearing on the work of the Association. In conclusion, she expressed her anxiety as to the influence of the new Authorities on girls' education. Parents were increasingly demanding that their girls should be taught subjects that would pay, and there was a danger that in municipal schools domestic and technical subjects would interfere with a wide intellectual outfit.

Registration of Teachers.

The following resolutions, which had been drafted by the Committee, were introduced by the SECRETARY:—

"(a) That no hindrance should be placed by the registration system or in any other manner to the free movement of duly qualified teachers from one class of school to another.

"(b) That no distinction should be made in the Register between teachers qualified for Column B (permanent regulations) and certificated graduate teachers in elementary schools.

"(c) That the registration system should be such as will foster a high standard of qualification.

"(d) That, in consideration of the fact that a large number of teachers engaged in kindergarten and other forms of preparatory teaching would find no place on the Register under the permanent conditions for registration, as at present laid down, a (second) division of the Register should be established for which the academic requirements should be less stringent.

"(e) That for all grades of the Register a year's "recognized" training should be required, as well as a year's recognized satisfactory teaching experience, *i.e.*, experience in a school or other institution recognized by the Board as efficient of its type.

"(f) That no secondary school that has not a due proportion of registered teachers should be recognized as eligible for Government grants.

"(g) That it is desirable that the revision of the present conditions of registration should provide for the establishment of Supplemental Registers, and that the requirements for such Registers should be in keeping with those of the main Register.

"(h) That the Teachers' Registration Council should be fully representative of the various branches of the profession."

Miss MACKLIN said that the resolutions represented a connected policy, and should be considered as a whole. She regretted that there had not been time to allow them to be previously discussed by the Branches, but they were drawn up at what was thought to be a critical moment, though the crisis had fortunately been postponed by the action of the Board. The present condition of the Register was anything but satisfactory. The permanent conditions of registration, which were now not to be enforced till July 31, had been satisfied by few women and still fewer men. An increasing number of women were indeed undergoing training, but the number of men in training institutions was a negligible quantity. The clause for admission as student-teachers had been wholly inoperative. Supplemental registers had been indefinitely postponed. There was, in her opinion, another reason beyond that given by the Board—the impossibility of demarcating primary and secondary teachers—in cookery, for instance. Column A was a dead letter. It had provoked the unanimous indignation of the teachers for whose supposed benefit it was framed. It was impossible to draw such a distinction between the two branches. If the Register was boycotted by secondary men teachers and banned by primary teachers, it must either be radically reformed or ended. The distinction between Columns A and B should disappear, but there should be a new classi-

fication as proposed in (d), under the two heads of graduate and non-graduate teachers. It could not be expected for many years to come that all the staff of a school should have a degree, but it was imperative that every member of the staff of an efficient school should be on the Register. The conditions of schools had greatly changed since the Register was first framed. Then there was a clear distinction between primary and secondary schools, the gap being filled by private-venture schools of a low type. The place of these was being taken by a type of school which did not answer to their idea of secondary, but which were recognized as such by the Board, the so-called municipal secondary schools. To her knowledge a certain school with the same staff and curriculum had changed its name three times—Science Division A, Higher Elementary, Municipal Secondary. Should a master in such a school be registered in Column A or B? Again, preparatory schools as forming part of the system of public schools had been recognized for registration, but now numbers of primary schools prepared their scholars for the municipal or grammar schools. Lastly, for registration to be effective, the Board must take some means of enforcing or at least encouraging it. This point was dealt with under (f).

The resolutions were then moved separately.

Miss PEARSON, who moved (a), said it served merely as a preamble, and declared the policy of the open door.

Mrs. POLLARD took exception to it. She had seen, where she would have least expected to find it, a word of wisdom in an election address:—"There will be no progress in education till it is made part of the Civil Service." She held that the analogy of Civil Service clerks, who were classed in two distinct divisions, higher and lower, applied to the teaching profession.

(a) having been carried, Miss PEARSON moved (b). She said that the present distinction was not only hopelessly illogical (not a fatal objection), but flagrantly unjust. The only plea that could be urged for preserving the invidious distinction was the difference of experience. Even allowing this difference for the sake of argument, it was far less than the differences of academic attainments between those admitted to Column B.

Miss SKEAT said that elementary and secondary teaching differed wholly in their points of view, and the two ranks should not be confounded. A long experience of teaching in Board schools would unfit a teacher for high schools. The teaching in secondary schools was idealistic; that in primary schools was purely utilitarian. Consequently she found that, if pupils passed to the high school at the age of eleven, she could make something of them; if at thirteen, they were comparatively hopeless.

Miss LAURIE said that, if resolution (c) were carried, (b) was superfluous.

Miss ANDREWS pointed out that in the reformed Register the quality of the registrée's experience would be entered as now.

After some further debate the resolution was put in the amended form:—"That certificated graduate teachers should be eligible for the same grade in the Register as trained graduates in secondary schools."

The resolution was lost by 26 votes against 17.

The other resolutions were then put and carried with verbal amendments necessitated by the rejection of (b).

Training of Teachers.

A paper was then read on "The General Principles that should underlie the Training of Teachers," by Miss FORTEY, of the Cambridge Training College. Miss Fortey proposed to criticize the present system of training as practised in four colleges with which she was familiar. It consisted of two parts. (1) The practical. In this lecturers might boast that they were fairly efficient. When head mistresses complained, as they sometimes did, of the inefficiency of one of their college students, her answer was: "You should have seen her when first she came to us." (2) The theoretical. This part left much to be desired. It was only the exceptionally able student who derived any benefit from the study of psychology or gained any real grasp of first principles or of the history of education. Nor was it reasonable to expect that those who had had little or no practical experience of teaching should grasp the theory. As well expect a science student to master chemistry without ever entering a laboratory. Their subject was not general psychology, but psychological facts and generalizations of a special kind. Many students who made excellent teachers had no turn for philosophy, and several who had proved their ability by gaining first classes in a Tripos had subsequently been plucked in Theory. In their criticism lessons they should appeal to the "middle axioms." She proposed, then, that there should be two Teaching Diplomas: (1) general and compulsory, (2) special and optional. (1) would entail two terms at a college, spent in teaching, hearing lessons, discussions on practice, &c.; (2) would not involve residence. The teacher would pursue the theory *pari passu* with the practice and take the examination in Theory and History when she felt herself ripe for it. She might take in the vacation, or a by-term, courses in the higher study provided by the training colleges. She advocated her plan as sounder in principle than the present one, as less expensive,

SOME REMARKABLE OPINIONS OF A UNIQUE WORK.

"CASSELL'S 'NEW FRENCH DICTIONARY' is a magnificent book, and a marvel at the price. It will meet every difficulty of the young student."—J. McCUBBIN, B.A., F.R.S.E., Burgh Academy, Kilsyth, Glasgow.

"After careful inspection of CASSELL'S 'NEW FRENCH DICTIONARY,' I find it excellent in every respect. It is quite up-to-date and very complete, whilst its cheapness places it within the reach of all. I was particularly struck by the numerous examples given to show the different meanings of the same word."—J. L. HAREL, B. ès L., Wyggeston School, Leicester.

"I can say with perfect confidence, after an examination of several School Dictionaries, that there is none of anything like the same dimensions which so completely meets the requirements of students. It is a marvel of fulness, accuracy, and cheapness."—J. D. MCCLURE, M.A., LL.D., Mill Hill School, N.W.

"I think it is by far the cheapest and most useful in the market."—Rev. E. F. GILBARD, M.A., King Edward VI. School, Norwich.

Just Published, Cheap Edition, price 8s. 6d.

Cassell's NEW French Dictionary.

Compiled from the best Authorities in both Languages.

Revised and considerably Enlarged by

JAMES BOIELLE, B.A. (Univ. Gall.)

✎ This Cheap Edition has been newly Revised by

DE V. PAYEN PAYNE,

Assistant Examiner in French to the University of London.

A Prospectus, with Press and personal opinions, will be sent post free on application.

READY SHORTLY. PRICE 1s. 9d.

Messrs. CASSELL & COMPANY have in preparation an important work on *Physiology and Hygiene*, entitled

The Health Reader,

written by Miss W. HOSKYNs ABRAHALL in accordance with the "Suggestions" of the Board of Education. This work will contain numerous illustrations in colour and black and white, and will be uniform with "The Citizen Reader."

Further particulars will be sent on application.

A NEW AND THOROUGHLY REVISED EDITION
(containing nearly 80 additional pages) of

DE FIVAS' NEW GRAMMAR OF FRENCH GRAMMARS

ENLARGED BY THE ADDITION OF CAREFULLY CHOSEN

**GRADUATED FRENCH TEXTS FOR
PREPARATORY READING AND TRANSLATION.**

Foolscap 8vo, 474 pages, price 2s. 6d. cloth.

Extracts from Preface to the New (Fifty-seventh) Edition.

In the present Edition, the main body of the work as last revised has been faithfully preserved, but an important addition has been made by the insertion of 258 graduated French PREPARATORY TEXTS in prose and verse, one of which precedes each of the original Exercises, for use in reading and translation.

The Publishers feel confident that this valuable practical addition will efficiently complete the lucid theoretical part of the GRAMMAR OF FRENCH GRAMMARS, and make it a complete TEXT-BOOK FOR THE LEARNER—giving not only clear principles to apply, but practical and varied examples of style, forms of sentences, and arrangements of words to imitate, which cannot fail to be invaluable helps in translating the Exercises. The object throughout has been to assist the student in points where he generally finds difficulties. In the Syntax such extracts have been selected as serve to represent the most varied styles in French literature, in order to familiarise the student not only with the great masters of the language, but also with the more familiar turns of modern conversation.

OPINIONS OF THE PRESS ON THE NEW EDITION.

"The Fifty-seventh Edition of the 'New Grammar of French Grammars' shows a most thorough revision, with considerable enlargement. . . . Its new lease of life will be a very long one."—*Educational Times*.

"This is perhaps the best known French Grammar in the country. Having used it ourselves we can speak in the highest terms of its all-round excellence."—*Teachers' Aid*.

"As a manual of French Grammar the book will be difficult to equal."—*School Manager*.

"The student who is intent on mastering the grammar of the language will find it invaluable."—*Yorkshire Post*.

BEWARE OF WORTHLESS IMITATIONS.

and as providing suitable mistresses for schools that received student-teachers.

Miss YOUNG said that, if training colleges abandoned theory and thought to teach from the purely empirical point of view, their *raison d'être* would cease. Teaching must be based on psychology. The aim of the trainer must be, not to turn out psychologists, but to give to intending teachers, as it were, a psychologic aspect. She disputed the analogy from science. In studying the laws of mind the facts were already before the student. The task set him was to make explicit and to coordinate principles already implicit in consciousness. At Cambridge lectures were given on Psychology and Logic, at Oxford on the Theory of Education, but it was really only a difference of nomenclature.

Geography.

At the afternoon sitting a paper was read by Miss J. B. REYNOLDS on "The Teaching of Geography in Switzerland, with special application to the teaching of the subject in this country." Miss Reynolds described an out-of-door lesson in geography that she had seen given to a class at Lausanne, and a school expedition from Berne to Burgsdorf that she had attended. At all the Swiss Universities, except Basle, Geography might be taken as the principal subject for a degree; hence there was an adequate supply of trained experts. The *excursions scolaires* were largely subsidized by the municipalities and communes. In Switzerland the regional method was generally in vogue—first the Alps, then the several valleys. Whether the basis should be geological, or relief, or climatic, was a moot point. She herself held that it should vary with the country that was being studied. The lecture was illustrated by numerous original maps and diagrams.

In answer to questions Miss Reynolds thought that the stereoscope could not be largely adopted in schools on account of the expense. The teacher must rely mainly on pictures or picture books. The lantern could be used without darkening the room to any extent. An excellent variety of slides could be had on loan from Messrs. George Philip. The best form of home work was simple problems, especially if books of reference were available.

The meeting concluded with votes of thanks to Miss Reynolds, Miss Lewis, and Miss Macklin.

UNIVERSITY WOMEN TEACHERS.

THE Association of University Women Teachers held its annual business meeting on January 12 at University Hall, Gordon Square. The meeting was well attended.

Miss CLOUGH, the President, in congratulating the Association on the very satisfactory report for the year 1905, drew attention to the large increase in the number of salaries above £100; e.g., this year the report gave thirty teachers with an initial salary of £120, as against fifteen in 1904; and thirty-four at £110, as against twenty-two last year.

When the business of the meeting was concluded, two papers were read and discussed. Miss C. R. ASH, of the St. Paul's Girls' School, Brook Green, read a paper on "The Principles and Aims of the Direct Method of Modern Language Teaching and their Application in Practice." Miss Ash contrasted the old method with the new, i.e., the method which gave the pupil a language of paper and ink, of grammar and dictionary—dead for all practical purposes—and the new method which gives the learner a living language, arouses an interest in the people who speak it, and surrounds him with an atmosphere of the country whose language he is learning; the main principle underlying such a method to be as far as possible the same as that employed when we are taught our mother tongue.

Miss WATERS, Head Mistress of the County School for Girls, Bromley, read an interesting paper on "Tenure and Functions of Head Mistresses under Education Authorities." She advocated the following scheme:—(1) The appointment of the head mistress by the supreme Authority, not by a local Sub-Committee. (2) The appointment of the assistants by the head mistress, subject to confirmation by the Managing Committee. (3) A probationary period, after which the position should be secure up to the retiring age limit. (4) Dismissal of both head and assistants to be only in the power of the supreme Authority, with ample opportunity for a personal defence and no dismissal without cause assigned. (5) The internal arrangement of the school to be in the hands of the head mistress, subject to inspection and report from the Board of Education. Miss Waters pointed out the defects and inconvenience arising from a system where those who are responsible for the work do not choose their own agents, and she pleaded that teachers under Education Authorities should be prepared with a well considered and unanimous opinion as to their minimum rights and needs; if they knew their own minds on these points, the Authorities would not be unwilling to listen to their claims—more especially at the present moment, while many of the Authorities were still in the fluid state and not yet crystallized by precedent.

Spoken French, already optional, will soon be compulsory for Junior and Senior Locals.

To teach Spoken French you must employ the **Direct Method**, and the best book by far for this purpose is **ROSSMANN and SCHMIDT'S FRENCH BY THE DIRECT METHOD, (NOW COMPLETE)**

of which nearly 200,000 copies have been sold, and which is RAPIDLY REPLACING all other French Courses in British Schools.

Dr. GRAY, Warden of Bradfield College, Berks, writes:—"A valuable work, and infinitely superior in system to the old grammars."

D. L. SAVORY, Esq., of Marlborough, writes:—"Certainly the best First French Book on Reform lines that I have yet seen."

Part I., 1s. 6d. Part II., 1s. 6d. Part III., 2s. 6d. Part IV. Livre d'Exercices, 2s. Livre de Lecture, 2s. Grammaire Française on Français, 8d.

Each Part consists of a carefully planned year's work.

"We consider it excellent for those who wish to acquire a practical knowledge of French."—*Athenæum*, 3/6/05.

The Cambridge Examination, Christmas, 1905, shows that times are changing, and that the R. & S. Course is by far the best for the changed conditions.

OCCASIONAL NOTES.

THE King's Speech, as we were warned, contains no surprises. An Education Bill stands first among the legislative measures actually named, but we are only told that it will be introduced as soon as possible. A Cabinet Committee is still engaged in drafting it, and it will probably be read for the first time shortly before the Easter holidays. This will happen opportunely both for the Scarborough Conference of the N.U.T. and the Sheffield Conference of the Teachers' Guild. By collating the utterances of the Prime Minister and members of the inner Cabinet it is not difficult to prognosticate its main provisions, and all that has since happened tends to confirm our horoscope of last month. There will be no upsetting—so Sir Henry Campbell-Bannerman has stated—of the foundations of the 1902 Bill; in other words, no return to the abolished School Boards. Next, we may take it for certain that the distinction between provided and non-provided schools will disappear. All State-aided schools will be subject to the control of the Local Authority, and the Cowper-Temple clause will apply to all. It follows that powers must be given to County Councils to acquire or to rent from the trustees denominational schools. Our own belief is that no compulsory powers are needed. All but a few fanatics will come to terms when supplies are cut off and the erection of a provided school is a certainty. Lastly, facilities for denominational teaching will, in some way or other, be granted; but on this point we are left to conjecture, and can only state what seems to us the most reasonable compromise. Opportunities should be afforded for specific religious teaching at the beginning or close of the school day in all schools where a substantial proportion of the parents demand such teaching, the teachers to be unpaid and appointed by the respective religious bodies. We should

like, too, to see special provision made for Jewish and Roman Catholic districts.

WHATEVER the new Bill may have in store, it is clear from Mr. Birrell's speeches that children and teachers will be sympathetically considered and fairly dealt with. The *Schoolmaster* recalls how, in the days of Mr. Mundella, *Punch* plaintively asked if any one at Whitehall had ever seen a child. Things have altered now; and, although rates, religion, and regulations must of necessity loom largely in the minds of administrators, yet we may feel full confidence that Mr. Birrell and his official advisers do desire the welfare of the child, and therefore of the nation, rather than the most perfect of paper systems. Dr. Macnamara reminds us of many points of importance that will not be discussed at Westminster, such as large classes, imperfectly qualified teachers, inadequate salaries, and the like; but it is said that there are a hundred members of the new House who have passed through public elementary schools. They will know. Any reform of public schools has always had scant consideration in Parliament, because the majority of members have been educated in such schools, and look back to their schools with affection. Perhaps now, for the first time in the history of legislation, we shall find the case of the people's schools treated with inside knowledge. On the subject of the Register of Teachers Mr. Birrell has already spoken with no uncertain voice, and we may expect to see the existing injustices and absurdities swept away.

SECONDARY education has been often, and with justice, called the Cinderella of the three sisters—Primary, Technical, and Secondary. Perhaps Mr. Birrell will prove the Fairy Godmother. His reply to Mr. Acland's letter is full of promise and hope. Mr. Birrell has been in communication with the Chancellor of the Exchequer, and, as we anticipated last month, is able to say that provision will be made in the Estimates for "a considerable increase of the Exchequer grants in aid of secondary schools; to alleviate the burden now placed upon Local Authorities in respect of the education of teachers; and to further assist the building of training colleges for teachers by the Local Authorities." Until the details of the proposals are actually before us we cannot say how far the new grants will be adequate, but we may welcome the evidence that Mr. Birrell is awake to the needs. It was only last year that the Board, forced by the want of money in the Treasury, announced the change in the Regulations for Secondary Schools that swept away the former classes of A and B schools and lowered the scale of grants except in a few special cases. This *ukase* has threatened a number of schools with bankruptcy. Such schools, all over the country, have been presenting the hardship of their position to the Board, and it is probable that these representations have had weight with the Treasury. Let us hope that the relief will be given generously in the form of a large loaf.

ANOTHER important point raised by Mr. Acland in his letter to Mr. Birrell concerns the payment of teachers. Speaking of the lamentably small grants he says: "The result is that we have a very large number of underpaid teachers." Here Mr. Acland presses home a matter of the utmost urgency. In the abstract we may admire the "simple life" and revere the celibate schoolmaster, full of missionary zeal, of cenobitic temper, putting the spirit

The Need for
Higher Salaries.

above the body ; but in practice it must be admitted that the demand for educational missionaries is greater than the supply. Teachers are neither much better nor much worse than other men. If they are underpaid, they suffer in body and mind : they are celibates from compulsion, ascetic for want of means, cut off by their poverty from sharing in the social or intellectual life of their neighbours. Such a state of affairs—and the picture is not overdrawn—must react for evil upon the school and the scholars. Two things make it urgently important that salaries of assistant teachers in secondary schools should be increased. These are, first, the increased salaries, the regular promotion, and the comparative security enjoyed by teachers in elementary schools. It is inconceivable that salaries in secondary schools should remain permanently below those in public elementary schools, as is often the case to-day. The other reason is that the good sense of the nation will insist that those who have charge of the children shall be able to live decently, to enjoy family life, and in their turn to educate suitably their own children.

THE endowed grammar schools all over the country, with rare exceptions like Tonbridge, have been desperately in want of money. The endowment that sufficed for the teaching of the few who, years ago, asked for secondary education is now a mere drop in the ocean of fresh claimants for a share. The buildings which a century, nay, ten years, ago were considered adequate will no longer meet the needs of the times nor satisfy the Board's building regulations. Many of these schools are in a very weak financial position. The Local Authorities, with their limited rating powers, and ratepayers, already alarmed at the expenditure upon elementary education, cannot give the full help that is needed. Increased Treasury grant is required, even though in these schools the fees may be reasonably high. But the other class of secondary school is in a still more parlous state. It must be remembered that since the Cockerton judgment a large number of schools that were formerly supported out of the elementary education rate are now thrown on the higher rate. The fees charged in these schools are necessarily low. The number of the schools is increasing very rapidly, in response to the growing demand for an education continued after the elementary school. After many years of discussion the sad fact is that secondary education remains neither properly supported nor effectively organized.

THE Archbishop of Canterbury's letter to Mr. J. G. Talbot is a model of Christian charity, in marked contrast to the party prejudice and uncharitableness of another letter on which we commented in last month's "Notes." "I should like," writes his Grace, "to say that I have no reason to believe that the Government is disposed to act unfairly towards those who have in recent years shown so much generosity and self-sacrifice on behalf of schools in which there is security for genuine religious teaching. Like its predecessor, the Government is face to face with an exceedingly difficult situation. I am willing to believe that, like its predecessor, it desires to act with fairness all round." It is a relief, too, to learn that, so far as the Archbishop has any voice in the matter, whatever the Act may be, Churchmen will not resort to "passive resistance." There will be no Trial of the Seven Bishops or sale of apostle spoons at Lambeth. We are not among those Liberals whom the Archbishop upbraids for countenancing "a course of action so contrary to the elementary principles of representative government."

THERE is no arguing with a prophet, and Lord Hugh Cecil writes to the *Times* like a prophet new-inspired:—The fashion of this world passes away, and with it the new Parliament which will extend for five or six years and then give place to a successor. But the Church is everlasting : she counts her day by centuries, and even by millenniums. Those who fight her battles can wait in quietness and in confidence till the tyranny be overpast.—With such prophecies—we say it in no mocking spirit—we have neither the inclination nor the ability to argue. But we may point out that the Church of which Lord Hugh speaks is not, and never has been, the National Church. His is the Church of Apostolic Succession, not the congregation of the faithful that embraces High Church and Low Church, Episcopalians and Presbyterians, the Bishop of Manchester and the Dean of Ripon. Further, we would ask Lord Hugh, however strong his faith in the future, whether he is prepared in the meanwhile to deprive whole generations of children of the "elementary theology and devotion" which he allows may be taught in an undenominational school.

MR. FRERE, of the Community of the Resurrection, finds the solution to the riddle of the Sphinx in that blessed word Pandenominationalism, and the *School Guardian* hails him as an *Œdipus*. Pandenominationalism. It combines and reconciles (so we are told) the apparently conflicting principles of public control over public money and of parental rights as to the form of religious teaching. As our readers know, we do not share Dr. Clifford's objections to concurrent endowment, and wherever the numbers of Roman Catholics are sufficient we should gladly see State-supported Catholic schools. But in one-school areas the pandenominational school for which Mr. Frere pleads seems to us—we can find no milder word for it—a pandemonium. "It will be the business of managers to keep a creed register and provide for the religious education of each group of children according to creed. The willingness or capacity to teach one or other form of creed will cease to be a disqualification and will become a qualification." And the *School Guardian* assures us that there will probably be not more than half a dozen different headings on the creed register. Half a dozen classes classified not by attainments or age, but by creeds! Fifty little Church-of-Englanders taught by the Anglican arithmetic master, a score of little Primitive Methodists taught by the Methodist music master, a Quaker pupil-teacher and two Quaker infants taught by the Friend sewing mistress, and a job lot of no particular persuasion handed over to the agnostic drill sergeant!

Tantum religio potuit suadere malorum !

THE Bishop of St. Asaph says ditto to his brother of Birmingham, and thinks to clinch the argument against undenominational teaching by a poser. He asked an earnest Welsh Nonconformist this question: "Would you, as a Calvinistic Methodist, be willing that your child should receive this Bible instruction from a head teacher who was a Roman Catholic?" His reply was prompt and frank: "Certainly not." Extremes meet, and it is natural that an orthodox Anglican should rejoice more over an ultra-Methodist than over the ninety-nine just parents who need no repentance. Hard cases make bad law, and it is surely better that one parent be constrained to withdraw his child from the common Bible lesson under the conscience clause than that ninety-nine children should receive no religious instruction from their appointed teachers and be left to the tender mercies of sectarian volunteers.

IN the last number of *School* there is an admirable article by Mr. J. L. Paton on "Religious Teaching in Secondary Schools," too good to be here condensed or sampled. We will only refer to the negative conclusions that have a direct bearing on the present controversy. (1) Teachers must be an unordained ministry and their work must be to them a cure of souls. To secure such teachers of religion tests are useless, and worse than useless—"more likely to produce an abundant crop of those finished hypocrites who have the truth of God in their mind, but are without the love of God in their hearts." (2) Equally futile is any prescribed curriculum of religious instruction. "It would be better if the choice were forced upon us to have purely secular instruction given by religious men and women than the most carefully thought-out religious instruction given by men and women who were secular or religious merely for the purposes of their profession." (3) It is advisable in school to have as few dividing lines as possible. "Prof. Rein has pointed out the failure of the *Simultanschulen* in Germany." That the *School Guardian* should have quoted this article with approval and expressed a wish to have reproduced it in full is a happy augury for the forthcoming Bill.

WE have received from the Rationalist Press Association a declaration in favour of purely secular instruction in all State- or rate-aided schools. The major premiss of the argument is that in publicly subsidized schools nothing should be taught but facts—i.e., statements on which the learned world and men of science are unanimously agreed. The Bible, according to the old epigram, is the book in which each man seeks and finds his own dogmas; and the conclusion follows that the Bible cannot serve as text-book for schools. The logic is unimpeachable, but it seems to us to prove too much, and it wholly fails to convince us. On this showing we should be bound to exclude not only all myth and legend, romance and fairy tales, but the greater part of poetry. The story of Odysseus and the Cyclops, of Romulus and the she-wolf, of Alfred and the cakes would all be taboo. "Paradise Lost" would be put on the "Index Expurgatorius," and the ode on "The Intimations of Immortality" would be barred because it contains the questionable doctrine of *anamnesis*. We hold that there is nothing in English literature to take the place of the story of Joseph and his Brethren, still less of the Sermon on the Mount; that ninety-nine parents out of every hundred desire that their children should be taught from these texts; and that the divergent views of teachers as to the nature of inspiration and supernatural authority do not—or, at any rate, need not—affect their exposition of these texts to children.

THE Bishop of Stepney made an earnest appeal for the need of dogmatic teaching in his recent sermon at St. Paul's Cathedral. Dogma, he points out, cannot be common to different religious bodies, and dogma is the simple form of teaching suitable to children. Therefore he will have nothing to do with what is called undenominational teaching. "In itself," he says, "a dogma is a judgment, a decision, a statement which must be taken on trust. In this sense the whole teaching of children in every subject must be dogmatic. No matter what the subject of your teaching may be, you must begin at once with statements which the child must accept on trust, and can only afterwards either verify or correct by his own thinking." The teacher of to-day is not prepared to accept

this dictum. He does not tell a child that five times seven are thirty-five: he makes the child discover the fact by actual calculation and arrangement of units. Indeed, the whole tendency of education is to give as little as possible that must be taken on trust. In secular education it has been found that knowledge taken on trust is apt to become a permanent but unfruitful possession, to the criticism of which the intellect is rarely, in later years, directed. We would rather a child should unconsciously and naturally seek to employ his activities because of a natural desire to be active and because he sees other people around him occupied than that he should be morbidly and precociously active because of Dr. Watts's hymn.

THE English Public Schools' Association in Montreal, on the occasion of the annual dinner, at which many of the chief schools in England were represented, produced a scheme of great possibility and one that ought to be carefully considered by the head masters of public schools at home. The proposal is that young public-school men on emigrating to Canada should be provided with proper recommendations to the Association in Montreal. This association, which has members in all the chief cities, would make it its business to know of openings and opportunities for work, so that the young Englishman, who has perhaps no suitable introductions and has exhausted the slender capital with which he landed, may not be obliged to take unsuitable employment, because he does not know how to get anything else. For a long time past the colonies have been looked upon as a dumping ground for undesirables, and it is natural that the promoters of this scheme in Montreal should make a point of good testimonials and guarantee as to character. Mr. Bidwell, who communicates the plan to the *Times*, suggests that the Head Masters' Conference should consider the possibility of establishing a committee to issue certificates based on unimpeachable evidence that applicants are *bona fide* public-school men and that they have borne a first-rate character at school and since leaving.

MR. BALFOUR has told us that we are all socialists now, and the remark is perfectly true in so far as we are all prepared to recognize the responsibility of the nation as a whole to all its citizens. It is agreed that every one should have reasonable chance of health and strength and education; that it is the duty of the nation to provide as far as possible that no individual shall be allowed to starve, to suffer from malnutrition, or to remain ignorant. But there is a long way from the acceptance of the idea to its realization. And, of course, in details there is opposition, often founded on perfectly good grounds. The nation is certainly not at present prepared to accept the whole of the policy laid down in educational matters by the Annual Conference of the Labour Representation Committee. Put briefly the demands are these: at least one free meal a day to be given; all education of all grades to be free; bursaries to be given to children whose usefulness would be enhanced by continued education to enable them to support themselves while continuing their studies; education to be entirely secular and entirely controlled by the directly elected representatives of the people; the standard of capacity to be judged by work previously accomplished, and not by competitive examinations; the money for these reforms to be found by the National Exchequer out of revenue obtained through broadening the basis of taxation. This is a vision of Cloud-cuckoo-land, an outbidding of the Aristophanic Sausage-seller.

GREAT schemes must of necessity move slowly. It is some two years since Lord Rosebery announced that private benefactors had made it possible for him to propose the establishment of a great institution for the teaching of science—an institution which was at once christened the “London Charlottenburg.” Now we have the report of the Committee appointed, under the chairmanship of Mr. Haldane, to investigate the nature of the basis needed. The next step is to begin building and to appoint heads of departments who may superintend the erection of laboratories suitable to their needs. We hope it will not be possible in these days to sink large sums in a palace merely designed to please the artistic eye. Success in teaching depends to no small extent upon bricks and mortar. The work of many a school and college is hampered to-day by buildings that handicap the teacher and the student. Therefore we would say that the chief professors of the new institution should be appointed first, and should be in close collaboration with the architect throughout. In about ten years’ time we may expect the first batch of students to have left the new college and to be beginning their task of spreading scientific knowledge among the industrial traders of the Empire. The vexed question (discussed in full on another page) whether the institution shall or shall not form part of the University of London can afford to wait.

THE movement in Germany in favour of more complete opportunities for the education of women has reached a stage, as we learn from the Berlin correspondent of the *Morning Post*, at which practical progress can at once be begun. The Prussian Government has announced the intention to effect a thorough reform in the existing system of education for girls. Throughout the kingdom of Prussia public schools called *Lyceen* and *Oberlyceen* will be established. Thus a girl can begin her education in a *Prolyceum* and leave the *Oberlyceum* at the age of twenty prepared to undergo a University education. But the object of the new proposals is not merely to suit the small percentage who wish to study at Universities: it is also to provide a more serious education than is given at present to the majority of girls from the middle and higher classes. As Fräulein Helene Lange well says: “We wish to do away with the shallow æsthetics and the sugary sentiments that at present form so large a part of our girls’ education. We desire to see our girls grow up to be capable mothers and citizens; to train them to think, to give them a more profound appreciation of the intellectual and the economical and social culture of the day, and to inspire them with a more robust feeling of responsibility in regard to questions affecting the social well-being of the nation.” But what will become of contemporary writers of fiction?

THE London County Council has issued a memorandum calling the attention of those interested to the career offered by teaching in the public elementary schools of London. The new scale comes into operation after August 1 of this year. It offers to assistant masters who are properly qualified a salary of £100 a year, rising by regular annual increments to £200 a year. These increments might, of course, be withheld, but practically they are automatic. Tenure during good behaviour is certain. Salaries of head masters range from £200 to £400, and “there are openings to posts of still higher value.” Assistant mistresses will begin, after August 1, 1907, at £90 and rise to £150. Head mistresses range from £150 to £300,

and again we see the tempting allusion to posts of “still higher value.” Graduates who are also otherwise fully qualified, whether men or women, will begin at £10 above the ordinary scale. We are told that the Council already has under consideration a scale for teachers in secondary schools. The minimum cannot well be below the minimum just quoted. And it is a fact, though we utter it with shame, that in many of the poorer secondary schools of London assistant masters and mistresses would be glad if they could be assured of the maxima of £200 and £150 respectively that we have mentioned above. When the scale for secondary teachers is published, whether or not the Council is able by grant of funds to make it compulsory, a valuable example will have been set that will do much towards improving secondary schools over the country.

THE American school system of purely secular education has, in common with all other systems, its supporters and its detractors. Thus we read: “I have never yet come across a single American who objects to it or who dreams of substituting anything else.” Again we read: “The assassination of President McKinley is a visitation of God on America, and is to be attributed to our Godless system of education, a far worse crime than slavery or intemperance.” We agree cordially with the real meaning of both speakers, and we would point out again that a people is not made religious by definite doctrinal teaching given during certain and limited periods, any more than it is made sober by Act of Parliament. Conduct, which even the most rigid devotee of dogma will admit to be an important fruit of religious teaching, is the result of the general influence of the *milieu* in which the child lives. Children will not be much more nor much less religious than the people with whom they mix. Among these influences teachers count for something. It is impossible to-day to get thousands of teachers convinced of the primary importance of dogma. What teachers believe and what they do—not the half-hour’s lesson in religion—form their real influence on their scholars. The teacher standing before his class for thirty hours gives a more influential sermon, for good or ill, than the preacher in the pulpit for twenty minutes. It is by our teachers that religious education stands or falls.

A BRIEF account has been published of a meeting of the Executive of the Northern Counties Education League, from which it is clear that the Government will have to meet no slight difficulties in the drafting of the new Education Bill, even from the progressive party among its own supporters. We are told that opinion was freely expressed that the proposals outlined by Mr. Birrell might not have the approval of the advocates of a national system of education. The President, Mr. Alfred Illingworth, seemed to voice the feeling of members when he said that all sectarian teaching must be removed from the official work and the official hours of the school. He felt convinced that the American plan of leaving out theology and reading the Bible for purposes of the formation of character and moral instruction was the true settlement of the difficulty. This sounds so simple, and yet in practice it is so impossible. If teacher and children are to be gagged, the latter forbidden to ask and the former forbidden to answer questions, then the Bible reading will soon become an empty form. A better solution than this will have to be found in order to satisfy the religious instinct of the nation. In truth, the League takes up an attitude as irreconcilable as that of the extreme

Opposition to Mr. Birrell.

High Church party, and a *concordat* between the two does not seem possible. The Executive also condemned a history published by the National Society that had been issued to schools in the East Riding on the ground that an attempt was made to disparage the character of Oliver Cromwell.

"WHY trouble about cooking, when tinned lobster and pickles can be readily bought and expeditiously prepared."—Yet Mrs. Marvin, as we are glad to see, pegs

The Value of Food.

away at the urgent need of training girls to be housewives and mothers. The existing ignorance is absolutely appalling, in spite of the many efforts to dispeel it that have been made and are being made. We are, perhaps, rather proud of our cookery schools and our laundry centres. Mrs. Marvin tells us that of girls over eleven only one quarter learn cookery, only one nineteenth learn housewifery, and only one twenty-second learn laundry-work. Book education, partly because it is cheap, has assumed too great a monopoly of the school hours. Practical teaching in the facts that tend to produce a well ordered and healthy life are of the utmost importance. The present ignorance, to take one point alone, of food values is discreditable to those who are responsible for our codes and disastrous for the well-being of the nation. It is just as easy to suffer from malnutrition as from under-feeding (or indeed from over-feeding). Even among the so-called educated classes and their cooks this ignorance is extraordinary and lowers their vitality. It is obviously a matter of primary importance that some member of the household should know the values and properties of different sorts of food.

PROF. OMAN, in his inaugural lecture, went out of his way to scoff at "educationalists," especially when assembled in conclave. "Horrid word," he said, "and, by implication, "more horrid thing." Our

The Oxford Modern History School.

withers are unwrung, and, though he flouts the "irresponsible criticisms of the press," he cannot take offence at a humble endorsement of his views on the teaching of history. Briefly, he held that the University is a place both of education and of research: that the two functions must be, as far as is possible, correlated; but in cases where they conflict education must take precedence. Applying these principles to his own province, he maintained that the Modern History School was framed on the right lines, and he deprecated its conversion into a technical school for budding historians. The real blot on the school was, in his opinion, not the neglect of palaeography, but the want of any provision that the student should have some grip of foreign languages. In this plea for a liberal education as opposed to a specialized study we are heartily in accord. But even Oxford is capable of reform. There have been predecessors in his chair to whom Prof. Oman fits the cap. "The worst teacher, without exception, that I ever knew was a man who had obtained the highest possible University distinctions and had also done meritorious work in research."

MRS. HUMPHRY WARD'S letters to the *Times* on the subject of the playtime of the poor will have been widely read and doubtless have aroused an uneasy feeling in some minds that, in spite of the many organizations on which we pride ourselves, all is not well with the children of our less privileged neighbours. In our comfortable suburban homes we scarcely like even to think of the slums of large cities. Yet much has been done by many wealthy

donors and by a multitude of earnest and self-devoted workers to enlarge and brighten the outlook of dwellers in slums. But what a drop in the ocean it is! If the crowded rookeries and dirty courts of our big cities are to remain, the responsibility of looking after the children in their play-time must not be left to amateurs: it must be undertaken by the State. For many years Christianity has had as one of its fundamental doctrines the duty of care and consideration for one's neighbour. But, in the modern conditions of life, we do not see and cannot look after our "neighbour." Though it weakens the benefit to giver and recipient alike, we must pay some one to do our duty for us. That is to say, that the more fortunate among us, usually from no fault or merit of our own, must pay through the rate-collector for the proper care, in school and out of school, of the children of the less fortunate in life's struggle.

LOCAL AUTHORITIES.

THE Education Committee of Middlesex has published the conditions for the recognition of secondary schools in the county. In the first place, all schools, public or private, applying for recognition will be required to undergo inspection, both administrative and educational, in accordance with the Board of Education Act, and will have to be approved by the Education Committee. Half the cost of inspection will be borne by the county. When the test is passed the school will be included in the county list of recognized schools. Schools not carried on for private profit will be eligible for assistance in the usual way: capital grants and maintenance grants. Schools carried on for private profit will be eligible for assistance in the following forms:—County scholarships may be held by pupils in the schools: pupils may compete for all county scholarships; the services of travelling lecturers and the use of county museums, laboratories, gymnasia, &c., subject to suitable terms being arranged. It is further stated that schools in receipt of aid must present an annual report showing the curriculum, time-table, and the examiner's or inspector's report.

THE Staffordshire Education Committee, as a result of two years' experience, has issued a very useful scheme for **A Scheme for School Gardening.** Sixty-four schools in the county have worked out the scheme. The general garden is recommended, as opposed to the single-plot system. The latter is more suitable for evening-class students. Where the former plan is adopted it is possible to arrange the garden exactly as a cottager would deal with his own plot of ground. There is also a saving in equipment; and the teacher is able to group the boys together under his eye and within hearing of his instruction. The cost of equipment is stated to be (for each class) £7. 1s. 8d., and the annual cost of seeds, manure, repairs to tools, &c., £1. 13s. 7d. The Committee offer a grant of £6, of which at least £5 should be given to the teacher. "If the class is to be taught with enthusiasm, it is neither wise nor fair to lay it upon the teacher as an additional burden without any proportionate advantage to himself." The importance of the course, in Mr. Graham Balfour's opinion, may be gathered from the following quotation:—"The boy who has been well taught will not merely be a neat gardener, but will thereby develop his intelligence, observation, and character, and become better able to turn his hand successfully to any work he may desire to do, and to avail himself of any opportunity in life that may present itself to him." The way in which the garden may be utilized in connexion with the Nature-study work of the school is fully dealt with.

It is the fashion to pour gentle ridicule on the "Suggestions" of the Board of Education as being a set of pious aspirations impossible of realization in the cold, practical light of experience. Yet in one place after another we see earnest reference made to these "Suggestions," and in one report after another teachers are urged to study them carefully—in the Staffordshire report on gardening and Nature study and in the report of the Wilts County Council on the way to deal with infants. The latter report contains also the following specific recommendations:—Chairs and dwarf tables of a convenient size should be supplied for infants under five years of age. A separate room, and that the sunniest, should be reserved for them. A separate time-table should be in use. No lesson should exceed fifteen minutes in length. No metal needles, and, as a rule, no penholders, lead or slate pencils, should be given to

the infants under five. Numbers should be taught by concrete objects only; picture books and blocks, but no reading books, may be requisitioned. For physical exercises recreative games are the best. We have also received reports of the valuable work in agriculture that is being done by the Committee.

Evening Classes in Birkenhead. We have received from the Education Committee of Birkenhead the annual report of the evening classes in science, art, &c. The subjects taught are numerous and the attendance seems to have been good, showing that the inhabitants of Birkenhead appreciate the opportunities afforded them by the Committee. It is interesting to note the degrees of popularity of the various subjects. Among the men students (by the way, we do not like the terms "males" and "females") the following subjects were the most popular:—Arithmetic, shorthand, book-keeping, drawing, commercial correspondence, woodwork. After these come writing and composition, French, preliminary science, English; then citizenship and, last of all, algebra, Spanish, and ambulance. Among the girl students needlework comes first; then writing and composition, book-keeping, cookery, arithmetic, ambulance, and home nursing. The least well supported are vocal music, commercial correspondence, millinery, drawing, and French. The comparative unpopularity of citizenship and ambulance is rather surprising.

Secondary Education in Cheshire. A COMPLETE scheme of secondary education for Cheshire has been proposed by the Education Committee. This will, of course, take some years to become effective; but when it is fully carried out it will probably meet all needs, as the requirements of rural districts will be met by maintenance scholarships. These are the new schools proposed: Altrincham, for 200 pupils; Wallasey, for 300 boys; Macclesfield, for 220 girls; Hyde, for 250 pupils; and Crewe, for 350 pupils. It appears that three of these are to be co-education schools. The initial cost, apart from site, is estimated at £40 per school place. This is, perhaps, rather a narrow estimate, and may have to be increased. The estimated cost of maintaining all the secondary schools, including those that are already built, is put at £7,000 a year. Here, again, the cost is certain to increase. On the other hand, it is to be hoped that the Treasury grants will soon become much more generous and also that the limit of twopence for the higher education rate may be removed. Higher elementary schools are also to be established; but in some cases existing secondary schools will be converted. The difference between a higher elementary and a lower secondary school appears to be that the latter sounds more genteel to parents, and is therefore preferred by them; while the former may be charged to the elementary education rate, and is therefore easier to finance.

Games at Grimsby. It was not without some opposition that the Mayor of Grimsby carried his motion before the Education Committee that a sum of £40 should be spent in relaying part of the playing field as a cricket pitch for the boys of the Municipal College. We do not doubt that the money will be usefully spent; and, if the principle is once admitted that it is the duty of the Authority to make provision for physical health and the occupation of leisure, then we may see the provision of cricket pitches for all the elementary schools as well. It was argued at the meeting that passed this expenditure that this money was really in the form of scholarships, as it would induce boys to come to the College after leaving the elementary school. This would be good for the boys and good for the school. The boys are evidently willing to help themselves as well as to apply to the Committee for funds. It was stated that they proposed to raise a sum of £250 for a cricket pavilion.

THE LONDON CHARLOTTENBURG—UNIVERSITY OR POLYTECHNIC?

By Dr. A. DU PRÉ DENNING.

THE conclusions and recommendations embodied in the final report of the Departmental Committee on the Royal College of Science, issued early in February, will be viewed in scholastic circles as liberal, broad-minded, and far-seeing statements, which reflect the greatest credit on the compilers, whose labours have now extended over nearly two years. The preliminary report, of which we gave a full account last August, dealt with finance and locality. The question of government was reserved for further consideration.

With regard to the ultimate governing body, the Committee are still not yet unanimous. The point of difference is whether

the new institution shall or shall not be amalgamated with the University and come under the control of the Senate. In order that the establishment and organization of the new institution may not be delayed, whilst the best arrangements for the governing body may be further discussed, the Committee have unanimously agreed that a provisional Committee (of forty) be appointed to take forthwith the necessary steps. On this original governing body it is suggested that the Crown should appoint six members; the Board of Education four; the University of London, the London County Council, the City and Guilds Institute each five; the teaching staff four; the Commissioners of the 1851 Exhibition two; the remainder to be appointed by the Royal Society, the principal engineering societies, and the Society of Chemical Industry. The Committee are agreed that this first governing body shall have free action in organizing and starting the new institution without delay, and they further recommend that this body be given control during a minimum period of five years.

The question, upon which there is a divergence of views, seems to the writer of this article to be one of extreme importance (see "An Amended Scheme for the London Charlottenburg," *Journal of Education*, September, 1905) for the welfare of the new undertaking, and one of no small moment for its future students. Without exaggerating the prestige of a degree, may we not well raise the question as to whether a student of this institution will not find himself at a disadvantage in his profession—say, that of an engineer—when competing against the "degreed" men from the provincial Universities? Of course, "students would be free to take degrees at London University, or other University, in addition to the College diplomas." But, if the instruction courses are not accepted "degree" courses, we may easily conclude that the majority of the students will elect to take the diploma only. Does a diploma carry as much weight in applications for scholastic and professional positions? This may seem a very subsidiary point; but, fortunately or unfortunately, it is one of grave importance to the average student in his future career. The German technical high schools have ultimately decided in favour of degrees. Until the occasion of the Charlottenburg High School jubilee in 1899 they were accustomed to grant diplomas to their students on the completion of their studies: they have now obtained the right of granting degrees. In Prussia, Saxony, Wurtemberg, Baden, and Brunswick it is that of "Doctor of Engineering"; in Bavaria it is that of "Doctor of Technical Science."

Indeed, the question of the combination of the University and the technical high school into a greater University embracing all branches of learning has in recent times frequently been raised in Germany. We all recognize the close connexion of mathematics and the whole of the natural sciences with technical science, and it is not necessary here to point out how important for the technical scholar has become a training in questions of national and political economy and of law. On the other hand, an insight into technical science will become ever more essential to those engaged in natural science, law, and economics. Also in the Universities nowadays a continually growing importance is attached to practical and laboratory work; so that the outward form of instruction in the two establishments does not show any essential differences. Such reasons seem potent grounds for binding a new technical college to a progressive University such as that of London. It is to be borne in mind that when German technical high schools were instituted as separate bodies from the Universities it was at a time in which technical work was held in but slight estimation, and when, in fact, there was but an imperfect appreciation of technical matters. However, though many men of mark have pleaded in favour of such a combination, general opinion would seem to indicate that, though desirable, it is no longer practicable, on account of the wide extent of the technical high schools—an argument which does not seem very convincing, to this writer at any rate. The future, we are told, will be the age of big undertakings for the sake of economy of management, &c. Surely, if this is true of commercial undertakings, it is likely to be equally applicable to educational methods and undertakings.

Again, in considering such a scheme as the present one, ought we not to take into account the probable methods which will be followed by our other large centres of industry in similar matters? The extensive engineering, mining, metallurgy, and

applied chemistry departments, already existent or to be provided, in Birmingham and other such towns, are now, and are likely to continue, units of one co-ordinated whole.

Should the new institution not be associated with London University, what is to become of the University Engineering Faculty? Will this, at present flourishing, faculty become a moribund body, hampered and tied by the "all-impeding trammels of an education regulated, and rightly regulated, by other aims?"

It may be of interest to give the main arguments which have been put forward in support of their views by the two sections of the Departmental Committee. For the one view it is said:

It is assumed that, whatever may be the subsidiary purpose of the new institution, its principal purpose must be to afford a two years' course of advanced study, linking science with investigation, production, and manufacture, to students of, say, nineteen years of age and upwards who have received elsewhere a good general education, and have passed, in addition, through the equivalent of a two years' systematic training in science, whether at the new institution itself or elsewhere. Such an institution, while it will make for the general development of its students, will have their preparation for the work of life as its dominant aim. It must therefore maintain close contact with current practice in the industries of the Empire. . . . An institution which is to keep touch with these interests must be correspondingly elastic. Its organizations must be free from all impeding trammels founded upon experience of the well tried and comparatively little changing track of an education regulated, and rightly regulated, by other aims. It must be free to adapt itself, its staff arrangements, and its methods of teaching, to the conditions of the time. Its constitution must place the responsible control in the hands of men with a continuing knowledge of affairs and of the great producing activities of the Empire, and its governors must be in position to govern with a single eye to the fitness of the institution for its proper function. These conditions of success appear to exclude the proposition that the control of the institution should be vested in a University.

One cannot but wonder what idea these objectors can have of the teaching staff of such technological institutions. Are they also to be regarded "as children in these matters" of everyday life? Is it not realized that a professor of one of the subjects taught may be, perhaps, the greatest living authority on his subject—as, for instance, is Prof. G. Kapp, Professor of Electrical Engineering, Birmingham University? I imagine that no engineer in England would for an instant consider himself a more practical man or more capable of exercising "responsible control" of the Electrical Department than the Professor. Of such men I imagine the teaching staff of the new institution would be composed if London University appointed them. By all means have co-opted specialists on your Board of Studies. But why a staff of first-class practical men could not act under the University it is hard to realize.

Moreover, students for advanced courses of study in the new institution should be drawn from all parts of the Empire. It should, in fact, be an Imperial College of Technology, admission to which should be sought by men trained in the Universities and technical colleges at home and in the dominions beyond the sea. Freedom from subordination to any existing University would enhance its attraction for the ablest students, whose preliminary training had been obtained elsewhere and would indicate its distinctive character as an Imperial College.

The last argument is surely hardly meant to be taken seriously; whilst against the first it may be remarked that quite a large number of students from such different parts as India, Japan, China, South Africa, and New Zealand are attending various courses in technological subjects at Birmingham. Further, if the age of admission is to be from nineteen years upwards, the two years' course of study is not likely to be much more advanced than the senior courses at the various schools it is proposed to incorporate, though naturally the equipment will be more costly.

London University has special obligations laid upon it in connexion with the London district, and must continue to fulfil them. It cannot claim any particular right to provide for Imperial needs.

This last sentence may be taken as indicative of the foremost thought in the minds of the objectors to the amalgamation proposal. They fondly believe that the one institution for which they are now working will be all-sufficient for home and colonial, that is, for Imperial, requirements for some years to come: yet it will most certainly not meet our home requirements, let alone those of our colonies. How is it to be expected that many parents of even capable boys (and surely all parents

think their boys capable) are going to send them to London to study engineering, or whatever it may be? Those most conversant with English parents should realize that it is necessary to bring educational institutions to their very doors before the great majority will give the matter serious thought. And, after all, it is the majority we want to educate technically, and not the appreciative few—who will usually know where to go. The point I wish to urge is that we must be anxious to secure many such technological institutions as the one in question, and these in the majority of our large towns, though naturally on a smaller scale than in the Metropolis. For the opposite view it is said:

Modern opinion at home and abroad is in accord that degrees should be given for advanced technological education. In this country, if it is possible to infer a settled policy from recent and numerous proceedings, it appears that such degrees should be given by the Universities. Not to mention recent developments at the older Universities, the power of conferring degrees for advanced instruction in technology has been given by each of the five University charters granted in the last five years, as well as to the University of London, when it started on its new career. . . . Each of the existing component parts of the new institution is a school of the University. . . . There would, however, evidently be danger of friction between the University and a powerful school if each were regarded by the other as external to itself.

The Senate (of the University) . . . has expressed its willingness that its numbers should be increased if the new College were administered by or under the control of the University. On that condition, too, University College appears willing to consider either the proposal that its Engineering Department should be moved to South Kensington, or that it should have special relations to the new College. Difficulties due to the existence of separate interests have been and are being diminished. . . . It would be a very serious step to check a spontaneous movement, which is thus healing the divisions and rivalries that have hindered the progress of University education in London for three quarters of a century, by reverting to the principle of dual or multiple control, which, as experience has shown, tends neither to economy nor efficiency. . . . An Imperial institution which throws its doors open to all must be largely local in character. Nay, it should be so if the mingling of British and colonial students, which it is one of the main objects of Imperial education to secure, is to be attained. Further, a successful local institution of the first rank must become in part national, Imperial, and even international. . . . An attempt to establish side by side two systems, one Imperial and the other local, would only lead to confusion.

Finally, let us hope that the opinion expressed by Lord Reay and Sir Arthur Rucker—that it is desirable, in the interests of higher education and of the new institution that steps should be taken as soon as possible to incorporate it in the University—may eventually be shared by all. Perhaps it might be worth while for the powers that be to institute degrees in technical science.

Postscriptum.—Very soon after the foregoing had been written there appeared in the *Times* a sharp criticism by Prof. Karl Pearson of the Committee's action in not straightway placing the proposed new institute under the control of the University of London. Prof. Pearson emphasizes the fundamental fallacy of attempting to differentiate technology from academic science, and refers to the fact that difficulties have arisen where technical colleges have been set up independent of the local University, and ultimately, by reason of their growth, competing with it, as, for example, in Manchester and Cambridge (U.S.) and in the case of the Massachusetts Institute of Technology and Harvard University. Should the present report be acted upon, then two of the constituent colleges of the University will be thrown together into a new institution, which will inevitably be forced into competition with the University. Is the University, in that case, asks Prof. Pearson pertinently, to close its other technical schools and go maimed through life?

The Professor is further of the opinion that the right way for Government funds to help technical education is by developing the technical sides of all the local Universities as contended above.

WHAT an ideal school, according to Mr. Lathbury's ideas, Cheam must have been in Lord Randolph Churchill's day! A contemporary remembers him at the age of eleven "repeating 'ore rotundo' the whole of the Article on Predestination and Election without hesitation or the tremor of an eyelash."

PHENOMENA OF ASCENT.

AERONAUTS and mountaineers are at the outset advised to read no further if they would seek fresh avenues of interest in their favourite pursuits; yet, if they have the wider instincts of humanity, they may be able to read what follows in their capacity of units in a human world, and be, perhaps, none the worse.

The admitted aim of most philanthropic agencies is to raise the lower strata of mankind; but the most enthusiastic agents have not always had the clearest conception of what exactly this "raising" implies, and even the particular gradations of ascent in the cases of individuals have not always been made the object of the most careful scrutiny. Yet on individual cases must be based all general methods which are to be other than purely empirical.

How difficult the analysis must be we see when confronted with certain individual cases in which an analysis of ascent defies statement just because genius itself defies analysis. When the Russian *moujik* of obscure origin comes to pen brilliant word-pictures of his low estate, or when the English tinker enriches his mother-tongue with a classic, we can but enshrine the individual within the hierarchy of genius and be profoundly thankful. Even when the barefoot, penniless lad emerges from life's conflict as a merchant prince, we feel that genius is present in the phenomenon, and we can but marvel at the forces of Nature. Nay, further, we are bound to admit that, even in the case of the slum-born *danseuse* or *prima donna* who ends life, mayhap, as her Grace, there is present an intangible something that transcends any reasoned process of analysis.

Sometimes even genius is aided by other factors, whereof heredity is undoubtedly chief. Exactly how much Horace and Burns and Carlyle owed to their fathers we shall never quite know, though none of the three failed to give honour where it was so worthily due. It would interest us much to know just why these fathers elected to give their sons what to-day we call "a chance." In all likelihood the most potent factor in the paternal mind was a consciousness of personal defect attributed, and probably with truth, to the lack of opportunity. Still more valuable would be a precise knowledge of what led to the recognition of this defect—whether it was an influence of a definite type, educational or social, or, on the other hand, some sudden flash of introspection called up by some external and fortuitous combination of events.

It is not the aim of this article, were it within the writer's power, to trace to the fountain head the subtle influences acting in cases like these. Genius is too rare to be worth speculation. Rather, if it be possible, would it be useful to discuss with some fullness the very ordinary case in which a man of average talent and attainments comes to occupy in the arena of life a place of more prominence and greater power than his forbears could command, or, what is a more weighty matter still, the case in which, occupying a place on the same rung of life's ladder, he so infuses his personality into the performance of what may be humble duties that potentialities hitherto undreamt of are disclosed, and that particular office in life demands ever after from him who fills it a higher degree of *vous* and a fuller conception of life as a whole.

To none more than to schoolmasters ought this to appeal with a peculiar interest, for it involves the question of development from the *παιδαγωγός* to the teacher of to-day. Not that the *παιδαγωγός* is extinct, even to-day (to our shame be it said), but it is manifestly true that the output of intellectual energy by the average schoolmaster of to-day is enormously greater than it would have been at any time these three hundred years.

It is remarkable how reluctant many parents are to permit their children to adopt the occupations they themselves follow. This is especially noticeable where the occupation is not a lucrative one. Families of physicians, clergymen, and barristers are not at all uncommon, and we have doubtless to thank heredity for much that is excellent in the professional world.

With the classes engaged in manual toil the case is somewhat different. Some distasteful and dangerous occupations are highly lucrative, and those engaged in them think of little save getting and spending. In Scotland many an ironworker makes £4 a week, and the writer was credibly informed that an efficient chimney-sweep can earn £1 a day. The sons of such

men naturally drift into the paternal occupation; and, while stability may result so far as the business is concerned, the chance of any alteration in the moral or intellectual *status* of the worker is diminished.

Not so with the less highly paid *confrère*, who is perhaps often out of work, and thus has periods of enforced meditation. *Res angusta* was not unknown in the Venusian household, and it is quite probable that the Burness and the Carlyle families knew the pinch of poverty. Not that we can thence evolve any practical means of philanthropic action; 'twere odd philanthropy to reduce a man to penury for the weal of his descendants. But we know that the parent who had time to meditate had thereby given to him a chance of discerning wider paths for the energies of his sons. He probably cast his eyes on some "modern instances," and came into contact with those of a more highly developed type than those among whom he habitually moved. He probably realized that there is no real barrier between class and class, and that effectiveness in this world is a question neither of birth nor of education, but rather of potentiality—to which, of course, education is often subsidiary. Some men can *do* without *knowing*: these are the geniuses. Others can *do* after *learning* how: these are the skilled workers. Others, again, *know*, but *do* not: these are the "ignavum pecus," the drones.

Leisure for meditation must lead a parent to recognize the fact that a man lives in virtue of the work he does, and the more effective the work the fuller the life. Why does purely manual labour rank so low? Simply because, in spite of Carlyle and Ruskin, no one has yet invested the so-called humbler spheres with their full birthright of potential activity. It is all, so to speak, kinetic; the man is nothing, the work everything. How different things are in the professional world!

Again, manual labour is, as a rule, a slow operation, and the labourer spends his entire day for what seems very little. In the nature of things and the present condition of machinery, this must still be so, but less so than of yore. If a census of workers were available, we should find that in Britain to-day there are not a tenth of the men engaged in purely unintelligent operations that there were fifty years ago. The tending of machinery calls for much higher intelligence than did the operations which the machinery has superseded.

It is an almost invariable rule that the length of a man's working day is in inverse proportion to the intensity of the energy expended. We honour the more on that account the labourer who lives the fuller life. The writer has the pleasure of knowing a man whose working day is devoted to the most unintellectual of spade work, but who yet is an authority on entomology. Not long ago a verger in an Irish cathedral was consulted by his bishop on a knotty point in Hebrew. Cases like these are exceptional and, it may be, irrelevant. They do show, however, that a man may earn his bread literally in the sweat of his face and yet not be in any sense deprived of the higher and fuller life that we are so dangerously apt to regard as the peculiar prerogative of the man of learning.

Recent developments in engineering have shown us how useful is the combination of mental with manual training. The best director for a gang of navvies is the man who not only can plan the constructive work, but is able at a pinch to cast his coat and give an effective demonstration lesson in purely manual toil. At the present moment a very large number of artisans try to train their sons as engineers. They have seen in the course of their day labour that possibilities of fuller life exist for those who enter into work which is gradually being more fully infused with living and intelligent interest. There is something in the mere contact with mechanism which has an elevating tendency. It is only too well known that the mechanic is a man of fuller life than the agricultural labourer. But it need not always be so. As the science of agriculture develops, those engaged in the practical art develop also. How different is the up-to-date scientific farmer of to-day from his prototype of the Early Victorian age! The advance in status has not yet reached to the meanest agricultural operative, but assuredly time will show a change. Why is a gamekeeper as a rule a more intelligent man than a ploughman? Simply because the former has constantly to set himself to the solution of varying problems in animal life. So with the shepherd, who is usually a man of some resource.

When the steam-driven plough is universal, then ploughmen will be no more. They may have been drawn into the ranks

of mechanics, or they may have found occupation as herdsmen, who will be required so long as domestic animals survive. In any case there will have been an ascent.

There is a way in which a little may be done by educational agencies. Every real teacher has recognized it, and uses it daily. It is simply to make our teaching a living testimony to the grand truth that every single thing in this world is interesting. There is no subject but can be made fascinating by the right man. The highest ideal any teacher can have is to live up to this. He will probably fail, but where he succeeds he will be doing work of incalculable value. We know that certain schools have their peculiar traditions. A man hailing from one is almost certain to be fond of classics, from another, of mathematics, from a third, of art. Why not of plain manual work? Every schoolboy knows, as Macaulay's oft-quoted urchin did not, how pleasant are the hours of school life devoted to manual work, be it in wood or iron or clay.

Thews and sinews we ever admire; sheer brute strength we constantly respect; yet the work that calls for these and nothing more we are apt to despise. Perhaps this is partly because we so seldom find it being done by men who have any claim to respect on higher grounds. Yet it is not always so; and it would be less often so if we could reach such excellence in our educational work that every boy who left school did so taking in his heart some intelligent interest, be it but in fish or fur or feather—an interest that would live and lead to deeper study and further experiment and inquiry.

There is a period when a boy seems, from the civil point of view, to be entirely a negligible quantity—viz., the period that elapses between his school-days and the time when he becomes a taxpayer. He may, it is true, continue his education, but he is not always shown why he should do so. The Church makes valiant efforts to enlist his interest, but with slight success. The wax of tapers will not stop his ears to the voice of the Siren, Sport. The State does nothing: it might do much. It might, for instance, raise the marriageable age, and allow young blood to cool and sense to come; it might pursue drastic methods and lay loafing under a ban, compelling all youths to do something definite in their evenings—it matters not greatly of what kind, provided it were done well: conscription would be better than nothing.

The lad who works his way to manhood and thinks while he works is the one whose descendants add something to the accumulated sum of human knowledge or infuse some fresh energy into the performance of some ancient task. On the other hand, the youth who passes the novitiate to manhood without aim or purpose and without work is certain, if unfortunately he perpetuate the race, to rear a family whose national worth will be either *nil* or negative. And this is true of peer as of peasant. The aristocratic "waster" may perhaps be the more calamitous to the nation through involving in his downfall those who are perhaps really useful, but the tendencies that draw the individual over the brink are precisely the same in the two cases.

If thinking men combined in reasoning out the precise course of this ascent in life, in marking the various steps, and determining to some extent the dominant influences, they would be in a position to contribute towards the solution of a problem which is neither trivial nor ephemeral. W. R.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The endeavour to supplement the work of the primary school by means of classes for adults has been attended with remarkable success in France. The classes are conducted mainly by primary teachers; but others co-operate in their beneficent labours. Ministerial decrees lately issued set forth the rewards to be bestowed on those who have been most zealous in instructing adults. Among primary teachers will be distributed a hundred silver-gilt medals, each carrying a premium of 100 francs, a hundred and fifty silver medals, with a premium of 75 francs, and four hundred bronze medals, with a premium of 50 francs. For those not connected with the primary school there have been set apart twenty-five silver-gilt medals, seventy-five silver medals, and a hundred bronze medals. The rewards are to be allotted upon the nomi-

nation of the prefects and *recteurs*, a special committee being appointed to draw up the list of those selected for honour. Payment by decoration is familiar to French and German teachers. It has a certain elegance and refinement; but English primary teachers would probably choose rather to have their remuneration wholly in terms of bread.

There is a real necessity that something should be done to reinforce the work of the primary school. We believe that the general public is quite ignorant of the degree in which compulsory education has proved a failure both in France and England—a failure, that is, in respect of compulsion. The French, however, have their eyes opened from time to time by inquiries made into the state of education among the conscripts. Such an inquiry was made in 1905 in a company of a regiment recruited almost wholly in a department of North France, where the school is held in high esteem and where agriculture and industry prosper. Out of sixty-two conscripts seventeen, or 27.4 per cent., were entirely illiterate. The least bad results were obtained in practical morality. The question propounded was: "Supposing you had sent to you a foreign coin, not bad, but no longer current, what would you do with it?" One young soldier declared that he would begin by trying to pass it; a second was for converting it into a scarf-pin; most of the others decided that it would be best to sell the coin for its actual value. The problem in arithmetic was this: "The captain of a company of one hundred and eighteen men gave a litre of wine to each of them. If the wine cost 40 centimes a litre, what was his total expenditure?" Only six offered an exact and reasoned answer; twenty-three sent up a correct answer without any reasoning; ten, a wrong solution; the rest, including, of course, the illiterates, could furnish none. In civics it was asked: "What is the form of government in France? Under what circumstances was it established?" Four answered properly; thirty-two simply said "Republic," without adding particulars; three made no answer at all; four replied, "the French Government"; and one (whom we might suspect to have been jesting) laid down that the government of France was "tous les coups d'Etat assemblés!" To test knowledge of geography the recruits were called on for the situation of six well known towns. Five thought that Metz was still in France, one that it was in America; four placed Port Arthur in France, whilst five assigned it to Italy; two believed that Austerlitz was in Russia, one that it was in England, and one that it was in North America.

We give these details not to emphasize the failure of the primary school in France—similar questions to English recruits would reveal at least as a great a measure of ignorance—but to illustrate a general proposition. Compulsory education has not yet compelled all to acquire even the rudiments of learning. Let us turn, however, to another subject. A method seems to be coming into vogue for teaching the French boy the true meaning and etymology of French words by grouping them about the Latin or Greek word from which they are derived. It occurs to us that classical schools in England might find the plan useful as a reinforcement of the direct method of instruction. Let us take an example. Beginning with *palma*, the teacher points out that it yields the popular *paume* as well as the learned *palme*. Then from *paume* he traces *jeu de paume*, *jouer à la longue paume*, *empaumer* (of a ball), *empaumer quelqu'un*, *empaumer une affaire*; to *palme* he refers *palmette*, *palme*, *palmarès*, and so on. The method can be used even with those who know but little Latin and Greek. To facilitate the employment of it books have been prepared by M. Carré and published by the Librairie Armand Colin at Paris. Both have the title "Le vocabulaire français." The smaller (for the pupil) costs 2 francs; the larger (for the teacher) 4.25 francs. How the system would work in practice, we cannot say; but it has at first sight much to recommend it. And some head masters might be induced to take French more seriously when they found that it could be correlated with instruction in the classics.

GERMANY.

In our February number we touched, in connexion with the proceedings of the Naturforscherversammlung at Meran, on the movement for improved science teaching in schools. Let us put the matter as clearly as possible.

There are two principal groups of educational subjects, one consisting of language and history, the other of mathematics and natural science. Now not only in classical schools, but also in modern (or realistic) institutions, the former of these groups has hitherto received a preponderating amount of attention. It is now contended that the two groups are equally indispensable to modern culture, and should therefore be put on equal terms. Moreover, as to natural science it is urged that the development of science and the increased importance of science in our social and intellectual life have not been adequately recognized in the school. Our readers will observe with interest what is happening in Germany. Parity of right was demanded for the modern as against the ancient. This has been in great measure conceded. But even before the concession is quite complete a new cry is

raised. Realistic studies claim equality with what may be called verbal studies, be these in an ancient or in a modern field. The words of men recording their thoughts and past experience are not more useful, it is said, as instruments of education than the phenomena of Nature, observed and studied in their relations and their laws. To what degree the contention is valid it is not for us to determine, or, in this place, even to examine. We do but report an educational movement of the day, significant, it may be, of much for the future.

The aims of the reformers may be brought out, so far as the school is concerned, by means of an illustration, which will

An Illustration of its Aims.

be instructive further for the side-light that it throws on science teaching in Germany. The time-table for the *Oberrealschulen* of Baden is to be recast. We show first how the subjects relevant to the question are at present treated in the four highest classes:

	Hours a Week for			
	Mathematics.	Physics.	Chemistry.	Botany, Zoology, Anthropology.
Lower II.	7	2	2	None.
Upper II.	7	3	2 (+ 2)	None.
Lower I.	7	3	2 (+ 2)	None.
Upper I.	7	3 (Astronomy).	2 (Mineralogy and Geology).	None.

Next we give the allotment of time as recommended by the Education Committee of the *Naturforscher*. The minimum number of hours a week for natural science in each form would be seven—the same number as is now assigned to mathematics, which would lose two hours. They would be distributed thus:—

	Physics, 3 hours a week.	Chemistry and Mineralogy, 2 hours.	Biological Subjects, 2 hours.
Lower II.	Conclusion of the elementary course in Magnetism, Electricity, Acoustics, and Optics.	Introductory Course.	General study of the forms of plants and animals.
Upper II.	Mechanics and Heat.	Inorganic Chemistry, with occasional references to Mineralogy.	Summer half-year: Botany. Winter half-year: Zoology.
Lower I.	Acoustics; Optics.	Summer half-year: Inorganic Chemistry. Winter half-year: Mineralogy.	Summer half-year: Botany. Winter half-year: Zoology, Physiology, and Comparative Anatomy.
Upper I.	Magnetism; Electricity; Cosmic Mechanics.	Organic Chemistry.	Summer half year: Geology. Winter half-year: Anthropology, including Psychology.

This, be it remembered, is a time-table for science teaching as it is demanded by scientific men. It is not a time-table actually in force, and there are many slips possible between the cup of proposal and the lip of realization. It serves, however, to make plain the character of the science movement, clamorous not only that more time should be devoted to science, but also that the instruments of scientific education should be multiplied and improved.

We have been speaking of Baden. Perhaps we may here beg those who care to read—it would be impertinent of us to address those who write—about education in Germany to keep always in mind that the German Empire is not a unity for administrative purposes, and that it is almost as hard to make general statements about German schools as about English. Let us give an example. Does the German *Gymnasium* require Greek from its pupils? The answer to the question is that at least in Prussia the subject is not always obligatory. A school may follow the time-table of the *Gymnasium* to *Untersecunda* (Lower II.) inclusive, but with English as an option for Greek; then from *Obersecunda* (Upper II.) onward it may offer alternatively the course of the *Gymnasium* or that of the *Oberrealschule*. But special permission is necessary for such an organization, nor do we know that many schools have adopted it.

Greek in the Gymnasium.

clusive, but with English as an option for Greek; then from *Obersecunda* (Upper II.) onward it may offer alternatively the course of the *Gymnasium* or that of the *Oberrealschule*. But special permission is necessary for such an organization, nor do we know that many schools have adopted it.

UNITED STATES.

In an article in *Science* Mr. Jas. P. Munroe pleads for closer relations between trustees and faculties; that is to say, between those who govern places of higher education and those who teach in them. We summarize his contentions as well as we can. It is a common cry that teachers, whether in colleges or schools, are underpaid; and the complaint is just. But the imperative need of American college faculties is not larger salaries: it is greater professional authority and more genuine freedom. The reason why comparatively few men of ability deliberately prepare themselves for what should be reckoned the noblest of professions is not that it condemns them to poverty, but that it dooms them to a kind of servitude. The American lawyer or physician must obey only the well established code of his profession; the American teacher, on the other hand, is often wholly at the mercy of unsympathetic laymen. American Universities have always been strongholds of intellectual freedom. But in their early days they were subordinate to the ecclesiastical or civil power. Now the hands both of Church and State have been largely withdrawn; in their place, however, have appeared the dead or living hands of donors demanding that their gifts be safeguarded by stable and practically irremovable trustees. So there are School Boards administering large funds and possessing almost absolute powers. These governing bodies consist, except in the case of strictly denominational institutions, of laymen chosen, as a rule, for their standing as financiers rather than as educators. They doubtless invest the funds at their disposal to good advantage; but they grow to be less and less in touch with the teachers over whom they exercise their despotic authority.

Again, of the teachers, especially in large institutions, the best are occupied as college presidents and heads of departments. As a consequence the teaching falls mainly into the hands of recently graduated young men, more zealous than wise, and inexperienced in the art of teaching. Education is neglected for the giving of instruction. What is required is some means of communication between those who actually teach and those who govern; so that all may co-operate in the work of education. Mr. Munroe advocates the creation in every board of trustees of a new standing committee to confer at stated and frequent intervals with a like standing committee of the faculty, selected freely by that body itself. We do not doubt that his proposal is wise. It interests us as an indication that in the United States, as in England, teachers have to complain that they are consulted too little upon the business of education. And much in the article goes to confirm our opinion that millionaires are to be feared "et dona ferentes."

The American Modern Language Association held its last annual meeting at Haverford, Pennsylvania. One of its acts was the adoption of a resolution approving the proposal to hold an international conference of experts in phonetics to consider the formation of a uniform alphabet for all languages. Great interest was shown in the subject, and the hope was expressed that some definite concrete result would be attained in the simplification of written forms.

Dr. Harper was born in 1856 at New Concord, Muskingum County, Ohio. He entered the Muskingum College at eight years of age and received the degree of A.B. there at fourteen. He had been studying Hebrew, and his graduating oration was delivered in that language. After further years of study, given to the Indo-Iranian and Semitic languages, he was made a Ph.D. When he had gained experience and fame as a teacher, he was called to Yale as Professor of the Semitic Languages, and in 1880 became Woolsey Professor of Biblical Literature in the Yale Divinity School. But his great achievement was the restoration of the defunct Chicago University, over which he presided for fourteen years. The closing days of his life were spent in a tragic and brave-hearted struggle with cancer, to which he succumbed on January 10 in the present year. It is said that he has left but a small estate behind him, he having given largely in his lifetime to the Institute of Sacred Literature. For this his memory should be the more highly honoured.

BELGIUM.

Autumn is the season in Belgium when societies meet as naturally as leaves fall. The daily press has notified the success of the important gathering at Liège, the First International Congress upon Education and the Protection of Infancy in the Family. The Congress has left behind it as a product two permanent committees—one for pedagogic science proper, the other for the study of abnormal children. The Congress international d'expansion économique mondiale, which assembled at Mons was characterized by the strong attack made in one of its sections upon the place assigned in education to classical studies. Of those who defended them many belonged to the Clerical party. Father Thibaut, S.J., went so far as to aver that "the old humanities, constituting the normal preparation for truly scientific studies, are necessary for the formation of the intellectual élite that Belgium requires." Interesting

was the statement—it will not be to all convincing—of Dr. Hausknecht, Head Master of the *Reform-Realgymnasium* at Kiel, Germany, that in his school, where the ancient authors are studied in German translations, the spirit of them was more deeply penetrated than in the ordinary *Gymnasien*. After much discussion and much railing at Greek, the Congress agreed in calling on the legislature to establish a college in which a scientific study of the mother tongue, of Latin, and of modern languages should form the chief instrument of instruction, and to leave experience to decide whether its pupils compared favourably with those brought up under the old classical system.

CEYLON.

The Report of the Director of Public Instruction for 1904 has just been received. The total number of pupils attending school in Ceylon was 246,382, an increase for the year of 8,123. An addition of ten to the Government schools and of fifty to the grant-in-aid schools is reported. So far the figures are satisfactory. But it is found difficult to get the children to attend regularly and for a sufficient period. There are a large number of them who attend school irregularly for one or two years, or perhaps only for a few months. "Such an education," says the Report, "is of no value at all, and cannot be expected to have any influence either in checking crime or promoting habits of industry. The inference seems clear that, if education is to be of any real use, in Ceylon it must be made compulsory. If this were done at the present moment, we should have over 500,000 children at school; at present we have only a little over 200,000 at schools which can be regarded as efficient. The change is one which cannot be made with a stroke of the pen; it must necessarily be spread over some years. The question how it is to be carried out was referred by Government to a Commission at the end of the year 1904."

The number of girls attending Government and aided schools during that year showed an increase. About 26 per cent. of the female population of the country get something in the way of education, the rest nothing. It does not appear that any considerable step was taken to remedy this state of affairs. But the Education Department proposes to establish more girls' schools. The mixed school, it declares, is not suited to the East, and does little good except in cases where it is, to all intents and purposes, two separate schools. Higher education is better provided for than elementary. One girl presented herself for the University Scholarship, passing a very creditable examination; twenty-five out of thirty-three girl candidates obtained certificates in the Senior Cambridge Local Examination.

DRAWING AS A METHOD OF EXPRESSION.

A CLASS of elementary-school girls (Standard VII., ages twelve to fourteen), who had studied drawing as a class subject, in accordance with the Government Code, for at least two years, were one day told to make a drawing of one of their own hands. We all know at what a very early age the juvenile studies his extremities, and it was interesting to see how far the older child was now able to give expression to these infantile contemplations. The girls were to be left quite free—absolutely unassisted and at liberty to choose either hand, either side of the hand, and any position.

The following facts were observed, from which the thoughtful may draw certain conclusions:—

Out of thirty-six girls seven elected to draw the right hand, regardless of the constant movement: three drew the hand with palm uppermost. Of the remaining twenty-nine various studies in fingers were exhibited. Two girls drew the closed fist with one finger pointing, one showing the back of the hand, the other showing a portion of the palm with fingers closed down upon it. Four girls drew a firm hand with fingers quite closed; three drew the fingers slightly apart. No less than twenty-seven showed the hand with fingers widely extended. The thumb was drawn close in to the fingers by one girl only. Even when the fingers were close the thumb in all other cases fell away widely from the fingers. Nineteen girls drew the fingers and thumb all of one and the same length. Where had been the physical training, and the training of the observation, of these children?

The same girls were also asked to draw a human face—any position, man or woman, &c.—just as they chose. Mindful of the days when a rude circle with two dots served for a human

face and four short straight lines indicated our own active and much flourished limbs, whilst a trunk was often missing, the following observations of childhood at a later stage of development afforded food for reflection:—One girl drew full face with broad grin, showing dentition of prehistoric magnitude; four drew the face looking to the right—and these were some of the worst; all the others drew left profile. Ten heads were bald; nor was it possible to distinguish the sex of the person represented. Eleven indicated masculine faces, the moustache being marvellously well developed. Seven seemed to represent girls with flowing hair, and seven indicated women's heads with a pronounced knot of hair behind.

After noticing these particulars regarding individual choice, details of anatomy were remarked. Thirteen omitted any indication of mouth, open or closed; five drew the mouth slightly opened; two showed an extraordinary drop of the lower jaw; one gave a pronounced grin (full face). Ears were altogether omitted in no less than twenty-three cases. Necks were extraordinarily slender, noses distinctly pronounced. The eye, with remote eyebrows, often filled a large portion of the available space, and was situated in the side of the face, halfway between the nose and the back of the head.

Yet a third experiment was set the girls. They were told to draw from memory any article they liked in common use in their homes. The following list gives the varied choice:—Nine chose cup and saucer; five, chair; three, table (two legs); one, cup without saucer; one, pudding basin; one, egg cup; one, tall jug; one, kitchen dresser; one, chest of drawers; one, tumbler (these two were the most successful); three were unintelligible; nine abandoned the attempt.

What knowledge of the individualities of the girls would a thoughtful teacher gather from these studies of her class?

AUGUSTA BARE.

JOTTINGS.

JUDGE BACON can never have had sons at a public school, or he would not have displayed such righteous indignation at charges for extras. Dr. Bruce-Smith, of the Ealing Grammar School, sued a parent in Judge Bacon's court to recover a term's fees for defendant's son, who had been withdrawn without notice. The fee for board and tuition was £8. 8s., and the extras amounted to £3. 1s. 11d. The proportion of the extras does seem large, but it included stationery, attendance at public baths, subscriptions for games and school clubs. Judge Bacon denounced the games subscriptions as ridiculous, and had never heard of a master charging for pens and ink. We could tell him of an eminent member of the profession who left not so long ago a considerable fortune derived in part from the sale of pens, ink, and candle-ends, and of a fashionable ladies' school where everything except English and Divinity is an extra. Apparently Judge Bacon held that cricket, racquet, and foot balls, as well as stationery and ink, should all come out of the eight guineas a term. "Sus Minervam!"

ANGLO-GERMAN AMITY.—The London Branch of the General German Language Association held its seventh anniversary meeting on February 3 at the Holborn Viaduct Hotel. Its founder and President Prof. Aloys Weiss, occupied the chair, and there was a large audience. He stated that the number of members had during the year increased from 542 to 600, half of them being English by birth or naturalization. One of the objects of the General Association was to purify and simplify the German language. The London Branch endeavoured to advance the study of German in this country; and, by extending the knowledge of German literature, it hoped to contribute towards Anglo-German friendship. Throughout these seven years its motto had been: "Loyalty to the German Fatherland and Friendship to England." Dr. Weiss referred to the recent meeting of the Anglo-German Conciliation Committee at which Lord Avebury presided, and to the important speeches of the German Ambassador, Count Metternich, at the Lyceum Club and the Junior United Service Club. A new movement had thus been inaugurated, and many manifestations of friendship had followed. Such amity would be greatly furthered if German were studied in this country to the same extent as English was in Germany. Prof. Walter Rippmann read a highly interesting paper on "Allegories of Hans Sachs."

"WHAT," asked a grave bishop, "do you mean by the three degrees of education?" Answer was made by a waggish M.P.: "Religious, irreligious, and Birrelligious."

THE REV. F. TAYLOR has resigned the office of Registrar of the Joint Agency, the resignation to take place in June next.

LORD G.: "What on earth should take Mr. Chamberlain to Oxford? There's no declining industry in Oxford to serve as his text." Mr. A. J. B.: "I suppose he will discourse on the declining industry of the undergraduates."

THE DEAN OF RIPON ON BIBLE TEACHING.—The present crisis is a case of the Sibylline books. The clericalists have twice over resisted reasonable proposals which gave a promise of a satisfactory solution. The first occasion was when, some forty years ago, it was proposed to have a conscience clause in all the schools. The violence of Archdeacon Denison prevailed; the proposal was rejected. The conscience clause came, of course, but it came too late. The second proposal (made some twenty years ago) was that of having on every Committee a certain number of members representing the public. This also was rejected, and its enforcement has come too late. We have now a third opportunity of bringing about a settlement. Let us frankly adopt it while there is time.

We have before us number 3 of *Outre Manche*, the organ of the Guilde Internationale, and we can strongly recommend it as an invaluable aid to students of French. Among the contributors are the most distinguished professors of the Sorbonne, and they give us admirable translations and notes on translations. There is a beautiful rendering of Sidney's sonnet to the Moon by M. Legouis, and a fair copy of Burke's famous passage on Marie Antoinette by M. Rancès. We have also notes of lectures on Romeo and Juliet by M. Beljame, and of translation from French into English by M. Baret. Other items of interest are an account of the Reformed Method in French Lycées, a descriptive review of "Jean Christophe," and an account of St. George's House, Vincent Square, where women workers can live in comfort for about £60 a year.

THE seventeenth annual report of the Royal Drawing Society shows a marked increase in its work and sphere of operations. Seventy additional schools have been examined, making a total of 652 schools, presenting 34,839 candidates.

DR. JAMES WARD, Professor of Mental Philosophy in the University of Cambridge, has for a second time been appointed Gifford Lecturer. He will lecture at St. Andrews in the sessions of 1906, 1907, and 1908 on "The Realm of Ends."

AT the annual conference of the Labour Representative Committee a sweeping resolution on education was carried by 817,000 votes against 76,000, including the following items:—(1) one free meal a day for all school-children, (2) all grades of education to be free and State maintained, (3) maintenance scholarships up to and at the Universities for all pupils capable of profiting by them, (4) universal secular education controlled by direct representatives of the people. Mr. Chamberlain's increment of nine millions to the revenue would be but a drop in the bucket if the Labour programme were carried out in its integrity.

SIR PHILIP MAGNUS's letter in the *Times* of February 19 fully bears out the contention of Dr. Denning's article, which was written before the letter appeared. "If," writes Sir Philip, "the proposals of the Committee are adopted, the advanced engineering schools of London would be practically amalgamated into one institution which would constitute the Engineering Faculty of the University. The students of the institution would look to the University, and to the University only, for their degrees."

KING'S COLLEGE, LONDON, WOMEN'S DEPARTMENT.—The Art School is starting a special class for girls under seventeen in drawing from the antique, still life, &c. The fee is three and a half guineas a term.

THE London Intercollegiate Scholarship Board will hold an examination for entrance scholarships, beginning on May 15. The aggregate amount of the scholarships to be awarded is £870.

THE future of the new Labour group in the House of Commons will largely depend upon the training their members have received in social and economic questions. Many of the members of the two historic parties have had the good fortune of receiving a University education followed by some experience in public work. The trade unions of the country have realized the importance of fitting their representatives for positions in public life, and have established scholarships for some of their members at Ruskin College, Oxford. This year there are no less than thirty-six students at the college, all working men, and drawn

from trade unions, and in the majority of cases their fees are paid by their unions. The Amalgamated Society of Engineers, numbering 95,000 men, have sent nine students. By taking a course of training at Ruskin College these students are not helped to rise out of the class to which they belong; for the subjects in which they receive instruction do not in any way fit them to alter their trades. Not a single working man student who has attended the college has failed to return to his trade. Another interesting feature in connexion with the college is that for the first time in the educational history of this country public funds are being used to educate working men in those social and economic problems which they are called upon to solve. The West Riding County Council has established a scholarship at Ruskin College, Oxford, to be held by a young working man from that district. The scholarship this year has been won by a miner from Pontefract who has for several years been devoting the whole of his leisure to the education of his fellow-miners in social questions.

THE Conference on the Training of Teachers convened by the University of Wales and the Central Welsh Board, which met at Shrewsbury on January 26, passed some sweeping resolutions. (1) Till the abolition of the pupil-teacher system—a much-wished-for consummation—the Local Education Authorities should have full discretion in determining how the time of pupil-teachers should be divided between primary and secondary schools. (2) The training of teachers should be regarded as a national concern, and Treasury grants should be increased to such an extent as to enable the Local Authorities to provide a four-year continuous source of instruction at a secondary school as a preliminary to professional training for intending elementary teachers. (3) That pupil-teachers should cease to be counted as effective members of any school staff. (4) That all intending teachers should be granted, as far as possible, facilities for obtaining a University degree.

"W. H." writes to us: "Mr. Herbert Paul holds a brief for the defendant in the case of *Freeman v. Froude*. I have no desire to intervene, and only wish to point out how

"One touch of nature makes the whole world kin."

Mr. Paul pleads that Froude's mistakes are, nine-tenths of them, mere misprints and slips of the pen, which none but a pedant would notice, and Mr. Paul faithfully follows his leader. In a Greek quotation of two lines there are five misprints or slips of the pen, and the most sarcastic paragraph in the *Life* ends thus: "It is fortunate that there was no temper in the case. For if there had it would have been a very bad temper indeed."

MR. ARMITAGE SMITH, Principal of the Birkbeck College, has been appointed Treasurer of the College of Preceptors, in place of Mr. Pinches, resigned.

WE grieve to learn that Miss Maitland, Principal of Somerville College, is dangerously ill.

THE following appointments are announced in the A.M.A.:—Mr. E. N. Marshall, late Head Master of Kingston-on-Thames Grammar School, Head Master of Walsall Grammar School. Mr. W. Walton, Head Master of Widnes Secondary School, Head Master of Gateshead Secondary Day School. Mr. J. B. Gaunt, Newcastle-on-Tyne Central Pupil-Teacher School, Head Master of Rutherford College, Newcastle-on-Tyne. Rev. F. H. George, The Grange, Folkestone, second master, Hurstpierpoint College. Mr. W. P. Donald, Assistant Secretary to the Dorset Education Committee, Secretary to the Barnsley Education Committee. Mr. F. Shackleton, barrister-at-law, Assistant Director of Education for Bedfordshire. Mr. J. Townsend, Bancroft's School, Woodbridge, Leeds Grammar School. Mr. W. W. Exell, Handsworth Grammar School, Head Master of Atherstone Grammar School. Mr. T. Smirk, second master at Accrington Secondary School, Head Master of Haslingden Secondary School.

TEACHERS' REGISTRATION COUNCIL.—The following important notice has been issued by order of the Council:—"The attention of the Teachers' Registration Council has been called to the fact that on July 31, 1906, the date on which Regulation 4 ceases to be operative, the results of certain final examinations for a degree and also of certain of the examinations mentioned in Appendices A, B, and C of the Teachers' Registration Regulations will not have been made known, though the examinations will have been undergone before that date. The Council have accordingly ruled that teachers whose qualification for registration is affected by the publication of the results referred to shall be permitted to make provisional application for registration before July 31, 1906. The Council will be unable to consider applications under Regulation 4, provisional or otherwise, which are not lodged at the Registration Offices on or before July 30, 1906."

Mr. MURRAY'S LIST.

The School World:—

"Mr. Thompson's larger Greek Grammar has already won a place in the world of scholarship; this abridged work for schools will, we think, win equal acceptance. Its good points are accuracy of scholarship and agreement with the canons of philological research. . . . The book is original; it is a new work, not an adaptation of others."

AN ELEMENTARY GREEK GRAMMAR FOR SCHOOLS.

By JOHN THOMPSON, M.A.,

Formerly Scholar of Christ's College, Cambridge;
Senior Classical Master at the High School, Dublin.

Part I.—ACCIDENCE, 1s. 6d. Part II.—SYNTAX, 1s. 6d.
COMPLETE, with full Indexes, 3s.

BY THE SAME AUTHOR.

A GREEK GRAMMAR FOR SCHOOLS AND COLLEGES

ACCIDENCE AND SYNTAX. Complete in One Volume. 6s.

The 'Guardian':—

"Mr. Thompson's larger Greek Grammar, published a year or two since by Messrs. Murray, was welcomed as an improvement in many respects on those which are commonly used. This abridgement will be also welcomed. Like its larger brother, it bears on every page marks of independent study; it is, in fact, a new work, not an adaptation of old works."

School History of England. 3s.

An Outline History for Middle Forms. From the Earliest Times to the Death of Queen Victoria. By Miss M. A. TUCKER, formerly Marion Kennedy Student at Newnham College, Cambridge. With many Coloured and other Maps, Plans, Tables, &c. While containing all that is necessary for the Junior Examinations, this book aims at arousing the interest of the student and stimulating him to further efforts in historical study. The book is very fully equipped with maps, plans, tables, &c., which greatly add to its practical utility.

MR. C. R. L. FLETCHER'S History of England. Part I. 5s.

Part I.: From the Earliest Times to the Close of the Middle Ages. With Coloured and other Maps, Plans, &c. *New and Cheaper Edition.*
Part II. *In preparation.*
" . . . We commend it to the notice of schoolmasters sick of the arid typical text-book. . . . Here is a book containing to a great extent the old history-stuff, but written with vivacity and intelligence."—*Academy.*

The Growth of the Empire. 4s. 6d.

A Handbook to the History of Greater Britain. By A. W. JOSE. With many Maps of the Empire at various periods. *New and Cheaper Edition.*
This book has been recommended as a text-book for the Cambridge Local (Senior and Junior) and College of Preceptors (Junior) Examinations.

Classical Atlas for Schools. 6s.

Edited by G. B. GRUNDY, M.A., D.Litt. Consisting of Fourteen Sheets (containing Thirty-eight Maps and Plans), with a Complete Index of 19 pages.
" . . . Will undoubtedly supersede atlases now in use among schoolboys and undergraduates. It is well bound and cheap at six shillings, but, better than this, it is clearer and more legible than any similar atlas we have seen. . . . The whole is excellently edited and produced."—*Athenæum.*

Nature Teaching. 3s. 6d.

Based upon the General Principles of Agriculture. For the use of Schools. By FRANCIS WATTS, B.Sc., and WILLIAM G. FREEMAN, B.Sc.
"Forms a welcome change from the many appearing under similar titles in that it is avowedly based upon experiments and treats of things about which the writers really know and have not merely read up."—*Nature.*

Notes on Volumetric Analysis. 2s.

By J. B. RUSSELL, B.Sc. Lond., and A. H. BELL, B.Sc. *Revised and Enlarged Edition.*
Concise directions and calculations are special features of this book. In the new edition additional matter has been added on the standardisation of Acids by means of Sodium; Chalk; Borax, &c.; Potassium Bichromate; Iodine; Thiosulphate; and Silver Nitrate.

Manual of English Grammar. 2s. 6d.

With Exercises and Examination Papers. By T. D. HALL, M.A. *New Edition, Revised and Enlarged.*
The new edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely re-written, and embody the most recent philological discoveries. The whole text has been re-set in a clear and striking type.
"The work of revising this new edition has been well done."—*School World.*

French Reader (Intermediate). 2s. 6d.

With Historical, Biographical, and Grammatical Notes. Edited by M. A. GEROTHWOHL, B.Phil., L.ès-L., F.R.S.L., Examiner to the Oxford and Cambridge Schools Examination Board.
"A collection of about 100 short passages (usually two or three pages) from French Authors. The first fifty passages deal with Natural History and the rest are 'pièces relatives à l'histoire de France,' e.g., 'Mort de Jeanne d'Arc.' The volume is admirably printed and there is a sufficiency of explanatory notes at the end."—*Preparatory Schools' Review.*

By W. MANSFIELD POOLE, M.A., Senior French Master at the Royal Naval College, Osborne.

GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE.

Just Published. Crown 8vo, 2s. 6d.

A New Elementary French Grammar on modern lines, written entirely in French, with numerous Exercises, and intended for the use of scholars up to 14 or 15 years of age.

JOHN MURRAY, ALBEMARLE STREET, LONDON, W.

"Books" are the first and last of all our enjoyments" — Hazlitt

The Gospel according to S. Luke.

With an Introduction and Notes by WILLIAM WILLIAMSON, B.A., Author of "Dictation Passages." With 3 Maps. Crown 8vo, 2s. [Methuen's Junior School Books.

"Every subject is interesting, but it is not every author who knows how to make it so. Mr. Williamson has this invaluable secret. His notes and introduction are eminently scholarly without being needlessly academic."—*Church Family Newspaper*.

Nouvelle Grammaire Française.

By J. G. ANDERSON, B.A., Examiner to London University, the College of Preceptors, and the Welsh Intermediate Board. Crown 8vo, 2s.

Except an important Introduction on Phonetics, with Diagram, this work is written in French for English-speaking students who have reached the stage when a systematic but rational study of Grammar is necessary. It also contains matter for reference purposes. Emphasis is laid on points where English and French differ. The conjugation of the verb is simplified. Other new and special features are The Formation of Words, Concordance of Tenses, Parsing and Analysis, Punctuation, &c.

Exercices de Grammaire Française.

By J. G. ANDERSON, B.A. Crown 8vo, 1s. 6d.

This book is primarily intended as a companion to the "Nouvelle Grammaire Française," but it may be used in conjunction with any Grammar.

"Will be of great service to most classes in schools, as the exercises pass by easy gradations from simple accidence to the difficulties of syntax and punctuation."—*Athenæum*.

A Junior French Prose.

By R. R. N. BARON, M.A., Modern Language Master at Cheltenham Grammar School. Crown 8vo, 2s. [Methuen's Junior School Books.

Manual Training Drawing (Woodwork).

Its Principles and Application, with Solutions to Examination Questions, 1892-1905. Orthographic, Isometric, and Oblique Projection. By F. STURCH, Staff Instructor to the Surrey County Council. With 50 Plates and 140 Figures. Imperial 4to, 5s. net.

A guide to the Examinations in Manual Training Woodwork of the City and Guilds of London Institute, meets the requirements in Geometrical and Mechanical Drawing of the Education Department, University of London, London Chamber of Commerce, &c. The questions and solutions are not obtainable elsewhere, and these, with the large number of new questions and diagrams which can be used early in the session, should make the book invaluable to teachers.

Please write for a Specimen Page.

A New Trigonometry for Beginners.

By R. F. D'ARCY, M.A., Lecturer at Gonville and Caius College, Cambridge. Crown 8vo, 2s. 6d.

Among the special features of this book are:—The introduction of experiments in Practical Geometry to lead up to many of the topics considered; the use throughout the book of four-figure tables; the relegation of the special consideration of the trigonometrical ratios of angles of 30, 45, 60, 120, 135, and 150 degrees to a few worked-out examples. The book is provided with a large number of examples.

A New Junior Arithmetic.

By H. BOMPAS SMITH, M.A., Head Master of Queen Mary's School, Walsall. Crown 8vo, 2s. 6d.

This book is an attempt to lead the beginner to regard the learning of Arithmetic as primarily the habitual application of common sense to questions involving number, not as the acquisition of mechanical facility in certain rules.

Examples in Physios.

By C. E. JACKSON, B.A., Senior Physics Master at Bradford Grammar School. Crown 8vo, 2s. 6d.

The object of this work is to supply a collection of suitable problems covering the average Physics course in Secondary Schools.

An attempt has been made to cover the whole ground, and it is believed that any pupil who can work through these examples will be well up to the standard of a University Scholarship.

Easy Stories from English History.

By E. M. WILMOT BUXTON, Author of "Makers of Europe." Crown 8vo, 1s.

"Of elementary English histories this is quite the best that has recently come under our notice, and should make a solid foundation for later teaching."—*School*.

"The stories are well chosen and well told. A capital bird's-eye view of the whole course is given."—*The Journal of Education*.

The Student's Modern and Historical Atlas of the British Empire.

By C. GRANT ROBERTSON, M.A., Fellow of All Souls', Oxon., and J. G. BARTHOLOMEW, F.R.S.E., F.R.G.S. 4to, 4s. 6d. net.

"The maps appear admirably adapted for their purpose, and in combining information as to physical features and products with political boundaries the authors are doubtless on the right track. The Atlas thoroughly deserves a wide popularity."—*Athenæum*.

Let Youth but know: a Plea for Reason in Education.

By KAPPA. Crown 8vo, 3s. 6d. net.

"However much some readers may disagree with some of 'Kappa's' conclusions, nothing but good can come of a careful reading of his really fascinating book. 'Fascinating' may seem a curious adjective to apply to an essay on educational methods, yet few people with a healthy interest in its subjects who take up this book will consider it inappropriate."—*Daily Telegraph*.

"Here is a writer who has thought profoundly concerning education. . . . A master of illuminative phrase."—*Morning Post*.

"Kappa's' book should be studied (it can be studied with real pleasure and entertainment) by every one who has the interest of his country at heart."—*Daily Mail*.

A Primer of Religion.

By W. J. OLDFIELD, Canon of Lincoln. Crown 8vo, 2s. 6d.

This book is based on the Catechism of the Church of England, and is for use in families. The writer has had in view the needs of the home school-room, and children up to about twelve years of age. He endeavours to give them a clear grasp of the primary truths of religion, while cultivating a facility in 'finding places' in both Bible and Prayer Book. Diagrams are given to strengthen the interest and assist the memory. The book is intended as a guide to personal life, and not a textbook for examination purposes.

Small Lessons on Great Truths.

By A. K. PARKES. Fcap. 8vo, 1s. 6d.

An attempt to present some of the fundamental truths of religion, untrammelled by mediæval dogma, and in a form in which they can be understood by children. It is intended for the use of those parents who wish to bring up their children as Christians and, at the same time, to provide them with a reasonable faith.

The Complete Cricketer.

By ALBERT E. KNIGHT. With many Illustrations. Demy 8vo, 7s. 6d. net.

A volume alike for players and students of the game. Memories of the past are incorporated with pictures of the present. The historical development of our national pastime and a discussion of its changing aspects during recent years precede those more practical and didactic chapters intended for younger aspirants to proficiency in Cricket. The final chapters concern themselves with Cricket in the Greater Britain, with the characteristics of Australian grounds, the preparation and peculiarities of their wickets, and a personal impression of a great Test Match at Sydney. There are many photographs of cricketers in action.

Sir Walter Scott.

By G. LE G. NORGATE. Fully Illustrated. Demy 8vo, 7s. 6d. net.

The "Life of Sir Walter Scott" treats of its subject both as man and author, and is in many important respects different from any other Biography at the service of present day readers. Whilst Lockhart's great work, the "Letters" and the "Journal" have been freely utilized, notable particulars have been drawn not merely from contemporary writers, but from memorials and recollections only given to the world in recent years. Abbotsford and the Scott country have been specially visited, and interesting details are given as to their condition at the present time. The aim has been to produce a thoroughly popular, readable book, and thus, although due place has been given to critical commentary, this has not been done at the expense of other phases. In the volume are collected fresh facts about Scott not to be found elsewhere.

Thoughts for the Day.

Arranged by R. MUDIE SMITH. Fcap. 8vo, 3s. 6d. net.

Christ In Art.

By Mrs. HENRY JENNER. With 39 Illustrations. Demy 16mo, 2s. 6d. net. [Little Books on Art.

Methuen's Standard Library.

Paper, 6d. net; cloth, 1s. net.

The following additions will be made shortly to this important series:—

More's Utopia.

Law's Serious Call.

Plato's Republic.

Burns' Poems.

Butler's Analogy.

The Little Flowers of St. Francis

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

CLASSICAL EDUCATION.

By W. F. BURNSIDE.

LATIN and Greek can no longer lay claim to an absolute monopoly in a liberal education. In an age frankly commercial and utilitarian the value of a classical education has been frequently challenged, and the claim that the classics supply the best training of the mind is not tacitly accepted by a considerable proportion of the well-to-do classes in England to-day. It is vain to urge that the aim of education is to impart culture and refinement, to train the intellectual and reasoning powers, to stimulate taste and feeling—in a word, to create a state of mind fit to deal with the practical difficulties of many walks in life—rather than to furnish the mind with a certain stock of useful knowledge capable of being converted into hard cash. The classics are a noble means for a noble end—to enable a man to write, to speak, and to think with ease and power; and, if the end is attained, then the service of the means may be dispensed with. Classics may still retain the hegemony in the field of higher education; but the days of their absolute sway are over. Even the hegemony may pass away if the hoary traditions of methods systematized and practised for centuries are adhered to with a rigid conservatism almost amounting to superstition.

A frank recognition that times have changed must inevitably lead to a readiness to fall in with the altered conditions. The old contempt felt for modern subjects in classical schools and the Universities has exacted, and is exacting, a heavy retribution. One subject after another has encroached upon the classical preserves until at the present day mathematics, science, French, and English are regarded as almost indispensable in the wide education which should form the foundation of subsequent specialization in some particular branch of learning. The result has been a severe curtailment of the time allotted to the classics. Greek has practically disappeared from the grammar schools, and some of the large schools, even in their classical departments, have partially surrendered to popular demand and been compelled to make it an optional subject. Then Latin is no longer obligatory for London Matriculation, the Army, and other examinations. These are

ominous signs; but still those responsible for the defence of the classics fiddle while their citadel is burning. "Defence, not defiance," said Mr. Justice Henn Collins, is the motto of the Classical Association, formed, none too soon, "to impress upon public opinion the claim of classical studies to an eminent place in the national scheme of education," and, in the second place, "to improve the practice of classical teaching by free discussion of its scope and methods." Many who are actively engaged in the work of teaching look to the Classical Association for light and leading, with an earnest hope that its influence will be sufficient to introduce important changes into the public examinations, and thereby into the classical curricula of the schools. The classics are in danger of sinking deep in the rut of scholastic pedantry on account of an over-minute study of the details of form. When time has been so severely curtailed the pendulum should swing in the opposite direction, and the accuracy of detail in pure scholarship should be the luxury of the few who have the time and ability to become finished scholars: mint and anise and cummin should not be set before the average schoolboy. If the old literary studies are to be retained amid the strong competition of modern and scientific education, those interested in their retention must face the facts: a *laissez-faire* policy will only end in disaster. At present it is not too much to say that no bold effort has been made to bring the old system of teaching into line with the altered conditions of time under which the classics have to be taught. We still revolve in the vicious circle of a system inherited from the past.

Circumstances require that Latin and Greek should be discussed separately. It is assumed that the Latin language is an "excellent vehicle of linguistic instruction." Exact and rigid accuracy, lucidity in thought and expression, intellectual vigour, models and masterpieces in rhetoric, history, and poetry, liberality and breadth of view, an insight into the life of the storied past from which all that is modern has taken its rise—these are advantages which few will be found to appraise at little value. If a student of Latin at the close of his school career can feel that he has some mastery of the language, an appreciative acquaintance with Roman literature, and an intellectual grasp of Roman life and thought, then he will never regret the hours he has spent upon his task. In order to achieve this threefold object the pupil must be able to read the language with comparative ease. At present it must be confessed that the average schoolboy who spends many years studying Latin cannot read an ordinary passage in Latin at sight. Where does the responsibility for this failure lie? Partly with the teacher and the taught, but most of all with the system. The chief aim in studying modern languages is to be able to speak, to write, and to read them. In the case of Latin—once the literary language of Europe and still an intermediary between scholars—no one attempts to speak it: only the few can hope to write it, and the vast majority cannot read it. It need occasion no surprise that large numbers of men question the value of the years they have spent upon what has given them little pleasure, and, apparently, small profit, and left them destitute of either the ability or the inclination to read the classical authors again. At present, classical curricula are arranged in the interests of the able minority, and the interests of the vast majority are sacrificed. Scholarships are essential to a school's reputation, and the problem to be faced is not an easy one. Is it possible to continue to give that very thorough training to the scholar which has been the pride of English scholarship and at the same time to give a more liberal education to the boy of average ability? If only it is admitted that from the very first Latin is not to be regarded mainly as a field for mental gymnastics, but as a means of developing the literary and linguistic instinct and of affording that tinge of culture without which all education must be incomplete, then there is good reason to hope for even better results from classical teaching than have been secured in the past. The most urgent need is that students of Latin should read more Roman literature, and with more genuine appreciation.

When, then, should the study of Latin begin? Although grammatical accuracy has become a fetish, and has been regarded not so much as a means to an end, but as an end in itself, no one will be so foolish as to urge that it is needless to learn Latin grammar. We have been ground under the heel of the grammar paper too long, and multitudes are compelled to continue toiling in the treadmill when the novelty of the exercise

has worn off. The dethronement of the grammar paper would be welcomed, and, while it should not be abandoned altogether, it should certainly be relegated to a secondary position.

The necessity for learning grammar is the strongest argument for beginning Latin early in life. Grammar may be learnt accurately from tutors and text-books, or it may be "picked up" inaccurately by reading and observation. Every one would admit that one of the most solid courses in the foundation of all education is a knowledge of the forms and grammatical usages of *one* language. No better language can be chosen for this purpose than Latin. Experience teaches that Latin grammar is the delight of very young boys, because proficiency is easily attained, since the powers of memory are developed very early in life, while the reasoning powers (which need not be exercised to any considerable extent in learning rudiments of forms in language) are still latent. All that is required is a thorough revision of the "Latin Primer" and the excision of a multitude of regularities and irregularities, both in accidence and syntax, which it is quite unnecessary and useless for the ordinary boy to learn. Many very young boys know the gender and genitive of many words which they will never come across; they are taught to differentiate six uses of the accusative, eight uses of the dative, thirteen uses of the ablative, and eight uses of the genitive, while they are often absolutely ignorant of the fundamental meanings of the cases. Simplification, above all, is required, and a severe pruning of the luxuriant growth of detail and exception.

In the earliest years language, as opposed to literature, should be taught, and a foundation laid upon which to build in the future. On the whole, most boys come to the public schools well grounded in a knowledge of Latin grammar, but often quite unable to translate Latin into English or easy English sentences into Latin. At fourteen years of age, however, the time has arrived to attempt to arouse interest in the substance and meaning of literature as well as in the form of language. If this is to be done, translation should form the main part of the work, and from the first boys should learn to translate into idiomatic English, and not rest content with the bald Latinized English which, in the interests of severe accuracy, is so often made to do duty for translation. Even in the lowest forms boys take real pride and pleasure in thinking out an English equivalent if only they receive a little encouragement to do so, and thus taste and style in writing and speaking their own language receive a powerful stimulus. If the time-table allows eight hours a week to be allotted to Latin, four translation lessons should be the minimum. Two hours might be devoted to Latin prose, partly based upon the translation lessons; and many have found that, while the translation of endless disconnected sentences is a wearisome task, boys take a delight in translating a series of easy sentences strung together in a connected narrative. One hour should be given to a weekly paper in prose and translation and any points of interest that may have arisen—an admirable test of the powers of thought and expression, memory, and accuracy of the members of the class. The great value of written work in translation cannot be too strongly insisted on in the case of lower forms. The remaining hour should be given up to grammar, in which the Latin language might well be intelligently taught rather than unintelligently learnt. In the middle forms there is no need to devote a special hour to grammar, in addition to the constant refreshing of the memory of the lessons of the past usually added to the translation lessons. Perhaps it may be found possible to add another hour a week, and thus two additional hours will be gained, which may be devoted to translation—one additional prepared lesson and one unprepared—either written or taken *viva voce*. It is generally found a useful expedient to vary the written translation of unseen passages with *viva voce* translation, thus affording the master a valuable opportunity of showing boys how to translate.

The time apportioned to translation in middle forms usually admits of two books—verse and prose—being read concurrently. The common practice is to read very small portions of books with great care. These fragments are laboriously revised for examination and learnt in many cases almost by heart. The result from the point of view of marks is excellent, but this process does not enable a boy to translate Latin authors at sight, nor give him a wide acquaintance with Roman literature or life, and many a boy leaves school without an intelligent

grasp of any single author, or, in some cases, of any single book as a whole. It is reform, however, that we ask for, not revolution. No one who has been through the mill himself will underrate the value of the severe drilling in accuracy of reading, structural analysis, parsing, and the various allusions in a classical author; but, if we are to succeed in imparting taste and in training the literary faculties, something beyond drilling is required. If fragments of translation are "got up," style and expression will become efforts of memory, and individuality of thought and language is lost. It is advisable that we should combine quantity with quality, and the rapid reading of one author with severe drilling in another. One book should be read for its language, the other as literature: idiomatic English should be insisted on, and emphasis laid upon the continuity of the narrative and the personality of the author. The type of examination paper should of course be different, and a sympathetic examination in a thousand lines read in such a way without revision in class would produce more real results than the ordinary stock paper in the smaller amount "got up" in the manner prevalent at the present time. No mathematical teacher spends all his time making his pupils learn all the types and examples by heart, but enables them to use them as models. In the higher forms, greater quantities could be read, but the same plan followed, and the ultimate result would assuredly be far superior to what is now attained. There might be some loss in minute accuracy, but the gain would far outweigh the loss; for the average boy would leave school with the sense that he had really read some Latin books as literature, and not as an exercise in endless questions on grammar and construction.

The question of composition remains to be dealt with separately. In most schools there is a carefully graduated scheme of Latin prose teaching, and, if there is a general consensus of opinion that composition should be cut down, but not entirely abandoned, most people would agree that verse composition—and in our classical schools where Greek and Latin are taught to the same forms Greek prose as well as verse—should be confined to the highest forms, but that Latin prose should be retained, not because the ordinary schoolboy is likely to write excellent Latin, but because Latin prose, with its exact accuracy of form and construction, its order and arrangement, its literary finish and elegance, affords one of the finest instruments for training mental accuracy and precision in the whole field of education.

But it is not proposed to abandon Latin verse composition altogether. While the ordinary Latin prose does not rise high above the standard of idiomatic rendering of simple English into simple Latin, high-class Latin prose and all Latin verse bring into play the finest intellectual powers. It is very easy to disparage composition, and many would willingly give up a task which they find much more difficult than anything else they do. If we are to translate good English prose into good Latin prose, we must train the power of exact analysis of thought and expression, and form, above all, a skeleton of ideas. This is no easy task, and the majority find it easier to translate words than to transpose ideas; but the result of their labours is not Latin. There is no harder task than the analysis of language and ideas in a modern language and the proper clothing of these ideas in a dress of correct Latin phraseology, with due appreciation of Latin style and arrangement. It is just because it is so difficult that it is so well worth doing. But, if this be our standard of composition, it is clear that it is useless to expect success until the student has attained a wide acquaintance with Latin literature and has become imbued with the spirit and thought of ancient Rome. This is the strongest argument for confining verse composition to the highest forms, and even then only to those who, after a real trial has been made, show some aptitude and facility for an art that requires taste and delicacy of thought and expression, some power of poetical imagination, and a true appreciation of the exquisite effects of metre and language. The use that might be made in the upper and middle forms of the hours thus set free by the abandonment of verse composition—and, in the case of Greek, of prose as well as verse—will be dealt with later.

It is still usual to teach Latin on the modern side in public schools, and the question naturally arises: Should it be taught on the same lines as on the classical side?

As the time allotted to Latin is different, and the object in

learning Latin is different, the methods also should be different. The value of Latin on a modern side is purely literary and intellectual, and Latin prose should be given up. Any attempt to teach translation, grammar, and composition in five hours or less a week will end in failure. An interesting experiment was about to be tried in the school to which the writer belongs, at the time these words were written, which has now been tested by more than a term's work. Under an elastic scheme, classical and modern boys are combined in certain forms in Latin translation and English subjects, so that the same foundation of culture may be given to both. In the higher forms, while the number of Latin hours for the classical boys increases the compulsory Latin hours in which the modern boys take part gradually decrease, until the modern sixth is reached, when only two hours a week are devoted to the reading of some of the best Latin authors. Should this scheme succeed, a very valuable result will have been attained: the classical boy will still have his careful training in the additional hours allotted to classics, while the modern boy will, it is hoped, have read a sufficient number of Latin books to give him some insight into Latin literature and some facility in translating Latin at sight. Where Latin is taught in modern forms or sets apart from the classical side, a readiness to accept the doctrine that the great aim of learning Latin should be simply and solely to read the language, and not to write it, would probably lead to much better results.

To turn to the question of teaching Greek. The severance of Greek from Latin, even in classical forms, and its degradation to the position of an optional or set subject, is much to be deplored, and teachers experience considerable loss in not being able to make the Greek and Latin lessons supplement and illustrate each other. But public opinion has declared against compulsory Greek in schools in an age of fierce competition of all kinds of subjects for a place in the school curriculum. When should the learning of Greek be begun, and to whom should it be taught? The opinion is commonly expressed amongst educational authorities that the study of Greek should be postponed to the age of fifteen or sixteen; that, if boys have had a good grounding in Latin, they are able to learn the Greek accidence with greater ease, and in a few weeks, in many cases, can take part in the translation lessons of a middle-school form. It may be that they will rarely attain that accurate knowledge of Greek accidence which boys who have begun Greek very early often possess; but, assuming that to learn Greek grammar is only an aid to translation, and that Greek composition should be confined to scholars and to the "bright boys, to make them brighter," the boy who begins late will easily learn sufficient grammar to enable him to translate ordinary Greek authors. The time may come when it will be recognized that it is a much easier task to learn grammatical forms so as to recognize them with ease in their relation to other words in a Greek book than to reproduce isolated forms and phrases in a Greek grammar paper. Recognition is a very much easier process than reproduction, and at least as valuable to the ordinary student. The abolition of the grammar paper in Responsions and the Cambridge Previous Examination would remove the chief objection to "compulsory Greek" and stimulate the study of Greek on the lines herein suggested. The wonderful elasticity of the Greek language and its exquisite simplicity make it easy, and, at the same time, difficult. But the acquisition of the power to read Greek is a liberal education in itself; for the greatest masterpieces of literature are in Greek, and

Whate'er we have of beauty, half is hers.

Here, as in Latin, we want wider reading with less stress upon language and greater insistence upon the beauties of literature and the vivid realism of Greek life and thought. The rigid purists have had their day who would exclude Herodotus from a school curriculum for fear of spoiling the Greek composition, and the hitherto vicious circle is widening, and will soon include authors who may not be models of pure Attic style, but who were men of genius and whose works still live. In the lower forms six hours a week will be given to Greek, and, if Greek is still taught to young boys, it is clear that they must devote a considerable time to Greek grammar, but still the larger proportion of the time should be given to translation. A lesson once a week explaining by means of elementary philology the reasons for the various inflexions, consonantal and

vowel changes, tense and verb stems, personal terminations, &c., arouses intelligent interest in a subject which to many is very dry and difficult. If Greek composition is excluded from the fourth and fifth forms of a public school, or the corresponding sets, a considerable amount of Greek literature will have been read, and in the sixth forms the time will have arrived to begin composition—the hardest task in the learning of a dead, synthetic language.

It is clear that by such a scheme as this the sweeping reform of abandoning composition to a considerable extent would set free a certain number of hours a week, varying in different forms. These should be devoted to a wider reading of the classics, or to the study of history, geography, and English literature and composition. Our present deficiency in these subjects, in spite of considerable advance, still leaves much to be desired. Most scholars have a good knowledge of Roman and Greek history (usually regarded as an "English" subject), a very poor acquaintance with English history, the very vaguest smattering of geography, and an entire ignorance of the history of Europe; to which may often be added very little knowledge of the English classics. The general papers in history and literature in scholarship examinations have already done something to awaken interest and kindle latent enthusiasm, and, if real alternatives were allowed for candidates who do not do verses, additional stimulus would be given to what is already in many schools a young and vigorous branch of study. If only four hours a week were allotted without change or intermission, in addition to the two special hours usually devoted to history throughout the whole school to English subjects, English history, literature, geography, and composition would be constantly taught, and it is one of the worst of many bad traditions that geography should be confined to the lower forms or be learnt only at private schools. Geography taught in connexion with the main outlines of the history of each nation is one of the most interesting and fascinating studies imaginable and worthy of attention in any sixth form in the country. When we compare the teaching of English now with the condition of affairs twenty or even ten years ago there is abundant cause for thankfulness: the time will come when classical scholars will leave school with a wide outlook upon the history of the world, with a knowledge in outline of the history of antiquity, of mediæval Europe, and of the modern world, and the additional knowledge which they will have gained, even if it is purchased at the cost of a slight loss in pure scholarship, will be found of inestimable value as the nucleus of a store in a well furnished mind.

FRENCH PROFESSORS AT THE MANSION HOUSE.

THE distribution of prizes and certificates awarded at the twenty-first annual competition took place in the Egyptian Hall on February 3. The French Ambassador introduced the Committee to the Lord Mayor. Mr. S. Barlet, the President for the year, in an eloquent speech, expounded the aims of the Society, and M. Albert Barrère, Secretary of the Competition Committee, read the report. The number of competitors had this year increased to three thousand, and the oral tests had shown a marked improvement. The Rev. G. H. Rendall ascribed the present *entente cordiale* with France in part at least to the more serious study of French language and literature in schools, which in its turn was due in no small measure to the stimulus of examinations. The prizes were then distributed by the Lady Mayoress. The following are the principal awards:—Sèvres vases given by the President of the French Republic—*hors concours*, Royal Military Academy, Woolwich; vases, Clapham High School for Girls, Cheltenham College. Gold medals given by the Minister of Public Instruction—Miss T. Frank, Kennington High School; Mr. F. Ayrton, Cheltenham College. Silver medals given by L'Alliance Française—*hors concours*, the Misses M. Fowle and M. Barringham, Ladies' College, Guernsey; medals, Miss I. M. Whitechurch, Blackheath High School; Mr. A. H. Scott, Cheltenham College; Miss M. Tirard, pupil of Mlle. Paquier. Silver medal given by M. Paul Cambon—Gentleman Cadet M. Goldman Monk, Royal Military Academy, Woolwich. Silver medal given by M. Camille Barrère, French Ambassador in Rome—Gentleman Cadet A. G. Glenday, Royal Military Academy, Woolwich. Special competition medals—Miss C. Bagnall, Clapham High School; Mr. A. W. Douglas, Owen's School, Islington. *L'Entente Cordiale* (Anglo-French Society) competition for *bourses de voyage*, value £20 each—Miss M. H. Campbell, Royal Holloway College; Mr. E. W. Lynam, University College, Cork. Competition of *L'Entente Cordiale* (Anglo-French Society) for *bourses de voyage*, value £10 each—Miss M. C. Thompson, Mr. A. R. Wollrom.

A vote of thanks to the Lord Mayor, moved by the Rev. A. Chilton, concluded the proceedings.

BOOKS OF THE MONTH.

Antiquities.

The Museums and Ruins of Rome. Two vols. With Maps, Plans, and Illustrations. Walther Amelung and Heinrich Holtzinger. English Edition, revised by the Authors and Mrs. S. Arthur Strong, LLD. Duckworth & Co., 10s. net.

Classics.

The Theætetus and Philebus of Plato. Translated and explained by H. F. Carllill, M.A. Swan Sonnenschein & Co., 3s. 6d. net. [The first of a new Classical Library under the general editorship of Dr. Reich. There are helpful footnotes, and English readers who have not Jowett will welcome the volume.]

The Aeneid of Virgil. With a Translation by Charles J. Billson, M.A. Two vols. Edward Arnold, 30s. net.

Matriculation Selections from Latin Authors. A. F. Watt, M.A., and B. J. Hayes, M.A. (Second Edition). W. B. Clive, 2s. 6d.

Cicero: Pro Roscio Amerino. Edited by J. C. Nichol, M.A. Cambridge University Press, 2s. 6d.

Demosthenes against Midias. With Critical and Explanatory Notes and Appendix by Dr. W. W. Goodwin, of Harvard University. Cambridge University Press, 9s.

Xenophon: Hellenica. Text by E. C. Marchant, Notes by G. E. Underhill. Clarendon Press, 7s. 6d. net.

Lucian: Selected Writings. Edited by Dr. F. G. Allinson. Ginn & Co. 6s. 6d.

Drawing.

Longmans' Complete Drawing Course. Part I. With 54 Plates. By J. H. Morris. 5s.

English.

Barnaby Rudge (School Edition). With Introduction and Notes by A. A. Barter. A. & C. Black, 2s. 6d.

Scott: The Abbot (School Edition). With Introduction and Notes by H. Corstorphine. A. & C. Black, 2s.

Essays and How to Write Them. A. H. Forbes, M.A. Ralph Holland, & Co., 2s.

How to Read English Literature. Laurie Magnus, M.A. George Routledge & Sons, 2s. 6d.

Shakespeare: King Henry IV., Part II. Edited by J. W. B. Adams, M.A. Horace Marshall & Son, 1s.

De Quincey: The English Mail-Coach and Joan of Arc. Edited, with Introduction and Notes, by Dr. M. H. Turk. Ginn & Co., 1s.

The Child's Book of Health. Dr. A. F. Blaisdell (Revised Edition). Ginn & Co., 1s.

Selections from the Writings of Benjamin Franklin. Edited by U. Waldo Cutler. George G. Harrap & Co., 1s. 6d. net.

Pippa Passes. Robert Browning. With an Introduction by Arthur Symonds. William Heinemann, 6d. net.

The Lyrical Poems of Edgar Allan Poe. With an Introduction by Arthur Symonds. William Heinemann, 6d. net.

Asser's Life of King Alfred. Translated from the Text of Stevenson's Edition by A. S. Cook. Ginn & Co., 2s. 6d.

Browning and Dogma: Seven Lectures on Browning's Attitude towards Dogmatic Religion. Ethel M. Naish. George Bell & Sons, 4s. 6d. net.

Essays in the Making. Eustace Miles, M.A. Rivingtons, 3s. 6d.

Exercises for Parsing in Colour. Edith Hastings. Edward Arnold, 1s. 6d.

The Principles of Rhetoric. E. H. Spalding, A.B. D. C. Heath & Co., 3s. 6d.

Poetic Gems: a Selection of Good Poetry for Young Readers. W. & R. Chambers, 1s.

Edmund Burke: Speeches on American Taxation and Conciliation with America. Edited by Arthur D. Innes, M.A. Cambridge University Press, 3s.

Geography.

Philips' Model Atlas. 18 Relief and 20 Political Maps in colour, and 11 Diagrams. 6d. net.

Handwork.

Paper Sloyd: a Handbook for Primary Grades. Ednah Anne Rich. Ginn & Co., 3s. 6d.

History.

Summary of English History. N. L. Frazer, B.A. With Illustrations and Maps. A. & C. Black, 2s.

The Romance of Empire. Philip Gibbs. With Illustrations. Edward Arnold, 6s.

A Book of Golden Deeds. Part II. A Selection, Edited with Introductions, Notes, and Glossary, by Helen H. Watson. Macmillan & Co., 1s. [Miss Charlotte Yonge's well known selections fully annotated.]

Britain's Sea Story. B.C. 55 to A.D. 1805. Illustrated. Edited by E. E. Speight, B.A., and R. Morton Nance. Holder & Stoughton, 2s. 6d. net.

Studies in Roman History. E. G. Hardy, M.A., D. Litt. *Swan Sonnenschein & Co.*, 6s.

Inaugural Lecture on The Study of History. Charles Oman, M.A. *Clarendon Press*, 1s. net.

The Political History of England, in twelve vols. Edited by William Hunt, D.Litt., and Reginald L. Poole, M.A. Vol. I. From the Earliest Times to the Norman Conquest. Thomas Hodgkin, D.C.L., Litt.D. *Longmans*, 7s. 6d. net.

History of England. In three Parts. Part I, B.C. 55-A.D. 1485. By George Carter. Relfe, 2s.

Greece, from the Coming of the Hellenes to A.D. 14. By E. S. Shuckburgh. Fisher Unwin, 5s.

[This volume of the "Story of the Nations" deals mainly with the political, literary, and artistic achievements of the Greeks, touching lightly on military history.]

Captain John Smith. By A. G. Bradley. English Men of Action. *Macmillan*, 2s. 6d.

England under the Normans and Angevins, 1066-1272. By H. W. C. Davis. Methuen, 10s. 6d. net.

Our Island Story: A Child's History of England. By H. E. Marshall. With thirty coloured pictures by A. G. Forrest. Jack, 7s. 6d. net.

Logic.

Logic, Deductive and Inductive. Carveth Read, M.A. Third Edition, Revised and Enlarged. *Alexander Moring*, 6s. [Errata have been corrected and an appendix of questions added.]

Mathematics.

Clive's Arithmetics for Scheme B. Edited by Dr. Wm. Briggs. Standards I. to III., 2d. each; Standards IV. to VII., 3d. each.

The Theory of Determinants in the Historical Order of Development (Second Edition). Dr. Thomas Muir, F.R.S. *Macmillan & Co.*, 17s. net. [The Superintendent-General of Education in Cape Colony traces the history of determinants from Leibnitz to Sylvester in two parts, general and special.]

On the Development of Mathematical Thought during the Nineteenth Century. John Theodore Merz. *W. Blackwood & Sons*.

Original Exercises in Plane and Solid Geometry. Levi L. Conant, Ph.D. *American Book Company*.

Cambridge Tracts in Mathematics and Mathematical Physics. Edited by J. G. Leatham, M.A., and E. T. Whittaker, M.A., F.R.S. No. 2.—The Integration of Functions of a Single Variable. G. H. Hardy, M.A. *Cambridge University Press*, 2s. 6d. net.

In Field and Pasture. Maude B. Dutton. *American Book Co.*, 35 cents. [A child's book prettily illustrated.]

The Founders of Geology. Sir Archibald Geikie, F.R.S. (Second Edition). *Macmillan & Co.*, 10s. net. [The lectures delivered before the Johns Hopkins University in 1896, recast and greatly enlarged. A fascinating chapter in the history of science.]

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

Two entrance scholarships are offered for competition in June, 1906.

(1) The Clift-Courtauld in arts, tenable for three years, of the value of £31. 10s. for the first year, and £28. 7s. for the second and third years. (2) The Pfeiffer in science, tenable for three years, of the annual value of £48. Candidates must have matriculated before taking up the scholarship, and must not already be students in the College. There is no age limit. The examinations for these scholarships begin on Wednesday, June 27, and last two days for arts and three days for science. Full particulars can be obtained on application to the Principal. Forms of entry must be returned filled up not later than June 12.

Two Deccan Scholarships of the value of £22. 10s. for one year, and one scholarship of the value of £20 for one year are offered for the course of secondary training beginning in October, 1906. The scholarships will be awarded to the best candidates holding a degree or equivalent in Arts or Science. Applications should reach the Head of the Training Department not later than July 2, 1906.

OXFORD.

The chief event of the last month in Oxford was the death (on February 11) of the Rev. T. H. Grose, of Queen's College, Registrar of the University. He was probably quite unknown even by name to that mysterious entity called "the general public." He wrote no books (except that he was associated with Prof. Green in his edition of Hume); he took little part in public affairs; he appeared on no platforms, engaged in no newspaper controversy, attended no congresses; yet it may be doubted if since Jowett's death any loss in recent years has called forth more genuine and widespread regret. He gave his whole life and energies to the service of Oxford. The remarkable tributes which have appeared in the *Oxford Magazine* show that, besides all that is implied in his thirty-five years' devotion to his college—where he was the unforgetting friend of each generation—and his eighteen years' work (as member and Registrar) on the Hebdomadal Council, where his help in drafting and supporting many important statutes was often invaluable, he found time to give indefatigable and effective aid for many years to such diverse bodies as the Union Society, the Women's Education Association, and recently to the County Education Committee. Those who knew him best speak of him as a man of unbounded generosity, with a genius for friendship. And the extraordinary gathering at his funeral is well described by a colleague of over twenty years' standing as "a fitting tribute to one of the kindest of hearts, the truest of friends, and the most unselfish of lives."

An interesting analysis of the results of the General Election, as it concerns Oxford men, has been published in the *Magazine*, showing that 210 were candidates, of whom 104 were successful (61 Liberals, 43 Unionists). Of the candidates more than a quarter (56) were from Balliol and 45 from Christ Church. There are 17 Oxford men in the

Ministry, and 8 in the Cabinet, namely, the Lord Chancellor, the First Lord of the Admiralty, the Home, Foreign, Colonial, Indian, and Irish Secretaries, and the Chancellor of the Exchequer. It may be added that among the new members are eleven former Presidents of the Union, including Mr. Bryce and Mr. Asquith; while four Presidents (including Mr. Brodrick) were defeated.

The only measure brought before the University that has attracted general attention and interest was a Statute promulgated on February 13 intended to deal with what is known as the "Summer Term difficulty." The difficulty is, briefly, this: that, as the "Eights" races occur in the middle of the term, and Commemoration just after the end, and as both increasingly attract visitors, practically the last half of the term is "a running fire of continuous gaieties," which disorganizes the normal life and work of the University as a whole. Attention has been further drawn from another side to this fact, already evident enough to all residents and even visitors, by careful statistics of attendance at lectures, collected by Mr. E. J. Palmer (late Senior Proctor) from the college and University lecturers for the past two years. These clearly showed the steady decline of attendance after the beginning of the races. The measure proposed to Congregation was practically to facilitate the postponement of the "Eights" by fixing the "Schools," i.e., the regular summer examinations, earlier in the term. By this means the two festivities would be brought close together at the end, and a much larger part of the term would be set free from distractions. On various grounds, expressed and unexpressed, which it would be useless to enumerate, the Statute was thrown out by 139 to 76. It is, however, clear both from the discussion at the time and afterwards that the evil which it was proposed thus to remedy was not denied to be a great and growing one, and it is not at all likely that the matter will be left where it is. One suggestion, referred to in the debate, and further dwelt on in subsequent discussion, is the proposal to transfer all the examinations to the first weeks of the Vacation. This would, perhaps, be unpopular with examiners, but it would certainly keep a longer time in the term for regular work, and would not interfere with the present arrangement whereby the "Eights" precede the "Schools."

Everybody in Oxford, and many outside Oxford, will have been glad to see that the nomination of Mr. Mackail for the Professorship of Poetry was not contested. By the absence of any competitor, Mr. Mackail may be said to have been unanimously elected to the post: and his first lecture, entitled "The Progress of Poesy," will be delivered on Saturday, March 10, at 4 p.m. We anticipate that there will be an unexampled incursion of Oxford "week-enders" on that date.

Some interest is naturally felt in the election of a University Registrar to succeed Mr. Grose. The Registrar has very important duties—to attend all meetings of Council, Congregation, and Convocation; to keep all the records thereof; to prepare all the business for the meetings of the three bodies, and to draft all statutes and decrees; to conduct all correspondence (under direction of the Vice-Chancellor) with public bodies; and to give information in answer to inquiries on matters relating to the University. It must be remembered too not only that Council alone can initiate legislation, but also that the Registrar is the only permanent member of Council. The Vice-Chancellor is elected for four years, the Proctors for one, and the members for three: and, though the latter are re-eligible, they frequently either retire or are not re-elected. It is obvious what powers and opportunities a strong man in such a position may possess. He may be not only a centre of information to the constantly shifting Council, but also a channel of communication with outside bodies, and a focus of suggestion towards meeting the constantly new needs of the University. It is much to be hoped that the authorities will realize the need—never greater than it is to-day—to seek for a man who should combine the essential business talents with insight into present or imminent needs, and a wide outlook on the movements and developments in the field of education.

There is an abundance of criticism at the present moment directed towards English higher education generally which is naturally of much interest to many of us in Oxford. What with "Kappa's" republished articles, Canon Barnett's discussion of our wasted resources in the *Tribune*, and the *Westminster's* new "Lambda" series of papers on Oxford, we have plenty of material for reflection and discussion. It is impossible to enter on these large subjects here: but it may be said that, as far as can be seen at present, there is little or none of the old desire in Oxford to shirk the issues or suppress suggestion or criticism, though there may be a feeling that the real difficulties in the way of reform are as yet not fully brought out, and that more time will be required before the forces and obstacles can be really estimated, the true lines of improvement indicated, and the best policy be formulated. Meanwhile, the humbler efforts at specific reform of "Moderations" (Class and Pass) are steadily proceeding. There is nothing as yet definitely proposed. But it may be said generally that the aims are to make the examinations more interesting and more educational; and that there is something like an agreement on the general methods of change to be adopted.

The Rev. W. Tuckwell, better known in some quarters fifteen or twenty years ago as "the Radical Parson," has been giving in the *Magazine* a series of further extracts from what must be the most remarkable collection of Oxford stories now existing in memory or

manuscript. Mr. Tuckwell was the son of a distinguished Oxford doctor, and his acquaintance with Oxford notabilities dates from over sixty years ago. In a place like Oxford there is nothing so entertaining as well selected anecdotes of old-time worthies and eccentrics. When the series is finished they will, we hope, be collected in a volume.

Dr. Drummond, Principal of Manchester College, has resigned; and, as was generally expected, Mr. Estlin Carpenter (well known as a scholar and student, and editor, translator, and author of many learned theological works) has been appointed his successor.

The recently appointed Delegacy for Instruction of Candidates for Army Commissions has issued the annual report. In the four terms covered by the report 53 candidates entered: 5 have been gazetted, 3 have received probationary commissions, 1 died, 6 withdrew after registration, and 38 remain on the books of the Delegacy. Certain financial difficulties were at first encountered, but, by a rearrangement of fees, these have been adjusted.

The deaths have occurred of the following:—Sir M. E. Grant Duff; Mr. G. Parker, Senior Assistant of the Bodleian; Rev. E. Frewen Moor (Oriel), Vicar of Ampfield.

CAMBRIDGE.

Since I wrote my last letter the election to the Greek Chair has taken place. The prelections excited a good deal of interest. Dr. Jackson's was an *apologia* for his long devotion to Plato. Dr. Verrall, Prof. Ridgeway, and Dr. Headlam all lectured on Aeschylus. Dr. Verrall raised an interesting point—several, in fact—as to the vote or votes of Athena in the "Eumenides": How far did the poet wish the audience to suppose that he believed the decision of a popular tribunal authoritative in a question so delicate and intricate as the tragedy of Orestes? Prof. Ridgeway, by a route as characteristic of himself, reached the conclusion that Aeschylus has been credited with far too much Toryism; he was really a Progressive alike in his social and religious opinions. Dr. Headlam's prelection was a revelation, which fairly astonished many of his hearers, of the beauty of Greek poetry. Dr. Adam took a passage from a dirge of Pindar, and lectured on the idea of the Divine origin and kinship of the human soul in Greek literature—a masterly piece of exposition, of great human interest.

When all the prelections were over, the Council of the Senate, who had heard them all with unflinching attention (rumour casts doubt on their *enjoyment*), met and made their election. As was expected, they elected Dr. Jackson. It is generally recognized that Dr. Jackson has served the University long and well, and that he has taught Greek long and well—and therein lies the one doubt as to the wisdom of his selection. His years of work have been long, and they lie behind him. Reference to the *Triplos* lists in the *Calendar* will at once reveal his approximate age. He was Third Classic in the year when Jebb was Senior. Our Professor of Latin is over eighty years of age, and has done very little classical teaching for many years. Is it well that both our very little professors, in the present position of classical learning, should be men advanced in years? Of course, this is Cambridge, and the bulk of the teaching will remain where it always has been, in the hands of the college lecturers. It is an interesting coincidence that just at this time the University should receive a legacy, and a very considerable one, to be devoted to the advancement of classical learning.

The change in our representation in Parliament, at which I hinted in my last letter, is not to be. The "greatness," which, rumour said, might be "thrust upon us," is going elsewhere. Scandal says a 1,500 majority was not safe, but rumour replies that that is absurd, and that there was another reason, probably valid.

Dr. Perowne, long Master of Corpus, has died, and an eloquent obituary notice has appeared in the *Review* from the pen of Mr. C. W. Moule, brother of the Bishop of Durham. The undergraduates of the college did a rather curious thing in organizing a *plebiscite* to determine whom they would like as the new Master. It is a remarkable fact, however, that their choice anticipated that of the Fellows, and fell on Colonel Caldwell. Colonel Caldwell is perhaps the first Master of colonial birth and training whom Cambridge has had; for he was born in Barbados, and educated in a small Canadian college in Winnipeg.

Another Canadian college, Bishop's College, Lennoxville, is contributing a Hulsean Lecturer to us in the person of the Rev. J. P. Whitney, once its principal.

We are being well lectured this term. Dr. Inge is giving a course on Religion, which is being well attended by men of various types of thought, and Dr. Savage a course on "Pastoral Theology." Mr. Hogarth lectured, on February 20, on "Geographical Conditions affecting Population in the East Mediterranean Lands." Dr. Haddon has lectured on an anthropological subject. (By the way, he is making an interesting collection of the native children's toys of all the world.) M. Bérard is coming over from Paris to lecture the Classical Society (in French) on "Les Origines de l'Odyssée."

MANCHESTER.

Education Committee. At the monthly meeting of the Manchester Education Committee held on February 19 a practically unanimous vote was given in favour of the renewal of the grants in aid to various institutions engaged in the work of secondary education. A resolution calling for an increased grant from Government was defeated, as ill-timed at the present moment. The grants in aid referred to above amount, in the aggregate, to £5,870, and include £4,000 to the University and £600 to the Grammar School. It was pointed out that the work done by the University in the training of elementary teachers was beyond what was done in that way by any other provincial college. In supporting the vote for the Grammar School, the Dean of Manchester, who was recently appointed Chairman of the Governors, stated that he did not think the Manchester Grammar School ever stood higher in its long history than under its present distinguished High Master. The school was rising in numbers, and he thought the citizens of Manchester would not be long in discovering what a distinguished High Master they had in Mr. Paton. The unanimity of the Committee in renewing the secondary education grants in aid has since been warmly commended in the public press. By the adoption of the slip system in place of duplicate registers the Committee hope to improve the attendance at the elementary schools.

The proposals to erect two colleges for the training of teachers have both fallen through for the present. The Committee are at present spending about £530,000 on education, of which £230,000 comes from the Government.

The question of taking over the Whalley Range High School for Girls has been deferred till the education proposals of the Government are made known.

The Committee are considering the details of a scheme of instruction in motor car driving. On the recommendations of the Inspectors a number of alterations are being made in the equipment of the Municipal Secondary School. The minimum salaries have been raised in the case of both men and women teachers in the elementary schools.

Education Department of the University. During February a series of conferences on Art Teaching in Schools has been arranged on successive Saturday mornings. An exhibition of illustrative material, and of work done in a number of local schools formed an interesting feature of the conferences, which were addressed by the Head of the Municipal School of Art, by Mr. T. C. Horsfall, and by Miss Barbara Foxley, M.A. On Saturday mornings in March Mr. Paton will speak upon "Problems in the Teaching and Training of Older Scholars."

Appointments. Prof. Young has been appointed Pro-Vice-Chancellor. Dr. C. H. Lees, Assistant Director of the Physics Laboratory and Lecturer in Physics, has been appointed Professor of Physics at the East London College. Dr. J. Walker Hall, Lecturer and Demonstrator in Pathology, has been appointed Pathologist and Director of the Clinical Laboratories at the Royal Infirmary, Bristol. Mr. Wm. Mair, M.A., M.B., B.Sc., has been appointed Demonstrator in Pathology. Other appointments notified are those of Mr. J. Cameron, D.Sc., M.D., and Mr. C. M. Craig, M.B., Ch.B., as Demonstrators in Anatomy; Mr. Gilbert Norwood as Senior Assistant Lecturer in Classics; Dr. F. W. Gamble as Assistant Director of the Zoological Laboratories; and Prof. Findlay as representative of the University on the General Organizing Committee of the second International Congress on School Hygiene. This Congress is to meet in London in August, 1907.

The University Classical Society has given a successful costume performance of scenes from the "Rudens" of Plautus. The audience were supplied with programmes containing the Latin text and an excellent translation by members of the society.

Girton and Newnham Students. On February 6 the annual meeting of former students of Girton and Newnham was held in Manchester. The guests of the evening were Miss B. A. Clough and Mrs. Bidder, and Miss C. Herford presided. A silent toast was drunk to the memory of Mrs. C. P. Scott, and reference was made to the success of her exertions in favour of the admission of women to the University of Manchester.

Girls' High Schools. At the Manchester High School for Girls special addresses have been delivered by Miss Hilda Oakeley, M.A., Warden of the Women's Hall of Residence, and by Mr. Charles Rowley.

The Pendleton High School for Girls is now quite full, the number being over one hundred and fifty.

School Games. At the meeting of the Froebel and Child-Study Association, held on February 12, when Miss C. Herford and Mr. S. W. Meek spoke on the subject of "School Games," it was unanimously resolved that "no scheme of education for boys and girls can be satisfactory which does not make adequate provision for all to take part in organized games." Mr. Paton, who presided, spoke strongly in favour of the motion.

Among recent honours that have fallen to Old Boys of the Grammar School may be mentioned the appointment of Mr. E. T. Whittaker, M.A., F.R.S., Fellow and Lecturer of Trinity College, Cambridge, to be Astronomer-Royal for Ireland, in succession to Sir Robert Ball. Mr. Whittaker was Second Wrangler and First Smith's prizeman of his year, and Secretary of the Royal Astronomical Society. The Governors of the School have decided to reserve a number of free places at the School for the sons of members of both the tutorial and the clerical staff of the School.

Public Libraries. The result of a recent decision on the part of the Salford Libraries Authorities to remove the restriction as to age limit has resulted in an addition to the number of new readers under fourteen of no less than 1,739.

Rise in Salaries. The meeting of the Lancashire Education Committee was largely occupied with questions of finance. Sir Henry Hibbert, who presided, reported that the cost of teachers' salaries had increased from £335,000 to £366,500. The estimates were adopted.

WALES.

Conference on Training. The recent Conference on Training held at Shrewsbury was evidently in the mood to effect, if possible, a "root and branch" reform of the pupil-teacher system, and so, with great unanimity, several resolutions of a somewhat revolutionary nature and of considerable scope were adopted. The experience gained by the Local Authorities in the administration of the Education Acts of 1902-3 has evidently convinced them that the present methods of training pupil-teachers are radically wrong in principle and that the system, as a whole, is of a "makeshift" character. At the outset it was clear that there was a fairly unanimous opinion that the total abolition of the system at an early date is desirable in the best interests of the school and of the teachers themselves. Recognizing, however, that some time must elapse before this can be effected, the Conference proceeded to define some of the modifications in the Regulations of the Board of Education which it considered necessary. The half-time system was described as thoroughly unsatisfactory, being both wasteful and futile. It involved a serious dislocation of the secondary-school time-table without conferring a proportionate benefit on the pupil-teachers themselves. There appears to be no doubt that the Conference, as a whole, inclined strongly to the view that pupil-teachers should be recruited mainly from those who had received a thorough secondary training, and that their professional training must be completely separated from their literary training.

In Cardiganshire an attempt is being made to induce the Board of Education to accept a scheme based on the above principles, but so far without success. Now, in order to bring about these reforms, it is evident that Local Authorities must be prepared to spend considerably more money on education—especially in the rural districts—or the supply of teachers must fall lamentably short of the demand. Greater financial inducements must be provided. As, however, the education rate in many districts is as high as circumstances warrant, the Conference resolved to ask the Treasury for an increased grant to the Local Authorities for the purposes of training. It is not likely, however, that Wales will receive any preferential treatment in this respect. Another resolution in favour of the proposed Welsh National Council of Education was carried unanimously, though the feeling was fairly general that the clauses dealing with finance and representation required careful reconsideration. There is no doubt that in their present form they are very unsatisfactory and unworkable.

Grants to University Colleges. The three University colleges of the University of Wales intend to make an application to the Chancellor of the Exchequer for an increase in the Treasury grants. A joint committee, representing the three institutions, proposes to lay before the Welsh Parliamentary party a full statement of the reasons why the present grant of £4,000 per annum should be substantially increased. Among other reasons it is pointed out that the three Welsh colleges did not participate in the additional grant of £100,000 paid to English University colleges during the past three years, and that, in spite of the growth of the colleges, and the consequent increase in expenditure, there has been no addition to the grant originally fixed, viz., £4,000 per annum. With the present number of students (1,400), and the low fee of £10 per annum, the colleges find much difficulty in meeting the necessary expenditure; so that their future development must depend very largely upon the success of this application to the Treasury.

Lord Kenyon, the President of the University College of North Wales, has announced that the Chancellor of the Exchequer has provided in the next Estimates for a sum of £20,000 towards the building fund. As, however, another £140,000 is required before the buildings can be completed, there still remains for the wealthy magnates of North Wales a grand chance of proving the reality of their interest in educational progress. The middle classes and the artisans appear to be contributing towards the fund on a fairly liberal scale.

A correspondent of the *Manchester Guardian* has been dealing out some rather severe criticism on the present regulations of the C.W.B. for the award of its Honours Certificate. And many head masters will, undoubtedly, agree with his main conclusions that the work is much too specialized in character to suit the requirements of the majority of our schools. They contend that a certificate on a wider basis will be of much greater value to the pupils, and, moreover, that it is not a sound educational principle for any examining body to encourage by its examinations, even at the highest stages, the study of not more than two subjects. It is true that the Board has succeeded in maintaining a very high standard in its Honours Certificates—a standard which is distinctly higher than that required for the Inter. Arts or Science of the University—but yet there is room for doubt whether the pupils would not have derived far more benefit from the systematic and thorough study of more subjects, say three or four.

The present regulations suit to perfection those boys who are preparing for scholarships at the older Universities, and for this reason some schools are disinclined to interfere with them. The great majority, however, of the hundred and fifty boys and girls who gain these certificates proceed to the provincial colleges, where high specialization—at all events at the beginning of their career—does not pay. Some modification of the present regulations appears to be inevitable—though the C.W.B. must exercise great care before it sanctions any change, as the award of County Exhibitions is made on the result of the Certificate Examination.

Cardiff College.

The last Court of Governors seems to have spent some time in discussing the desirability of altering the Charter, so as to allow assistant masters and mistresses to be represented. It is doubtful whether there is a very keen desire on the part of the masters or mistresses for such representation, as the chief functions of the Court appear to consist of passing votes of congratulation and selecting representatives on public bodies, &c. The Council absorbs practically all the power, while the Court is restricted to registering its decrees.

Principal Griffiths made an excellent speech at the Monmouthshire and South Wales Colliery Examiners' Association, on behalf of a Welsh school of mining. He secured the unanimous support of all present to his scheme for the establishment of a strong mining department at the College. It is certainly a grave defect in our system that such a school is not already in existence.

Mr. J. G. Davies (Neath), Miss Dobell (Pontypool), and Mr. Rhys Morgan (Pontypridd) were elected to represent the Head Masters of the Intermediate Schools on the Court of the University. The present method of election adopted by the University is very unsatisfactory, and very few head masters appear to take any interest in it. Candidates are sometimes elected when only some half-a-dozen votes are recorded in their favour; so that some more rational method should assuredly be devised.

Post Vacant.

Mr. J. S. O. Tombs, M.A., Head Master of Haverfordwest Grammar School, has resigned his post on his appointment to a mastership at Durham School. Haverfordwest is one of the few old schools that were brought under the jurisdiction of the Central Welsh Board by the Welsh Intermediate Education Act of 1899. The somewhat extraordinary condition inserted in the advertisement for the new Head Master, that none but graduates of Oxford and Cambridge need apply, is evidently due to the desire of the Governors to maintain, as far as possible, its ancient traditions.

The University College of North Wales, Bangor, is one of the three colleges where the Surveyors' Institution Scholarships can be held. The holders of these scholarships, which are of the annual value of £50, must take their degree on the Agricultural side.

SCOTLAND.

The draft Regulations for the Training of Teachers, which were submitted by the Education Department to the new Provincial Councils some months ago, and which were at first regarded as private and confidential, were made public by the Department on February 2, and they have since been subjected to a considerable amount of criticism from School Boards and associations of teachers. Much of the criticism unfortunately has been hasty and ill-informed; but the Edinburgh and Glasgow Provincial Committees have recently published the results of their careful examination of the regulations, and the careless critics are now less prominent. The chief point of controversy is the proposed abolition of the pupil-teacher, whose place is to be taken by the "junior student," i.e., a boy or girl who intends to become a teacher, and who is aided by allowances to take a course of secondary school instruction in preparation for the Intermediate or the Leaving Certificate. The junior student is still to have a limited amount of guidance and practice in teaching, but is not to be employed as a member of the school staff. The junior student is to be mainly a pupil—the purpose of any teaching he does is merely that his capacity for becoming a teacher may be tested. The examinations for entrance to the training colleges are to be abolished,

their place being taken by the Intermediate and Leaving Certificate Examinations.

The inevitable outcry that the new system will mean an increase of rates in order to provide certificated teachers for the work at present done by pupil-teachers has been met by the official announcement that "out of a total of 2,882 schools under the management of School Boards, there are at present only 176 in which the staff would be inadequate if pupil-teachers were not reckoned." The regulations, in short, recognize the existing state of things, and the change they make will consist mainly in liberating the pupil-teacher from serious over-work, which hinders his mental and physical growth, and from the evil effects of beginning to teach at too early an age. It was contended by some of the hasty critics that the new regulations would put the children of working-class parents at a disadvantage; but this also has been shown by the Department to be erroneous.

In other respects the regulations should ensure a considerable advance in the status and attainments of teachers. Practically all the side-doors into the profession are to be closed. The ex-pupil-teacher goes with the pupil-teacher. Provision is also made for the training and certification of secondary teachers and of teachers of special subjects, such as art, agriculture, commerce, domestic economy, physical training, manual work, &c. It is proposed that secondary teachers shall, as a rule, be Honours graduates in the special subjects for which they are certificated; but the regulations on this matter have at present been withdrawn by the Department in order that they may be recast. As to the requirement of an Honours degree, there is a good deal of difference of opinion, and there is a general feeling that part, at least, of the work of secondary education may safely be entrusted to a qualified ordinary graduate. But discussion on this point has been deferred until the recast regulations of the Department have been published. The Edinburgh and Glasgow Provincial Committees have made various suggestions for amendment of the regulations in matters of detail, but the result of their deliberations has been, on the whole, the approval of the Department's proposals as forming an admirably constructed system, which gives promise of a wise and salutary revolution in the education of Scottish teachers.

[We regret that our Irish news reached us too late for publication, and part of Scotland had to be held over.]

SCHOOLS.

BEDFORD GRAMMAR SCHOOL.—H. V. Hoey gained an exhibition at Hertford College, Oxford, and was subsequently elected to a John Watson Scholarship at Brasenose College. C. H. Bristow has won an open scholarship at Christ College, Cambridge. He was also offered an exhibition at Wadham College, Oxford. In the examination for entrance into Sandhurst the following were successful:—H. S. Moberly, D. A. Davison, W. D. Vyvyan, L. V. S. Blacker, R. Carter. At the same time S. Atkinson, E. G. Anderson, P. L. Beaver, candidates for Woolwich, qualified for Sandhurst, but declined to accept appointment. In the "Schools of the Empire" Shooting Match our representatives came out third on the list. Of the eighty-two schools which took part in the competition twenty belong to South Africa, eight to New Zealand, one to Canada, nine to Australia, and forty-four to Great Britain. Our Debating Society has declined to assert "that too much importance is attached to athletics at the present day in England," but thinks "that the present system of free education provided by the Government is detrimental to the best interests of the country."

ETON COLLEGE.—In the autumn examinations at Oxford Butler secured an All Souls Fellowship and Swinbank a Craven Scholarship; at Balliol Shaw-Stewart gained a classical scholarship—thus securing for Eton a scholarship at Balliol for the fourth successive year—Huxley a Science Scholarship, and the Hon. C. A. Lister and Liffan exhibitions respectively in classics and history. Other successes included a science scholarship at Trinity, a classical scholarship at University, and a history demyship at Magdalen. At Cambridge Selwyn won the Porson Prize and Bell Scholarship, and Scholfield the Powis Medal; at King's Richmond obtained a fellowship, and Bland and Mozley classical scholarships; at Trinity Carter gained a mathematical exhibition. Eton has lost the last of its Dames in Miss Evans. Her house had been in the hands of her family since 1839, and Miss Evans had administered it since 1871. The house was the most famous at Eton, and of the Old Boys no less than five were at one time in Mr. Balfour's Administration, and eighty-two served in the South African War. Mr. Ramsay will succeed to the building, and Mr. M. D. Hill will take most of the boys now belonging to the house. Mr. Carrington has succeeded Mr. Butler as a classical master.

PORTSMOUTH HIGH SCHOOL.—Eva Wallace has obtained the Higher Certificate of the National Froebel Union. We have this term welcomed Miss Steele, M.A., who has been appointed Head Mistress in the place of Miss Adamson, who resigned last term. The prize distribution, which was postponed until the arrival of Miss Steele, took place at the Portsmouth Town Hall on Friday, February 16. The prizes were distributed by Lady Settle, and the chairman was Mr. Tatton, a member of the Council.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS, AMEN CORNER, E.C.

RUGBY SCHOOL.—R. L. G. Butler, of Trinity College, Cambridge, has this term taken the place of the Rev. F. S. S. Williams, who left at Christmas on his appointment to the Head Mastership of Eastbourne College. It was resolved last term that all boys entering the school after the summer of 1905 should undergo a training in military drill and rifle shooting. A scheme was accordingly drawn up by Mr. Hawkesworth, the energetic captain of the Rifle Corps, which is now in full operation. Besides past and present officers of the Rifle Corps, several other members of the staff have volunteered their assistance. The results at present are most satisfactory. As an encouragement we were honoured by a visit from Lord Roberts on the 16th inst., who not only reviewed the Corps, but delivered an address to the whole school on the necessity of military training—an address which was received with unbounded enthusiasm by all who heard it.

STEPNEY AND BOW FOUNDATION, COBORN SCHOOL FOR GIRLS, Bow, E.—At the Cambridge University Local Examination, K. Jacobs passed in Senior Honours, First Class, with distinction in French. There were two Second and four Third Classes and nine Passes. In the Junior there were two Second Classes and ten Passes.

TONBRIDGE SCHOOL.—The following honours have been gained since the last list was printed in our columns:—W. R. S. Hunt, Queen's College, Oxford, Second Class *Lit. Hum.*; H. J. W. Tillyard, British School of Archaeology, research studentship; A. E. Kitchin, open classical exhibition, St. John's College, Oxford, £60; R. C. De Morgan, open classical scholarship, St. John's College, Oxford, £80; E. Sharpe, mathematical scholarship (Rustat), Jesus College, Cambridge, £40; J. W. Dew, open natural science scholarship, Clare College, Cambridge, £40; F. W. Watkyn-Thomas, open natural science exhibition, Trinity College, Cambridge, £40; A. M. Zamora, open natural science exhibition, Christ's College, Cambridge, £30; A. M. Pearkes, open modern languages exhibition, Caius College, Cambridge, £30; H. S. Bigg-Wither, open natural science exhibition, Corpus Christi College, Cambridge; A. E. H. Killick, Woolwich Entrance Examination; R. A. Poland, Sandhurst Entrance Examination; M. B. Fisher, British Institute Art Scholarship. During the football season all the matches against schools have been won.

WINCHESTER COLLEGE.—The Debating Society refused to welcome the recent decision of the constituencies by 45 to 7, and approved of closer relations with France by 19 to 5. We have to deplore the death of Mr. E. H. Buckland, after a long illness borne with great patience and fortitude. He died on February 10. Mr. G. H. Blese succeeds to his house.

PRIZE COMPETITIONS.

The Prizes for Translation from Claudian are awarded—Verse, to "C. S.," Prose, to "Phosphor"; for Translation from Gruppe—Verse, to "Fidelio," Prose, to "Martine."

The Winner of the Translation Prize for January is Miss Agnes H. Stephenson, 83 St. George's Square, S.W.

*Ipsa Roma die, nec adhuc ostenditur auctor,
Personant venisse duces laetisque Quirites
Vixibus auspiciis certi plausere triumphi,
Muneri Stilichone suo. Quis gaudia vero
Principis amplexus alacres, quis disserat aulae?
Pulveris ambiguum nubem speculamur ab altis
Turribus incerti, socios apporet an hostes
Ille globus: mentem suspensa silentia librant.
Donec pulvere sub turbine sideris instar
Emicuit Stilichonis apex et cognita fulsit
Canities. Gavisa repens per moenia clamor
Tollitur, "Ipse venit!" Portas secunda per omnes
Turba salutatis effunditur obvia signis.
Non iam dilectus miseri, nec, falce per agros
Deposita, iaculum vibrans ignobile messor;
Nec temptat clipeum proiectis sumere rastris,
Bellona ridente Ceres humilisque novorum
Seditio clamosa ducum: sed vera inventus,
Verus ductor adest, et vivida Martis imago.*

By "C. S."

And on that day, though none may say from whence the rumour spread,

In Rome rang out a joyous shout that he had come, their head—
With blithesome voice, Quirinus' sons their triumph's presage claim,
For still they know their sure defence in Stilicho's proud name.

Ah! who may tell the greetings glad among the courtly band,
And swift embraces of their lord while hand was clasped in hand?
Spied from a lofty tower afar a cloud of dust arose,
Still as we gazed the doubt was there: "Which veils it—friends or foes?"

Each tongue was still, for each man's mind was weighing hopes and fears,

When, issuing like a star amid the whirling mist, appears
The helm of Stilicho and locks whose snow proclaimed his years.
Along the walls they cry; "He comes!" and through the gates
Amain

The host to meet, the flags to greet, pours forth an eager train:
No scanty gathering this, not here with sickle cast aside
A reaper crowd with useless spear hath joined the martial tide,
Nor here the rustic from his plough assumes the unwonted shield,
A laughing-stock for War's proud Queen—drift of the harvest field;
No shout of 'prentice chief or din of clamorous peasant strife,
But heart of youth, and leader true, and war's majestic life.

By the PRIZE EDITOR.

That very day through Rome (who brought the news
None knows) a rumour ran: "The General comes!"
And, with a shout of glad acclaim, all Rome
Welcomed the sign of victory assured,
Strong in the strength of their own Stilicho.
How prince and courtiers, wildly jubilant,
Fell on each other's necks what tongue can tell?
We from the ramparts watched the cloud of dust,
Doubting its import—was it friend or foe,
This serried troop? We held our breath in poise,
Till from the dark tornado, like a star,
Shone out the crest and then the good grey head
Of Stilicho. All knew it and upraised
A universal shout: "He comes, he comes!"
Straight through the city gates, their terrors past,
To meet and greet the standards, streamed the crowd.
No wretched conscripts these, or rustics forced
To drop the scythe and trail a bloodless pike;
Nor does the Queen of Cornfields leave her share
To don a buckler, while Bellona jeers;
No ragged regiment clamorous to proclaim
The last pretender: here are warriors true
As is their chief, a true-born son of Mars.

We classify the verse translations of Claudian as follows:—

First Class.—E. H. O., Senex, C. S., Yew, Eicarg.

Second Class.—Stilicho, Bluebell, Otac, Iudex, E. S. B., Nephest, H. M. W.

Third Class.—K. O. T., Dido, Jaculum, Dionyma, H. W. F., Ilex.

Fourth Class.—Claudius, R. A., Caius, V. T., Mona, North London, Valentia, Io.

The Claudian presented some difficulties of interpretation, and, however well rendered, it is impossible to conceal the fact that the true poetic touch of the opening lines tails off into somewhat forced rhetoric. In the fifth line we should prefer to transpose the comma from *alacres* to *principis*. Honorius exults; the courtiers fall into each other's arms. *Aper* must mean either "helmet" or "crest," not "head." It is strange that no one adopted or referred to Tennyson's imitation, "the good grey head which all men knew." *Salutatis*: the tense is irregular, but there is no need to emend; they go to meet the standards and have greeted them. *Ignobile* is proleptic: it will shed no blood in the hands of these conscript rustics. *Humilis* is awkwardly tacked on to *Ceres*: these are neither an awkward squad of agriculturists nor base-born mutineers. We incline to connect *clamosa* with *ducum*: "clamouring for new leaders of revolution"; but we can give no parallel use. *Martis imago* probably refers to the whole scene, not to Stilicho alone.

Next to the prize winner came "Yew," "E. H. O.," "Senex," "Eicarg." There were 78 prose versions.

Es weicht die Nacht und überm Hügel
Glimmt roter Schein am Himmelssaum,
Noch birgt der Vogel unterm Flügel
Sein träumend Haupt im weichen Flaum.

Nur leise schallen helie Stimmen,
Die bald verhallen überm See,
Im Kloster seh' ich Kerzen glimmen,
Und Nonnen gehn durch zarten Schnee.

Ein stiller Zug von wenig Schwestern:
Es stirbt das Nonnenkloster aus;
Davon verschied die jüngste gestern,
Man senkt sie in des Grabes Haus.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

(Late of 39 Holywell Street, Strand.)

Darauf ein still Gebet der Frauen,
Doch keine heisse Träne rinnt,
Kein Schluchzen tönt und ist zu schauen
Kein trostberaubter Mann, kein Kind.

Es fallen leichte Flocken nieder,
Und nichts ist von dem Grab zu sehn,
Und weit und breit ist Stille wieder,
Und Tag wird's als ob nichts geschehn.

By "G. E. D."

A FUNERAL.

Night's near its ending. O'er yon hill
The sky's low verge grows faintly red ;
But 'neath a downy pinion still
Nestles in dreams the wild bird's head.

Yet, hark, a requiem sweet and clear,
Sighing and dying o'er the lake !
Lights glimmer dim in cloisters near,
Nuns through the snow a pathway make.

An Order lapsing to decay
Those few hushed Sisters yonder show :
Yestreen their youngest passed away,
And now in earth they lay her low.

In silent prayer they bow the head,
Not theirs are tears or sobbings wild :
Refusing to be comforted,
No widower kneels there, wails no child.

No more I see the dark grave-side,
So thick, so fast, descend the flakes :
The silence deepens far and wide ;
Day, as if nought had happened, breaks.

By "FIDELIO."

Night's darkness pales, and, rosy gleaming,
Dawn peeps above yon distant hill ;
Each little bird, with head yet dreaming
Beneath its wing, is silent still.

A silv'ry chant, erewhile ascending,
Sinks on the water, faint and low ;
The convent tapers light are lending
Where nuns move o'er the drifted snow.

A silent train, of 'minished number
(The convent life ebbs slow away),
They lay there, in her deep last slumber,
Their youngest, Death took yesterday.

In silent prayer their heads are bending ;
But no hot tears are falling there :
No orphan's cry the air is rending ;
No husband sobs in deep despair.

Fresh snow, the grave's lone site effacing,
Falls soft, 'mid silence far and near ;
Day breaks, the long night's gloom replacing,
Nor reck's of aught Night witnessed here.

By Prof. SKEAT. (*Not for competition.*)

Night wanes, and o'er the hill is gliding,
On heav'n's far verge, a radiance red ;
Still 'neath her wing the bird is hiding
In soft white down her dreaming head.

Clear high-toned voices, rising lightly,
Float o'er the lake, with dying sound ;
The convent-tapers glimmer brightly,
Nuns' foot-tracks print the snow-soft ground.

A train of sisters, few, sad-hearted,
Whose sisterhood is waning fast ;
The youngest yesterday departed,
They bear her to her home at last.

They pray in silent adoration,
No hot tear from the eyelid steals,
Nor sobs express such desolation
As lovelorn child or husband feels.

A few white flakes the skies are shedding ;
The new-made grave no more is seen ;
Deep silence far and wide is spreading ;
Day comes, as though no loss had been.

THE CALENDAR

OF

The College of Preceptors

FOR 1906.

The Diploma Papers of the College of Preceptors (for Fellow, Licentiate, and Associate) are to be had only in the Calendar. The Calendar contains also the Papers for the Certificate, Lower Forms, and Professional Preliminary Examinations set in 1905.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

We classify the verse translations of Gruppe as follows:—

First Class.—G.E.D., Valentine, Hasta, Grace, Christy, Annie Laurie, Den, Agricola, Fidelio, Katty Ann, Grozier.

Second Class.—Douteux, Corbar, B.R., Lotharshöhe, Evadne, R.F.F., L.M.L., Nessko, Quamquam O!, Oddity, Cosy, E.K.G., Student, Amethyst, Karthal, Nomad, Chien-lung, Exon, Fortes et Fidelis, Athluain, Eicarg, Otac, Megan, Puck, H.M.K., Altnacoille.

Third Class.—Auber, Effendi, Lob, Gonsalvo, Meg, Homespun, Taugenichts, Adliih, Never say die, Stedye, Apri Caput, Enoch Arden, Penrith, Esprit, Bildad the Shuhite, Umtala, Frosch, Ifer, Cremorne, Bapaxos, Peter, A Pike, Tanal, Laurel, Crauford, Casterton, Tsam-mead, Rolandseck, E.H.O., Cinderella, E.J.A., J.J., Cornet, Penmynydd, Duncan, M.A.V.N., Bente, Immerdar, Beth, Weimar, Roma, Nerewys.

Fourth Class.—Betty, Peggotty, Polypody, Mary Caunter, Lochnagar, M.C.E.F., Hotspur, Grethel, Stena.

The prize for the German verse translation lay between "G. E. D.," "Agricola," "Hasta," and "Den."

"G. E. D." would certainly have won it but for his last line.

"Nuns through the snow a pathway make" is suggestive of shovelling. In "Agricola's" version

"Hides 'neath its wing its drowsy head" is cacophonous, and "snow-flakes—day breaks" does duty for a double rime. "Den" is faultily faultless, and the line

"Then all the sisters join in prayer" rules him out. In "Hasta's"

"And nuns are walking through the snow" misses the picture, and "silence holy" shows stress of rime.

We have to thank Prof. Skeat for an admirable fair copy. We are debarred from saying whether it would have gained the prize; but he
(Continued on page 206.)

MISS INGLEBY HARRISON,
A.R.C.M. (Pianoforte), formerly Student at the R.C.M. and Pupil of Arthur Somervell and Franklin Taylor, desires Non-resident Post as MUSIC MISTRESS in a School in or near London. Would also Visit Country. Takes Engagements as Soloist and Accompanist and Private Pupils for Piano, Theory, and Harmony. Is thoroughly experienced and prepares for Examinations. Address—35 Dorset Square, Regent's Park, N.W.

School and Teachers' Advertisements are continued on pages 207, 208, 209, 210, 211, 212, 213, 214, 215.

FLORIGENE

(Regd. Trade Mark.)

Awarded **BRONZE MEDAL** of the **Royal Sanitary Institute**,
School Hygiene Exhibition, 1905.**FLORIGENE** is an Odourless, Air-purifying, Labour-saving, and **FLOOR**
preserving **FLUID**, easily and quickly applied to **all Wood, Linoleum,**
Cork Matting, &c., for**Absorbing and Fixing Dust and Dirt in**
COLLEGES, LABORATORIES, & SCHOOLS(where it is generally applied during the holidays, or term if preferred,
three times a year only),Also **GOVERNMENT, MUNICIPAL, and other BUILDINGS.**
No scrubbing or damping of floors, only **Hard Broom** required, when the
sweepings roll and are not redistributed. **Dusting** seldom necessary.

For particulars, testimonials, and reports, write—

PRACTICAL ART MANUALS.

Marine Painting in Water Colour. By W. L.
WYLLIE, A.R.A. With 24 Coloured Plates. 60 pages. Crown 4to, 5s."The work contains no less than twenty-four plates by Mr. Wyllie, and
these range from a simple study of a boat to most beautiful and complete
seascapes, the whole of which have been made direct from Nature. The
work contains full instructions as to Mr. Wyllie's method of work, colours
and brushes, &c., employed, and is one which art students will find simply
invaluable. In addition it is a work which will charm every one as an album
of water-colour drawings by an eminent artist. It is in every respect quite
charming."—*Schoolmaster*.**Landscape Painting in Water Colour.** By J. MAC-
WHIRTER, R.A. With 23 Coloured Plates. Price 5s."A most charming five-shilling volume, with an Introduction by Mr.
Edwin Bale, R.I. The notes opposite each picture by the author give
sound and concise instruction to the would-be landscape painter, and will
be also interesting to more advanced students."—*St. James's Gazette*.

READY SHORTLY

Flowers and How to Paint Them. By MAUD
NAFTEL, A.R.W.S. With 10 Coloured Plates. New Edition. Price
2s. 6d.In this work are given clear and concise instructions for flower painting
from the outline drawings in pencil to the finished sketch in colour. It
contains full information as to the materials and colours to be used, and
numerous coloured examples are included. All the difficulties that beset
the beginner are discussed, and the methods of getting over those difficulties
clearly pointed out.**A Manual of Oil Painting.** A Treatise on the
Practice and Theory of Oil Painting. By the Hon. JOHN COLLIER.

FRENCH DICTIONARY EVER PUBLISHED."**—*THE SCHOOLMISTRESS, Jan. 11th, 1906.*

Cheap Edition, Now Ready, price 3s. 6d.

Cassell's NEW French Dictionary.

Compiled from the best Authorities in both Languages.

Revised and considerably Enlarged by

JAMES BOIELLE, B.A. (Univ. Gall.).

This Cheap Edition has been newly Revised by

DE V. PAYEN PAYNE,

Assistant Examiner in French to the University of London.

PRESS OPINIONS.

"The Dictionary, in its present form, consists of twelve
hundred and thirty pages, and fairly justifies its description
as 'The best and cheapest French Dictionary ever pub-
lished.'"—*The World*."For school and home use it is invaluable."—*Oxford*
Review."The information given is remarkably good and ac-
curate."—*Preparatory Schools Review*."Cassell's French Dictionary' has been known for
many years as the best French Dictionary one can use for
general purposes. It needs no description and no recom-
mendation."—*Practical Teacher*.A Specimen Page Prospectus of Cassell's New French
Dictionary will be sent post free on application.**CASSELL & COMPANY, Ltd., La Belle Sauvage, London, E.C.**

will, we are sure, agree with us that his fourth stanza is comparatively weak.

We have not attempted to classify the prose versions, of which 156 were received. Half of these had no actual mistake, and the prize was determined mainly by considerations of prose rhythm. Contrast, for instance, "as if nothing had happened," the usual rendering, with "as if no change had been." *Der See* and *die See* were not seldom confused, and the force of the prefix in *verhallen* missed.

A Prize of Two Guineas is offered for the best translation of the following extract from Sainte-Beuve:—

Mais ce qu'il faut dire et faire observer, c'est que La Bruyère était d'une génération plus jeune que celle des purs écrivains du XVII^e siècle; venu le dernier, il avait à renchérir un peu à sa manière, à s'efforcer. Il le faisait en écrivant; il le montrait aussi dans sa personne; il avait des saillies, des fougues et comme des poussées d'agrément qui passaient la limite. Ces gens de goût de la génération précédente le remarquaient et se le disaient entre eux. Tout est dans l'ordre. Règle générale: nous remarquons de prime abord les défauts de ceux qui entrent dans la vie et dans la carrière après nous; les qualités, quand nous les reconnaissons, ne viennent qu'en second lieu.

Heureux homme, après tout, que La Bruyère! Son talent regarde deux siècles; sa figure appartient à tous les deux; il termine l'un: on dirait qu'il commence et introduit l'autre. Bossuet l'a tout d'abord pris par la main et patronné; Despréaux l'a accepté, sauf une légère réserve; Racine l'a tout à fait accueilli: et, en même temps, il précède Montesquieu; il l'annonce et le présage pour ses "Lettres persanes," il reste son maître en ce genre. Tout ce qu'il y a d'esprits piquants dans le XVIII^e siècle semble tenir et relever de lui; tous ces hommes de lettres et à la fois gens du monde, qui régissent la société, qui dans les tous-les-jours ont le mot vif, mordant, ironique, le propos plaisant et amer, semblent avoir trempé la pointe de leurs traits dans l'écrivoire de La Bruyère. Et il a ce singulier bonheur encore que, quand le XVIII^e siècle est passé et qu'on en parle comme d'une ancienne mode, quand le XVII^e siècle lui-même est exposé de toutes parts aux attaques, aux irrévérences et aux incrudulités des écoles nouvelles, lui, La Bruyère, comme par miracle, y est seul respecté; seul, tout entier debout, on l'épargne, que dis-je? on le lit, on l'étudie, on l'admire; on le loue précisément à cause de cette manière un peu marquée et appliquée, qui faisait question en son temps, qui semblait trop forte, qui n'est que suffisante aujourd'hui: il en demeure le premier modèle. Fénelon—tout

Fénelon—a pâli et s'est effacé: lui, il subsiste, il brille comme au premier jour. Le temps n'a rien ôté à sa solide et vigoureuse peinture. La curiosité, comme au lendemain de 1688, s'acharne à ses demi-obscuretés et à ses mystères. L'artiste n'a pas cessé de le révérer. Il est le premier nom en tête de la liste des nouveaux venus, des plus modernes et des plus hardis, de ceux qui prétendent bouleverser les rangs et changer les choses. Il est le classique de tout le monde. Allons! cet effort de La Bruyère ne l'a pas si mal servi: il est trois fois couronné du succès.

An Extra Prize of Half-a-Guinea is offered for the best solution of the following problem:—

Find, without the aid of algebra, the area of the triangle *ABC*.

$$AB = 25,$$

$$AC = 26,$$

$$BD = x,$$

$$DC = x + 3,$$

$$AD \text{ is perpendicular to } BC.$$

Propound a similar problem.

Solutions, addressed "PROBLEM," The Journal of Education, 3 Broadway, Ludgate Hill, E.C., must be received by March 16.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by March 16, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: The Right Hon. R. B. HALDANE, K.C.B., M.P., LL.D.

Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Summer Session** extends from the beginning of May to the end of July; the **Winter Session** begins about the middle of October, and closes about the end of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The widening of the Arts curriculum permits to a greater extent than formerly the combination of Arts, Science, Medical, Legal, or special studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. A **Schoolmaster's Diploma** of two Grades is conferred, viz.: a **Secondary School Diploma** for Masters of Arts with Honours, and for Graduates in Pure Science, and a **General Diploma** for those who have taken the Ordinary Degree of M.A. or the Degree of B.Sc. The Secondary School Diploma is recognized by the English Board of Education as qualifying for Registration as a Secondary School Teacher; the General Diploma is recognized by the English Board of Education and the Scotch Education Department as qualifying for employment in State-aided Schools. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering**, and in **Public Health**, and the Degree of B.Sc. in **Agriculture**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine, (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A Diploma in Tropical Medicine and Hygiene is conferred on Graduates in Medicine of the University. A University Certificate in **Tropical Diseases** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 49 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,270. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, and Music, and they are admitted to graduation in Arts, Science, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **CLERK OF SENATUS**; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 6d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

By authority of the Senatus,

L. J. GRANT, Secretary of Senatus.

A KINDLY ARITHMETIC MASTER.

By JAMES R. WOODLOVE.

ONE day, as I was walking through an unassuming street in the western part of London, not far from the Great Wheel, I noticed a pile of dilapidated books outside the shop of a general dealer. Looking through them expectantly, I found, and purchased for the modest sum of 3d., a treatise on arithmetic which promised me possible entertainment. Putting the volume in my pocket, for it happened that a fine rain was falling, I made my way back to my lodging in Bloomsbury, and proceeded to investigate my purchase.

Its value and interest, after a careful perusal, promised far to exceed my not very sanguine hopes. Vivid pictures were called up of the methods of instruction of long ago; some hints of the school life of the day; and, above all, some suggestions of the kindly relations existing between the writer and the young ladies whom he taught. It seems that my colleagues—for I, too, am a schoolmaster—might find amusement, and perhaps something more, in running through the pages with me.

First, reader, let me give you in full the title. It runs: "Arithmetical Questions, on a new plan, intended to answer the double purpose of Arithmetical Instruction and Miscellaneous Information. Designed for the use of Young Ladies." My edition is the eleventh and was published in 1832; but internal evidence shows that the original edition appeared in 1795, and was compiled by William Butler, a visiting master in schools for young ladies. The book, on its first appearance, was cordially welcomed by the reviews, Miss Edgworth, among others, speaking of it with approval; and notices of later editions are no less complimentary. Many extracts from papers of the time are given, which indicate that this work was looked upon as epoch-making. On the death of the gifted author the copyright was purchased by his son-in-law, Thomas Bourn, who edits the edition before me.

Although the year 1795 is the date of the first edition, it must be noted that manuscript copies had been already in existence for several years, and several generations of young ladies had copied the information supplied. Indeed, the principal reason for publication is found in the fact that the task of copying proved too laborious for the young ladies. So we may gather that some time prior to 1795 a widespread dissatisfaction was felt at the arid methods of teaching arithmetic that were then in vogue. "The dryness and dullness of books of arithmetic in general," says one of the quoted reviews, "have disgusted many with the study." William Butler attempts a remedy by connecting the sums with scientific information or with historical incidents.

His object is frankly stated to be the acquisition of knowledge. To each fact he appends an arithmetical problem; and to each problem a paragraph of history, geography, or science is prefixed. Our author's ingenuity in correlating his lessons in writing, history, geography, and arithmetic is truly remarkable. I cannot but be reminded of Mr. Squeers: "W-i-n-d-e-r; now go and clean it."

I pause to emphasize the deduction that a hundred years ago methods of teaching were viewed with grave distrust not only by teachers, but also by writers in the reviews. Mr. Butler's aim is to increase the interest of the young ladies in their studies; to economize time, as so many subjects are pressing for inclusion in the curriculum; and to prevent the unintelligent learning by heart of unexplained information. I almost think the position can be paralleled in more modern times.

I next notice, with some joy, that our author recognized how greatly the success of his book depended upon the governess who adopted it. He knows that some teachers are indifferent—and with these, he admits, nothing can be done; but others, "possessing more animation and zeal," will be grateful for his help in providing information of all kinds to enliven the arithmetic lesson.

His object goes beyond the mere improvement of this lesson. "When the scholars are assembled in classes to repeat their tables (which [he says] I shall take for granted is always once a week)" the zealous teacher will take the opportunity of "promoting general emulation and disseminating the desired knowledge" by asking questions from the examination papers at the end of the volume. And, further, "in the best regulated seminaries,"

he continues, "vacant hours occur, many of which will often be wasted in the perusal of pernicious, or at best frivolous, novels." His book will lead the young ladies to occupy their leisure by seeking information on the shelves of the school library.

But here, before I go on to show our author's method in fuller detail, I must break off to admit the intrusion of two contingent issues. First, on the subject of novel reading. Let me remind you, reader, that Mr. Butler was an old man at the beginning of the last century. A quotation in a footnote informs us that "the frivolity of the age affords very shameful encouragement to a species of literary composition called a novel . . . worked up in such a form as to corrupt the minds of young women and to enable old ones to murder that time of which they have so little remaining." The note goes on to say that novel reading causes serious injury to health by stimulating the emotions in such a way as to affect prejudicially the organs of the body; and quotes a physician "of the first eminence" as saying that "music and novels have done more to produce the sickly countenances and nervous habits of our highly educated females than any other causes that can be assigned." Shades of Jane Austen! What would our author say, were he alive to witness the activity of the writers of fiction of to-day, and what would he think of the modern, highly educated lady student?

My second aside refers to school libraries. William Butler hopes that his book will often stimulate a young lady to seek fuller knowledge. Now, as the governess cannot always be present to answer inquiries, he would have in every school a library for the use of the scholars. He thinks that no parent would object to paying 10s. 6d. a year for this purpose, and with such a sum in prospect the governess need not hesitate to purchase a choice selection of books in the certainty of being able to recoup her outlay from the subscriptions. Mr. Headlam's reports, *passim*, and many other writers, re-echo these sentiments. Yet school libraries are far more common than they were a hundred years ago. I do not want to imply that we have made no progress since Mr. Butler wrote; but I am constantly made to realize, as I turn over the pages of his book, that some of the "burning questions" of to-day were well alight at the end of the eighteenth century.

Well, to go back to Mr. Butler's method, the young lady will read—I open the book at random—an account of the Battle of Agincourt, enlivened by quotations from Shakespeare. She will previously have written in her copy book the phrase "Agincourt, 1415," and, with the knowledge so acquired, will proceed by means of an exercise in the science of subtraction to discover how long ago the battle was fought. She may then turn to the examination questions at the end of the book and try if she can answer them from the information given. Perhaps she can do so; but, during the process of considering this historical event, her curiosity has been aroused, and in her next vacant hour, instead of reading "a romance taken from the manners of the times"—to wit, a novel—she will take down from the shelves the school history and the school atlas, and, if she is of an especially inquiring disposition, will, perhaps, read the play of "Henry V." Thus, she will have correlated her lessons in history, geography, writing, and arithmetic. Do not understand me to say that our author uses this weird word "correlate." He is quite innocent of it; but the system must remind you, reader, of some modern essays in correlation.

Mr. Butler's industry is most praiseworthy and his knowledge marvellously varied and as accurate as research could make it. For 437 pages he discourses on every conceivable subject. Among the paragraphs he intersperses 619 sums, carefully graded and arranged to cover every arithmetical process that he deems necessary for the counting-house or to enable the highly educated female to exert a proper influence on the males. Let us take another example of his wonderful method. Paragraph No. 232, under the heading of "Compound Multiplication," gives quite a little sermon on the evil of playing cards. The young lady is informed that "cards are little pieces of fine, thin pasteboard." Then follows the history of the subject so far as it can be ascertained. But you are warned that it does not really matter who invented the odious things, and a number of prose and verse writers are invoked to prove the evils attendant on card playing. "What are 684 packs of cards worth at 3s. 3d. per pack?—Ans.: £111. 3s." is the last sentence of the section. Then the governess will turn to the examination questions and ask: "In what number of the

Rambler does Dr. Johnson condemn these pestilential time wasters?" Of course, the young lady will take an early opportunity of learning all she can about Dr. Johnson and the *Rambler*.

Nowhere in the book do we get any attempt to explain scientifically the properties of numbers, though we find the word "science" often enough. The introduction is full of quaint arguments to show the antiquity of numbers, *e.g.*: "When Rebecca was sent away to Isaac her relations wished that she might be the mother of thousands of millions; and, if they had been totally unacquainted with the rule of multiplication, it is impossible to conceive that they could have formed such a wish." At bottom Mr. Butler's work is an effort to make arithmetical sums interesting by connecting them with some concrete piece of information. This recalls the breakfast-table problems that are now served up by the Press. His genuine desire to be helpful to his young ladies cannot be doubted. All through he speaks of them with gentle affection and with an amiable feeling that they enjoy his teaching and are as anxious to gain as much learning as possible. He gives many instances of learned females who have proved their value to the world. He is not always successful in making difficulties clear, nor can he avoid the use of terms needing much explanation. For instance, on the subject of money, he says: "Coin differs from money as the species from the genus." And: "A coin is a piece of metal converted into money by the impression of certain marks or figures thereon." But he shies at explaining money.

Incidentally, we get from the sums much interesting information of the times, so far as sums may be trusted to give it. I notice that the word *groat* (= fourpence) survives—at any rate, in the money table, if not in actual use. "A common silver watch" costs nearly £5. On a house at Worcester, rented at £24, the tenant pays £13. 3s. 10d. in rates and taxes, distributed as follows:—Poor rate, £3. 10s.; water, £1. 4s.; Church rate, 5s.; window and house tax, £6. 16s. 4d.; Easter offerings, 10s. 6d.; the watch, 18s. Butcher's meat costs 11d. a pound. As a typical question, showing the ingenuity of our author's methods, I should like you to notice this: "To as many guineas as the Israelites wandered years in the desert add as many half-crowns as there are provinces in Spain." Interesting extracts could be continued without end; and I would not sell my book for many times the humble coppers that I gave for it. One more quotation, and I have done. This time we are dealing with boys. Many of the reviewers think that the book would be equally useful in boys' schools; and, our humble-minded author, though writing for girls, is "fully sensible with Dr. Knox that, as a regular course of history would too much interfere with other parts of learning in the academies of young gentlemen, some of the time of recreation must be allotted to the attainment of that invaluable acquisition." For these recreative hours his book may serve.

Well, reader, do you, as I have done, find an interest in realizing that a hundred years ago a visiting master—writing-master, he was called—in young ladies' schools was confronted with and had thought upon the same problems that you and I are now called upon to face; and that he dealt with them gently, affectionately, and conscientiously, sparing himself no trouble in searching for information to make his book more interesting to the young? His method was to wrap the powder in jam; your method is perhaps to cultivate a liking for the powder.

REVIEWS AND MINOR NOTICES.

Coin Types: their Origin and Development. By GEORGE MACDONALD, M.A., LL.D. (J. Maclehose & Sons.)

A Greek coin of the best period is an object lesson in beauty—beauty of form, of design, of skilful craft, of exquisite line. It is a revelation in little of the proper artistic excellence of the Greek creative mind, its sculpturesque attitude, its love of balance and proportion, of exact adaptation of materials to harmonious effect, of space adequately and rhythmically filled. These are not qualities that appeal consciously to the minds of the young, whose sense of beauty is perhaps dormant, perhaps nascent; usually undeveloped. But the Greek coin is more than a thing of beauty: it is a fact, a piece of Greek history; it is a fragment of Greek life, touching our own life in one of

its most familiar aspects; it can be handled, grasped, literally and mentally; it readily comes home to every one's experience. And, if those who teach Greek classics desire to enliven and illustrate their lessons by some visible object that at once arouses curiosity about real life in the past and is in itself wholly admirable and worthy of study for its own sake, he cannot do better than choose a Greek coin. But many teachers have not had or found the opportunity for archaeological study. To them, and to all libraries of classical schools, we would heartily recommend Dr. Macdonald's book. With this and a few others, such as Prof. Gardner's "Types of Greek Coins" and the British Museum "Coins of the Ancients," with Head's "Historia Numorum" for general reference, and a few well selected electrotypes, a classical teacher may make himself fairly master, for illustrative purposes, of a fascinating study. He certainly will gain for himself a new insight into the Greek mind and fancy. He will be able to bring many a literary allusion into contact with visible ancient life, and in the process stimulate many an awakening artistic consciousness.

Dr. Macdonald has written a book at once generally useful and stimulating to fresh inquiry. Being a reprint of lectures addressed to a general audience, it covers a great deal of ground without being either minutely technical or superficially discursive. Inspired by his subject, the author has observed due proportion and adequately filled the space which he marks out for treatment.

But the book has a further claim. It is a study in scientific method, a lesson in evolution, and on that ground alone will abundantly interest many minds not specially susceptible of artistic influences. It is a story of growth, of development, culmination, degeneration and manifold regeneration, of adaptations and survivals. Each type becomes of interest, not only as an individual, but as a "link among the days." The author seeks to show us the history of coin types, how they began, how they grew, what influences modified them. In following this line of study he has reached some conclusions which are new, and to an archaeologist this will be the most suggestive part of the book. It has hitherto been almost universally assumed that the coin types of the Greeks were, in their origin, religious. It is expressly so stated and argued in Prof. Gardner's "Types," a beautiful book which all classical school libraries ought to possess. That the types of the finest period of Greek art were religious in character is obvious upon the face of the coins. Look through one of the plates of "The Coins of the Ancients"—say Plate 21—and we see, almost universally, the head of a divinity upon the obverse, and frequently upon the reverse some symbol or mythological legend of that divinity. The study of coins becomes a study of Greek religion—not literary, Attic religion, but popular, local cults. But the religious character of the earlier coins is not nearly so obvious. What was the precise religious significance of Metapontum's ear of corn, the shield of the Boeotian, the tunny of Cyzicus? It is here that Dr. Macdonald's analysis is most novel and illuminating. All students of Greek coins are familiar with the distinction between the main type and the minor emblem, or adjunct, called the symbol. It is agreed that the symbol is the private mark of the moneyer or magistrate responsible for the issue—sometimes his name is added—and that this symbol is a copy of the device upon his signet, his personal badge, his "crest," as we should say in modern heraldic language. Now, Dr. Macdonald argues that, whatever be the origin of the symbol, the same explanation must hold for the type. The type must be the badge, "crest," or "arms," the *παράσημον* of the city. Of course, this badge may have been, and obviously often was, itself religious in origin. The Athenians chose the owl as their city device because the owl was the sacred bird of their patroness Athena. But the point he makes is this: that the type was not, any more than the symbol, necessarily religious. It may have been chosen for other reasons—as indicative, for example, of the commercial relations of the town; it may have been an allusion to the town's name—a *type parlant*, or "canting badge." Whatever its origin, it was a shorthand expression for the city issuing the coin; an easily recognized mark serving as a guarantee for the issue, so that men might know "whose image and superscription" it bore. Very curious in this aspect are the early coins of Thessaly, exhibiting a man wrestling with a bull. This type has been supposed—as by Prof. Gardner—to have a religious reference, to Hercules, perhaps, or Jason. But Dr. Macdonald

shows from literary record that bull-taming was a popular sport in Thessaly, and supposes that the type was chosen for that reason. So a horseman may indicate prowess in cavalry, a chariot success in races, a trireme in regattas.

The general conclusion is that the type, like the symbol, was heraldic in origin, and was used before and after the invention of coinage upon the city's seal, or graven upon public monuments. To the further question—upon what principle were the types chosen—Dr. Macdonald replies by enumerating four governing motives: the decorative, the imitative, the commemorative, the religious. Of these the last was much the strongest and most permanent, and, ultimately, it overcame and superseded other influences. From the fourth century the religious character of coin types becomes universal; the *παρασημον*, or city badge, either disappears or is transferred to the reverse of the coin, or appears only as an adjunct, like the magistrate's symbol.

All this is worked out with great ingenuity and wealth of illustration and closely reasoned argument. The theory strikes us as illuminating: it certainly will provoke discussion and inquiry among Greek numismatists. We think that Dr. Macdonald may fairly plead that his theory accounts for the facts better than any other which has been put forward.

The remaining part of the book follows more conventional lines, but these are laid down clearly, with judicious selection from the mass of material available. From the time of Alexander we trace the process of evolution from the head of the divinity to that of the deified monarch, and thence to the portrait-type pure and simple. Some of these *diadochi* portraits are "speaking" likenesses, and there is nothing quite like them for grandly artistic realism till we come to the portrait medallions of Italian art. It is a pity that the subjects were often so unworthy of such immortalization. Next we follow the introduction of historical and topical motives; and the author thence passes to Rome, showing the effect of Greek models, the reaction upon Greek coinage of the practical, unimaginative temper of the Roman, and the gradual supersession of local mintages. We are taken rapidly through the Imperial period to the time when Christian influences begin to make themselves felt. We are shown how the earliest coins of the new Western world were first purely imitative; how heraldry came into play as a new motive; till in the time of the English Henry VII. revived portraiture takes up another link with the past:

Sic alid ex alio nunquam desistet oriri.

We have to make one small criticism—of the arrangement of the illustrative plates. They are placed at intervals through the book. References in the text are made to the number of the plates, but we have to turn to the beginning to discover the page at which the plates are bound. It would be convenient either to add the page to the reference to the plate, or to place all the plates together at the end of the book.

As reference has been made to Prof. Percy Gardner's "Types of Greek Coins," with which the present book may seem to invite comparison, it may be said that the two books supplement each other. Prof. Gardner deals with Greek coins only, with a greater wealth of illustration, a fuller discussion of each period and its individual coins, and more frequent reference to the sister art of statuary. Dr. Macdonald is more preoccupied with the history of coin types as a whole and the establishment of the continuity of tradition and evolution. He has produced a most interesting and stimulating book.

A History of England. In Six Vols. Vol. II.: *England under the Normans and Angevins.* By H. W. C. DAVIS, Fellow and Tutor of Balliol College, Oxford. (Methuen.)

An author who has to cover over two hundred years of English history in a single volume must find that one of his chief difficulties is to decide what he shall relate and what pass by. Mr. Davis has generally decided this question wisely: he devotes little space to the doings of our Norman and Angevin Kings in France, and so is enabled to treat English affairs at more length. He should, however, have said something of the Welsh expedition of 1231, especially because it had an evident connexion with the disgrace of Hubert de Burgh. His book is written in correct and sober English, but his narrative is lacking in picturesque description. The frequent occurrence of over-long paragraphs is unfortunate; many pages are without a

break, and in one place, though this is an extreme instance, a single paragraph extends over more than four pages. The excellent plan of giving dates at the headings of the pages is somewhat spoilt by using the dates to indicate the whole period covered by a chapter, as 1219-1254, instead of making them refer to the contents of each page. The matter of the book is scholarly, and bears out the author's claim that he has founded his work on a study of original authorities. Sufficient references are given in foot-notes, and are confined for the most part to matters which are not of common knowledge. Advantage has also been taken of the best modern books on the period. A well arranged bibliography contains brief comments on several of the books cited: these notes might well have been fuller and more numerous.

Mr. Davis gives many evidences of sound judgment. For example, in what he says concerning the making of the New Forest, he avoids the extreme views of older historians who accept the indignant words of Florence of Worcester as literally true, and of some modern writers who minimize the extent of the devastation. Again, he warns his readers against attaching too much importance to the meeting of the King's tenants and their vassals held at Salisbury in 1086: it was, he says, "a temporary expedient to meet a temporary danger," and the oath of allegiance did not, as Freeman contends, imply any doctrine that was new either in England or in France. He refuses to accept the suggestion in Mr. Round's "Geoffrey de Mandeville" that the description of the anarchy in Stephen's reign given in the "Chronicle" may have been true only of the Fen country, and points out, as he had previously done in an article in the *English Historical Review*, that the evidence of desolation in the West, the Thames Valley, and some of the Midland shires, afforded by the first Pipe-roll of Henry II., corroborates the pictures drawn by the Peterborough chronicler and the author of the "Gesta Stephani." We observe that in this connexion he follows the old-fashioned translation "they hung burning things on their feet," though Mr. Stevenson has conclusively shown that "bryniges" should be translated as "coats of mail." The importance of the administrative changes introduced by Hubert Walter is excellently brought out. "It may," we are told, "reasonably be contended that our national liberties owe as much to him as to the authors of Magna Carta." The treatment of the Great Charter affords another instance of the good judgment with which this book is written. Mr. Davis rightly maintains that its general clauses place it on a far higher level than the charter of Henry I., which, on those points, does not go beyond vague promises to keep the peace and restore the law of the Confessor; that, with regard to the clauses affecting special interests, there is no ground for supposing that they imply a class conspiracy, and that the fact that John failed to obtain that support which the Commons had given to Rufus shows that the action of the baronial party was acceptable to the people at large. At the same time he insists on the conservative character of the Charter as a whole, and the evident reluctance of those responsible for it to trench on the prerogative of the Crown.

On the other hand, he is not particularly successful in dealing with persons. His men and women perform their proper parts in the drama of their times, but they scarcely seem alive. This detracts from the interest of his narrative. In portraiture he exhibits some uncertainty of touch, which is the more remarkable because he generally writes with considerable assurance. Of Rufus he says that he was "exact in the performance of his plighted word," and a few pages on that "it was not to be expected that Rufus would keep faith with those in [of] whom he did not stand in awe," and again that "Rufus lost no time in repudiating the promises he had made." So, too, we read with some amazement that the capacity of Henry I. for "taking pains" must not lead us to imagine that he was a man of genius; that he continued what Rufus had begun, and originated little. Later we are told that "he rejected the Red King's ideal of an arbitrary despotism"; we read of a remarkable proof of his "statesmanship," and of the important administrative changes which he introduced; and we remember that his work is only partially known to us, and that with fuller knowledge we should probably form an even higher estimate of his genius than that which will certainly be derived from these pages. The account of the reign of Henry III., though generally good, is less satisfactory than the earlier part of the book. The suggestion that, if Pandulf had known English law, he would have understood

that his assumption of the regency was unwarrantable, and the assertion that, because there is no notice of a resolution of the barons in his favour, they cannot be said to have ratified the wish of the Earl-Marshall that the legate should succeed him, strike us as extremely weak. A good opportunity for interesting description is lost in the account of the sea-fight with Eustace the Monk: the reader is led to imagine that, on coming out of the Thames, the English fleet at once bore down on the enemy "with the advantage of the weather-gage"; the admirable manœuvre by which that advantage was gained is not related. A more thorough acquaintance with Gascon history would have shown Mr. Davis that Simon de Montfort's administration of Gascony was by no means so equitable as he imagines. Nor can we understand why Henry III., a King of remarkably cosmopolitan sympathies, should be represented as "indifferent" to European events; except so far as they could be made to serve his own ends.

In a book dealing with many names and events slips of small importance will inevitably occur. If Mr. Davis has an opportunity for correction, he will doubtless recognize that Mellent is a barbarism for Meulan; that Henry—not Hugh—de Beaumont was Earl of Warwick; that Simon de Montfort was the third, possibly the fourth, son of the Crusader; that Edward I., before his accession, should not be styled prince; and that it would be well to be consistent in writing names—that he should, for example, keep either to Hugo or Hugh, Geoffroi or Geoffrey, Pandulph or Pandulf. But these things are trifles. A more serious lapse is his acceptance of William of Malmesbury's careless statement that the Conqueror landed at Hastings. He falls into an even more unaccountable error in saying that Archbishop Edmund "ended his days in the monastery of Pontigny": no more recondite authority than Matthew Paris records that he died at Soisy in Brie. Ignorance and carelessness with reference to mediæval ideas on Church matters are common enough, and it is therefore specially to be regretted that a writer of Mr. Davis's position should represent the rectors of Berkshire as speaking of the English Church as a sister of the Church of Rome. The book as a whole shows reading and independent thought; the treatment of constitutional questions is particularly good; but the narrative is less interesting than it might have been made if more time had been given to working it up.

The Religion of Numa, and other Essays on the Religion of Rome.

By JESSE BENEDICT CARTER. (3s. 6d. net. Macmillan.)

When first the Romans come into sight they are a plain agricultural folk, with a religion still largely animistic. From the spirit (*anima*) supposed to dwell in every separate thing they had evolved, or were evolving, gods. But these gods were not personal enough to have a history; so that there was no primitive Roman mythology. Nor were they personal enough to excite affection: the duty of man towards them consisted in the scrupulous fulfilment of certain forms. This early stage of belief is designated by the term "the religion of Numa": that is to say, the religion of the old kingdom before it was brought under foreign influences. Then arose the god-door or door-good Janus, originally the spirit of the *janua* (door); then the "store-closet gods," or Di Penates, began to be worshipped, and Lar, the general protector of the house. Then, too, the dead were honoured: not as individuals, but as a vague body of spirits—the Di Manes. Other gods were likewise known, most of them such as a farmer would do well to pacify; but Mars already flourished as the guider of battles. And these gods begat others; for the epithet describing some special quality of the god, broken off, gave rise to a new divinity, and Juppiter Fidius, for example, produced Fides. But now came the second stage in the religion of the Romans. They grew to be differentiated from the other hill communities of Italy, owing to their receptivity for external influences. The one-class society of the young commune resolved itself into many classes. Fresh elements, such as politics, trade, and handicraft, entered the common life, and with these elements appropriate deities. Hercules arrived from Magna Græcia as the patron of travellers (and so of traders); Castor as the god of horsemen; Falerii sent Minerva, the friend of artisans; from Aricia the Romans took Diana of the Grove, goddess of woods, of the animal kingdom, and of birth; because she was much venerated by the Latin League and the road to hegemony in the League lay through devotion to her. But, most significant

innovation of all, the old sky-father Juppiter on the Capitoline, whom farmers had wooed for sunshine or rain, became, as it were, the divine symbol of the State. He, superior to all other Jupiters, was Optimus Maximus: he would enable Rome to triumph over rivals.

This second stage may be roughly dated by connecting it with the name of Servius Tullius. A third, with a grievous change for the worse, commenced soon after the opening years of the Republic. To a religion essentially simple, yet varied enough to represent the aspirations of the Romans, succeeded a baleful Greek superstition. Under cover of the Sibylline oracles, the gods of Greece made their entrance into the Eternal City, not merely to the parts where foreign gods might fitly be harboured, but ultimately into the jealous *pomerium*, or symbolic wall that encompassed the native deities. These new-comers received the names of older Roman gods, and generally displaced them from office. Demeter ousted Ceres; Liber was thrust from his vines by Dionysos; Kore dislodged the shadowy Libera. Next Hermes, protector of the merchant, was admitted into the State cult as Mercury; and Poseidon, the sea-god, bestowed his attributes on Neptune, whose province until then had been the sweet water of rivers and springs. In the third century before Christ Asklepios was imported in the form of a snake, and exercised thenceforth his healing powers as Aesculapius on an island in the Tiber. The Lower World, too, changed its aspect. No longer the abode of the equal Di Manes, it became a kingdom, governed by a king and his consort. Pluto, as Dis, and Persephone, her name transformed to Proserpina, were accepted by the Romans from Greece at the bidding of the Sibylline books. From the time of the Second Punic War it is hardly possible to distinguish between Roman and Graeco-Roman cults. The gods of Greece had vanquished the gods of Rome.

The overthrow belongs to the period that may be labelled "the Coming of the Sibyl." Its marks were an ever-growing superstition and great pomp of ritual. But before it closed the Mighty Mother, introduced from Phrygia with unique ceremony, had dealt a crueller blow at the religious life of the Roman people. With her coming the orgiastic element was grafted on Roman worship, and emasculate priests showed an evil example of fanaticism. The gate was open for Oriental cults as injurious to morality as they were alien to the spiritual past of Rome.

The effects of the third period are manifest in the fourth—in the decline of faith that characterized the last two centuries of the Republic, when, too, philosophy, another borrowing from the Greeks, assailed religious belief of all kinds. In a fifth period Augustus endeavoured to set up anew the ancient State religion; but its vitality was gone, and he found it easier to rebuild temples than to kindle again the spirit that once had filled them with votaries.

All these things are set forth, and set forth with remarkable skill, in the volume before us, of whose contents we have given a slight outline the better to draw attention to it. With its unpretending title it might easily slip away unobserved amid books of small note and transient interest. We deem it worthy of a better fate. It has qualities that should ensure to it a large audience and some considerable duration of life. The subject is full of charm. Little known to general readers, it is no less important than it is fascinating; for the religion of the Romans contributed to the erection of the most marvellous structure that the world has ever seen. And the theme is handled in these pages with keen insight, with philosophic balance, and with an orderliness and lucidity above all praise.

In work so good it is perhaps ungracious to point out defects, and we do that part of our business with half a heart. A sentence on page 169 should be written again, since at present it is all too rich in *-ation*:—"But this secular celebration of Augustus is interesting aside from the relation of Juppiter and Apollo, for it affords another illustration of the skilful combination of new and old in the Augustan reorganization." That was penned in a drowsy mood; for the author does not generally lack ear. As to his argument, we have pondered carefully what he says of the action of Hellenism on Rome, remaining not quite convinced. It is true that Greece gave her gods to Rome when she herself was weary of them: she gave her "tired gods." Yes; but these tired gods were superior to any that the Romans could devise for themselves, their home-made gods being but poor wooden things. With the gods of Greece must

have come some sparks of Olympian fire, not yet altogether extinguished. The effects of Hellenism on Roman religion are not to be dissociated from the subsequent effects of Hellenism in calling into existence a Roman literature. Mythology, stirring imagination as well as proceeding from it, is one of the mainstays of literature, and the earlier influence prepared the ground for the later. Both the religious and the literary influence may haply be included in the debt that the Romans owed to Greece; which not incurred, they would have continued to be nothing but farmers with a taste for lawmaking and petty litigation.

Some such thoughts occurred to us as we lingered over Mr. Carter's book. But, if our readers will peruse it for themselves, they may be disposed to agree with him and not with us. Braving the risk, we counsel them to do so.

Studies in the Sermon on the Mount. By Rev. the Hon. E. LYTTETLON, M.A. (Longmans.)

A second reading of Canon Lyttelton's studies has increased our sense of their value and suggestiveness, particularly to that class of readers for whom they are primarily intended—teachers and exponents of Scripture who seek to gain information respecting a disputed or a difficult passage. The introduction shows deep insight in pointing out the underlying meaning of the Sermon on the Mount as it has been recorded to us, and in laying stress on the fascination that it has always possessed for men and women however much their practice has contradicted its precepts. In contending that the Beatitudes do not contain a social propaganda and a code of ethics that would ensure Utopia the writer is, in our opinion, entirely justified—as, for instance, when he says:

Instead of explaining the existence of pain and evil or prophesying their abolition, our Lord simply affirms that blessedness belongs to those who come directly under their influence and are subjected to the full severity of their onslaught. True happiness, He says, belongs to the unhappy; to those who mostly because of evil operating in others are deprived of all that for which men in this world naturally crave—wealth, fame, and the like.

In describing also the keynote of the sermon as trusting belief in a Father in Heaven—however at variance with that which the visible world would have us believe—the writer strikes to the very heart of religion and to a truth which is in much need of proclamation among the Christian denominations of to-day. These too often find it impossible to get outside the walls of their own religious life and predilections and to discern the ties which unite them to men of other faiths. Belief in a Divine Fatherhood that shapes and cares for the destinies of all races of human beings would make such sectarian bigotry impossible, and this prime deduction from Christ's sermon might well have been accorded a chapter to itself.

That religion consists in claiming a Divine Sonship and in opening the heart and mind to receive life from the Supreme Giver of life, instead of endeavouring to earn or attain it, is, the writer contends, and as we think with truth, not merely the underlying assumption of all Christ's sayings, but of His life also. In a very suggestive appendix on the true meaning of the word "Christian," he says that Christ's prayerfulness, *i.e.*, His intense and concentrated communion with the Father-Spirit of the universe, was not only His supreme characteristic, but the only daily habit of His earthly life of which a literal imitation can be safely enjoined.

Yet our admiration for the learning and insight of this appendix and similar passages cannot overcome a certain quarrel with the book as a whole. It is cast often in so conventional a phrasing that its appeal is necessarily limited to the Sunday school and the pulpit, for which it might seem exclusively intended. Condensation of thought and style and a less stereotyped manner of expressing spiritual fact would have secured, we venture to think, a far wider public, who are passionately interested in the things of the spirit when described in terms that are intelligible to them, and not calculated to arouse irritating recollections. We note, also, a cumbersomeness of composition which tends to obscure the value and suggestiveness of the author's reflections. To give a single instance:

This guilelessness, being natural and spontaneous, is very likely to misconstrue the mixed motives which play a large part among mankind in the practical affairs of life, and to be somewhat at the mercy of

intrigue and selfishness, and hence ignorant of facts the knowledge of which is necessary unless endeavour is to be seriously crippled.

It is true, we agree, that the average Christian consciousness has too often regarded the Sayings on the Mount as stars in the heavens, whose nature and constituents it is impiety to examine; yet we are still convinced that Christ is best interpreted, not by any amount of literal deduction and ethical commentating, but by flashes of imaginative insight which are born of communion with His spirit. To interpret His sayings as recorded in the Gospels as we do, say, the treatises of Plato and Aristotle is, we think, invariably dangerous ground. The critic can always point to the fact that they were not written by Christ Himself, or recorded at the time of utterance, but are representative probably of a set impression in the minds of His hearers some years afterwards. The student also has to bear in mind that Christ, as well as His Apostles, is hampered by language and the search for symbols and illustrations through which to convey spiritual truths to minds steeped in material imagery and hopes. He had to use current ideas and modes of speech in which to approach the understanding of His hearers at all, and it is only, we hold, by communion with His spirit that we can hope to rightly interpret His sayings. Prosaic textual criticism can no more fathom them than the commentators on Shakespeare's plays can reveal Shakespeare's mind. Take, for instance, that solemn and dark saying: "And if thy right eye causeth thee to stumble," &c. How it sinks like a stone into the deep pool of thought, causing ripples in the waters of the imagination! The tragic pages of history and individual life could certainly have supplied a less trivial illustration than that which the writer quotes. The rumour concerning Jenny Lind, if true, charges the great singer with a morbidity which is much to her discredit. The best exercise of a great gift is dependent to a certain extent on the appreciative sympathy of the work, and a great artist who refuses to give joy to the human race because of introspective scruples would be as cowardly as a general who refused to serve his country any more because he mistrusted the legitimate pleasure which he felt in the plaudits of the crowd.

We differ no less from the moral drawn from the story of Martha and Mary; but space forbids us to argue the point. The author underrates, we think, the active and aggressive aspect of the Christian life, and his allusions to the social reformer and the value of his temperament and motives seem to us lacking in fairness and discrimination. The laws which govern personality and temperament are all equally of God, and the Sermon on the Mount might be described from one aspect as a discussion on the proper standard of judgment. The saint militant who actively tries to redress the crying ills of his time is every whit as much a child of God as the saint of more quiescent and meditative temperament who serves his generation in another fashion.

The Law of International Copyright, with Special Sections on the Colonies and the United States of America. By WILLIAM BRIGGS, LL.D., D.C.L. (12s. Stevens & Haynes.)

Students of copyright have been exceedingly fortunate during the past few years in the books that have been issued to interpret the very complicated Acts dealing with this subject. It is a subject that must be dealt with exhaustively or not at all. No possible good can be gained either for the public or the student by an article of about one thousand words headed "All about Copyright," though this was the method of treating the subject adopted in a well known annual not long ago.

Although three or four most valuable treatises have been produced on domestic copyright, yet international relations had only been touched upon incidentally. To fill the omission the work under review was produced. Does it wholly stop the gap left in other works? We can, without hesitation, say that it does.

Not only does Mr. Briggs handle the law of international copyright, but so fully does he investigate the subject that the student of the ethical right of property and the general relation of State to State cannot fail to derive great assistance from a perusal of these pages. Not only has the author expanded his own point of view, direct or indirect, but he has apparently embraced the points of view of all other commentators. He acknowledges indebtedness to Dr. Alcide Darras, whose excellent work ought to be with every one attempting to grapple

with copyright; also to Lyon-Caen, Putnam, the International Bureau at Berne, whose publications are excellent, and to many others. His meticulous method can best be exemplified by quoting the heading and sub-headings of his first chapter. Chapter i. deals with the nature and origin of copyright, and is divided into four sections: (1) The Author's Moral Right in his Work; (2) The Creation of Property; (3) Property Features of Copyright; (4) Evolution of the Legal Right. The whole of this chapter is full of interest to the student of international ethics, as well as to the student of international law.

Dr. Briggs explains the origin of all property from a common source and its gradual evolution and protection, and, as an illustration against the perverted views of the ignorant, quotes aptly from "The Political Ethics" of Francis Lieber: "Because there was no copyright in early times . . . it is believed by many to this day that copyright is an invented thing and held as a grant bestowed by the mere grace and pleasure of society; while, on the contrary, the right of copyright in a book seems to be clearer and more easily deduced from absolute principle than any other."

Within recent years we have heard the claim of the public forcibly pushed forward. It has been advanced without knowledge of these wider ethical truths, and in ignorance not merely of the improbable ideal, but of the actual real; and the result has been to hinder legislation, and, by this hindrance, to sanction robbery and piracy, which at the present advanced state of civilization should be impossible.

The author argues carefully and incisively from first principles, but he carries the reader with no less care through the history of copyright in all the leading countries of the world. He points out the difference in result for those who legislate towards the loftier ideals and those who legislate for the protection of the narrow domestic issues. He points out this curious result of limited protection, and, therefore, of large piratical capacity—that free competition among pirates has always brought about deterioration in the intellectual quality of the works produced, and quotes Prof. Brander Matthews, who asserts in Mr. Putnam's well known book, "The Question of Copyright": "The cheapest books to be bought in the United States are mostly inferior stories by contemporary English novelists, while the cheapest books to be bought in England, France, and Germany are the best books by the best authors of all times." This was before the Chace Act of 1891.

After he has cleared the way by his historical study of domestic copyright, the author next deals with the development of international relations, the histories of treaties, their advantage and disadvantage, till at length he comes to the Berne Convention, the Act of Paris, the Montevideo Convention, and their practical bearing on the literature of modern times. He proceeds to discuss the possibilities and probabilities of the future, the hopes of uniform domestic legislation, the prospects of ideal international legislation. Part IV. brings the climax—the protection accorded to foreign authors in Great Britain and the rights of an Englishman in foreign countries.

There is no doubt from a study of the labour expended by the author and the result produced that he shows a fine knowledge of his subject, and, in addition, has the power to place that knowledge before his public in a lucid and intelligent manner. His arrangement is admirable, and runs along in a natural sequence. In a book of this size, dealing with a subject so full of research, there may, no doubt, be one or two small mistakes, but nothing to detract from the value of the work. It is not only the first effort in English which attempts to elucidate the subject, but so elaborate is it in detail, and so exhaustive in method, that, unless there is some revolution in international copyright, it cannot fail to be the leading authority for some time to come.

A History of English Poetry. Vol. V. By W. J. COURTHOPE. (10s. net. Macmillan.)

The fifth volume of Prof. Courthope's "History of English Poetry" may justly be regarded as the most authoritative outcome of his literary studies—for the eighteenth century is his province by a well established right of conquest. Perhaps the chief contribution of this volume to our understanding of the period is to be found in its admirable perspective and the careful and sympathetic treatment of humbler heirs of the Augustan traditions. Prof. Courthope protests against a criticism which

applies to the whole period the vaguely conceived characterization of "classic," and, with a welcome abundance of illustration, attempts to correct this judgment as superficial and inadequate. Shadowy and forgotten names become substantial and individualized realities, and, amongst other valuable citations, space has been found for Pomfret's once famous "Choice"—which lost its author ecclesiastical preferment by reason of the ambition it records to live near "some obliging, modest fair"—while at the same time he parenthetically expresses his determination to "have no wife." But, though Prof. Courthope justly protests against the undefined and depreciatory use of the epithet "classic," we confess to certain misgivings as to the precision of his own usage of it, and he certainly allows "the single, oracular word 'correctness' to shift for itself" when he remarks that "the religious poets of the eighteenth century, being scholars and men of refinement, knew that it was necessary for them to curb their enthusiasm by art, and to observe in their compositions the rules of correct taste."

Prof. Courthope has no misgivings about the eighteenth century; there is no hint of doubtful sympathy with the tendencies of the age and forms in which they were embodied; no serious suggestion of limitations either in its literary activities or in the political compromise with which, as Prof. Courthope repeatedly and forcibly insists, they were so closely embodied. With the discrimination and enthusiasm of a lover he pierces apparent uniformity, and detects the kindling touch of passion and genius where some read only a conventional description; tragic skill where some read suitable and unconvincing sentiments. A certain vagueness of conception as to the borderland between poetry and prose seems to underlie the author's decision to omit from consideration Swift's profoundly imaginative prose satires and Gray's letters—so significant in the early Romantic movement—while at the same time a chapter is allotted to the *Tatler* and *Spectator*, and a considerable space to the exact theological beliefs of the Wesleys and Dr. Watts. The impression this distribution creates in us is confirmed by the following summary of the achievements of the "system of classical taste" during the body of the century:—"If, in its desire for law and discipline, it tended to suppress much that was beautiful and romantic in the spiritual history of the nation, it abolished much that was false, affected, and unwholesome. Under it society was taught to reason about ideas." As an estimation of the general achievements of a prosaic age we should not quarrel with this dismissal, but, if Poetry is our theme, we are moved to ask when and where she acquired the credentials of a schoolmistress; and De Quincey's profound and subtle distinction between the literature of knowledge and the literature of power recurs to our mind: "The function of the first is to *teach*, the function of the second is to *move*; the first is a rudder, the second an oar or a sail. . . . Remotely it may travel towards an object seated in what Lord Bacon calls *dry* light, but proximately it does and must operate—else it ceases to be a literature of power—in and through that *humid* light which clothes itself in the mists and glittering iris of human passions, desires, and genial affections."

It is perhaps natural that the early Romantic movement should seem to lack significance to Prof. Courthope; somewhat scant justice is done to Chatterton's creative use of words as musical units, nor do we feel that the importance of the developing naturalistic movement is quite sufficiently appreciated. It is somewhat bewildering, for example, to find Cowper taking place only among the satirists of religious lyrics; and a division of the centuries which excludes Crabbe's wonderful sea-pictures from their place among the eighteenth-century Nature poetry is surely an injustice to the period.

"English Men of Letters."—*Adam Smith.* By FRANCIS W. HIRST. (2s. net. Macmillan.)

The publication of this well written little volume is singularly appropriate at this moment when Protection *v.* Free Trade is the subject of the hour. For Adam Smith was the apostle of free trade, and the free trade movement of the forties owed much to "The Wealth of Nations," published in 1776. The influence of Adam Smith has indeed been extraordinary. "Pitt's commercial policy from 1784 to 1794 was simply an attempt to carry out Smith's views." In France the improvements in the methods of taxation were largely due to Smith's suggestions on the subject in the fifth book of "The Wealth of Nations." "It was," wrote Mollieu, Napoleon's favourite

Minister of Finance, "this book of Adam Smith, then so little known, that taught me better to appreciate the multitude of points at which public finance touches every family and raises judges of it in every household." In Germany his influence was seen in the fact that commercial restrictions were gradually removed and external duties reduced, while lectures were given at the University of Königsberg by Prof. Kraus, which were attended by large numbers of eager students who spread Smith's views throughout Germany.

Mr. Hirst gives an interesting chapter on Glasgow and its University during the years that Adam Smith was student, professor, Dean of Faculty, and Vice-Rector. He had the advantage of learning from a great teacher, Prof. Hutcheson, who lectured on philosophy and inspired his hearers with an enthusiasm for reform and freedom which extended beyond the walls of the lecture room. "I am called the New Light here," he said; and his influence on his great pupil was marked and acknowledged by Adam Smith, who, to the end of his life, loved to recall "the abilities and virtues of the never to be forgotten Dr. Hutcheson." Among his companions was Mathew Stewart (the father of Dugald Stewart), who became one of the greatest mathematicians of his age; and as colleagues he numbered Simpson, the Professor of Mathematics and editor of Euclid, a man of great charm and amiability; and Joseph Black, the founder of modern chemistry. James Watt was at the time instrument maker to the University, with a workshop within its precincts. Within the University were also the printing press of Robert Foulis, who had printed the famous "Horace" in 1744, and the type foundry of Wilson, the Professor of Astronomy. Glasgow was a centre of life and activity: lectures on natural science were given by the professors to working men, while an Academy of Design, the first of its kind in Great Britain, was housed in the University and had the enthusiastic support of Adam Smith. Smith took his official position seriously and was active in promoting every movement for the good of his University, which stood first among the centres of learning of his day. One of Smith's most intimate friends during his residence at Glasgow was Hume, whose admiration of the economist's genius was boundless. In 1764 Smith accepted the post of travelling companion to the young Duke of Buccleugh, with whom he spent two years in France, where he learnt much concerning taxation and administration which was to be useful when, some years later, he was to write his "Wealth of Nations." He met Voltaire and Turgot, and was a frequent and honoured guest at all the famous salons in Paris. To Quesnai the author of "The Economic Table," he admitted his obligations, of which part of "The Wealth of Nations" bears unmistakable evidence. The visit to France was fruitful in every respect, and his description of France some twenty years before the Revolution is a valuable contribution to history.

The life of this strenuous philosopher and reformer is well worth studying, and Mr. Hirst has done his work well, probably because, added to carefulness and accurate knowledge, he has a whole-hearted admiration for his subject, whom he characterizes as the "sole author of a revolution in thought which has modified the governing policy, and prodigiously increased the welfare, of the whole civilized world. . . . His word has rung through the study to the platform. It has been proclaimed by the agitator, conned by the statesman, and printed in a thousand statutes."

Jeremy Bentham: his Life and Work. By C. M. ATKINSON, M.A., LL.M., Stipendiary Magistrate to the City of Leeds. (5s. net. Methuen.)

To most people the name of Jeremy Bentham calls up little but the adjective "utilitarian" and the phrase "the greatest good of the greatest number." In his lifetime—which covered a period of great social and political activity (1748–1832)—he counted for much among a small body of enlightened men such as Sir Samuel Romilly, the two Mills, Francis Place, &c.; and his scheme for dealing with criminals, the "Panopticon," received some support from the Government of his day, while his writings were widely studied for their extraordinary wealth of information on a large number of subjects. Since his death he has been somewhat unduly neglected—partly owing to the fact, perhaps, that many of the reforms advocated by him are accomplished, partly to the somewhat involved and uninteresting style in which he clothed his ideas. Hazlitt, writing of Bentham in

1825, says the reason of his unpopularity is "that our author's influence is purely intellectual: . . . he has not made sufficient allowance for the varieties of human nature and the caprices and irregularities of the human will." He regarded man as a "logical man," and so his writings have not appealed to the average man, who knows himself to be anything but logical and intellectual.

Yet there is much in Bentham's life and work that is worthy of study, especially to a generation that is not apt to reason overmuch or to give itself up to strenuous intellectual effort. Mr. Atkinson, whose position as a magistrate has naturally given him an interest in Bentham's views of punishment and the treatment of criminals, has written an interesting book about a most curious, though not an attractive, personality. We see a man from his youth upwards devoted to work for the public welfare, at the cost of money and of time, who never swerved from his single-hearted purpose of reform; and, disagree as we may from some of his conclusions (which, one cannot help agreeing with Hazlitt, are often based on ignorance of human nature), it is impossible not to admire his untiring energy and zeal for what he believed to be right. He is one of the very few distinguished men whose private lives offer no material for interest: he never married, and lived a solitary life—not in the least unhappy, for to the last he remained cheerful, good tempered, and kindly. "He never knew prosperity nor adversity, passion nor satiety," wrote J. S. Mill. "He never had even the experience which sickness gives: he lived from childhood to the age of eighty-five in boyish health. He knew no dejection, no heaviness of heart. He never felt life a sore and weary burthen. He was a boy to the last." It is seldom indeed that such words can be truthfully said of a mortal who reaches the great age of eighty-four, and they carry with them their own limitations. From such a man we shall not expect a minute understanding of the human heart, nor great sympathy with the failings and follies of common humanity.

Bentham's writings, however, deserve a careful reading by politicians and philanthropists alike; for they display a broad humanity, a knowledge of law that is probably unequalled, and a strong, virile common sense in dealing with problems which cannot be solved by mere sentimentality. His "Fragment on Government" was extravagantly praised by Romilly, over whom he exercised great influence, while his various writings on law—"Protest against Law Taxes," "Codification Proposals," &c.—received unstinted praise from Mill, who tersely remarked: "He found the philosophy of law a chaos; he left it a science"—while even Hazlitt, who laughs at his "Panopticon" scheme and quarrels with his style, admits that his little book "On Usury" is admirable. If, therefore, Mr. Atkinson's book will lead readers to study Bentham, he will have done a good work, though he should complete his task by collecting some of the best of the essays into one portable volume; for at present he can only be read in some nine or ten closely printed volumes which may be found in our public libraries.

Easy Mathematics, chiefly Arithmetic. Being a Collection of Hints to Teachers, Parents, Self-taught Students, and Adults, and containing a Summary or Indication of most things in Elementary Mathematics useful to be known. By Sir OLIVER LODGE, F.R.S. (4s. 6d. Macmillan.)

We quote the title in full, as this will give the best idea of the contents. Let us say at the outset that it is a very readable and suggestive book, and one which answers a distinct demand at the present moment, when teachers are making a definite attempt to leave the beaten track in elementary mathematical teaching.

We doubt whether Sir Oliver Lodge would advocate in actual school teaching the sort of general instruction his book indicates, though he says of the volume in the preface, "a book on arithmetic forced itself to the front." How far arithmetic can be blended with other branches of mathematics is a moot point. There is a commendable tendency nowadays to let subjects overlap, but all teachers will acknowledge that in a child's mind the gulf, for instance, between arithmetic and algebra is very great, and to some algebra always remains a deep and incomprehensible mystery. It is certainly dangerous ground to tread when we go beyond algebra to geometry, trigonometry, and even differential calculus. We should still advocate the teaching of undiluted arithmetic.

Apart from this question, the very comprehensiveness of the title will give rise to dissension: for example, it seems to us that a little knowledge of the measuring of heights and distances by trigonometry would be more easily acquired and would be of more use than an excursion into the theory of leaks.

Not a little of the value of the book will be found in the many sound and salutary remarks scattered throughout it—such, for instance, as this: "If the teacher of arithmetic knows arithmetic and nothing else, he is not fit to teach it. His mind should be alive with concrete and living examples. . . . Spontaneity and freshness is permitted to the body, but too often denied to the mind"; or: "The sums set are often too long and tedious, the methods too remote from those actually employed by mathematicians." At the same time, we feel that the book might have been made of far more value by slight additions in practical demonstration, and by rearrangement of some of the matter. We are told, it is true, that the book, as regards teachers, "is not intended to instruct in subject matter, but to assist them in method of presentation"; but when Sir Oliver Lodge goes so far as to work out multiplication and division of decimals and square root, with special remarks on the uselessness of more than four- or five-figure accuracy, why should he not go a step further and show sums worked out by contracted methods? Again, it is picturesque, but hardly an explanation of $6 - (-3) = 9$ to say: "the loss of an undesirable burden was esteemed by Bunyan's Pilgrim to be clear gain. A negative subtraction is a positive addition." As to arrangement, why should not the formal proof of fundamental relations in logarithms, which present no difficulty, be given at the outset, and not after use has been made of the results? It seems, also, an unnecessary inversion to assume that fractional indices mean roots and see how it works, and later to go on to the fundamental principle that $a^m \times a^n = a^{m+n}$, from which the interpretation of fractional indices so easily follows.

But, if we criticize too minutely, we shall leave a wrong impression as to the value of the book. We would specially commend in it the chapter on numeration, with the immediate introduction of the idea of decimals. The duodecimal system, however, is a hobby that Sir Oliver rides too hard.

The chapters on logarithms are excellent; so, too, the theory of square root; and throughout the book the interest is vastly increased by constant reference to actual living facts and phenomena and concrete examples. To sum up, we might call this a rejuvenated De Morgan, written in a more entertaining style, with wider range, of less solid practical worth, but very good reading nevertheless.

The Captivi of Plautus. By J. HENSON. (2s. Blackie.)

This little volume belongs to Blackie's "Illustrated Latin Series," and is, like its fellows in the series, well printed, nicely got up, and provided with instructive plates. The editor, chaplain and assistant master at Reading School, has made use, and frequently good use, of several commentaries, particularly those by Prof. Lindsay and Mr. Hallidie. Far from being among those who hold "In Plauto nunquam hiatus," he rejects many of the expedients that Schoell and others have adopted to avoid *hiatus*; and in some difficult passages he has, wisely or not, exercised his own judgment. We set down a few of the notes that we made in going through his work. Page ix.: Was Plautus ever an actor? Aulus Gellius speaks only of his gaining money *in operis artificum scaenarum*, and the whole story as told by Gellius has slight authority. 347: *Ex sententia*, "according to," is an explanation put so as to cause misunderstanding. The words mean "to his liking." 385: We had supposed that the derivation of *sedulo* from *se-* and *dolus* was now everywhere abandoned. 566: *uera uanitudine conuincas* is not "prove truth to be falsehood," but "defeat the truth by lying." 570: It seems unprofitable hair-splitting to distinguish (with Lindsay) *aspice ad me*, "look in my direction," from *aspice me*, "look at me." We find *tamquam in speculum in patinas inspicere* and *speculum inspicere*. Now does *in* differentiate the sense? 718: We have not been able to persuade ourselves, as Mr. Henson has persuaded himself, that *nuperum* is derived from *nouus* and *paro*. 1003: "*anites* for the classical *anates*" is a misleading statement, since *anitum* is read in Cic. "De Deor. Nat." ii. 124. The notes, we must add, are somewhat too largely made up of hints as to scansion and of admonitions to mark the alliteration. Thus the reader has often to depend for epexegetis on the vocabulary, which we cannot describe as a very good piece of work. It contains *intelligo* instead of *intellego*. It omits many words, e.g., *arripio*, *audacia*, *cogito*, *conloquor*, *defleo*, *mors*, *mortalis*, *orbis*, *paruulus*, *praelectura*, *saluos*; and, if some of them will not be much missed, it might have indulged us at least with *em* and the adverb *illi*. It does

not always offer the meaning proper to the text; so, although Plautus has *Fortuna humana fingit*, it fails to tell us that *fingere* may signify "to fashion," "to mould"; it does not inform us that *facete* is not of necessity "wittily"; and for *postulo* it gives "ask, seek, demand," but not "expect." It affirms that *somnio* is of the fourth conjugation! Naughty vocabulary!

Arnold's Latin Texts. General editor, G. EVAN BERNAYS.—(1) *Phaedrus, Selections from the Fables*. (2) *Livy, Selections*. (3) *Horace, Odes, Book I*. (4) *Cicero, First and Second Speeches against Catiline*. (5) *Vergil, Select Eclogues*. (6) *Vergil, Selections from the Georgics*. (7) *Cicero, Pro Archia*. (8) *Caesar in Britain*. (8d. each.)

Mr. Edward Arnold has promptly carried out, if he had not already anticipated, the appeal of the Head Masters for plain texts. The small volumes before us are accompanied by a brief introduction and a full vocabulary, but are without a note. The "Phaedrus," the "Livy," and the "Caesar in Britain" are just the books demanded for lower forms, and we hope to see them widely adopted. When we come to harder authors we are more doubtful about their use. The *pros* and *cons* of notes were pretty fully discussed in our last number, and on this head we have nothing to add. But we cannot see the need of a special vocabulary for a boy who is capable of tackling the Catilinarian speeches; and such entries as "*iz*, see *tū*," "*tuli*, see *ferō*," he is likely to regard as an insult. On what principle are vowels long by nature as well as by position not so marked?

Xenophon: Hellenica. By MARCHANT and UNDERHILL. (7s. 6d. net. Clarendon Press.)

In July, 1900, we wrote: "It is difficult to see what more can be done for the 'Hellenica' than Mr. Underhill has done, and his commentary, together with Mr. E. C. Marchant's revised text, should long stand as the recognized work of reference." That was in a review of Mr. Underhill's book. The Delegates of the Press at Oxford are now issuing Mr. Marchant's text and Mr. Underhill's commentary in one nicely bound volume at a price not much greater than that asked for the latter alone. Those who are about to read the "Hellenica" will do wisely if they provide themselves with this joint production of the two well known scholars.

The Story of the Nations: Greece. By E. S. SHUCKBURGH. (5s. T. Fisher Unwin.)

This book belongs to the sphere of what the French call *vulgarisation*, and we, more gently, "popularization": that is to say, it addresses itself, not to scholars or to places of education in especial, but to those who wish to acquaint themselves with the large and general results of modern inquiry. Since we must confess to a long affection for Greece, we feel grateful to the publisher for having put the work into the hands, not of a Grub Street hack, but of one who has truly breathed the pure, elastic air of Attica and who has absorbed some measure of the Hellenic spirit. We need hardly say that Dr. Shuckburgh has done his popularizing well. He tells the story brightly, without sacrificing the truth. His chapter on literature is particularly good. It is adorned, we observe, with specimens of the poets, all of them, except one, in versions by himself. Our readers may be glad to have the rendering of a beautiful stanza, ascribed in the Anthology to Plato:—

"Thou gazest on the stars, my star!
O would I were the skies,
That I might look on thee afar
With all those myriad eyes."

The Public Schools Year-Book, 1906. (2s. 6d. net. Sonnenschein.)

The special feature in this issue is an article on "Military Efficiency in Public and Preparatory Schools," to which Lord Roberts referred and from which he quoted largely in his speech to the Assistant Masters. (In our report of the speech it was wrongly stated that the article would appear in the *Schoolmasters Yearbook*.) The information and opinions collected by the editor are invaluable to all concerned with cadet corps and rifle shooting in schools. There is in the volume an enormous amount of miscellaneous information. In the bibliography we notice some gaps. We fail to find "Kappa" or "The Upton Letters," "Five Great Head Masters," the Lives of Farrar, Quick, Almond.

Grammaire Française à l'Usage des Anglais. Par E. RENAULT. (4s. 6d. E. Arnold.)

The object of this "Grammar" is "to furnish an explanation of all the grammatical difficulties that an Englishman is likely to meet with in the course of his studies," and one of the most valuable parts of it is a supplement to each chapter on the corresponding French and German idioms. We are not so sure as to the advantage of combining accidence and syntax. In particular, the treatment of the verb and its conjugation seems to suffer. The tabular form, as in Eve's "Grammar," is much to be preferred, and the names of the tenses are not made quite clear. The syntax rules are clearly and crisply given, and the examples are well chosen.

Elements of the Theory and Practice of Book-keeping. By JOHN WALMSLEY. (3s. 6d. F. Hodgson.)

Mr. Walmsley, whose name is familiar as the author of a school "Trigonometry," has set himself the harder task of expounding a system of book-keeping which is at once practical and based on scientific principles. By it the fictitious "debit losses, &c.," based on the fallacy that entries in all accounts except goods represent actual money, disappear, and the journal, not isolated ledger accounts, is taken as the starting point. We cannot agree with the author in his desire to see book-keeping admitted to the ordinary curriculum of a secondary school; but we freely admit that, as here treated, it may afford a valuable exercise not only in accuracy, but in logical reasoning.

Pocket Dictionary of the English and French Languages. By J. E. WESSELY. Rewritten and greatly enlarged by EDWARD LATHAM. (3s. Routledge.)

This is, to all intents and purposes, a new work, and there seems no more reason for retaining Wessely's name than there would be for announcing the forthcoming new edition of "Liddell and Scott" as "Damm's Lexicon," rewritten. The size has trebled, and only a poacher's pocket could now hold it. Mr. Latham is a most careful compiler, and we have looked not in vain for many neologisms not to be found in cheap French dictionaries. "Prig, v. Snob," is a confession of failure.

Harvard Studies in Classical Philology. (6s. 6d. net. Longmans.)

This, the sixteenth, volume of "Harvard Studies," always interesting and often valuable, is in merit, we believe, quite up to the average of the series. In it C. L. Smith—it is from no discourtesy that we omit the titles of the contributors—offers a further study of manuscripts of Suetonius; Chandler R. Post discourses on the dramatic art of Aeschylus; Hanns Oertel and Edward P. Morris examine the various theories regarding the nature and origin of Indo-European inflexion; and Keadall K. Smith deals with the use of the high-soled shoe or buskin in Greek tragedy. All these papers contain suggestive matter. To us, that on the art of Aeschylus, the thesis presented by the successful candidate for the Charles Eliot Norton Fellowship in Greek Studies, appeals most forcibly. Novel, we think, is the contention in it that the Athenians, having driven back the hosts of the Persians and made the Aegean their own, were filled with a lively interest in geography, and that Aeschylus consciously catered to his audience by expatiating on the popular topic of the day. Io's wanderings thus get a new—and slightly ludicrous—meaning.

(1) "The Temple English Literature Series."—*The Song of Hiawatha.* By HENRY WADSWORTH LONGFELLOW. Edited by HENRY WILLIAMS, M.A. (6×4½ in., pp. xi, 197; 1s. net. Dent.) (2) *The Song of Hiawatha.* Edited, with Introduction and Notes, by P. T. CRESSWELL, M.A. (6½×4½ in., pp. 191; 1s. Blackie.)

(1) Mr. Williams has given us a very dainty and prettily bound edition of Longfellow's poem. He has prefixed a few words of introduction, and has added at the end a glossary and a few notes. His edition is one to be read and enjoyed.

(2) Mr. Cresswell, of Berkhamsted School, writes more definitely for the school boy or girl. He gives us ten pages of introduction, twenty-eight pages of notes, and an appendix on the metre of the poem. His vocabulary also is slightly fuller. Here and there he has, in our opinion, explained more than was necessary; but, on the whole, the notes are good, and the introduction tells us all that was necessary about the author and his poem.

The Tale of Troy. Retold in English by AUBREY STEWART, M.A., and edited for Schools, with Introduction, &c., by T. S. PEPPIN, M.A. (6¼×4¼ in., pp. xix, 213, illustrated; 1s. 6d. Macmillan.)

This is another volume belonging to the same series as "Ballads Old and New." Mr. Peppin, who is an assistant master at Clifton, supplies a short but readable introduction and an index of proper names. We are also given the regulation questions, subjects suggested for short essays, and helps to further study. The rest of the volume consists of eleven chapters of an admirably simple version of the tale of Troy, told by Mr. Aubrey Stewart, of Trinity College, Cambridge. The four illustrations are from Greek vases. The book is intended for children of the age of twelve or thirteen. It is excellently conceived and done.

The Landseer Object Lesson Handbook and Reader. Book III. (Pp. 384; 3s. 6d. G. Philip & Son.)

This is a teacher's book to go with No. 3 of the above. It seems to us well fitted to supply the teacher with what is wanted.

Blackie's Model Readers. Books I. and II. (8d. and 10d.)

Two well bound and well illustrated little books: the illustrations in colour are particularly effective. The notes at the end on reading aloud and composition are good.

The Temple Infant Readers. Vols. I. and II. (4d. each. Horace Marshall & Son.)

These are nice little books, printed in large clear type and well illustrated. They seem well fitted to fulfil their purpose.

Longmans' British Empire Readers. Six vols., and one Introductory Reader.

Each of these pretty volumes is bound in red, and is illustrated by such well known artists as H. J. Ford, Lancelot Speed, Mrs. Allingham, and numerous others. The pages are well and clearly printed; and the contents are made up of a delightful selection from poems, fairy stories, tales and novels, &c. At the ends of the first four volumes are lists of hard words properly accented; and at those of the other two are added explanations of various kinds. On the whole an admirable set.

"Blackie's English School Texts."—*Charles Lamb's Adventures of Ulysses; Sindbad the Sailor; Charles Kingsley's The Heroes; Early Voyages to Japan; Erasmus's The Praise of Folly; Plutarch's Life of Alexander.* (6¼×4¼ in., pp. 110 to 130; each 8d.)

These are capital cheap reprints of notable books, or parts of books, edited by Dr. W. H. D. Rouse. He has cast his net well and has made a good haul. But why are the little books published at 8d. instead of 6d.? However, we will not haggle over the price, but wish the adventure all the success which it so well deserves.

"The Jack Historical Readers."—(1) Fourth Book: *Stuart England.* (2) Fifth Book: *Hanoverian England.* (7¼×5 in., pp. 265 and 284; 1s. 6d. and 1s. 8d. T. C. & E. C. Jack.)

The former book is by Mr. Shadrach Hicks, of the Inner Temple; the latter by Mr. A. W. Dakers, B.A. They are written in an easy, agreeable style and well illustrated. Each is divided into a certain number of periods, at the end of which are given summaries. Everything is done to render the books both useful and attractive.

The Children's Pickwick. Chosen and Annotated by THOMAS CARTWRIGHT, B.A., B.Sc. Lond. (7×5 in., pp. viii, 216; 1s. 3d. T. C. & E. C. Jack.)

This is an abridged edition of the immortal work; the selected passages being chosen as wholes, and the places of the omitted parts indicated by brief epitomes in italics. The illustrations are reproductions of the old ones. It makes an admirable reading book for the middle forms of a school.

Round the World: our Colonial Cousins, or Britain beyond the Seas. By VERE MINGARD. (7×4¼ in., pp. 288; 1s. 6d. T. C. & E. C. Jack.)

The title of this book gives its contents. It is well and succinctly written and well illustrated, and gives a clear account of our great Empire.

Object Lessons in Elementary Science, Stage V. By VINCENT T. MURCHE. New and Revised Edition. (7×4¼ in., pp. xvi, 282; 2s. Macmillan.)

A new and revised edition of a well constructed and well illustrated book of popular science. It is based on the scheme issued by the late London School Board. It has been wonderfully popular with teachers, and is now revised and brought up to date. It should have a renewed lease of life.

Between the Cupolas. By W. (7½×5 in., pp. 128; 2s. 6d. net. Headley Bros.)

The title-page tells us that this is "a light and airy record." It is dedicated "to my old schoolmasters," and tells in a pleasant way the story of an old school; or rather it wanders about telling now of one thing, now of another. It deals with "pleasant places" and "choice selections" and "Gray's Elegy" and the difficulties and misunderstandings of boys when reading it; and with "Dr. F— and Dr. B—" and other things. Altogether, it is "light and airy" enough, and fulfils its purpose of gossiping about the old days and old ways of a place for which W. cares much. But it will not greatly interest any one else.

Dean's Rag-Book Company send us their *Rag Animal Alphabet*. It claims the double merit that it will not tear and will wash. To find an animal for every letter seems to us a hopeless task. Urus, Quagga, Yak we know, but they do not enter into the most precocious child's vocabulary, and we candidly confess that we had never before heard of a Xema.

Messrs. Philip send us two of their "Nature Series of Relief Models"—*The Isle of Wight* (15s.) and *The Snowdon District* (17s. 6d.). They are based on the Ordnance Survey maps (½ inch to mile), and the vertical scale is 1:400. This seems to us, in the Snowdon District, needless exaggeration; but the graphic effect of both reliefs is admirable, thanks to the harmonious colouring and the total absence of names. The models are neatly framed and glazed, and, quite apart from their use, would adorn the walls of any classroom.

From Messrs. Nelson we have a series of twelve *Bible Pictures*, size 3½ by 2½ inches, price 8s. net. The drawing and composition are good, and the colour pleasant. Evident pains have been taken to secure anti-quarian and local accuracy. It is unfortunate, but perhaps unavoidable, that they should, from their subjects, provoke comparison with some of the world's masterpieces, but we doubt not that many children would prefer the anonymous artist to Murillo or Holman Hunt.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE Council met on Saturday, December 16. Present: Mr. S. H. Butcher (Chairman), Mr. H. C. Bowen, Miss H. Busk, Mr. R. F. Charles, Mr. G. Collar, Mr. H. V. Dawes, Mr. C. Granville, Mr. J. N. Hetherington, Mr. J. W. Longsdon, Mr. H. A. Nesbitt, Miss E. Newton, Miss K. Stevens, Mr. F. Storr, Mr. J. A. Turner, Mrs. J. S. Turner, Mr. W. Trevor Walsh, and Mr. J. S. Wise.

Mr. H. V. Dawes was welcomed by the Chairman as the representative of the Salop Branch.

The Chairman reported on the reception of the deputation from the Guild (himself, Mr. Storr, and the General Secretary) by the Executive of the National Union of Teachers on November 4. The welcome given to the deputation was very hearty, and the Organization Committee of the Union was instructed to consider the question of securing fuller support for the Guild from the associations composing the Union.

It was arranged to send the letter proposing a scheme for a Union of Educational Associations for the purpose of organizing a Joint Annual Conference to the different associations, and to request their Secretaries to bring it forward, in such way as they might think best, at their winter meetings or otherwise, for consideration.

The Chairman announced that he had received a letter from the Hon. Treasurer of the Guild (Sir George Young) which stated that he was unable to hold the post after the end of 1905. Sir George Young's resignation was accepted with great regret, and it was decided to send him a letter thanking him warmly for his valuable services to the Guild, as Hon. Treasurer and member of Council, from its earliest days.

The Chairman of the Finance Committee (Mr. J. Arnold Turner) was appointed temporary Hon. Treasurer from January 1, 1906.

It was decided to invite Dr. Alex Hill, Master of Downing College, Cambridge, to be President of the Guild for the year 1906, in succession to the Master of University College, Oxford. [Dr. Hill has accepted the office of President.]

The report of the special Finance Committee meeting on November 30 was brought up and read by the Chairman of the Committee. The report showed an estimated total expenditure in the year 1905 of £1,441, and total estimated receipts, apart from the Special Deficit Reduction Fund, £1,312, leaving a deficit on the year's working of £129. The Committee had received letters from the General Secretary and the Assistant Secretary proposing substantial reductions of salary from January 1, 1906, the amount of the reduction to be made up, wholly or in part, only if the genuine assets at the end of any year showed a balance to the good after meeting all outstanding liabilities. The Committee recommended the acceptance of the offer the General Secretary (reduction of salary from £300 to £200 per annum) and a postponement of the decision as to the Assistant Secretary's salary till the financial position in the middle of 1906 could be ascertained. Certain other detailed proposals for reducing outlay and increasing income were contained in the report, which was adopted by the Council, with generous expressions about the offers made by the staff. It is hoped that by these reductions in the working expenditure, and with a continuance of its present membership, the Guild will be able to carry on without deficit its varied and important work.

The report of the ordinary meeting of the Finance Committee was also brought up and adopted.

On the General Secretary's report, 29 applicants for membership of the Guild were elected, viz.: Central Guild, 20; Bath and East Somerset Branch, 3; Brighton and Hove Branch, 2; Manchester Branch, 3; and Oxford Branch, 1.

An instruction was given to put on the minutes the thanks of the Council to Sir William Mather for his gift to the Guild of his reprint of the pamphlet on "Education for Efficiency," by the President of Harvard University, one copy for every member, and to report the instruction to Sir William.

Votes of sympathy were passed with Lady Jebb, on the death of Sir Richard Jebb, an ex-President of the Guild, and with Mrs. E. W. Howson, on the death of Mr. Howson, of Harrow, a former member of Council.

Mr. J. W. Longsdon was appointed as a deputation from the Council to the Conference of the National Union of Teachers at Scarborough, Easter, 1906, in response to an invitation from the Union.

The Southampton and District Branch was asked to appoint a deputation to the Conference of the National Federation of Head Teachers' Associations at Southampton in January, 1906, in response to an invitation from the Federation.

The Education and Library Committee were instructed to sit with the Thrift and Benefits Committee, and report on certain proposals

of the Moral Instruction League, including the subject of the teaching of thrift in schools.

The Council met again on Thursday, February 1, 1906. Present: Mr. S. H. Butcher (Chairman), the Rev. H. Wesley Dennis (Vice-Chairman), Prof. J. W. Adamson, the Rev. J. O. Bevan, Mr. E. Blair, Miss H. Busk, Mr. C. Granville, Mr. J. N. Hetherington, Mr. A. Kahn, Mr. J. W. Longsdon, Prof. Lyde, Miss K. Stevens, Mr. F. Storr, and Mr. J. S. Wise.

At the commencement of the proceedings the Chairman announced that, as a result of his election to Parliament as a member for Cambridge University, he was compelled to resign the Chairmanship, and referred gracefully to his two years' occupation of the post, and to his regret at having to give it up. The Vice-Chairman expressed the sincere regret of the Council at the announcement, congratulated Mr. Butcher on his election, thanked him for his valuable services to the Guild during two anxious and busy years, and conveyed to him the good wishes of the Council for his future career. Mr. Storr, as an old friend of Mr. Butcher, added some seasonable remarks.

The Chairman welcomed Mr. Kahn, in the name of himself and colleagues, as a newly co-opted general member of Council.

On the report of the General Secretary, twelve applicants for membership of the Central Guild were elected.

The announcement of the death of Mr. J. R. Langer, a devoted member of the Council, was received with deep regret, and a message of sympathy was sent to his daughter, Miss Langer. (Mr. Langer died on January 8, in his eightieth year.)

The Organizing Committee were instructed to make the arrangements for the Annual General Meeting of the Guild and Presidential Address.

The extension of the time of service of the Teachers' Registration Council to the end of July, 1906, was announced, and the appointment of Mr. Storr, the representative of the Guild on that Council, was continued till that date.

A vote of congratulation to Sir Philip Magnus, a Vice-President and life member of the Guild, formerly on the Council, on his election as the representative of the University of London in Parliament, was passed.

A report from the Political Committee on the reconstruction of the Teachers' Registration Council was brought up and considered, and referred back to the Committee for further consideration. A choice of speakers to be invited to open the discussions on the questions of educational politics at the Sheffield Conference was made.

The Education and Library Committee submitted the names of proposed speakers to open the discussions on the pedagogic questions at the Conference. The list was approved.

On the report of the joint meeting of the Education and Library and Thrift and Benefits Committees, the Chairmen of those Committees (the Vice-Chairman of Council and Sir Edward Brabrook, C.B.) were asked to settle and send in to the President of the Board of Education a memorandum on the teaching of thrift in schools. The general programme of the Moral Instruction League for the teaching of subjects of a moral character was not dealt with.

The draft of a letter to a number of educational associations on the subject of the proposed Union of Associations for holding a Joint Annual Conference was approved for circulation, on the report of the Organizing Committee. A date soon after Easter for the first meeting of the proposed Provisional Committee was fixed, and instructions were given for the selection of some central place of meeting.

The report of the Finance Committee was brought up and adopted.

A report from the Modern Language Holiday Courses Committee, proposing, among other things, a reconstitution of the Committee, giving a fuller representation to the Guild and representation to certain associations of teachers, was adopted.

The following is the letter on the subject of the teaching of thrift which has been sent in to the President of the Board of Education over the signature of the Chairman of Council:—

"Teachers' Guild of Great Britain and Ireland,
"74 Gower Street, London, W.C.
"February 19, 1906.

"To the Right Honourable the President of the Board of Education.
"SIR,—The Council of the Teachers' Guild of Great Britain and Ireland have had under consideration the question of the teaching of thrift and other civic duties, which they advocate as an essential part of the curriculum in the schools of the country, and they have requested me to convey to you an expression of their opinion, in the hope that your Board may be induced to urge its adoption upon the Local Educational Authorities.

"The Council are assured of your sympathy with their views, and have read with satisfaction the portions of the official publications of your Board which deal with that subject. What they ask on the present occasion is that those statements should be somewhat expanded and elaborated, and should be brought under the attention of the Local Educational Authorities in the most effective manner. The subject of thrift, as part of a wise provision for the future, is not limited to the mere question of saving, as illustrated by the school

banks, which have done so much useful work, but extends to all measures by which a youth should be urged and encouraged to look forward to the contingencies of life and to begin his provision for them from the first day on which he finds himself in the position of a wage-earner.

"These measures involve many considerations, such as the operation of the laws of average, the principles of equity, the theory of vital statistics, and the method of accumulation by compound interest. Elementary instruction in these would not be beyond the reach of the higher standards in schools, while ignorance of them has led in the past to many disastrous failures in various kinds of institutions intended for the benefit of the working classes.

"It is not impossible that some even of the masters and mistresses in schools are imperfectly equipped in these branches of knowledge. However that may be, it is clearly desirable that special attention should be given to these questions in the training colleges of the country, if the teachers are to be competent to give such advice and instruction upon them to the growing boys and girls as will be of real value for their after life.—I have the honour to be, Sir, yours very truly,
"S. H. BUTCHER, Chairman of Council."

The preliminary circular giving details of the arrangements for the Teachers' Guild Holiday Courses (August, 1906) in France, Germany, and Spain is now ready, and will be sent to all members of the Guild at an early date. A copy will be sent to any applicant, not a member, on receipt of a request with a halfpenny stamp.

The invitation from the Sheffield Branch of the Guild to the General Conference at Sheffield, April 23-26, will be circulated, with the preliminary programme of the Conference, among all members of the Central Guild and Branches very shortly. The Sheffield Branch is preparing an attractive programme of social and other entertainments, including receptions by the Lord Mayor at the Town Hall, and by the Vice-Chancellor of the University and the President of the Branch in the University Buildings.

Mr. M. W. Keatinge, Reader in Education, University of Oxford, will give the second lecture of the session to the Education Society of the Guild at King's College, Strand, W.C., on the evening of March 8, 8 p.m. Particulars are being sent to all members of the Central Guild in London and suburbs; and any member from a distance who may be in London at the time will be welcome. The subject of the lecture is "Method, Curriculum, and Character."

A conjoint meeting of the London Sections; organized by Section C, will be held at Bedford College, York Place, Baker Street, W., on Tuesday, March 13, at 8 p.m. Prof. John Adams, of the London Day Training College, will lecture on "The Art of Forgetting."

The following arrangements in London Sections have not yet been announced in our Quarterly Reports:—

March 2.—*Section B.* 8 p.m. At the Holborn Estate School for Girls, 19 Houghton Street, Aldwych, W.C. "The Basal Study for all School Subjects." Speakers:—Prof. Lyde, Miss H. Busk, Miss Holmer, and Miss Penstone. Tea and coffee at 7.45 p.m.

March 30.—*Section D.* 8.15 p.m. At St. Mary's College, Paddington, W. Address on "Hopes and Fears for the Education of the Future," by Miss Alice Woods. Tea and coffee at 7.45 p.m.

April 6.—*Section B.* 8 p.m. At 74 Gower Street, W.C. "Suggestions for an Ideal Scheme and Examination of Schools." Speakers:—Mr. W. T. H. Walsh (in the chair), Mr. A. Kahn, and others. Tea and coffee at 7.45 p.m.

The full arrangements of Sections A and C for the session to June, 1906, were printed in the Report in *The Journal of Education*, October, 1905.

At a joint meeting of the Manchester Branch of the Guild with the Child Study Association at the Froebel Institute on February 12, the subject of corporate games in day schools was discussed. Mr. J. L. Paton, the Chairman, said the question was not one merely of physical development. It concerned not only the health, but the character, of schoolboys and schoolgirls. Football, for instance, taught a boy that he could not win a match by himself. He must co-operate with and sacrifice his individual desires for the good of the team. This was a most important lesson for the boy to learn, because no great results were attained in life without the hearty, self-effacing, loyal co-operation of many to a common end. The discussion was opened by Miss Herford, who moved a resolution declaring that no school education for boys or girls could be considered satisfactory that did not include adequate arrangements for all to take part in corporate games. If the day school, she said, was ever to become the ideal school—the school which should co-operate with the home in the bringing up of our future citizens—this problem of corporate games must not be overlooked. Personally she would not be satisfied until organized games were looked upon as an important item in every school time table. There still existed a certain prejudice against girls' games, but it was extraordinary how, like other prejudices, this was dying out with a little first-hand knowledge. Miss Herford described the systems at work in some of the large public schools, under which team games were made a part of the school training. She enumerated the physical, mental, and moral advantages

which girls obtain from such games. One advantage of their introduction was that shorter time must be given to work, and there must therefore be more concentration. The amount of time that women and girls gave to work—or rather sat over their work—was monstrous. Better work might be done by less prolonged and more concentrated effort. Among the moral advantages which a girl might gain was the learning to get a victory quietly and to take a beating well. The resolution was seconded by Mr. S. W. Meek, who spoke chiefly of practical details connected with the introduction of organized games into day schools. Organized games were essential, he thought, to the health of a public day school. A general discussion followed.

CORRESPONDENCE.

A HOLIDAY RESORT FOR FROEBELIANS AND OTHERS.

To the Editor of The Journal of Education.

SIR,—Change of work is often more really restful to the teacher than mere aimless travel, or stagnation in some lonely spot. I should like, with your leave, to inform teachers how they may apply this apophthegm, to tell them about the charm of Eisenach and of all that Froebel country, and to beg them to write to Fräulein Heerwart, 35A Theater Strasse, Eisenach, Germany, for all particulars of her "At Home" from August 1 to 15 of this year 1906.

Now some of my younger readers in all lands will exclaim: "Who is Fräulein Heerwart?" So I had better give a biography of her in a nut-shell. Fräulein Heerwart is the President of the Kindergarten Society in Germany, and an old pupil of Froebel's wife. The curator and collector of everything Froebelian, she has made Froebel and his work a life-long study, and given up a room in her house (to save expense) for the Museum, which is the most complete "one man" collection ever on view. Here is to be found evidence of almost every thought, word, and deed of Frederick Froebel. Here she personally explains to visitors (gratis) the origin and history of the gifts, occupations, songs, and games. Here are to be found, not a few, but dozens, of souvenirs not only of Froebel himself, but of the little fraternity of educational enthusiasts who worked with him.

Fräulein Heerwart carries her four score years well, and welcomed the suggestion I made, in spite of the fatigue it would involve, that she should do something this summer for educationalists all over the world. I am writing, therefore, to educational papers in various countries to call attention to her invitation to her "At Home" next August.

But it is not only the Museum that has intrinsic value and interest: it is Miss Heerwart's personality, which adds wonderfully to its charm and interest, and I have reason to believe that, if names are entered sufficiently early to enable her to make suitable arrangements for those who wish to accept her kind invitation, she will arrange a most delightful programme: for she is a born organizer of *fêtes*, and Eisenach and the Froebel country from the Wartburg to the Schwartzburg, eighty miles away, is an ideal country for festivities. Drives and excursions in parties can be taken for quite a modest sum, and when the week or ten days are over the student, with still a few weeks to spare, can spend them in forest and upland village, restfully and economically.

Miss Heerwart took me a drive, and we visited points and places of interest quite unknown to the ordinary traveller. We went to a private house where Froebel was married to his second wife; we sat on the very seat where he read the letter from Government forbidding him to open any more kindergartens on the ground of their revolutionary tendencies; we visited Froebel's grave, and all the history of that time was related to us on the spot—but you must go and see it all for yourselves, and, if you do not learn a great deal, I shall feel that the little rhyme about Froebel's Weathercock song applies to you, and that in your childhood something important in your education was forgotten. "Do nothing aimlessly or you'll create a child whose mind you cannot educate." Let me add that in our little company on that memorable drive we had Mrs. Page, of Chicago, and I am sure that, if you write to her, she will endorse my views that all who can should avail themselves of Fräulein Heerwart's invitation for August. For many

years she has been collecting from all parts of the world money to build or buy a small house, in which to place the Museum so that it may be suitably handed down to posterity. I do not know whether she will make any charge if she gets up this little *fête* to which I refer—she may do so, or she may leave it to individual enthusiasts to send her or give her from their generosity; but, whatever she does, I am certain that any money will be for the good of the cause, and not for personal affairs. I mention the fact that she is collecting, because I believe that many would contribute even if they cannot personally be present in August. I will make myself personally responsible for every English subscription, and give a receipt for sums from 2s. 6d. to £10. I hope many teachers from all countries will avail themselves of this unique opportunity of linking themselves on to a life that actually knew Froebel, and is the best living authority on all that concerns his life and teaching.—Yours, &c.,

EMILY M. J. WARD,
President of the Froebel Society, 1892-3.

AMBIDEXTERITY.

To the Editor of The Journal of Education.

SIR,—The following statements are taken from "The Infant School" by J. Gunn, page 321:—"It is a mistake to assume that right-handedness is due merely to our habit of training the right hand more than the left. . . . It has been found that the correcting of left-handedness in the case of children who were naturally left-handed was accompanied by a deterioration in their power of articulate speech, and the appearance of a tendency to stammer. The explanation, or the probable explanation, of this result involves a discussion of the brain centres, motor and other, involved in speech, which we cannot enter upon here."

I feel sure that many readers would be glad to learn from teachers whether the cultivation of ambidexterity in school-children had led to a deterioration in their power of articulate speech and the appearance of a tendency to stammer.—Yours faithfully,

C. G. WATKINS.
Education Office, Aylesbury.

February 13, 1906.

A GREAT PREHISTORIC GRAMMARIAN.

To the Editor of The Journal of Education.

SIR,—A careful study of the table of correlative pronominal words in Greek has led me irresistibly to the conclusion that they are the splendid achievement of some unknown and prehistoric Aryan grammatical genius. That table consists of forty words, contained in four columns of ten words each. The ten words in the interrogative column are *τίς, πότερος, ποῖος, πόρος, πότε, ποῦ, πότερον, πόθεν, πῶς, and τί*. I submit with confidence to your learned readers the statement that this table must be the product of an intelligent mind—that its creation by the ordinary laws of the growth of language is simply impossible. For the ordinary growth of language is quite unpremeditated: it follows no preconceived plan. Language is like Topsy: it simply "grows."—

I am, Sir, yours truly,

R. J. LLOYD.
The University, Liverpool,
February 7, 1906.

DR. HALL'S ENGLISH GRAMMAR: A CORRECTION.

To the Editor of The Journal of Education.

DEAR SIR,—May I crave permission to correct an oversight on the part of the not unfriendly reviewer who wrote the notice of the new edition of my "School Manual of English Grammar"? "We doubt," the reviewer says, "whether it is possible . . . to expound Grimm's Law with no mention of Verner." It is hard for one who may have many sins upon his head to suffer for offences of which he is innocent. The statement of Verner's Law, or so much of it as seemed necessary for the purpose in hand, will be found on page 10. With regard to the scansion marks, which, apart from their context, certainly look a trifle absurd, it might have been stated that in the very page in which they occur the *caveat* is entered that they simply represent the normal stress, not the emphasis to be observed in reading.

Another point of perhaps greater importance is that the price of the book is wrongly given as 3s. 6d. It should have been 2s. 6d.—I am, Sir, yours faithfully,

T. D. HALL.
Bowdon, February 4, 1906.

MISS CHARLOTTE MASON has arranged a Conference of Head Masters, Mistresses, and others to meet at Ambleside in Whitsun week to discuss the curriculum for children between six and fourteen. Many distinguished educationists have already promised to attend, and the Board of Education will send a representative.

HORACE MARSHALL & SON'S LIST.

BOTANY RAMBLES. By ELLA THOMSON. Giving simple information in charming and easy language. Profusely Illustrated. Part I.—SPRING. 10d.

THE NEW TEMPLE READER. Edited by E. E. SPEIGHT, B.A., F.R.G.S. Illustrated. Price 1s. 6d. net.

THE PREPARATORY TEMPLE READER. Edited by C. L. THOMSON. With Coloured and Black-and-White Illustrations. Price 1s. 6d.

HAKLUYT'S ENGLISH VOYAGES. Edited by E. E. SPEIGHT, B.A., F.R.G.S. With an Introduction by Sir Clements MARKHAM. Illustrated by R. MORTON NANCE. 2s. 6d.

STORIES FROM THE NORTHERN SAGAS. Edited by A. F. MAJOR and E. E. SPEIGHT. With Illustrations by W. G. COLLINGWOOD, M.A., and R. MORTON NANCE. 2s. 6d.

A BOOK OF BALLADS. Edited by C. L. THOMSON. Designed to meet the requirements of the Syllabus of Board of Education (First Year). 1s. 6d.

LITTLE ENGLISH POEMS. Edited by LETTICK THOMSON. With Designs by the Editor. 1s. 6d. This little book contains verses suitable for Children in Infant, Kindergarten, and Preparatory Schools.

LITTLE FRENCH FOLK. By C. T. ONIONS, M.A., Author of "English Syntax." Second Edition. Specimen booklet post free. Price 2s.

DEUTSCHE SAGEN. Edited by MARGUERITE NINET. Price 1s. 6d. This reading book in German, adapted for pupils in their third year, contains four charming stories, based on mediæval legends. They are prettily illustrated, and form a very attractive reading-book.

THE LIFE OF THE STATE. By GERALDINE HODGSON, Mistress of Method at University College, Bristol; sometime Cobden Scholar of Newnham College. Cloth. 240 pages. 2s. 6d.

OCCASIONAL NOTES.

IN our forecast of the Education Bill we have left out of account Roman Catholic schools. They stand in a separate plane and demand separate treatment. In a pastoral letter, the tone and temper of which are admirable, Archbishop Bourne formulates the claim of his coreligionists: "Catholic schools, Catholic teachers, effective Catholic oversight of all that pertains to religious teaching and influence." Nothing short of this, he tells us, will be accepted by Catholics as a final settlement. One way of meeting this claim has been proposed which is well worth considering. Let Roman Catholic schools, like all other non-provided schools, be rated to the Education Authority, and one-third of the managers be appointed by the trustees. Let the teachers be appointed by the Education Authority, with the proviso that they shall all be Catholics. The instruction given by these teachers shall be wholly secular, and the religious teaching shall be imparted by visiting teachers and paid for out of private church funds.

HERE is Canon Barnett's solution of the religious difficulty, given in the *Independent Review*, to which we append a few comments:

1. Local Authorities to be empowered to buy at market value the buildings of such denominational schools as may be required to establish in every neighbourhood a non-provided school, *i.e.*, in single-school areas.
2. The capital thus acquired to be pooled for each denomination, and employed with the sanction of the Charity Commission in carrying out the trust deeds by building new schools or maintaining those already established.
3. The Board of Education to pay on a fixed scale the full salaries of all teachers in denominational or undenominational schools, provided that the teachers hold the Board's Certificates and that the schools are built, equipped, and staffed to the satisfaction of H.M. Inspectors.

Whether the teaching in provided schools should be religious or secular Canon Barnett makes an open question to be determined by the Local Authority. This is to leave an open sore *πρὸς τομῶντι πηγάτι*. It is implied, though not definitely stated, that the appointment of teachers will rest with the several denominational authorities; but, if this is intended, we fail to see how "the teachers would be relieved of all tests and delivered from the sensitiveness which now so often affects their relations with the managers." And, further, the statement that "no penny of public money would go for any object other than the payment for secular teaching" implies that secular and religious teaching will be in water-tight compartments—a divorce as repugnant to Catholics as to teachers.

THE President of the N.U.T. has addressed an open letter to senior students in training colleges advising them to avoid service under the London County Council.

An Open Letter.

The reasons assigned are "the harassing of inspectors, the interference of officials, the unsympathetic attitude of the Education Committee, and the poor salaries paid to teachers." The letter is on the face of it an *ex parte* statement, and bristles with contentious matter; but, even were all the charges proved up to the hilt, we should strongly deprecate this attempt to boycott a public authority. If the tyranny be such as Mr. John represents, the N.U.T. is quite powerful enough to upset it at the next triennial election. The letter, moreover, when the charges can be tested, contains, to put it mildly, a *suggestio falsi*. Thus it is implied that the higher maximum for men assistants is a mere decoy, unattainable by all but a chosen few. As a fact, the estimates provide for 75 per cent. of the teachers passing on to the higher maximum. We hold no brief for the L.C.C., and we fully allow that the dearth of teachers in London is a grave sign which points to something amiss in the system of tenure or of salaries; but the single fact that the scale of salaries has been raised by £60,000 a year proves that the Council are not quite so bad as Mr. John points out.

THE Secretary of the Moral Instruction League sends us a letter received from M. Makino, the present Minister of Public Instruction in Japan. No more conclusive refutation could be found of Bishop Wilkinson's thesis that non-religious teaching universally produces immorality and criminality than the following testimony:—

From what we have experienced during the last two years of gigantic struggle we have reason to be satisfied with the present working of our moral teaching. The men who have fought on the battlefield and people at home who have borne the sacrifice so courageously have almost all been brought up under the present system of moral instruction. It is altogether secular, and the text-books in use now were prepared by a special commission having representatives of Buddhism, Christianity, and Confucianism upon it.

A GREAT step towards the pacification of Wales will have been taken, and Mr. Morant will sleep more quietly o' nights, when the Welsh National Council for Education has become an established fact.

An Education Council for Wales.

Details can be left till the Council is formed and begins to work out its own salvation. The general constitution must, however, be decided, and also the extent of its powers. At present the Central Welsh Board is in an anomalous position. It deals with the secondary, or, as they are called in Wales, the intermediate, schools, and stands apart from the authority dealing with public elementary schools. Thus Wales

has not yet secured the co-ordination of education that is enjoyed by the English counties. The new Council must certainly control the whole of the school education of the Principality, and it must not merely be an intermediary body copying out and handing on the edicts of Whitehall. But we are inclined to think that, on the analogy of affairs in England, it will be better to exclude for the present the University and colleges of University rank. As to the constitution of the Council, Mr. Lloyd-George is quite certain that Wales wants representatives of the people and not a Board of experts nominated from Whitehall. He further thinks that in the first instance the Council should not be directly elected by the people, but should be nominated by the County Councils.

THE Bill empowering Education Authorities to make provision for the feeding of necessitous children has passed its second reading. There is no doubt that the Government will grant facilities for its further stages, or else will incorporate its clauses in the forthcoming Education Bill.

The Hungry Child.

The idea has now been persistently pressed for some years, and the nation is growing accustomed to the notion. The strongest argument of the supporters is that it is impossible to teach, and cruel to try to teach, the hungry child. This is indisputable; and, if it is also admitted that the State must educate the child, it follows that the State must feed the child that would not otherwise be fed. It is sad to think that there should be parents unable or unwilling to do their duty by their offspring, and we trust that the Bill will impose adequate penalties for wilful neglect. But we do not think the provision of free meals will contribute seriously to weaken the sense of parental responsibility. The spirit of independence will still survive, and most parents will continue to prefer to provide food for their children. The fact remains, and, in spite of Mr. Wells, is likely to remain for our time, that a number of children in large towns are habitually underfed and ill nourished. Entirely apart from the need of education it is for the benefit of the community at large that the number of such children should be lessened as far as possible. It is on this ground rather than on the other that we would base our approval of this Bill.

SO many criticisms have of late been directed against the Inspector that we are inclined to say a word in behalf of that necessary and maligned official. The Inspector may be and probably is fully informed on one or more branches of school learning; but he cannot be familiar with all the subjects taught.

A Plea for the Inspector.

The master who addressed an uncomprehending Inspector in German, and then pointed out to his boys the folly of sending into a German class an Inspector who could not speak that language, was not only guilty of rudeness, but he failed to realize the function of an Inspector. In these days of wide curricula and advanced work the knowledge of the pupils is tested in written examinations, for each separate part of which a specialist is appointed. It is impossible, without great waste of money, to send specialist Inspectors on every occasion and for every subject. It is the work of the Inspector to watch the teaching and to judge of the master's success as reflected in the attitude of the class towards the work. The dislike of the master for the Inspector is based on the survival of an ancient, and we hope vanishing, superstition, that no visitor must enter his class-room. The congregation criticize the parson; the audience criticize the actor; the boys criticize the master. In each case the critic could probably do no better than the

criticized. It is good and healthy for the master to accustom himself to adult criticism and to be able to defend his own method.

THE absence of reporters at the meetings of the London Education Committee seems to increase rather than to diminish the criticism in the press of that Committee's work. It is clear that an uneasy feeling is abroad. Hints are circulated of quarrels between different departments, of waste of money on inspection and administration, of congestion of business in spite of scandalous over-work on the part of the clerks. It is stated that on one occasion a group of clerks worked from 9.30 on Monday morning to 5.30 on the following Tuesday evening. There are thirty-two Council Inspectors in addition to twenty-seven Board of Education Inspectors. Every one must be aware of the congestion of work in the office. Day by day there are complaints in the papers. All this refers chiefly to the elementary schools. There is worse to come. In the recent report concerning secondary education attention is called to "the grave situation caused by the deficiency of secondary schools in London." Therefore, one would expect the Council to tackle the organization of secondary education. But the report expressly states that the Committee propose to postpone all consideration of the organization of secondary education for the present and to limit their work to the provision of the additional places that are urgently required for the Council's scholars. Although we are not in favour of separating the control of education from the general work of the municipality, yet these considerations invite us to suggest that, seeing the enormous population of London and of Greater London, which ought to be included, the amount of work to be done requires a body of men and women who can give their entire time to the needs of education.

FROM Gateshead to West Ham arises the piteous cry of the over-rated areas. In reply to a deputation, Mr. Birrell was sympathetic, and hoped, with the assistance of the Treasury, to secure some substantial relief. But he had no definite scheme to put forward. He reminded his audience that many of the counties were also suffering, if their own opinion was to be accepted, from an undue burden for education; and that preferential treatment for any area would arouse much indignation in other areas. Still he was prepared to accept abuse and to have the courage of his opinions in drawing the line between one area and another. The worst conditions were experienced by districts like West Ham, which was described by one speaker as a dormitory and a nursery. Mr. Birrell spoke nothing but the truth in hinting that such areas ought not to have become Educational Authorities. These special cases demand some immediate measure of relief, but we cannot but feel that a permanent settlement must involve the inclusion of an area entirely covered with the residences of workmen who earn their wages in an adjacent town within the larger district in which the paymasters also reside. In other words, the London Education Authority should include the residential suburbs.

MR. BIRRELL has given some sound advice and some definite information to the Private Schools Association in reply to a deputation from that body. He advised his listeners in the first place not to rely upon quotations from Reports of Royal Commissions. No member of County or Municipal Council is greatly influenced by such references.

Mr. Birrell and Private Schools.

In the second place he advised caution and conciliation in dealing with Local Authorities. Thirdly, he stated in no uncertain tones that grants of public money mean public—i.e., municipal—control. Apart from these utterances he spoke in the most cordial way of the value of private schools, and of his intention to do his best in their behalf. It is clear that the memorial of the Association went beyond what is possible. It is too late in the day to ask that municipal schools shall not undersell private schools. The clock cannot be put back. It is equally impossible to expect a direct share in Imperial or local grants. But in some counties the Authority has not shown any hostility to private schools, and month by month we have given in our columns such cases of co-operation as have come under our notice. This month we are able to record that Berkshire has made friendly overtures to the private schools of the county. We believe that in some areas the Authorities have no knowledge of the private schools. The proprietors neglect the necessary organization that would enable them to represent their position with dignity and force to the Local Education Committees.

THE real weakness of the position taken up by private schools is to be found in the wide connotation of the term and in the difficulty in discriminating between the different grades. In some, the position of the usher, as Mr. Birrell pointed out, is by no means an enviable one, and inevitably brings discredit on the school. This is not because the proprietor is wallowing in wealth, a share of which he grudges to his assistant. It is because he is trying to compete in the matter of fees with schools subsidized from public funds. There are and will be parents who are content to pay the full cost of education for their children. It is upon these that the private schools must rely. But the type of private day school that charges fees not exceeding £2 a term cannot compete with the municipal school. Such private schools cannot give an education in accordance with the demands of the day. Although their gradual extinction must entail hardship on individuals, it cannot, and, in the interests of education, should not, be delayed. The one obvious reform is that membership of the Association should be limited to schools able to show from an inspecting body a report that the buildings are adequate and the education efficient. No private school, said Mr. Birrell, objects to inspection. We would vary the statement by saying that no private school charging reasonable fees ought to object to inspection.

UNIVERSITIES are but seldom "inspected": it is reasonable therefore that the "inspection" when it does take place should be serious and searching. Trinity College, Dublin, has not been inspected since the year 1853. Putting aside the matter of religious feeling, which may have prompted the desire for an inquiry, it is quite time that the administration of Trinity College should undergo investigation at the hands of a Commission. This inquiry Mr. Bryce has promised. He further states that, as the inquiry will be non-political and limited in extent, a report may be looked for at an early date. On this matter Mr. Bryce may perhaps be too sanguine. It is probable that the real grievance is that Trinity College is a wealthy Protestant foundation from which Romanists as such get no direct advantage. The pathetic side of the matter is that any corporation that continues for fifty years without public inquiry is liable to fall into a state of stagnation which is entirely unappreciated by the responsible body. The

College, we are told, is governed by a Provost and seven Fellows whose average age amounts to seventy-one years, and whose emoluments are in direct proportion to their years. There is a feeling that modern developments of science have not received their due recognition, and that the funds are not spent in the manner best calculated to encourage the education of the country. In welcoming the promise of the inquiry, we bring no charge against the authorities of the College. Schools both on the administrative and the educational sides are inspected once in three years at least: it is not unreasonable to require from Universities an inquiry once in half a century.

MR. ARTHUR BENSON'S views on compulsory Greek deserve attention for two reasons. They are the views of a man sufficiently apart from the vested interests involved; and they are the views of a classical teacher of twenty years' standing in one of the chief public schools of England. He tells us in a recent letter to the *Times* that the percentage of boys who can aspire to the appreciation of Greek as literature is very small; and that the intellectual needs of the many are sacrificed to the few boys who have a taste for classics. We feel that he is only stating the truth; and we agree with his opinion—indeed, it has already been stated in this column—that the abolition of compulsion will not weaken, but on the contrary strengthen, the real study of Greek in secondary schools. It seems obvious that to enforce on unwilling and unappreciative minds the smattering of Greek that qualifies for a pass examination is in reality to degrade and belittle a noble and honourable study. And yet we have the Master of Emmanuel repeating the discredited statement that, if compulsory Greek at the University is given up, "it will extinguish the study of Greek in English schools. . . . Greek will be an 'extra' degraded to the position of music and dancing." The more reasonable view is that by removing compulsion a burden will be justly taken from those who have no desire for literary study; while the classical master will forge ahead with his chosen following, freed from the irksome drag of the uninterested.

THE Master of the Rolls, speaking at a dinner of the Court of Leeds University, discussed the position of the ancient Universities in weighty words which, coming from such a source, cannot be ignored. It is not that he criticized or attacked Oxford and Cambridge, but that he stated in clear terms what their present position is, and how different that position is from what it has been in days gone by. A new wave of enthusiasm for knowledge, he said, had arisen in the country; but the old Universities had ceased to be in touch with the main working element in the nation. Consequently to the main body of people, especially in the industrial North, the ancient Universities were no longer the centres of light and learning. In the latter, examinations had become the chief thing, and the relation between the passing of examination and the acquisition of knowledge might be remote. The new Universities had the courage to treat the industries involved in getting a livelihood as proper subjects for University teaching. At the old Universities some of the students managed to enjoy rational recreation amid stimulating surroundings and traditions with the smallest possible expenditure of intellectual energy. Of course, there is another side to this; but in the main it is true that the ancient Universities in their devotion to what they consider pure learning have drifted apart from a very large and important section of the

Trinity College, Dublin, to be "inspected."

The Twentieth Century Renaissance.

intellectual life of the nation. The tragedy is that they are unconscious of this and still fondly think that they lead thought and enterprise.

THE Society of American Women in England is promoting a scheme under which English lady students shall be encouraged by means of scholarships to study in American Universities and American lady students shall, on the same terms, come to Girton and Newnham. The matter will be brought before the biennial congress of the General Federation of Women's Clubs of America in June of this year. So much encouragement has been given in high and influential quarters to the scheme that money will certainly be forthcoming to justify a modest beginning. And before long it is hoped that the millionaire will be found to extend to women the international scheme of education that Cecil Rhodes has made possible for men. The ultimate ideal is the foundation of two scholarships to English Universities from each of the States of the Union. In this way there would be a number of women in America who were familiar with England and English ideals. We can have nothing but cordial approval for such a scheme, which must help to bring into closer union two great English-speaking nations.

IN the *Morning Post* Mr. Arthur Benson carries the war of salaries into the highest regions, "putting out of sight the half-dozen leading public schools." An assistant master, he says, cannot marry for many years, unless he have private means; but in this case he will not have chosen the profession of schoolmaster. Even the house-master plum is not what it used to be. Mr. Benson tells us that with the growth of luxury the house master's profit has been woefully diminished. There is in consequence little left to attract the University man who has brains enough or capital enough for other professions. It is, of course, best to find men who care nothing for filthy lucre; "but enthusiasts and idealists are rare, and they are not always practically effective in a profession where vigour and common sense are the most desirable qualities." "The question of payment lies at the root of the matter." A schoolmaster should "be sure of a rising income and a pension." If things are so bad in the schools with which Mr. Benson is familiar, what must be the position in the hundreds of smaller and poorer schools, which are attempting to educate the brains of the nation without social distinction? A Civil Service system of pay, increment, and pension, coupled with a choice of men for human rather than for intellectual or athletic qualities, would seem to be Mr. Benson's proposal for a cure of existing evils.

LOCAL AUTHORITIES.

THERE has been a feeling prevalent for some time, not only in the county itself, but also among other Education Authorities, that the Kent Education Committee was unnecessarily lavish in its administration expenses. This feeling caused the County Council to invite its Education Committee to consider the matter and to report upon it. A careful and detailed report is the result, signed by the Chairman, Sir William Hart Dyke. It is argued that the system of centralization adopted in Kent, while necessitating the employment of a larger number of clerks, has effected a great economy in cost. For example, the Stores Department, which employs the largest staff, calculates that a saving in cost of materials to the extent of £10,000 per annum has been effected. Certain minor savings are suggested by the Committee in the direction of reduced staff, but on the whole the report assures the Council that the money is wisely and necessarily expended, and asks that the present

system may have continued support and approval. It is no doubt wise that administration expenses should be carefully watched. They have a tendency to rise beyond the necessary minimum. On the other hand, it is well known that the desire to keep these expenses down results in some areas in putting an undue pressure of work upon the clerical staff. In the matter of inspection Kent does not appear to be extravagant compared with several other Authorities. We find the name of one inspector only given in the list of officials, and there are only three assistant secretaries. The number of the whole staff amounts to ninety-three, and the expenditure to about £550,000.

It is not easy to overestimate the importance of teaching a trade to boys. Many existing labour troubles are caused by the desire of the parents to make their boys earn money as soon as they leave school, or of a desire on the part of boys for independence. The boy who leaves school and begins to earn money at once as an errand boy or a van boy, or by selling newspapers or matches in the street, joins, when he grows older, the immense army of unskilled labourers or the very large contingent of loafers. But it is hard to convince boys and parents of this: the immediate gain seems so important. Mr. Graham, Secretary for Higher Education in Leeds, is fully convinced of the need. He has seen on the Continent trade schools that are probably better than any we have in England. But he has not held his office long before he has had the satisfaction of seeing a trade school opened in Leeds by the Education Authority. To this school boys of thirteen may go for a short technical course before they enter the workshop proper. The old system of apprenticeship has, if not disappeared, at any rate become so modified that under it a boy has no full opportunity of learning a complete trade. The establishment of this school in Leeds is the direct outcome of a visit paid by members of the Leeds Education Committee to a similar school at Neuchâtel. Here it is frankly admitted that Switzerland had evolved something good that might be applied to our own needs, and it has been applied. This movement in Leeds is certainly one that deserves close observation on the part of other Authorities.

WE have received from the Director of Education of Staffordshire a report of field experiments conducted in that county and in Shropshire, together with a report of the season's work at the Harper-Adams Agricultural College at Newport, Salop; and a report of the work done in reference to agricultural education in the county of Wiltshire, including a report of the Dauntsey Agricultural School. These documents not only show a record of useful work accomplished, but also contain in themselves much interesting information to the agriculturist and the horticulturist. Full details of important experiments are given. Much local interest is chronicled. Such work, even if it does not succeed in "bringing people back to the land," at any rate, tends to make the position of dwellers on the land more interesting and more remunerative. The Wiltshire report deals with butter, cheese, farriery, bees, poultry, horticulture, the care of horses, and agricultural processes. The Staffordshire report deals principally with field trials and manurial experiments. It is also stated that the Committee place the services of their Agricultural Instructor, Mr. Rushton, at the disposal of farmers in the county, as far as time permits, to advise upon insect pests, uses of manure and their valuation, feeding stuffs, management of land, diseases of crops, and similar matters.

THE twelfth report of the Kent Education Committee recommends a grant towards a new secondary school for boys at Bromley, and announces the opening of a new county secondary school for girls at Folkestone.

Kent. The scale of salaries for head mistresses of county schools has been improved, and that for assistant mistresses is under consideration. The Committee recommend that as far as possible there should be uniformity in the matter of badges in the county schools. It is suggested that the design should in all cases consist of "the Kentish Horse, i.e., a white horse on a red ground, quartered with the name of the town in which the school is situated." The Principal of Wye College states that the number of students in residence is 97 (42 from Kent, 17 from Surrey, and 38 from other counties). Mr. F. J. Plymen, one of the assistants in the chemical laboratory, has been appointed to the Professorship of Agricultural Chemistry at the Nagpor (India) College of Agriculture. An incidental proof of the high estimation in which the college is held may be found in the important posts to which members of its staff are from time to time promoted. The county Instructor for Poultry Rearing states that much interest is taken in his lectures, and that his work has been of great use in several centres. One part of his work is to deal with the treatment (or the prevention) of diseases in birds. It appears from the report that there is no law to prevent the sale of diseased birds. This seems to be an anomaly, compared with the care taken as to the sale of butcher's meat.

Private Schools in Berks. THE Berks Education Committee have issued a scheme for higher education. New secondary schools are not to be provided until account has been taken of the private schools in the area that apply for recognition. The conditions on which recognition is accorded to private schools are liberal, and seem likely to result in an economy to the ratepayer. So far as we recollect they go beyond what any other Local Authority has offered to this class of school. A private school may apply for recognition—it will then be inspected by the University of Oxford at the cost of the Authority. The Committee will also need to be satisfied by its own inspector that the buildings are at least as good as those of a public elementary school. If the test is passed, the school will be placed in the directory as a school supplying a fixed number of places for a given area, and offering efficient instruction of a definite character. A statement of the staff, curriculum, accommodation, and successes of the school will be included. Such a school may retain county scholars and share in the benefits of any system of peripatetic lectures and the like that may be established. Further than this, application may be made by a private school for a capitation grant not exceeding £2 on each county pupil. Before the grant is made the Committee must be satisfied that the school provides an efficient education and one sufficient for the needs of the area, that the fees are reasonable, that the staff is efficient and adequately paid, and that the school is conducted under a conscience clause. A statement of accounts will also be demanded showing that the capitation grant has been expended on additional equipment or increased efficiency of staff, and that no part has been allocated to private profit. The Committee may appoint a visitor who shall confer with the proprietor on matters of policy.

Agriculture and Drill in Surrey. A GOOD deal of discussion has been raised in Surrey with regard to the Agricultural College at Wye. As the buildings are in Kent (which county, together with Surrey, is responsible for the maintenance) and as it happens that at the present moment there are comparatively few Surrey students in the college, the feeling has been somewhat widely expressed that the Surrey grant ought to be discontinued. The recent Report of the Surrey Education Committee gives a full account of the establishment and progress of the college, of the work done and the influence exerted on the agriculture of the county. The County Council held that the report was satisfactory and justified a continuance of the grants. This conclusion seems to us to be entirely right; but it is, unfortunately, not always easy to convince the rate-payer of the need for an expenditure of which he sees no tangible and direct results. Wye College, like all institutions of University rank, is expensive: its influence is undoubtedly great, though it may be difficult to express it in pounds, shillings, and pence. Another point of interest in the report of the Education Committee is the acceptance of an invitation given by Quarter Sessions to appoint a committee "to consider the question of giving instruction in military drill and the use of the rifle in all schools receiving grants from the public funds, and of encouraging rifle clubs and rifle shooting in the county, and to report thereon." The invitation is accepted with caution; and the need for the exercise of care and tact and the avoidance of laying additional burdens on the rate-payer are insisted upon.

Scholarships in the West Riding. FROM the West Riding of Yorkshire we have two further handbooks (the first nine of these handbooks we spoke of in a previous issue), dealing with pupil-teachers and with scholarships. Six hundred pupil-teachers are offered for competition in the current year. The payments are (for boys) in the preliminary years £10 and £12 respectively; afterwards, £17, £20, and £24; for girls, £8, £10, £20, and £24. There are also travelling expenses or allowances (the latter may go towards the upkeep of a bicycle), grants for books, &c. The list of scholarships, free studentships, and exhibitions seems singularly complete. We give one or two extracts to show the wide ground covered. Scholarships of the value of £40 are offered to women to enable them to take a course of training as teachers in domestic subjects, kindergarten, and the like; or in commercial subjects and secretarial work. Candidates must be over eighteen years of age, and in the case of those intending to become teachers must "speak distinctly." Coal mining exhibitions are offered to enable practical miners to attend special courses in coal mining or in electricity applied to coal mining at the Leeds University. In case any deserving candidate does not find the scholarship suitable to his needs, there is a special clause stating that the Committee will grant exhibitions not exceeding the annual value of £60 to an approved applicant for a Special Course, Special Talent, or Travelling Scholarship.

CORRECTION.—In the account of the French Professors at the Mansion House, Miss T. Franks, of the Kennington High School, was named among the prize winners. "Kennington" was a misprint for "Kensington."

REPORT OF REGISTRATION COUNCIL.

THE Report of the Teachers' Registration Council for 1905 is a document that may be read in two opposite senses. To one of our contemporaries it is a record of steady progress; to another it spells collapse. Before attempting to decide between these two conflicting interpretations we will rehearse the principal facts. Column A is a *caput mortuum*. There are in the offices of the Council entered upon cards the names of some sixty thousand certificated teachers; but no attempt has been made to keep the list up to date, and the question addressed by the Council to the Board in May, 1904—"How is the Order providing for a Register of Teachers, set forth and published in alphabetical order, to be carried out?"—has never been answered. The Report pronounces the initial scheme as drafted under the conditions imposed by the Act of 1899 impracticable and impossible to work; and so far exonerates the Board.

In Column B there were on December 31, 1905, registered 10,459 teachers—5,113 men and 5,346 women—and of these 2,788 were enrolled during the year. At first sight these figures may seem to denote steady progress, and they justify the carefully qualified satisfaction expressed by the Council, that the initial stages are proving not devoid of encouragement. To have enrolled nearly half of the existing secondary teachers of the kingdom is, indeed, a first step. It is only when we come to analyze the figures that we perceive the rottenness of the foundation. Of the 10,459 registered teachers only 230 have satisfied the permanent conditions. As to the bulk, all that registration implies is that either they have been acting teachers for three years in a recognized school, or that they have served for ten years in any secondary school and shown ability to teach, or have been for a year heads or joint heads of a recognized school.

It might be urged that, inadequate as are the qualifications so far insisted on, yet, like the Medical Register, the Teachers' Register would automatically purge itself, and that, at the end of twenty or thirty years, we should have an official roll of fully attested teachers. Unfortunately, the statistics hold out no such promise. Less than a tenth of those on the Register have received even the minimum of training implied by holding a Teacher's Certificate, and of this tenth less than 10 per cent. are men. Nor is there any sign that the movement for training, among men teachers at least, is spreading. The number of male students in residence at one or other of the institutions named in Appendix D was 123. This is, indeed, nearly double the corresponding number for 1904; but a single Catholic institution accounts for 53. Only two boys' schools, both under the management of the Society of Friends, have been recognized for the purpose of Regulation 3 (2) (ii.) (the student-teacher clause). It is not to be expected that head masters untrained themselves will undertake or provide for the training of apprentices. There is no motive power to set the machine going.

There is more in the Report to be noted and commented on, but we have carried our analysis far enough to uphold the sentence of "collapse" pronounced by the *Morning Post*. The main object of the Board in framing a Register was to secure a supply of qualified teachers for secondary schools, and they would stultify themselves were they for a third time to extend the temporary conditions, and so affirm that they considered training only a counsel of perfection. Without some radical change in the conditions, it is inevitable that after next July the Register will be gradually starved and die of inanition.

The duties of the Registration Council are purely administrative, and it is no business of theirs even to suggest changes in the constitution. Yet they hint not obscurely where the fault lies, and in what direction the remedy is to be sought. They go at once to the root of the matter. "Until the financial prospects of secondary teachers improve this difficulty will remain to be reckoned with." Teachers, they believe, are not unwilling to be trained, but they cannot, most of them, afford the expense. But a general rise in salaries would not of itself secure training. There must still be some legal or official sanction. "It is highly questionable whether the movement towards Registration will become general until the Board is prepared to state that no secondary school in which the head master and a fair proportion of the staff are not registered teachers will be eligible as a grant-earning institution." This is a proposition which we ourselves have more than once made in almost identical terms. But

when we ask why the Board have not adopted it, why they have even withdrawn the partial sanction that appeared in their Regulations for Secondary Day Schools, the answer is clear. They have been confronted by those Symplegades, the artificial barriers erected by their Consultative Committee, Columns A and B. To bar all teachers who are serving in an elementary school from employment in a secondary school was felt even under the late Government to be an act of injustice that could not be sanctioned.

We are thus brought to the conclusion in which all parties concerned—the Registration Council, the Board of Education, the teaching profession—are agreed: that the present Register cannot continue: it must be either mended or ended. All but the Consultative Committee, who, like the mariners in “Paracelsus,” “cling to their first fault,” and, like them, will, we fear, “perish in their pride.” They tried at starting to circumvent their reference and to put asunder what the Act of Parliament had conjoined. To satisfy the Act they ordained a dummy alphabetical list and beside it a genuine list of teachers engaged in secondary schools; but they gave no definition either of “teacher” or of “secondary schools,” and when they came to the framing of Supplemental Registers they found that definitions were essential and that any definition they might give would expose the hopeless illogicality of the original scheme. For four years they have been busy, off and on, in tinkering and botching and patching a Noah’s ark contrived to hold every teacher after his kind and to keep apart the clean and all other sorts.

The trouble began when Parliament evaded its responsibilities and transferred the problem of registration to the Board. The Board in its turn committed the task to the Consultative Committee, and the Committee has proved the staff of a broken reed. It is the old, old story of the house that Jack built. We have a new Jack in office, and Mr. Birrell is not a man to go on fumbling with a Gordian knot that his predecessors have tied. The end is not yet; but it draws nigh, and the judge stands before the door.

IS LATIN INDISPENSABLE?

UNDER the old state of affairs most schools worked on fairly similar lines, the smaller copying the greater, and all were classical to the core. Then came modern sides, which were in many cases a failure. A failure not because of the subjects taught, but because the boys that were placed on the modern side were such as had not profited by their classical instruction—a proof, if any were needed, that Latin and Greek are not suitable for all. Not only were the boys on modern sides too often flotsam and jetsam, but the teaching too often inefficient as well; consequently, even promising youths were ruined by being ill-educated, and, as a further consequence, a belief arose that a “modern” curriculum was the cause of much evil.

Now that many new schools are being started, intended to educate boys up to the standard of a leaving examination at the age of sixteen or over, we may well ask: “What is to be the curriculum? Is it to be that of a modern side; is Latin to be an alternative or shall we boldly declare that we will have neither Latin nor Greek?”

These new schools are well equipped and vigorous and are, in general, superior to the grammar schools that they are displacing. They will probably attract by degrees all boys who are not intending to study classics at a resident University. Is Latin indispensable for such non-classical pupils? Admitting that languages must be taught, is any modern tongue of equal value with Latin as an educative instrument? It is undoubtedly right for many boys to study Latin; but should all be expected to do so?

Latin is no longer used as a means of intercourse between States or individuals. If a material is needed on which to polish dull wits, Latin is not the one most available nor the one of most interest. It is advisable to proceed from the known to the unknown. So why introduce a child to Latin when English and French are more within the bounds of practical politics? And, further, it is admitted by experts that Latin should not be begun before the age of twelve; consequently, we have no time left in which to teach Latin to mathematical and science boys

unless they sacrifice periods that should be devoted to what is to be their life-study.

To those who are inclined to think that there are languages of educative value besides Latin and Greek, an abstract of the programme of the *collège* of Geneva may be suggestive: it will at least show how the Swiss deal with what we may call the problem of compulsory Latin.

LOWER DIVISION. (Classes VII. to V. Age 12-14.)

Subjects: French 5 hours, Latin 6 hours, German 4 hours, history 2 hours, geography 2 hours, mathematics 4 hours, natural history, &c., 2 hours, drawing 2 hours, writing 1 hour (in Class V. given to drawing), vocal music 1 hour, gymnastics 2 hours. *This division can be avoided by non-classical boys.*

UPPER DIVISION. (Classes IV. to I. Age 15-18.)

Classical Section.—French 3 hours, Latin 7 to 6 hours, Greek 7 to 6 hours, German 3 hours, history 3 hours, geography 2 hours, mathematics 4 to 3 hours, drawing 2 to 1 hours, gymnastics 2 to 1 hours. Above Class IV., natural science 2 hours; above Class III., diction 1 hour.

“Real” Section.—French 4 to 3 hours, Latin 5 to 4 hours, German 5 hours, English 3 to 2 hours, history 2 hours, geography 3 to 1 hours, mathematics 4 hours, natural science 3 to 5 hours, drawing 2 hours, gymnastics 2 to 1 hours. Above Class I. Italian, commercial arithmetic, chemistry can be taken.

Technical Section.—French 3 to 2 hours, German 5 hours, English 3 to 2 hours, history 2 hours, geography 2 hours, mathematics 6 to 7 hours, natural science 3 to 6 hours, drawing 6 to 3 hours, gymnastics 2 hours. Above Class II. more science is done.

Pedagogic Section.—French 8 to 5 hours, German 7 to 4 hours, history 2 hours, geography 2 hours, mathematics 4 to 6 hours, natural science 3 to 6 hours, drawing 2 hours, gymnastics 2 hours, music 3 to 1 hours. By degrees pedagogy, law, chemistry, and (in Class I. for 1 hour) practice in teaching are introduced.

Special optional lessons may be taken in English, Italian, commercial arithmetic, law, philosophy, music, shorthand, gymnastics.

In the above tables the figures (for instance, 7 to 4) mean that the hours devoted to the subject decrease from 7 to 4 as the pupil works his way up the school.

This curriculum becomes more instructive if we compare the Regulations of our Board of Education with it—the “Programme d’Enseignement” provided by the chief school of the little Canton of Geneva, with about 110,000 inhabitants, of whom some 75,000 live in the town of Geneva. Two extracts from the English programme will be enough to show how much wider the foreign scheme is than that of the Board in regard to Latin, the subject particularly under consideration.

1. The Board consider that Latin is the necessary basis of a thorough linguistic and literary training either in ancient or in modern languages.
2. The Board will require to be satisfied that the omission of Latin is for the educational advantage of the school.

The result of these suggestions of the authorities is that Latin must have an important place in the time table of many boys who can derive no benefit from it and who would have profited by an introduction to the study, for instance, of German or of history. For those acquainted with the methods of an English Government office will not be likely to waste time in trying to convince it of anything. The printed forms that the Board of Education issues can only be filled in properly by a spirit of divination: what therefore could be persuasive enough to “satisfy” it in a special case?

But schools under the control of the Board are by no means the only offenders. The very lowest type of secondary schools teaches Latin, because it is a high-class subject and “raises those who study it, if only for an hour a week, in the social scale.” For a somewhat similar reason the “great schools” insist on Latin, as being part of the education of a gentleman? Latin, indeed, they say, is indispensable, although those who are supposed to have learnt it may leave school not knowing how to write English fairly, to spell and to read aloud!

In proof of the neglect of German we may quote figures from the results of the Joint Board Examination for 1905:

Candidates.	Latin.	Greek.	French.	German
Higher Certificate ...	1,185	1,000	1,366	294
Lower Certificate ...	757	436	1,014	247
Total:—Higher Certificate,	2,143	Lower Certificate,	1,079.	

It is not that there may not be an alternative to Latin provided at some schools, but that prejudice and the exigencies of examinations prevent advantage being taken of the alternative.

Classical-Side Latin a paying Subject.

No reasonable objection can be made to boys who are going to the Universities in order to take a classical degree devoting a large part of their time to Latin. We can, however, claim that for them Latin is a utilitarian subject. It is owing to their knowledge of Latin and of Greek that they win large sums in scholarships, or obtain a degree on the strength of which they will earn their bread and cheese. In short, their acquaintance with Latin is a most valuable part of their stock-in-trade. This system of over-specialization is horrible, but nothing short of a much needed revolution will cure it; so, for the present, one-sided education must be continued for those who are narrow-minded enough to like it.

Still, it is not fair to raise the cry that subjects must not be taught for practical purposes, when it is urged that boys should learn what is of educative value and will be of use to them in after life, even to the exclusion of Latin. In Germany and in Switzerland a school course is provided without Latin: the tendency in England is to make such arrangements that no substitute has a chance.

What can replace Latin?

Of course, the substitute must not be some worthless subject. We assume that French is taken by every one, together with Latin and Greek on the classical side, and with Latin on the modern side. The non-classical boy, taking science and more mathematics than his fellows on the other side, has so full a programme that it is useless for him to attempt more than two languages, and these two, as a rule, are French and Latin.

It may be said that the hours saved from Latin, if abolished, ought to be distributed among other subjects, such as English, French, or history. No doubt, in cases where certain subjects are starved, the hours gained might be applied with profit to them; but let them not be given to mathematics or to science, which have already their full share of consideration. Two remarks will show the popular feeling towards mathematics. A student at a Swiss University was asked what profession he would adopt. "As I have, unfortunately, studied mathematics at college, all that is left to me is to become a schoolmaster." The writer once questioned a civil engineer on the value of high mathematics in his profession. "We keep a wrangler or two in the back office to work out figures and to save us time. Original designing is beyond them; but they are useful to do the drudgery!" On the whole, therefore, if a language is removed from the programme, it is right that a language should replace it, and the language that best fills the place is certainly German.

The Claims of German.

Is there any reason why boys not specializing in classics should be debarred from German? As an educative instrument German is as valuable as Latin. If learning grammar is useful, the grammar of German can be so arranged that a child can begin it at an early age, and an adult can find mental employment in it. If translation is desired, there are easy tales in German suitable for the veriest beginner. If a language is looked for that possesses a store of literature, can Latin compare with German? The boy who learns Latin at school as a secondary subject can hardly be said to make acquaintance with Latin literature. He may bungle through some Cæsar or some dreary Vergil; but he will never advance far enough in his studies to derive much benefit from Latin authors. The same applies to German literature with this difference, however, that, after leaving school, the boy may continue to read German if he has once begun it; he will certainly never touch Latin, taught as we are supposing it to have been taught. He will have the glorious field of German literature open to him—a field that no man with a knowledge entitling him to give an opinion can call inferior to Latin. An industrious person could read in a comparatively short time all the classical writings we possess; indeed so scanty is our stock of material that people have to compose Latin stories if they desire simple materials for learners to read. What Latins would say of such compositions is not easy to determine! In German we have a magnificent literature covering the whole range of human knowledge, containing what is indispensable to scientists, doctors, historians, and many others, even to the man in the street, but inaccessible to most, because they have been obliged to learn Latin and have had no time at school for German. It is no easy matter for a foreigner to learn German; it is the

work of a lifetime. If it is attempted, it must be treated with respect.

Latin almost compulsory at School.

Why, again, is every one forced to do that little Latin at school that is useless in itself and interferes with more valuable studies? There are many reasons. Tradition and the rigidity of British pedagogues account for much. We are told that the French school system cramps originality. France at least allows more freedom in choice of subjects at school and University than England, where schools seem only to exist for purposes of earning grants and for boys to achieve results wherewith to glorify their teachers. Originality is crushed by uniformity: boys are becoming a portion of the first, second, third, or fourth year's course and not human beings with a place to fill in the world. They are to look to their school as a universal provider of lessons, games, societies of various kinds—in short, as the employer of all their time during their scholastic career. This perpetual association of the same persons, pursuing the same object, destroys all individuality. Consequently, when their school-days are over, boys resemble bricks from a kiln in similarity and in inventive faculty. All thinkers know that "l'âme de la foule" exercises a stupifying effect on those brought under its continuous influence.

The unimaginative boy is not spoiled by this stereotyping process; the intellectual boy too often is. But Latin must be maintained; our system is superior to any other; let us not seek for changes! What proof have we of the superiority of our English schools? Lately, finding that a claim for any intellectual superiority is untenable, we have been forced to fall back on one stand-by character. Is it so sure that this claim can be substantiated? Let us, at least, give the new class of schools we are considering a chance to work out their own system in their own way.

Another cause for compulsory Latin is that those bodies, which insist on maintaining their own preliminary examinations for entrance into their corporations look on the subject as the hall-mark of education. Though the amount they require may be a smattering, still its imposition prevents, to some extent, the study of other subjects that might be more congenial. Thus, the Incorporated Society of Axe Grinders, the University of Pedlington, on the one hand, and the Board of Education, as well as the pedagogues, on the other, are all disputing the dissection of the boy's mental attainments at the close of his school career. What he has to be taught by his masters depends upon what these individuals decree; and, if amongst them all his future career is marred by a lack of useful knowledge, is it suprising? Latin must be maintained!

No reference to the teaching of Latin in schools lower than secondary has been made; "for I deem it unnecessary to prove" that no such school can teach Latin with advantage to its pupils.

Objections to Freedom from Latin.

People who argue in favour of Latin usually forget that those for whom exemption is claimed will never do more than learn a little grammar, do exercises and a few pages of translation badly. Consequently, it is absurd to talk of the benefit they will derive from their studies; for they will not advance far enough to learn anything of the beauties of Latin. They would derive far more benefit from reading a good verse translation of Homer, for example, in English, than they can derive from their dabbling in Latin.

Again, most of the supporters of Latin are those who have been educated on classical lines and who, if schoolmasters, have never taught any modern language. So it is absurd for them to say that German has no educative value. They are not in a position to judge. The only judges are they who know Latin and German equally well, and who have taught both. If such people are without bias, they—but only they—can deliver a fair verdict. To declare, for instance, that German is so like English that it is valueless as a mental training is merely to show one's ignorance of both languages. Compare: "He thought of going home" with "Er dachte daran, nach Hause zu gehen."

Summary.

Finally, I may sum up what this paper tries to show: Schools are intended for boys, not boys for schools; schools are neither experimenting grounds nor places in which to stagnate, but training shops for after-life, workshops that must be practical.

There is a tendency to insist on Latin for all, due in some respects to a natural revulsion from the one-sided curriculum of "A" schools. Good substitutes for Latin are easy to find, and must be found, as one of the steps required to aid in abolishing the stereotyped style of schoolboy too often prevalent. Those who have read the "Upton Letters" will recognize the type. The charge of utilitarianism brought against those who wish to include useful subjects in a school programme is not a fair one, unless it is levelled at all branches which have a definite commercial value, those branches for proficiency in which boys receive sums of money in scholarships, as well as others. Soon, too, this will be realized, and we may look forward to that good time when the study of English, French, German, science, and mathematics will be open to all, and considered of equal value and of equal importance; when we shall no longer, by forcing square pegs into round holes, end by making our pegs unfit for any holes at all.

THE PSYCHOLOGIC BASIS OF LITERARY STUDY IN SCHOOLS.

IT is sometimes remarked, with justice, that, as a rule, the teaching of literature is more defective than that of any other subject in the school curriculum. This circumstance is, in great measure, due to the fact that few teachers have taken the trouble to form a distinct idea of the reasons why the study of literature (whether that of our own country or that of foreign countries) deserves recognition in the curriculum. A clear conception of these reasons, and a strong conviction as to their validity, on the part of the teacher, would not only indicate to him what the aim of his teaching should be, but would suggest to him also particular methods which he might adopt in attempting to realize that aim.

Various opinions regarding the value of literary study in schools have been held by different writers on education. Some have gone so far as to maintain that, while the reading of literature may serve to amuse us in our leisure moments, yet as a means of training, of education, it is practically useless in a school. On the other hand, there are teachers who, while admitting that literary study is valuable, think that in a school the fruits to be obtained from it are unsatisfactory—poor and meagre in comparison with the richness of the field. Literature, they say, should be regarded not as a school subject, but as a study for later life: the boy is a Philistine by nature, and cannot rightly appreciate literature; in after life he may develop the literary sense if it be in him, but at school it must remain undeveloped. Even if a favourable view be taken, and it be admitted that a boy may be taught to perceive the "intellectual" qualities of literature—for instance, the logical qualities of coherence and continuity in a poem or treatise or essay—yet, it is said, he can by no means be trained to appreciate its "imaginative" or "aesthetic" qualities; he cannot properly value beauty of expression or of feeling. From this point of view, while it is admitted that a boy may be taught to perceive some of the more prosaic qualities of literature, it is urged that he can have no vision of it in its higher, more poetic aspects.

In opposition to these opinions, the writer would maintain that through the study of literature not only the pupil's intellect, but also his imagination and feelings—his whole human nature—may be trained and developed; and that there is in the curriculum no other subject so well fitted to achieve this particular result.

When it is said that possibly the harder and more logical qualities of a literary work may be utilized in teaching, but that its imaginative and aesthetic qualities cannot; when it is said that the study of literature in schools may possibly be a means of training a boy's intellect but cannot cultivate his imagination or feelings—to say this is to commit the serious psychological error of making an abstract separation of "mental faculties" where no real separation exists. There is no concrete state of mind that consists merely of reasoning or merely of imagination or merely of feeling: though we may distinguish between different aspects of consciousness, yet they do not operate apart from one another—the mind is a unity. And in a work of literary art the intellectual, the imaginative, and the

emotional elements of human nature work in particularly close association and harmony: the artist puts *himself* into his work, himself considered not as a congeries of distinct "faculties," but as a whole-souled being, as compact of conception, of imagination, of feeling—each of his "faculties" being related to the other, and all blending and harmonized in the finished product of his art. No other subject included in the school curriculum presents the pupil with material that is so "rammed with life"—so penetrated and inspired by the united action of all our faculties; and it is just this close association in it of intellect, imagination, and feeling that constitutes the special value of literature as a school study.

Remembering this connexion, and the fact that our faculties do not operate apart from one another, we may feel sure that, if we succeed in conveying to a pupil a sense of the intellectual qualities of literature, of the coherence and order and restraint that characterize a work of art, at the same time we shall have succeeded in conveying to him a sense of its imaginative qualities and its æsthetic value.

In other words, in the teaching of literature the imagination and the feelings may be cultivated *through the intellect*.

It is impossible to describe briefly what the distinctive function of imagination in literature is; but perhaps the best description in general terms would be to say that its function is to inspire atmosphere—an appropriate medium in which the creations of the artist may live and move. Atmosphere, it may be said, is the very life-breath of all literature (and of all art), just as it is of our material existence, and it may be admitted that only in so far as a pupil is inspired with the atmosphere of a book is the teaching of literature quite successful. If it be said that the imagination refuses to be coerced, and that therefore it is impossible to compel a pupil to breathe the atmosphere of literature, the reply may be made that in reality there exists no necessity for such compulsion; that just as, in the material world, given the necessary bodily organs, we cannot but breathe the atmosphere of the place in which we are, so, too, in the world of literature, given intellectual comprehension of the book that we are reading, we simply cannot help breathing its imaginative atmosphere.

It is the more special function of the intellect, in creative literature, to impart suitable form and design to a work, so that the exposition of its subject-matter may be marked by continuity, coherence, and unity. If a pupil shall have been led to perceive this unity of thought and structure in an imaginative work, he will have been brought a considerable way towards feeling the correspondent harmony of atmosphere.

Suppose, for instance, that a class is reading one of Shakespeare's plays, in all of which there appears the greatest complexity, while at the same time amid the diversity there is an underlying unity which serves as link of connexion throughout. This unity of thought a pupil should be brought to see in each of the details that it governs; it will be seen often in those details that apparently are most irrelevant to the main issue. Thus, in "As You Like It," the lyrics with which the speeches are interspersed would seem, on a first view, to be quite unrelated to the main idea of the piece. Yet they are not really so. Take the first verse of Amiens's song:—

Blow, blow, thou winter wind !
Thou art not so unkind
As man's ingratitude ;
Thy tooth is not so keen, ●
Because thou art not seen,
Although thy breath be rude.
Heigh-ho ! sing heigh-ho ! unto the green holly :
Most friendship is feigning, most loving mere folly.
Then heigh-ho the holly !
This life is most jolly.

Than this lyric what could seem more spontaneous, purposeless, artless? Yet throughout it, appearing in each sentence, there runs a thought that is intimately connected with the "plot" of the play—the song, one may say, so far as its matter goes, being a commentary on the banishment of the Duke, a contrast of his former with his present condition. Now, a pupil who had been led to perceive this connexion, as regards its thought, of the song with the story, with the play as a whole, could not but feel—though perhaps quite unconsciously—how finely the atmosphere or spirit of the song accords with the atmosphere or spirit of the play: his imaginative and æsthetic nature as well as his intellect would be touched.

Suppose, again, that a class is about to study Goldsmith's poem, "The Deserted Village." By his own previous study, the teacher himself will have realized that the spirit of this poem is in many respects of an intimately personal kind, significant of the circumstances of the poet's life and the conditions of his character; and with these circumstances and conditions the pupils, if they are to breathe freely and fully of the atmosphere of the "deserted village," must have previously been made acquainted: their imaginative and æsthetic nature may be reached through the understanding. As a step, then, preliminary to the reading of the poem, and taken with a view to inducing in the pupils the right mental state, the teacher may begin by describing, in an easy conversational manner, such circumstances of Goldsmith's life and character as find expression in the spirit of the poem. In the course of this narration the teacher will, wherever possible, quote by way of illustration any lines that may seem to him to breathe the essentially characteristic feeling of the poem. Goldsmith, as a boy, was educated at Lissoy, a small village in Ireland, with which the "deserted village" of which he writes has generally been identified. After he left Lissoy his life ran a somewhat troubled and erratic course. He was of a careless and improvident disposition, which frequently led him into financial difficulties. He tried various means of earning a livelihood, and at length settled down as a writer in London. While struggling to achieve success in his calling, in the midst of the bustle and noise of the London streets, he thinks with pleasure and longing of the quiet village where he had spent his boyhood. The thought of the peaceful beauty of its scenes, contrasted with the struggle and the squalid environment of his later life in London, stirs in him a wistful regret and a deeper sense of the simple pleasures of country life. Such illustrative lines as the following may be quoted:—

In all my wand'rings round this world of care,
In all my griefs—and God has given my share—
I still had hopes, my latest hours to crown,
Amidst these humble bowers to lay me down.

Or, again, the lines beginning

O blest retirement, friend to life's decline,
Retreats from care, that never must be mine!

The poet's kind and generous nature and his own hard fight with poverty lead him to sympathize with the poor and lowly, and the poem is permeated with this feeling. The scenes and the characters with which Goldsmith had been familiar in his boyhood are drawn with a sympathetic touch. The teacher's first aim will be, by dwelling on these and kindred themes, to suggest to his pupils the mental atmosphere of the poem. The next step in the teaching will consist in detailed reading by the class, in the course of which the logical connexion and sequence of thought in the successive parts of the poem will be shown, and words and phrases will be explained with a view to making the ideas and images more clear and vivid. The final step will consist in the continuous and expressive reading of the poem as a whole. All through the teaching the direct appeal of the teacher is to the pupil's understanding; for, as has been remarked above, if a poem (or any work of art) is thoroughly understood by a class, its atmosphere or life-spirit will be breathed, and the highest aim of literature teaching will then have been realized.

The imagination and feelings are trained not directly—from the nature of the case such direct training would seem to be impossible—but indirectly, through the intellect. And no subject is so well adapted as is literature to the task of so training them, because there is no other subject in which the qualities of imagination and feeling together are so predominant, or where they are so closely interwoven with the intellectual fibre of the matter taught.

W. MACPHERSON.

MR. BROOKFIELD'S story concerning the Sermon on the Mount recalls a more recent experience. A lady complained to her rector of the unintelligent way in which the responses were said or sung in church by the school-children: they evidently had no notion of the meaning. The rector indignantly denied the charge and agreed to submit the head class to a test. The first question put by the lady was: "What do you mean by 'the noble army of martyrs'?" Dead silence. Question repeated: "What is meant by 'martyrs'?" At last a small boy, waving his hand: "Please, Miss, I know: father grows 'em in our garden" [tomatoes].

JOTTINGS.

THE Education Estimates for the financial year 1906-7 amount to a grand total of £13,139,600. The advance under the head of "Elementary Education" is automatic, but there is a considerable increase in the grants to be made in respect of training and secondary schools. The following are the principal items (we give in each case the amount of increase):—Grants for training of pupil-teachers and pupil-teachers' centres, £110,916; maintenance of training colleges, £33,916; building grants to training colleges, £5,000; pupil-teachers' centres and instruction of pupil-teachers not in centres, £72,000; grants for secondary schools, £97,000; contribution towards local science and art scholarships held in secondary schools, £23,800. There is, further, an estimate of £87,000 for revision of grants for secondary schools under Sections 32 to 38 and 40 of the Regulations. The Office of Special Inquiries still starves on a pittance of £2,000.

IN the obituary notices of Charles Savile Roundell no mention was made of his connexion with Harrow; yet Harrow was, as it were, the golden thread that linked together a long life of varied activities. C. S. Currier—he assumed the name of Roundell in 1851—was head of the school in 1845, when Dr. Vaughan succeeded Dr. Wordsworth. He got his cricket cap in 1844, and was head of the Eleven in the two following years. We can vouch for a well known story of his captaincy, having heard it from his own lips. A fond mother, about to take her son from Lord's because his nose bled, was stopped by Currier with: "Madam, no Harrow boy leaves the ground while there is a drop of blood in his veins." When he was a Fellow of Merton he started an Essay Club, at Harrow, to which the *élite* of the Sixth were admitted, and was never absent from the meetings held over a term. Tradition says that the club did not survive a two hours' essay read by the founder. He is immortalized in the amebian eulogy, the joint production of E. E. Bowen and E. M. Young. *Thyrsis* (Mr. Bradby) boasts:

"Jucundumque bonumque vocat me Roundelos; æquis
Roundelon audivit nisi vere et sane loquentem?"

He was for nearly half a century a governor of the school. Mr. Roundell was an occasional contributor to this journal; and his charming recollections of Miss Swanwick will be fresh in our readers' memories.

THE following is a specimen of English as she is wrote by an Italian professor:—"Sir, I have the pleasure to inform you that there are some years I founded here an Establishment for the ploughing of marble. The works are delivered very perfect under all reports, because the execution is directed by a technical personal very competent, and at very low price and that for the great economy that I have on the rough marble, having quarries and saw-mill on the place. The speciality of my Firm is chiefly a reach assortment of decoratif works in patinal marble, imitating the antic authors, copying scrupulously the different styles of various epochs. Having at my disposition quarries of marble, I can furnish you very big orders in rough and sawed marble at very low price, with the same exactitude and breve time. I beg you, therefore, Sir, to be so kind to adress you to me at first as tittle of trial and I am sur that you will be very satisfied. Projects and preventives are prepared gratis on demand. Awaiting your previous orders I am, dear Sir, very truly yours."

THE Modern Language Association are arranging for a return visit of their French *confères* at Whitsuntide. The University of London will take a leading part in the reception and entertainment of the guests.

M. THÉODORE JOVAN, in a recently published work on "The Errors of Feminism," relates the experience of his friend, an Inspector. A class of girls, ages between ten and twelve, were being examined in a French elementary school. Their answers on the chemical composition of an egg and its dietetic value were brilliant; but when the Inspector put the prosaic question: "How long does it take to cook a soft-boiled egg?" the answers varied from a quarter to three quarters of an hour.

WE have received a circular, signed by Canon Barnett, Mrs. Bryant, and other influential persons, addressed to managers of schools and teachers. It is a strong protest against the movement associated with the name of Lord Roberts, and an appeal to them to inspire the rising generation with the true spirit of patriotism by teaching the arts of peace, not of war. Our older readers will remember a similar protest against military drill in schools made some years ago by Sir Joshua Fitch in this journal. We sympathize with the peace promoters, but only in part. The schoolboy is by nature a Jingo, and prefers "Barraek Room Ballads" and "Stalky & Co." to "The Happy Warrior" and "Settlers at Home," and it is

the function of the educator to crush "the ape and tiger." On the other hand, we hold that rifle-shooting should be in every way encouraged, and to suggest a connexion between the use of firearms and hooliganism appears to us extravagant. It should not be difficult to demonstrate that such warlike preparation is prompted solely by a desire for peace. The most pacific nation in Europe, the Swiss, are the keenest at rifle practice.

IN the report of an interview with Mr. Birrell, by Mr. Herbert Vivian, a cryptic utterance of Mr. Winston Churchill is recorded:—"He took up a volume of Matthew Arnold's poems. . . . Then he clenched his fist, and exclaimed in a loud voice: 'Curse these public schools! Curse these public schools! What a terrible handicap they are in the way of education!'" The curse provoked the *obiter dictum*: "I scarcely knew what to say to him, but I was profoundly impressed by his manner and attitude."

THE London Chamber of Commerce has decided to hold an examination in Esperanto. The date fixed is May 30, and the syllabus is the same as for modern and foreign languages.

A. B. writes: "There is, to my taste, a more offensive form of literary affectation than the importation of French and German words on which you recently commented—to wit, the revival of euphuism. I cull a few specimens from the *New Rambler*: Joints in the butchers' shops are 'eviscerated beeves'; gypsies are 'our Egyptian nomads'; a water lily is 'the vestal lotus of our fishponds'; the explanation of laughter is 'the *rationale* of cachinnation'; disliking kissing is 'averse to osculation'; tea is 'the Chinese herb'; and young ladies are 'nymphs.' I think, too, that an author who complains so bitterly of being misquoted by his critics should be more careful when he quotes himself. This is how a famous line of Musset appears:

'Une immense esperance à traversée le monde.'

A propos of the London Charlottenburg, a problem to which Mr. Birrell is giving his attention, it is worth while recalling a speech made by Sir Martin Conway at the last prize distribution of the Sir John Cass Institute. With regard to the bogey of Germany, he did not believe that the Germans were a whit less scientific than Englishmen or that German workmen were better educated than English. The real struggle was between German Universities and those of the rest of the world, and that was where Germany beat England. The relatively great number of business and manufacturing managers which the German Universities turned out was a momentous fact. It was the usual thing for Englishmen to say that they would put their sons into business young and let them learn for themselves by practical experience; but in Germany it was recognized that the science of business was not a thing that could be picked up by any one who was prepared to "muddle through."

THE Worshipful Company of Goldsmiths has made a grant of £1,000 to the Building and Endowment Scheme for Bedford College, London. The Worshipful Company of Grocers have granted £25 for the same purpose. Three more donations towards the Queen's special list of £100 contributions have been received since the last announcement—from her grace the Duchess of Marlborough, Mr. and Mrs. Henry Yates Thompson, and the Right Honourable James and Mrs. Bryce.

THE Council of the University of Liverpool have appointed to the new Chair of Classical Archaeology Mr. R. C. Bosanquet, who has for the last six years been Director of the British School at Athens. One condition of the appointment is that the Professor shall have leave of absence for at least one term in the year for the purpose of conducting practical research work.

OBITUARY.

MISS HENRIETTA MULLER.

MISS HENRIETTA MULLER, who died on January 4 at Washington, U.S.A., was at one time one of the hardest workers on the London School Board, and in a real and intimate sense the friend of the women teachers to a singular degree. She was born in Valparaiso, and her education was for the most part not that of the school. She was one of the early Girton students who when past girlhood eagerly embraced the new opportunities for the higher education of women. She ever set a high value on what the College did for her, though she passed out with the moderate distinction of Third Class Honours in the Moral Science Tripos. Soon after, in 1879, being urged by Mr. and Mrs. Henry Fawcett, she stood in the then huge Lambeth

(Continued on page 258.)

THE "A.L." NATURE CALENDAR.

A Set of 12 Sheets (one for each month), 27 in. × 24½ in., showing the chief **Mammals, Birds, Fishes, Butterflies, Moths, Insects, Flowers, Ferns, Mosses, Lichens, Fungi, &c.**, found during each month, and interesting facts about them, together with brief Hints on Garden and Farm Work. Nothing rare has been included.

The Set of 12 Sheets, mounted back-to-back on 6 stout boards, eyeleted, net 4s. 6d.

THE "A.L." NATURE-STUDY OBSERVATIONS.

For use with the above. Net 2s.

A Set of 12 Sheets (20 in. × 12 in.), one for each month, mounted on top-lath, with cover, and ruled and spaced for keeping a record, day by day, of *weather* and other *meteorological* matters, of *fauna, flora, &c.*, found and noted, and observations about them made by the children.

CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the
University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, Stationers' Hall, London.

Messrs. Bell's New and Recent Books.

Complete Educational Catalogue post free on application.

NEW BOOKS.

BELL'S FIRST FRENCH READER. By R. P. ATHERTON, M.A., Assistant Master at Haileybury College, Author of "Bell's French Course"; assisted by F. GAL-LADEVÈZE. With Illustrations by French Artists. Crown 8vo, 1s.

"FAITS ET GESTES."

A FIRST FRENCH HISTORICAL READER. Being short passages giving episodes from French History arranged as a First Reader. With Illustrations, brief Notes, and a Vocabulary. By R. N. ADAIR, M.A. (Oxon.), Assistant Master at St. Paul's Preparatory School. Crown 8vo. [*In the press.*]

A FIRST YEAR'S COURSE IN PRACTICAL PHYSICS. By JAMES SINCLAIR, M.A. (Glas.), B.Sc. (Lond.), Head Science Master in Shawland's Academy, Glasgow. Crown 8vo, with numerous Diagrams, 1s. 6d. [*Immediately.*]

NEW EDITION OF SCRIVENER'S GREEK TESTAMENT.

NOVUM TESTAMENTUM GRÆCE. (Editio Major.) The Textus Receptus, edited, with Various Readings, Parallel Passages, &c., by F. H. A. SCRIVENER, M.A., D.C.L., LL.D. Fourth Edition, revised and corrected by Professor Dr. E. B. NESTLE. Printed on India paper, limp cloth, 6s. net; limp leather, 7s. 6d. net; or interleaved with writing-paper, limp leather, 10s. 6d. net.

HENRY VIII. AND THE ENGLISH MONASTERIES. By Abbot GASQUET, D.D., O.S.B. Sixth and cheaper Edition, with New Preface. Demy 8vo, 8s. 6d. net.

STUDIES IN POETRY AND CRITICISM. By J. CHURTON COLLINS. Post 8vo, 6s. net.

CONTENTS:—The Poetry and Poets of America—The Collected Works of Lord Byron—The Collected Poems of William Watson—The Poetry of Mr. Gerald Massey—Miltonic Myths and their Authors—Longinus and Greek Criticism—The True Functions of Poetry.

DRAMATISTS OF TO-DAY. Rostand, Hauptmann, Sudermann, Pinero, Bernard Shaw, Stephen Phillips, Maeterlinck. Being an Informal Discussion of their Significant Work. By EDWARD EVERETT HALE, Jun. Post 8vo, 6s. net.

BROWNING AND DOGMA. Being 7 Lectures on Browning's Attitude to Dogmatic Religion. By ETHEL M. NAISH. Crown 8vo, 4s. 6d. net.

These Lectures are based on the following works of Browning:—Caliban upon Setebos—Cleon—Bishop Blougram's Apology—Christmas Eve and Easter Day—La Saisiaz.

"Browning's Christianity seems to us very well and wisely defined in an interesting and scholarly book."—*Academy.*

THE YORK READERS.

An entirely new series of Primers and Readers, printed in a specially bold and clear type, and are beautifully illustrated in colours and in black and white. They are strongly and artistically bound in cloth covers. The Series is now complete and comprises:—

York Primer.	No. I.	24 pp.	3d.
York Primer.	No. II.	32 pp.	4d.
York Infant Reader	64 pp.	6d.
York Introductory Reader	96 pp.	8d.
York Reader.	Book I.	128 pp.	9d.
York Reader.	Book II.	160 pp.	10d.
York Reader.	Book III.	192 pp.	1s.
York Reader.	Book IV.	224 pp.	1s. 3d.
York Reader.	Book V.	272 pp.	1s. 6d.

MODERN MATHEMATICAL WORKS.

IN THE PRESS. READY IN MAY.

A JUNIOR ARITHMETIC.

By CHARLES PENDLEBURY, M.A., Chief Mathematical Master at St. Paul's School, and F. E. ROBINSON, M.A., Assistant Master at St. Paul's School. Small crown 8vo, 1s. 6d.; or, with Answers, 2s.

A New Arithmetic for lower and middle forms of Secondary Schools, written on modern lines according to the recommendations of the Mathematical Association, with free employment of Graphs, &c. It will be found adapted especially for the use of Candidates for the Oxford and Cambridge Junior Local Examinations, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

NEW SCHOOL ARITHMETIC. By CHARLES PENDLEBURY, M.A.; assisted by F. E. ROBINSON, M.A. Second Edition. With or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each. Key to Part II., 8s. 6d. net.

New School Examples in Arithmetic. Extracted from the above. With or without Answers, 3s.; or in Two Parts, without Answers, 1s. 6d. and 2s.

EXAMPLES IN ARITHMETIC. With some Notes on Method. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Crown 8vo, with or without Answers, 3s.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. Complete. Crown 8vo. Second Edition, with or without Answers, 4s. 6d.; or in Two Parts—Part I., 2s. 6d.; or, with Answers, 3s.; Part II., with or without Answers, 2s. 6d.

Complete Key, with numerous Graphical and other Figures, 10s. net; or, in Two Parts, 5s. net each.

Examples in Algebra. Extracted from the above. With or without Answers, 3s.; or in Two Parts—Part I., 1s. 6d.; or, with Answers, 2s.; Part II., with or without Answers, 2s.

EXAMPLES IN ALGEBRA. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Fifth Edition. With or without Answers, 3s.

A FIRST ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Small crown 8vo. 192 pages. 1s. 6d.; or, with Answers, 2s. This book, which takes the subject as far as Quadratic Equations, will be found specially suitable for the Local Examinations.

ELEMENTARY GEOMETRY. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete. Fifth Edition, Revised, 4s. 6d. Also in Parts—Books I.-III., Seventh Edition, Revised, 2s. 6d.; Books I.-IV., Fourth Edition, 3s. Also published in the following forms:—

Book I., 1s. Books I. and II., 1s. 6d. Books II. and III., 1s. 6d. Books III. and IV., 1s. 6d. Books II.-IV., 2s. 6d. Book IV., 1s. Books IV. and V., 2s. Book V., 1s. 6d. Books IV.-VII., 3s. Books V.-VII., 2s. 6d. Books VI. and VII., 1s. 6d.

Answers to Numerical and Mensuration Examples, 6d. net. **Complete Key**, 6s. net.

Elementary Graphs. Reprinted from the above. New and Enlarged Edition. 6d. net.

A NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College, and the Rev. A. D. PERKOTT, M.A., Head Master at Coventry Grammar School. Crown 8vo, 4s. 6d.; or in Two Parts, 2s. 6d. each.

Complete Key, 10s. net; or, in Two Parts, 5s. net each.

BELL'S MATHEMATICAL INSTRUMENTS.

Specially prepared and adapted for use with Baker and Bourne's and other modern Mathematical Works.

Box No. 1	Price 1s. 3d. net.
Box No. 2	Price 2s. net.
Box No. 3	Price 2s. 6d. net.

London: GEORGE BELL & SONS, Portugal Street, Lincoln's Inn, W.C.

Division for election to the School Board, with the result that she was returned at the head of the poll for London, and consequently presided at the first meeting of the new Board. As a member, she was independent of party, and some of her most valuable work consisted in carrying small practical reforms suggested to her by her constant visiting at the schools, and her close relations with the teachers: *e.g.*, for the sake of the children's eyesight, she sought and obtained a reduction in the number of stitches to the inch required in the schools—a number which she proved to exceed that in the finest work sold in the best London shops! Her heart was in the "women's movement." While still at Girton she contributed to start the Women's Printing Society, and was in touch with Mrs. Patterson's initial efforts in establishing Women's Trade Unions. She founded the Society for the Return of Women as Poor Law Guardians (the inaugural meeting was held at her mother's house), and was its first Secretary. In March, 1882, she presided at the public meeting which appointed a provisional committee for establishing near University College and the London School of Medicine for Women a hall of residence for women students (of which the late Miss Grove was Principal), now known as College Hall. Mrs. Josephine Butler's noble campaign had ever her deep sympathy and all the support she could give to it. For the enfranchisement of women she worked unremittingly, even to the end of her life, recognizing that reform as fundamental. She started a weekly penny paper for women, which for many years held its own and supplied news of the work of women and the progress of the women's cause. But there was that within her which gradually withdrew her from most civic efforts: in her thirst for truth about the ultimate she more and more gave herself up to carrying further the reading of her college days, and earnestly studied different forms of religion. She travelled much and alone, not only in Europe and America, but much in Asia, the ease with which she could pick up a language facilitating this, as did also her complete fearlessness. She spent several years in India, and for part of this time lived as a native among the natives in the hills. Wherever she was she sought to study not only the religion of the people, but the position held by women. Her constant aim was to enforce conviction that love (in the Christian sense) is the great power; and in some of the most secluded parts of India she had a measure of encouragement amongst the natives, and was able to secure in some degree better treatment for the women.

The chief affection of her life was for her mother, and her chief friend and comrade was her sister, Mrs. Eva McLaren. All who knew her well loved her, and recognized in her a fervent seeker after truth.

A great writer has said: "Mark that man or woman who seeks and sees good in every one: there goes a magnificent soul!"

Henrietta Muller was one of those who sought and saw and brought to light the good, helping in her day and generation to make men and women alike realize themselves and become doers of the work.

PUPIL-TEACHERS IN SECONDARY SCHOOLS.

AN important conference on this subject, convened by the Association of Head Mistresses, was held on February 24 at the Notting Hill High School. A full report will be found in *Education*, March 9. No one who attended can fail to have been impressed by the practical character of the proceedings and the ability of the speeches. The resolutions to be proposed had been carefully considered in Committee and the speakers chosen. There was no beating about the bush. The Head Mistresses meant business. The first resolution ran: "That all pupils from elementary schools should, before entering a secondary school, be (1) interviewed by the head of the secondary school, who will judge of their general fitness, and, if she deem it advisable, examine them by means of papers; (2) examined by the medical adviser of the secondary school and refused if lacking in essentials." The first part was carried unanimously; to the second part Mrs. Bryant demurred, on the ground that Local Authorities would not accept such a condition.

The second resolution carried was: "That for the present it is in the best interest of elementary schools that the ranks of teachers in these schools should be largely recruited from pupils who have received all their education in secondary schools and gained probationer scholarships from those schools." Resolutions followed demanding a course of at least five years in a secondary school for intending pupil-teachers, and insisting that such pupils should not form a separate class, but be in such a proportion to the ordinary scholars that the influence of the secondary school shall predominate.

On the vexed question of half-timers there was no unanimity of opinion. The necessity of some practice in the elementary school at an early age was affirmed, but a wish was expressed that the hundred attendances now enforced by the Board might be reduced to fifty. The conference made it clear that the Head Mistresses have welcomed this new class of pupils and are bent on making the experiment a success. There could be no better augury for the future of national education.

A SHILLING ARITHMETIC.

By S. L. LONEY, M.A., and L. W. GRENVILLE, M.A. 1s. With Answers, 1s. 6d.

EDUCATIONAL NEWS.—"A splendid book for upper classes, and those getting up arithmetic without the aid of a teacher. The explanations are lucid, and the worked examples are models in every sense of the term, so that only average intelligence is required to ensure progress."

THE BEGINNER'S SET OF MATHEMATICAL INSTRUMENTS.

• Bow Compass; Dividers; Two Nickel Set Squares, 45° (4 inches) and 60° (5 inches); Nickel Protractor; 6-inch Rule, double bevelled, inches and millimetres; and a Lead Pencil, in metal Pocket-Case. 1s. 6d. net.

A MANUAL OF GEOMETRY.

By W. D. EGGAR, M.A. Crown 8vo, 3s. 6d. [Shortly.]

•• An experimental treatment of Geometry, in which Theorems are taken along with the practical work.

PRACTICAL EXERCISES IN CHEMISTRY.

By G. C. DONINGTON, M.A., Senior Science Master of Leeds Grammar School. Globe 8vo, 2s. 6d.

Covering the Work of the London University Matriculation Syllabus.

SCHOOL GOVERNMENT CHRONICLE.—"The book is an admirable one and is certainly adequate to its purpose. . . . It contains a carefully arranged and commendable course of study in itself, and will, no doubt, be of utility wherever adopted."

METHODS OF ORGANIC ANALYSIS.

By Prof. HENRY C. SHERMAN, Ph.D. 8vo, 7s. 6d. net.

PHYSICAL OPTICS.

By ROBERT W. WOOD, Professor of Experimental Physics in the Johns Hopkins University. Illustrated. 8vo, 15s. net.

SIEPMANN'S ELEMENTARY FRENCH SERIES.—New Vol.

MARCHAND D'ALLUMETTES. Par A. GENNEVRAVE. Edited by CLOUDESLEY BRERETON, Officier d'Académie. Globe 8vo, 2s. KEY to same, 2s. 6d. net. WORD- AND PHRASE-BOOK, sewed, 6d.

SIEPMANN'S CLASSICAL FRENCH TEXTS.

LES CARACTÈRES OU LES MŒURS DE CE SIECLE. Par LA BRUYÈRE. Adapted and Edited by EUGÈNE PELLISSIER. Globe 8vo, 2s. 6d.

NEW AND REVISED EDITION.

GREEK FOR BEGINNERS.

By Professor JOSEPH BICKERSTETH MAYOR, M.A., Litt.D. PART I. Limp cloth, 1s. 6d.

English Literature for Secondary Schools.

General Editor: J. H. FOWLER, M.A. Globe 8vo, limp cloth.

FIRST YEAR (12-13).

- BALLADS OLD AND NEW.** Selected and Edited for School use, with Glossary, &c., by H. B. COTTERELL, M.A. In Two Parts. Part I., 1s.; Part II., 1s.
- THE TALE OF TROY.** Retold in English by AUBREY STUART, M.A. Edited for Schools, with Introduction, &c., by T. S. PEPPIN, M.A. Illustrated. 1s. 6d.
- THE HEROES OF ASGARD.** Tales from Scandinavian Mythology. By A. and E. KEARY. Adapted for the use of Schools, with New Introduction, Glossaries, &c., by M. R. FARLE. With Illustrations. 1s. 6d.
- TALES FROM SPENSER.** Chosen from "The Faerie Queene" by SIR H. MACLEHOSE. School Edition, with Introduction, Notes, &c. 1s. 3d.

SECOND YEAR (13-14).

- LONGFELLOW'S SHORTER POEMS.** Selected and Edited, with Notes, Glossary, &c., by H. B. COTTERELL, M.A. 1s.
- SCOTT'S THE TALISMAN.** Abridged and Edited, with Introduction, Notes, Glossary, &c., by FANNY JOHNSON. 1s. 6d.
- SCOTT'S IVANHOE.** Abridged and Edited, with Introduction, Notes, Glossary, &c., by FANNY JOHNSON. 1s. 6d.
- A BOOK OF GOLDEN DEEDS.** Of all Times and all Lands. By CHARLOTTE M. YONGE. A Selection, Edited, with Introduction, Notes, Glossary, &c., by HELEN H. WATSON. Part I., 1s.; Part II., 1s.

THIRD YEAR (14-15).

- BYRON'S CHILDE HAROLD.** Cantos III. and IV. Edited by J. H. FOWLER, M.A. 1s.
- MACAULAY'S ESSAY ON ADDISON.** Edited, with Notes, Glossary, Index of Proper Names, &c., by R. F. WINCH, M.A. 1s.
- MACAULAY'S ESSAY ON CLIVE.** With Introduction, Notes, &c., by H. M. BULLER, M.A. 1s.

FOURTH YEAR (15-16).

- ESSAYS FROM ADDISON.** Selected and Edited, with Introduction, Notes, Glossary, &c., by J. H. FOWLER, M.A. 1s.
- MACAULAY'S ESSAY ON SIR WILLIAM TEMPLE.** With Introduction, Notes, &c., by G. A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School. 1s.

TEACHERS' AID.—"A text-books of English Literature for secondary schools it would be difficult to find a better selection than is supplied by this series. . . . The volumes are skilfully edited with notes and glossaries, are beautifully printed on thick paper, and altogether are pleasing to handle and to study."

MACMILLAN & CO., Ltd., St. Martin's Street, London, W.C.

PROFESSOR MEIKLEJOHN'S SERIES.

COMPOSITION.

- COMPOSITION FOR SCHOOLS AND COLLEGES.** Based on Outline Essays, with Exercises in Style. By C. H. MAXWELL, B.A. Crown 8vo, 138 pp. ... 1s.
- ONE HUNDRED SHORT ESSAYS IN OUTLINE.** By Professor MEIKLEJOHN. **Seventh Edition.** Crown 8vo, 110 pp. ... 1s.
- FABLES, ANECDOTES, AND STORIES, FOR TEACHING COMPOSITION.** **Ninth Edition.** Arranged by Professor MEIKLEJOHN. Crown 8vo, 160 pp. ... 1s.
- A NEW SPELLING BOOK.** With Side Lights from History. **Thirteenth Edition.** By Professor MEIKLEJOHN. Crown 8vo, 152 pp. ... 1s.

ENGLISH.

- A NEW GRAMMAR OF THE ENGLISH TONGUE.** With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Twenty-second Edition.** By Professor MEIKLEJOHN. Crown 8vo, 284 pp. ... 2s. 6d.
- A SHORT GRAMMAR OF THE ENGLISH TONGUE.** With Three Hundred and Thirty Exercises. **Seventeenth Edition.** By Professor MEIKLEJOHN. Crown 8vo, 176 pp. ... 1s.
- AN OUTLINE OF THE HISTORY OF ENGLISH LITERATURE.** **Nineteenth Edition.** By Professor MEIKLEJOHN. Crown 8vo, 110 pp. ... 1s. 6d.

JUST PUBLISHED.

MEIKLEJOHN'S POETRY BOOKS. A New Selection.

BOOK I., 40 pp., 2d.; BOOK II., 64 pp., 3d.; BOOK III., 64 pp., 3d.; BOOK IV., 72 pp., 4d.

"These small books are attractive in form, and that is half the battle with small children. They are also well graduated in difficulty. In Book I. there is no piece beyond the comprehension of a child of eight, and few that a child with a spark of poetry in him will not appreciate. Another good feature is the inclusion of new poets—Mrs. Tollemache, Mr. Newbolt, and Mr. A. P. Graves. As a whole, the selection shows taste and judgment."—*The Journal of Education*.

GEOGRAPHY.

- A SCHOOL GEOGRAPHY.** With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 410 pp. **Fourth Edition (Revised)** ... 2s. 6d.
- "This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times*.
- A SHORT GEOGRAPHY.** With the Commercial Highways of the World. **Twenty-sixth Edition (Revised).** By Professor MEIKLEJOHN. Crown 8vo, 196 pp. ... 1s.
- "Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.
- THE COMPARATIVE ATLAS.** By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index. **Fourth and New Edition.** ... 2s. 6d.
- "No Atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly*.
- THE BRITISH COLONIES AND DEPENDENCIES:** their Resources and Commerce. By M. J. C. MEIKLEJOHN, B.A. **Fifth Edition (Revised).** Crown 8vo, 95 pp. ... 6d.
- EUROPE:** its Physical and Political Geography. Page Map in Colour. By M. J. C. MEIKLEJOHN, B.A. 96 pp. **Second Edition (Revised)** ... 6d.
- AUSTRALASIA:** its Geography, Resources, Commerce, and Chronicle of Discovery. **Second Edition (Revised).** By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. ... 6d.
- ASIA:** its Geography, Commerce, and Resources. With Tables of Salient Distances, and a Double-page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. Crown 8vo, 96 pp. ... 6d.
- THE UNITED STATES:** their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. **Second Edition (Revised)** ... 6d.
- AFRICA:** its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. **Fifth Edition (Revised).** Crown 8vo, 76 pp. ... 4d.
- TEST QUESTIONS IN GEOGRAPHY.** Selected from Public Examination Papers, arranged by A. T. FLUX. Crown 8vo, 82 pp. ... 1s.
- These questions, 817 in number, have been selected from Papers set at the following Examinations:—Pupil Teachers', King's Scholarship, Certificate, London University, Oxford and Cambridge Junior and Senior, College of Preceptors, Joint Scholarship Board, Army Preliminary, Sandhurst, Civil Service, &c.

JUST PUBLISHED.

- THE GEOGRAPHICAL COMPANION.** Being Notes on Recent Geographical Progress and Territorial Change. With Contents, Tables, and Index. Arranged by M. J. C. MEIKLEJOHN, B.A. (Oxon.), F.R.G.S. ... net 6d.

HISTORY.

- A SCHOOL HISTORY OF ENGLAND.** By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner, Oriel College, Oxford. **Third Edition.** Crown 8vo, 470 pp + viii. ... 2s. 6d.
- "The book is clearly written and is not too full of details. The facts are lucidly expressed, and the maps and vocabulary of historical terms are exceedingly well done."—*The Educational News*.
- A SHORT HISTORY OF ENGLAND AND GREAT BRITAIN.** B.C. 55 to A.D. 1890. **Twentieth Edition.** Crown 8vo. ... 1s.
- A LARGE TYPE EDITION OF THIS BOOK IS ISSUED AT 1s. 6d.**
- OUTLINES OF THE HISTORY OF ENGLAND AND GREAT BRITAIN** TO A.D. 1890. **Sixth Edition.** Crown 8vo, 86 pp. ... 6d.
- THE BUILDING OF THE BRITISH EMPIRE (1497-1900).** With Notes on the Growth of Constitutional Government in the Colonies, Imperial Federation, Statistical Tables, Etymology of Colonial Names, Biographies of Empire Builders, and Five Double-page Maps in Colours. By ARTHUR T. FLUX. Crown 8vo, 254 pp. ... 2s.
- TEST QUESTIONS IN HISTORY.** Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 80 pp. ... 1s.
- These questions, 872 in number, have been selected from papers set at the following Examinations:—Pupil Teachers', King's Scholarship, Certificate, London University, Oxford and Cambridge Junior and Senior, College of Preceptors, Joint Scholarship Board, Army Preliminary, Sandhurst, Civil Service, &c.

ARITHMETIC.

- A SHORT ARITHMETIC.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. **Third Edition.** Crown 8vo, 196 pp. ... 1s.
- "It is one of the best short arithmetics ever produced."—*The Teachers' Monthly*.

NEW IMPORTANT TEXT-BOOKS.

ISSUED BY THE

University Tutorial Press.

A full and complete Course of Practical Work in Physics for use in Secondary Schools, Technical Schools, and Colleges.

PRACTICAL PHYSICS. By W. R. BOWER, A.R.C.S., Fellow of the Physical Society, Head of the Department of Physics and Electrical Engineering, Technical College, Huddersfield, and J. SATTERLY, B.Sc. Lond., A.R.C.S. **4s. 6d.**

Written in accordance with the Report of the Mathematical Association and the Official Syllabuses of the Oxford and Cambridge Local Examinations.

GEOMETRY, THEORETICAL AND PRACTICAL. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc., F.C.P. Part I. (Containing all that is required for the Junior Local Examinations.) **3s. 6d.**

A Treatise for use in Secondary Schools and Technical Colleges, Based on Potential and Potential Gradient.

THE SCHOOL MAGNETISM AND ELECTRICITY. By R. H. JUDE, M.A. Cantab., D.Sc. Lond., Head of the Mathematical and Physical Department, Rutherford College, Newcastle-on-Tyne. **3s. 6d.**

Contains Grammar, Analysis, Composition, Précis-Writing, and Paraphrase.

THE MATRICULATION ENGLISH COURSE. By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb. **3s. 6d.**

Suitable for London Matriculation, Society of Arts, and Civil Service Examinations.

TEXT-BOOK OF PRÉCIS-WRITING. By T. C. JACKSON, B.A., LL.B. Lond., and JOHN BRIGGS, M.A. Camb. **2s. 6d.**

This work includes Accidence, Elementary Syntax, Exercises, and Passages for Translation into French.

THE MATRICULATION FRENCH COURSE. By E. WEEKLEY, M.A. Lond. and Camb., Professor of French at University College, Nottingham. Third Edition. **3s. 6d.**

Containing Prose, Verse, Notes, and Vocabulary.

THE MATRICULATION FRENCH READER. By J. A. PERRET, Officier de l'Instruction Publique. **2s. 6d.**

An Introductory Course of Simple and Instructive Arithmetical Exercises.

THE PRIMARY ARITHMETIC. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. In Three Parts. With or without Answers. Parts I., II., **6d.** each. Part III., **9d.**

Rules and Examples.

CLIVE'S SHILLING ARITHMETIC. A Collection of Arithmetical Exercises for Class use. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. **1s.** (With Answers, **1s. 3d.**)

For use in Junior Classes.

THE JUNIOR ARITHMETIC. Adapted from "The Tutorial Arithmetic." By R. H. CHOPE, B.A., of Kingswood School, Bath. (With or without Answers.) **2s. 6d.**

A Complete School Course.

THE SCHOOL ARITHMETIC. Adapted from "The Tutorial Arithmetic." By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. (With or without Answers.) **3s. 6d.**

MATRICULATION LATIN CONSTRUCTING BOOK. By A. F. WATT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. **2s.**

Complete Catalogues, and Lists of Books classified for each of the following Examinations, may be had post free on application:—

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION Office, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE COMING EDUCATION BILL: A PRELUDE.

OUR columns during the last few months have been largely occupied with what is known as the religious difficulty in schools, and in attempting to summarize the pronouncements in the press of the various leaders of religious opinion we have indicated pretty clearly where, in our opinion, the true solution of the difficulty is to be sought. But, before the Bill is introduced and we are immersed in the troubled waters of party conflict, we shall do well to consider the broad principles involved, and see how far it is possible to combine the conflicting ideals of compulsory State-controlled education and respect for the individual conscience.

And first we may clear the ground by ruling the secularists out of court. It is true that this party is supported by the extremists of either side—by Dr. Stanton Coit and the Moral Instruction League, who hold that religion is a private matter with which the State has no business to intermeddle, and by the Bishop of Birmingham and the ultra-Anglicans who would prefer secular to undenominational teaching as the lesser of two evils. This position may be logical, but it is not practical politics. The vast majority of the nation are in favour of religious teaching of some sort, however widely they may differ as to the quality and the methods of imparting it.

Let us next consider the position of the opposite extreme—though, as we have shown, extremes may meet in their conclusions. Denominationalists appeal to the broad principle of parental rights. Their case is briefly this: A man is bound by Nature to provide education as well as food and clothing for the children whom by his own act he brings into the world; he has a right to educate his children in such a way as his conscience directs; the State has no right by taxation to take away from him the means of so educating them, and to force upon him the education which is approved by the majority, but to which he objects. If it is answered that the State enforces only the essential minimum of secular education, and provides religious education which satisfies the majority and which the dissenting minority may take or leave as they like, our supposed parent will rejoin: "You offer me a stone for bread.

Religion is not an extra, like music or dancing, but the very essence of *my* education, and a non-religious education is to me nothing, or worse than nothing—a training in godlessness."

But it is clear that this contention cannot be seriously maintained. Pressed to its logical conclusion it would involve the maintenance by the State of separate schools or departments for the hundred and odd religious sects enumerated by *Whitaker*. Ignorance is a danger to the community, and the State is bound to see that every child is educated, no less than clothed and fed. The education that it supplies must be in conformity with the best thoughts of the best minds and must be approved by the majority of the nation. All that the minority can insist on is that their children shall not be forced to learn anything that offends their religious convictions. That they are compelled to pay rates and taxes in support of what to them appears the propagation of false doctrine, if a grievance at all, is, it seems to us, an irremediable grievance: it is part of the incidence of citizenship. In the same way the Quaker pays for the support of an Army and the Faith Healer pays for officers of health. If Peculiar People disapprove national schools, their remedy is to establish schools of their own or expatriate themselves.

If we are agreed to eliminate the two extreme parties, the problem is greatly simplified, though still complicated by existing conditions produced by previous legislation. The appeal, on all sides, is to the parent; but, unfortunately, a *plébiscite* of parents is not possible, and amid the din of voices the parent alone has not made his voice heard. Yet surely this silence is significant and can hardly be misinterpreted. It means that the vast majority of parents are perfectly satisfied with the teaching given in provided schools—what used to be styled "Board-School religion"—and, as far as the teaching is concerned, desire no change.

Mr. Birrell, when asked what he meant by undenominational teaching, answered: "Dr. Temple's Rugby sermons"; and the recently published "Life" reminds us of the memorable sentence of Dr. Temple, uttered when he was still an Inspector of Schools: "It is a mere exaggeration to say that religious teaching imperatively demands a denominational system; it is not true in any denomination; it is least of all true in the Church. To lay so much stress on the doctrinal teaching of children is a mere mistake." As far as parents are concerned, we may safely affirm that undenominational teaching will satisfy ninety-nine out of every hundred.

But the trustees of such schools, in whom the property is vested, have still to be dealt with; their views are not the views of parents—and here lies the *crux* of the problem. Such a radical solution as has been adopted in France is repugnant to our national temper, and we must look to some compromise between vested interests and a purely State system of education. What exact form this compromise should take is a detail that we need not discuss till we have the Bill before us. All that need here be said is that anything in the nature of confiscation is inconceivable, and it should not be difficult to conclude a bargain between purchasers who have expressed their readiness to pay the full market price and vendors who, if they refuse to deal, will be left with a white elephant upon their hands. As to the market value we may venture one remark. The claim that has been put forward by some Churchmen that, if they surrender their schools, they must in justice be reimbursed for the sum total that they have expended on building (thirty-five and a half millions is the latest estimate), is wholly inadmissible. They have enjoyed the usufruct for years, and the railway companies and farmers who have subscribed in order to escape a School-Board rate have already had their *quid pro quo*. In this connexion another sentence of Dr. Temple is most apposite: "The Council of Education have held firmly to a definite principle. Promoters of education were made clearly to understand that the public money was never given to save their pocket, but to do something which they could not do."

Lastly, as to "free entrance," which is likely to be the standard round which there will be the hottest rally of opponents of the Bill, we hope that, if conceded as a political necessity, it may be reduced to the narrowest proportions; and we say this not as opponents to sectarian teaching, but because we are convinced that any such concession is certain to prove illusory and in practice simply an abridgment of the none too long school hours. The *Simultanschulen* of Germany are a

warning, not an example. The religious tone of the school will be determined by the regular staff, and will not be perceptibly modified by the half-hour's lesson given at the beginning or end of the day by the casual visiting teacher, be he cleric or layman. For two days out of seven the school buildings are unoccupied, and, if on these days they are put at the disposal of the various denominations interested, we hold that every just claim will have been satisfied.

To revert to our main contention, we would endorse the advice of Matthew Arnold to managers of schools contained in his report for 1869:

Let them make the main outlines of Bible history, and the getting by heart a selection of the finest Psalms, the most interesting passages from the historical and prophetic books of the Old Testament, and the chief parables and exhortations of the New a part of the regular school work. This could raise no jealousies; or, if it raises some, let a sacrifice be made of them for the sake of the end in view. Some will say that what we propose is but a small use to put the Bible to; yet it is that on which all higher use of the Bible is to be built, and its adoption is the only chance for saving the one elevating and inspiring element in the scanty instruction of our primary schools from being sacrificed to a politico-religious difficulty. There was no Greek school in which Homer was not read. Cannot our popular schools, with their narrow range and jejune alimentation in secular literature, do as much for the Bible as Greek schools did for Homer?

CORRESPONDENCE.

TEACHERS AND THEIR SALARIES IN LONDON.

To the Editor of The Journal of Education.

SIR,—The writer on the above subject in your March issue stated "that the London County Council offers to assistant masters who are properly qualified a salary of £100 a year, rising by regular annual increments to £200 a year," and that similarly the salaries of assistant mistresses begin at £90 and rise to £150. It is also added "that these increments of course might be withheld, but practically they are automatic." These automatic increases only go to a certain point. Assistant masters cannot advance beyond £150 per annum or mistresses beyond £130 unless "within two years of attaining that salary the Education Committee recommend his or her advancement after report from its officers based on a review of the whole of the teacher's service." What this means may be judged from the fact that when introducing the new scheme the London County Council Education Committee stated: "We contemplate that a considerable number will in reality not be allowed to pass beyond the lower maxima, and this will also operate so as to reduce the cost of the scheme."

It is also true that the salaries of Grade III. head masters range from £200 to £400 a year, and of Grade III. mistresses from £150 to £300 a year; but when the new salaries scheme is in full working order (many years hence) 216 schools will be in Grade I., 436 in Grade II., and 193 in Grade III. The 216 head teachers of Grade I. schools who combine the duties of head and assistant teacher will be in receipt of the salary of an assistant teacher *plus* £10.

The chances of promotion in London are few. In July last 75 assistant masters were selected as suitable for promotion, but only 14 have as yet obtained headships.—Yours, &c. F. R. JOHNSON.

Assistant Secretary, London Teachers' Association.
9 Fleet Street, E.C., March 12, 1906.

HISTORICAL CHARTS.

To the Editor of The Journal of Education.

SIR,—One of the chief difficulties in the teaching of history is that, from the nature of the subject, it is very hard to illustrate by chart or diagram, although the necessity for appeal to the sense of sight by some sort of graphic representation is very great, especially where a connected series of facts have to be remembered. Every practical teacher of history knows that his class will soon lose almost all recollection of the earlier periods in the interest of a new one unless he devote much time that can ill be spared to constant revision.

This difficulty is largely obviated by "Blake's Historical Charts," published by Bacon & Co. I write to recommend their use because I find that very few teachers know how valuable they are, both for revision and for gaining the general view of a period. They are clearly coloured, and can be used with any text-book. I feel certain that in the newer method of historical teaching history lessons without charts will be considered as unscientific as geography lessons without maps.—Yours, &c.

The High School, Leamington,
March 17, 1906.

M. P. WILLCOCKS.

[We have already called attention to these historical charts.—ED.]

COLLOQUIAL LATIN.

To the Editor of The Journal of Education.

DEAR SIR,—Some time ago, in the *Morning Post*, there was a correspondence advising the teaching of Latin by a more conversational method than is usually adopted. Could you, or any of your readers, kindly suggest any book which would be helpful towards the following of this system?—Yours faithfully,

AN ASSISTANT MISTRESS.

P.S.—One feels that such a method, employed in moderation, should add considerably to the interest taken by pupils.

March 17, 1906.

LEFT-HANDEDNESS.

To the Editor of The Journal of Education.

SIR,—A correspondent asks whether to check left-handedness is to induce hesitancy of speech. Allow me to say that I regard this danger as purely imaginary—a sample of the *post hoc propter hoc* fallacy. Of my *Geschwister* two are right-handed and two left-handed. The left-handed, of whom I am one, were checked, but not the slightest harm has come to brain or speech; and, as we are now in the fifties, there has been time for proof.

I have always been glad of my use of the left hand. It has relieved my right hand and side and given me muscular balance. My left arm is still the stronger: instinctively I tackle a heavy weight with it. For golf, tennis, cricket my left hand is more effective. Billiards I can play best with the right hand. My mind hesitated about ping-pong, but decided for the right hand. Many things at the table and toilet I can do equally well with either hand. I can throw a ball further with my left hand. Altogether I am better off than a right-handed man. The shampooer at a Turkish bath reveals what the exclusive use of the right hand means: his left hand has scarcely any power. Of course, I am glad that I was prevented from drawing and writing with my left hand, as I tried to do. One seeks to pass through life without attracting attention, and a left-handed person at table or a speaker who shakes his left forefinger at me always looks singular.—Yours very truly,

March 12, 1906.

J. SPENCER CURWEN.

SUGGESTIVE QUESTIONING.

To the Editor of The Journal of Education.

SIR,—I do not know if you have noticed in "Mrs. Brookfield and her Circle" an amusing story told by Mr. Brookfield of an experience he had while Inspector of Schools. A class of children showed good knowledge of the Sermon on the Mount, but when asked whose words they were the class was silent. The vicar said they did not understand Mr. Brookfield's way of putting the question. Mr. Brookfield led the class up to the point in several ways. He wrote a word on the black-board and asked whose writing that was. He asked who wrote Paul's Epistles. The answer in both cases was prompt, but the analogy was not seized. Visitors, vicar, teachers, and inspector grew uncomfortable. At last the vicar asked leave to put the question in his own way. "Before you reply," he said, "make an obeisance, and think of Him at whose name every knee shall bow." Then the vicar asked the question, and there was a triumphant answer. Says Mr. Brookfield: "I was put aside as an incompetent Inspector."—I am, Sir, &c.,

London, January 9, 1906.

J. SPENCER CURWEN.

THE GODOLPHIN AND LATYMER GIRLS' SCHOOL, HAMMERSMITH, W.—An interesting ceremony took place at Hammersmith on March 1, when the new premises of the Godolphin and Latymer Girls' School were opened by the Duke of Leeds. The Godolphin School for Boys was opened in 1856, and helped to supply the educational needs of Hammersmith until the end of the last century, when the trustees were obliged to close it owing to the severe competition due to the proximity of St. Paul's and the Latymer Upper School. As a girls' public secondary school with moderate fees was felt to be a distinct need in Hammersmith, the trustees of the Godolphin and of the Latymer Foundation agreed to combine forces and to build a new school for girls on the old Godolphin site. The new buildings, which have been ably designed by Mr. J. H. Greenaway, comprise twelve large class-rooms, an assembly hall, library, gymnasium, cookery room, and three science laboratories, and the equipment throughout leaves little to be desired. The school stands in four acres of ground, so that there will be every facility for outdoor exercise and games on the premises. The Duke of Leeds, in his opening speech, gave an interesting account of the foundation of the charity by his ancestor, Sir William Godolphin. Other speakers were: Thos. Chamberlen, Esq., J.P. (Chairman of the Governors), the Lord Bishop of Worcester, Lord Winterstoke (Governors), Sir William Bull (Member for Hammersmith), and Miss Roberts, Head Mistress of the Bradford Girls' Grammar School, under whom Miss Clement, the Head Mistress, worked for many years. The school opened with 67 pupils in temporary premises in May, 1905, and now, at the end of the first year, registers 210 pupils.

REVIEWS AND MINOR NOTICES.

Henry Sidgwick: a Memoir. By A. S. and E. M. S. (12s. 6d. net. Macmillan.)

"An autobiography mainly in the form of letters" would be a cumbrous, but more exact, title. The editors have performed a difficult task with excellent taste, judgment, and discretion. It would seem an easy matter to string together a number of letters and documents with the necessary explanations, comments, and connecting links; but those who know the mass of correspondence that Sidgwick left behind him, the variety of his interests, and the multitude of distinguished men in Church and State and in the world of science and letters with whom he was brought into intimate relations, will appreciate not only the labour involved in selecting and arranging the materials, but also the parsimony which, by excluding all that was not strictly relevant to the portrayal of character and conduct, has brought the whole within the compass of one solid volume.

There is a letter of Sidgwick which would seem almost to have dictated the form of the "Memoir," and, at any rate, supplies a sufficient vindication. Sidgwick was all his life an omnivorous novel reader, but he writes to his sister (*aet.* thirty-four) that his taste is changing in the direction of biography:—

Novels weary me, because they are not *true*—I don't mean in a vulgar sense, but true to human nature. Now Biographies are true, at least the letters in them: the chief objection to them is that they are stuffed with facts that one wants to forget. I hear the Hare book ("Memorials of a Quiet Life") is very good; and the second volume of Forster's "Dickens," though there is too much in it about another eminent man.

In the "Memoir" before us there are few, if any, facts that one wants to forget; and the joint authors, eminent as they both are, keep studiously in the background. We gather in passing that Mr. Arthur Sidgwick was at one time a master at Rugby, and involved in the Hayman *esclandre*, and that Mrs. Sidgwick was the joint founder of Newnham College. That is all.

The "Memoir" touches so many different spheres of interest—ethics and religion, education of women and at the Universities, politics theoretical and practical, economics and literature (we name these in their order of importance)—that it would require half a dozen reviewers to do justice to it. But in this diversity of pursuits there is revealed, from beginning to end, a singular unity of purpose. Sidgwick was, from the time that he arrived at years of discretion, a philosopher in the original sense of the word—a lover of wisdom, a seeker after truth; and, though he followed false trails and was misled by lying prophets, he never swerved from his whole-hearted allegiance. In 1861 Dr. Temple offered him a mastership at Rugby, and from mixed motives (which he analyzes with his usual acute introspection) he accepted; but straightway repented: "I *know* my vocation in life to be, not teaching, but study." For three years and more he devoted himself to Oriental studies, thinking to find in a comparative study of religions "the key to all the mythologies"; but he soon discovered that a mastery of Hebrew and Arabic would only turn him into a specialist and prevent his philosophizing. So he closes his Koran and turns to Kant.

The last *ignis fatuus* (for so we cannot help regarding it), which he pursued to the end, was spiritualism. With Sidgwick it was a sort of forlorn hope. Other proofs of immortality, authoritative, historical, and philosophical, he had rejected one by one, and the last remaining chance seemed to him to lie in those obscure phenomena which, by a question-begging epithet, are vulgarly known as spiritualistic. This portion of the life is in one way the most disappointing. We cannot help admiring the self-devotion, the dogged perseverance, the perfect candour of the searcher; but as far as here appears the positive results are *nil*. If we may venture to sum up crudely Sidgwick's final attitude towards spiritualism as gathered from his letters, he would have said: "I allow that nine-tenths of the manifestations are wholly subjective and that all the professional mediums that I have seen are impostors; but the remaining tenth I cannot explain by any known laws of mind or matter, and I shall continue my investigations till I have got to the bottom of this tenth." His presidential address to the Psychical Society presents a somewhat different aspect of

thought ; but a letter to F. Myers seems to us a truer revelation of his inner mind.

As for spirit-rapping, I am exactly in the same mind towards it as towards religion. I believe there is something in it—don't know what ; have tried hard to discover, and find that I always paralyze the phenomena. My taste is strongly affected by the obvious humbug mixed with it, which at the same time my reason does not over-estimate. John King [a *soi-disant* spirit] is an old friend ; but, as he always came with the dark and talked at random, our friendship refrigerated. Still, I shall be glad to accompany you on any favourable opportunity.

We have dwelt too long on the *Schatten-seite* ; but, as Goethe says : "Wo viel Licht ist, ist starker Schatten," and in this case the shadows serve only to bring out the *lumen siccum*, the pure light of the character. It makes one think better of human nature to find men who were poles asunder from him in creed—men like Archbishop Benson, Bishop Gore, Bishop Talbot, Mr. Wilfrid Ward—recording their unqualified testimony to the purity and nobility of his character.

It is too early to determine Sidgwick's place in the history of English thought, and to form even a provisional estimate would far exceed our powers. His genius was not architectonic, and he founded no system. In analysis he was unrivalled, nor was his simply destructive criticism. With unerring judgment he discussed both the strong and the weak points of his precursors in ethics and in politics, and, what is the rarest of all gifts with philosophers, he was content to acknowledge that there were problems he had failed to solve.

On Sidgwick as an educator it is easier to pronounce judgment. To his gifts as a lecturer an eloquent tribute was paid in this journal at the time of his death ; and between his self-estimate that teaching was not his vocation and Prof. Maitland's testimony that he was a supremely great teacher the contradiction is only apparent. His open-mindedness, his suspension of judgment, his dislike to laying down the law, his paradoxicality would have been hindrances, not helps, to him as a schoolmaster ; and even at the University these qualities were unappreciated by passmen, but to keener and riper intellects he must have been the most stimulating of teachers.

As an educational reformer, few, if any, will dispute his pre-eminence. Newnham College, with its Sidgwick Hall, attests the part he bore in the movement for the higher education of women. The resignation of his Fellowship was the most effectual of all protests against the imposition of religious tests. In the development of the Moral Science Tripos and the re-constitution of the Classical Tripos he was the protagonist. To his essay on "The Theory of a Classical Education" we have recently referred ; and, although in a letter he plays the *advocatus diaboli*, and criticizes it as "inconsequent, ill arranged ; stiff and ponderous in style ; nothing really striking or original in the arguments," we can only repeat that in the forty years that have since elapsed no sounder statement of doctrine has, to our knowledge, appeared.

To discuss the place that Sidgwick will take as a letter-writer would need a separate article, and we can only touch very briefly on the style of the letters. The editors observe that they best exhibit the thoughts, aims, and character of an outwardly uneventful life ; and they add that the letters sufficiently resemble his talk to bring his personality vividly before those who knew him, and in some measure before the reader to whom he was personally unknown. The first observation we can fully endorse. The most striking characteristic of the letters is their perfect candour. With his intimate friends Sidgwick has no concealments ; he reveals his inmost self even when aware that it may be only a passing phase. On the other hand, there are but few traces in the letters of that Socratic irony, that Horatian satire, that *malice* (in the French, not the English, sense of the word) which gave a peculiar zest and charm to Sidgwick's conversation. Sir L. Stephen singles out Sidgwick and Henry Smith as the best talkers among University men of his generation, and says it is beyond his power to differentiate their qualities as talkers. But there was one obvious distinction : Henry Smith was a wit, Sidgwick was a humourist. There are in the letters flashes of humour—as, when, *à propos* of University examinations, he speaks of "the danger of exhausting our energies in the improvement of all minds except our own"—but they are rare. Sidgwick's friends could recall dozens of *mots* as apt and pointed as this which were lavished in conversation. A Girton student addressed him, at an "at

home," with : "I am so glad to meet you ! I do want to know what you thought of my last essay !" Not knowing her from Eve, Sidgwick stammered a moment, and then said : "To be perfectly candid, I don't think that you quite did yourself justice." When "Dodo" was the talk of the town, the Archbishop said to him : "You mix in literary society. Tell me, Henry, what are they saying of my son's book ?" Sidgwick—stroking his beard and looking out of the corners of his eyes : "Well, Archbishop, they do say that you wrote it yourself." We may be sure that Dr. Benson, who coined the striking phrase "the saving salt of humour," appreciated the joke. It is possible for a reader of the letters to conceive of Sidgwick as an English Amiel. To those who knew him the comparison will seem grotesque.

The Aeneid of Virgil. With a Translation by CHARLES J. BILLSON, M.A. 2 vols. (30s. net. E. Arnold.)

Ἐπὶν ἀνιχάων—an English "Aeneid" is one form in which the quest of the Grail presents itself to scholars and poets ; and the cry is still : "Italiam sequimur fugientem"—that Italy "whose margin fades for ever and for ever as we move." It is strange that Tennyson—whose genius is far more akin to Virgil than to Homer, and who has given us the finest appreciation of Virgil in any language (Dante is a worshipper, not a critic)—should not have included Virgil among his "Experiments." Had he set himself to the task of translating the "Aeneid," there can be little doubt that he would have chosen blank verse as the medium, and still less doubt that he would have justified the choice.

There have in recent years appeared two translations in this form—one by Dr. Kennedy and one by Mr. Rhoades. The first is still of use as the interpretation of a fine scholar, and is quoted as such in Kennedy's school edition, but it has little claim to rank as poetry. The opening lines may serve as a specimen :

Much tossed by force celestial he on land
And deep, for cruel Juno's mindful wrath,
Much too in war endurant, ere he might
Stablish a city, and his country's gods
Bring in to Latium ; whence the Latin race
And Alban sires, and walls of lofty Rome.

Mr. Rhoades is a scholar and a poet as well. His verse has rhythm and variety, and eighteenth-century classicalisms such as "force celestial" and "in war endurant" he abominates :

Much tossed about on land and ocean he
By violence of the gods above, to sate
Relentless Juno's ever rankling ire,
In war too much enduring, till what time
A city he might found him, and bear safe
His gods to Latium, whence the Latin race
And Alba's sires, and lofty towering Rome.

Last in the race comes Mr. Billson—

Long tossed on sea and land
By Heaven's rude arm, though Juno's brooding ire,
And war-worn long ere building for his gods
A home in Latium : whence the Latin race,
The lords of Alba, and high-towering Rome.

To adjudicate on one sample taken at random would indeed be judging a house by a brick, but we may say without prejudice that in these lines Mr. Rhoades distinctly bears the palm. "Rude arm" is a strained expression, and "build a home" misses the literal force of *inferret*, the actual carrying of the *penates*. All three translations miss the exact significance of *dum condaret*, "in founding."

The passage, however, suggests one criticism of general application. Mr. Rhoades has seven lines against four and a half of Mr. Billson. Mr. Billson's version faces the text, and his boldness in inviting this line-by-line comparison is most commendable, but he suffers grievously by stretching himself on this Procrustean bed. To force six feet into five, and that in an analytic language, is a sheer impossibility. To take an extreme instance :

Grim-knit with bolts of iron War's temple-gates
Close-barred shall be, while hellish Rage within
Ug on a grisly pile of arms, his hands
Brass-bound behind him with a hundred knots,
Shall roar terrific from blood-boltered mouth.

Here Mr. Rhoades is at his best, and gives us a true replica of

Virgil, while Mr. Billson's is but a far off echo :

War's iron gates
Stand closed. Within, upon her savage arms
Inhuman Rage will sit, by thousand links
Of brass chained back, and snarl with bloody fangs.

Let us take a more favourable specimen of Mr. Billson's work, superior this time, in our judgment, to Mr. Rhoades's, which space forbids us to quote :

O relics sweet, while God and Fate were kind !
Receive my spirit, and free me from this woe !
I have lived my life, and run my destined course :
Now underground my mighty shade will pass.
I built a famous city : I saw it rise ;
Avenged my lord, my cruel brother punished :
Happy, too happy, ah ! if Dardan keels
Had never touched our shore !

She spake ; and kissed
The bed, and, Shall I die thus unavenged ?
Yet let me die, she adds. Thus, thus I go
Gladly to darkness. Dardan ! watch this flame
And with thee take the curse of Dido's death.

But for the bitter constraint which compresses "Let the Dardan glut his cruel eyes on this my pyre as he sails the deep" into "Dardan ! watch this flame," the lines are admirable, and the translation throughout is at a high level. For one thing, the Latin order of words is skilfully preserved, and the verse is harmonious, though lacking in variety—for instance, the hypermetric line in the above is almost unique.

Paper, print, and binding leave nothing to be desired. It is a rare pleasure in these days to see an ancient classic so worthily presented, "*Sosiorum pumice mundum*."

(1) *The Poetical Works of William Blake. A New and Verbatim Text from the Manuscript, Engraved, and Letterpress Originals, with Variorum Readings and Bibliographical Notes and Prefaces.* By JOHN SAMPSON. (10s. 6d.)

(2) *The Lyrical Poems of William Blake.* Text by JOHN SAMPSON ; with an Introduction by WALTER RALEIGH. (2s. 6d.) (Clarendon Press.)

(1) Mr. Sampson has restored the original and authentic text of Blake's lyrics with an exactitude and completeness which leave nothing to be desired. "Improvement makes straight roads," says Blake ; "but the crooked roads without improvement are the roads of genius." Most of Blake's admirers have felt constrained to improve his crookedness : Mr. Sampson has restored his genius to its natural waywardness, and the result is what all unprejudiced persons would anticipate—a version of the songs more beautiful, because more individual and more spontaneous, than any contained in the corrected and grammaticalized editions ; a text which, because it was the first, is final. Here and there new readings have been discovered which give the stanzas or even the poem they occur in a wholly new significance.

To find the Western path,
Right thro' the Gates of Wrath
I urge my way ;
Sweet Mercy leads me on
With soft repentant moan :
I see the break of day.

The war of swords and spears,
Melted by dewy tears,
Exhales on high ;
The Sun is freed from fears,
And with soft, grateful tears
Ascends the sky.

In all previous editions, Mr. Sampson tells us, the word "Mercy" in the fourth line has been replaced by "Morning."

Sweet morning leads me on :
With soft repentant moan
I see the break of day.

This is next door to nonsense : but the poem, as Blake wrote it, has a meaning. After a night of storm, the sun has arisen like a conqueror ; the elements grow tranquil before him, and a soft shower falls, adding new lustre to the victorious light. Even so, the reign of violence and wrath passes away before the deeper subtler virtue of mutual forgiveness and repentance. Here, indeed, expressed with a gem-like precision and perfectness, we have the central thought, the ideal and inspiration, which gave Blake the prophet's fervour as well as the poet's joy.

The restoration of the true reading here would in itself go far to justify the arduous labour which Mr. Sampson has carried so admirably to its conclusion. Another highly interesting novelty—published by the courtesy of Mr. A. G. B. Russell—is an effusion bearing the title : "To my Dearest Friend, John Flaxman, these lines." The following are of great importance for the understanding of Blake's inner life :—

Now my lot in the Heavens is this : Milton lov'd me in childhood
and shew'd me his face ;
Ezra came with Isaiah the Prophet, but Shakespeare in riper years
gave me his hand ;
Paracelsus and Behmen appeared to me ; . . .
The American War began ; . . . Then the French Revolution com-
menc'd in thick clouds.

It is interesting to note that the Bible and Shakespeare occupy the central place in Blake's regard. They were, in fact, the dominating influences in the formation of his style ; and it is a little curious that Mr. Sampson, in his estimate of Blake's debt to earlier literature, should have mentioned neither of them. He gives, we think, far too much prominence to the influence of Milton. In spite of Blake's intimacy with Milton's work and love for its author, his own manner both of conception and expression has comparatively little in common with Milton's.

(2) Mr. Sampson's text of the "Lyrical Poems" has also been issued by the Clarendon Press in the form of a delightful pocket volume, habited in green and gold, which no one who has seen it can fail to covet ; and to this Prof. Raleigh has contributed an introduction which gives, in its way, almost as keen a pleasure as the poems themselves. And perhaps the principal source of pleasure in this most delicate piece of criticism and appreciation is the frequency with which the poems are quoted. It is as if Prof. Raleigh had walked the round of Blake's enclosure, plucking here and there a flower, and then at the last arranged them so as to enhance each other's beauty and awaken the desire for closer intimacy with the garden in which they grew. It has been objected that Prof. Raleigh has not given a consistent summary of Blake's mental position ; that he has declared himself both for and against the prophetic books ; that he denies in one place what he asserts in another. The objection is not really relevant. All who love Blake will feel gratitude to Prof. Raleigh for this preface, because after they have read it they cannot fail to love him better than before.

Cicero : Pro Sexto Roscio Amerino. By J. C. NICOL.
(Cambridge University Press.)

This little book is, first of all, a proof that the Head Master of Portsmouth Grammar School believes in annotated editions of the classics for boys. He has based his notes on practical experience in class teaching and the actual reading of the speech with a form ; and he publishes them with the clear intention that they should be put into the hands of the young. We look then curiously to see what kind of notes he supplies. Occasionally he deals at some length with a point of grammar ; but in general he is content with explaining, in the shortest possible way, often by a mere translation, difficulties insuperable to a boy without help, or matters of scholarship as to which inexperience would go astray. The tendency of the day seems to be in favour of short, crisp notes, not weighted with many references or swollen with miscellaneous learning. Such is the character of those which Mr. Nicol gives us. But, if his commentary looks slight, it is based on a familiar knowledge of Ciceronian Latin. And he has found leisure to make himself acquainted with recent labours on his subject, from the light-winged soarings of the *Classical Review* to Mr. Clark's collation of Poggio's manuscript. Only of the *Clausesets* have we discovered no mention in his pages : perhaps because he is not deeply impressed with the value of this modern aid to criticism. If we set down here a few slight pencillings made in going through his work, it is from no wish to carp at what we regard as likely to be a most serviceable school-book, but with all good will towards it. Our marginal scrawls expanded run somewhat thus :—Page ix : Why *Caius Metellus*, seeing that on page xii we have *Gaius Gracchus* ? § 6 : *quoniam . . . invaserit* ; the mood deserved a word of comment. § 25 : *intelligitur*. Not, we think : "every one knows," but rather as Landgraf, who explains "i.e. from the way in which Chrysogonus proceeded with the envoys." Cicero now arrives by inference at what he before (§ 21) merely stated as fact. So the German translator Oberbreyer has understood : "Man sieht jetzt, was ich schon oben behauptete." § 27 : *filiam*, being part of the manuscript reading, should not be printed in italics. § 46 : *senex ille Caecilianus*. In writing about Caecilius our editor has relied on Landgraf, who makes the playwright flourish c. 166 B.C. But the latest and best teaching is that Caecilius,

surviving Ennius only one year, died in 168 B.C., and that the time of his greatest literary activity was some twelve years earlier, i.e. 179-180 B.C. And Chaerestratus, the son in the play, must have been not "illegitimate," as Mr. Nicol says, but *ὑποβολιμαῖος*, "supposititious," which is a very different thing. § 54: *commode* is simply "to the purpose." "Some plausible invention" is too far from the mark. § 57: The editor refers to "the French *dans la semaine des quatre jeudis*" (sic). Littré gives only *la semaine des trois jeudis*; the difference of number is, however, less worthy of remark than the squandered capital. § 59: *ille aut ille*. Young students should have been admonished of the rareness of the expression; compare Meader, "The Latin Pronouns" (1901), page 106. § 84: *viderimus*. In explaining the tense why does Mr. Nicol ignore the received view (Roby, Kühner, Landgraf) that the future perfect in this case suggests a brief postponement? § 98: *Automedontem*. Boys would be interested in learning that Automedon for "driver" has its parallel in the English "jarvey"; although, if it be true that the original Jarvis was hanged, the appellation is less complimentary. § 104: *neque enim accusatore muto, &c.* We cannot believe that *muto* applies to *teste* as well as to *accusatore*. § 133: an *authepsa*, they surmise now, was a kind of samovar. Let us end with a hope that the scantiness of our own notes will be taken to indicate the goodness of Mr. Nicol's, and that many will avail themselves of the instruction that he offers. So will education be served.

Britain's Sea Story, B.C. 55-A.D. 1805. Edited, with an Introduction on the Building of the Ship, by E. E. SPEIGHT, B.A., F.R.G.S., and R. MORTON NANCE. Illustrated from Paintings and Designs by R. MORTON NANCE. (2s. 6d. net. Hodder & Stoughton.)

This book should be in use in every elementary and secondary school throughout the Empire, that our boys and girls may learn to what a glorious heritage of duty and heroism they are born. It is admirably got up, with good, clear print, and profuse illustrations showing the types of vessels from the earliest period to Trafalgar. There are fifteen full-page illustrations of famous events. The stories are given in the words of well known classical writers—King Alfred, Hakluyt, Southey—so that the book is happily free from modern vulgarisms. It is interspersed with ballads and poetry which should be known to every boy and girl, beginning appropriately with "Ye Mariners of England!" Of especial interest at this time is "A Letter from Will Adams in Japan, 1611." It was this Will Adams who first taught the Japanese the art of building vessels after European plans. He died in Japan in 1620. Of the Japanese he says: "The people of this island of Japan are good of nature, courteous above measure, and valiant in war." Frequent mention is also made of the kindness of the Spaniards to their victorious enemies. Kindness to the victor is far less common than consideration to the conquered.

Stories from Wagner. By J. WALKER MCSADDEN. (1s. 6d. Harrap.)

The author gives, in the order of their composition, the stories of Wagner's operas, in simple and direct style, avoiding, where possible, "the involved plots and symbolical actions of the operas." We think, however, that in translating "Götterdämmerung" as the "Downfall of the Gods" the writer is mistaken, and has too much lost sight of the symbolism of the original. The qualities symbolized by the characters are not destroyed—they are only cast into the shade by a brighter light, and the usual translation, "Twilight of the Gods," is not only more poetic, but more correct. The stories, nevertheless, are charmingly told, and the illustrations are excellent.

Stories from Greek History: Retold from Herodotus. By H. L. HAVELL, B.A. (1s. 6d. Harrap.)

These stories from the Father of History are told in good English, and there is a useful "pronouncing and explanatory index" at the end of the volume.

Captain John Smith. By A. G. BRADLEY. (2s. 6d. Macmillan.)

Facing the title page is: "The Portraiture of Captain John Smith, Admiral of New England," and a most genial, humorous, and kindly man is therein depicted. Beneath are the lines:

These are the Lines that shew thy Face; but those
That show thy Grace and Glory brighter bee:
Thy Faire Discoveries and Fowle Overthrowes
Of Savages, much Civilized by thee.
Best shew thy Spirit, and to it Glory Wyn:
So, thou art brass without, but Golde within.

And the verse really describes the colonizer of Virginia. His life was full of curious adventures, and is written sympathetically, although the style is somewhat lacking in spirit and brightness.

"Black's School Series."—*Summary of English History*.

By NORMAN L. FRASER, B.A. (2s. A. & C. Black.)

The author describes his book as a "*rade mecum* for the young student of history." The teacher, too, will find it of real use. It is a "definite contribution to method," and has been well and carefully thought out. There is a differentiation of type for ecclesiastical affairs, which should prove a great help; and the portraits are admirable.

There are also summaries of Indian, colonial, and foreign events. Altogether an excellent book, well worth the price.

"The Complete Historical Readers."—*The Story of our Native Land and Empire*, Book VI. (1s. 6d. Blackie.)

Well written, and impartial and kindly in tone, as books for the young should be. It has good maps and illustrations and an excellent summary. It can be warmly recommended.

History of England. In Three Parts. Part I.: B.C. 55 to A.D. 1485. By GEORGE CARTER, M.A. (Relfe Brothers.)

This book is intended for students of special periods who are candidates for examination. It is well adapted for its purpose, being provided with numerous genealogical tables, summaries, and a good index. It is also conveniently broken up into sections and paragraphs.

"Jack's Concentric Series."—(1) *Our Island's Story*. Step Four: *The Making of Britain*. Compiled by THOS. CARTWRIGHT, B.A., B.Sc. (1s. 6d.) (2) *The Making of Europe*. (1s. 8d.) (T. C. & E. C. Jack.)

(1) There is a partisan tone about this book which jars on the reader, and a "Sois mon frère ou je te tue" air not suited for children. Chapter VII. deals with "Our Fellow Britons—Scotch, Irish, and Welsh," with sections headed "Scotland for Ever!" "God, save Ireland!" "Gallant Little Wales," with a Scriptural exhortation to them not to quarrel. The writer preaches cosmopolitanism, and tells the children that "history teaches us to hate war and to set up Courts of Arbitration, which will abolish both war and strikes." Does history teach us that? We fear not. The volume has good illustrations (some coloured), and portraits of the great poets and writers, suprisingly good, considering the price of the book.

(2) A history of the rise of modern Europe, necessarily much condensed. On page 8 is a diagram of "The Tree of Tongues, showing the Great Aryan Family of Languages." But from this Aryan tree the Semitic and Turanian tongues are made to spring with all their various branches. This is very misleading, and the text on page 9 is not as clear on the subject as it ought to be, although the distinction between the Aryan and Semitic races is noted. The book is illustrated, and has several useful maps.

Scenes from old Playbooks arranged as an Introduction to Shakespeare. By PERCY SIMPSON. (Clarendon Press.)

The title is somewhat misleading; for the "old playbooks" are mainly Shakespeare's plays—there are fifteen of them, against five from Fletcher, Ford, Massinger, Heywood, and Marston respectively—and Shakespeare is left to introduce himself. But it is only with the title that we have any quarrel. The scheme of the selections seems to us excellent, and we hope it will be largely used in schools not only as a class book, but as an acting copy. Undoubtedly a whole play is too heavy a burden to lay on any junior form; they cannot carry the whole story, especially when two or three plots are interwoven, in their heads. Still less follow the development and interplay of characters; and many scenes can be detached, having a unity of their own apart from their connexion with the greater whole. There are no notes, which from this point of view is all to the good, only a glossary and stage directions. An introduction gives a vivid account of the Shakespeare theatre and the acting of a Shakespeare play. The note on the verse had better have been omitted. To give in barest outline Shakespeare's prosody in a couple of pages is an impossible task. Thus in the typical lines selected for analysis it is not noted that there is a hypermetric line; and, according to Mr. Simpson's definition,

"Under the blossom that hangs on the bough"
would be a normal blank verse.

(1) *Elementary Modern Geometry*. Part I. By H. G. WILLIS, M.A. (2s. Clarendon Press.) (2) "University Tutorial Series."—*Geometry, Theoretical and Practical*. Part I. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. (3s. 6d. Clive.) (3) *The Elements of Geometry*. By B. ARNETT, M.A. (In three parts. 2s. each part. Simpkin.) (4) *Elementary Plane Geometry*. By V. M. TURNBULL. (2s. Blackie.) (5) *A School Geometry*. Part VI. By H. S. HALL, M.A., and F. H. STEVENS, M.A. (1s. 6d.; complete book, 4s. 6d. Macmillan.)

(1) This promises to be a very thorough, if somewhat lengthy, introduction to plane geometry, the volume before us, of 230 pages, not extending beyond Book I. of most modern text-books. The first chapter on experimental and practical geometry is a distinct advance on the corresponding chapters of several books published two years ago. Everything in it bears on the work that is to follow, and there is no pattern drawing. In the theoretical chapters, several familiar propositions disappear from the adopted course. Euclid I. 13 and 14 are considered as obvious, but I. 15, though equally obvious, finds a place. The equality of the angles of a triangle to two right angles is proved by means of the rotation axiom. Parallel straight lines are defined as the limiting positions of two straight lines when their point of intersection recedes indefinitely; and there is an advantage in so doing, for it is the definition that will be afterwards employed. In not making everything easy, the book is free from the defects of many others. Indeed, for pupils who are able to grasp the more difficult reasoning employed

Mr. Willis has produced a very useful handbook. Alternative proofs to some of the propositions enable him to suggest a course that may be more acceptable to conservative teachers. Whether the book is thereby improved seems to us rather doubtful.

(2) Of the books written on the lines of the Cambridge syllabus this is one of the best that we have seen, though it carries with it the defects of printing and setting which are characteristic of the series to which it belongs. The fourth theorem (Euclid I. 27), which forms the modern "pons asinorum," could hardly receive a more simple explanation; and here, and elsewhere throughout the book, we see the results of the experience gained in the last two or three years. Part I. contains the usual discussion of angles, parallels, triangles, and parallelograms, the propositions on areas so far as they are given in the First Book of Euclid, and the properties of the circle, with the exception of the three concluding theorems of Euclid's Third Book. This seems to us the best course, but it might be well to give Euclid II. 12 and 13 after Pythagoras' theorem, proved in the same manner. The method of numbering the theorems is worth noticing. Those on parallels, for instance, are called P1, P2, P3, &c.; on triangles, T1, T2, T3, &c.

(3) The three books of Mr. Arnett's geometry contain respectively the usual course on triangles, parallelograms, &c., the properties of circles and the theory of proportion and areas, with the additional theorems in modern geometry that are generally studied in schools. The use of hypothetical constructions is rightly preceded by propositions definitely proving that every angle has a bisector, and that a perpendicular may be drawn to a line from a point in it, &c. Pythagoras' theorem is proved in the first place by proportion, and afterwards in the usual ways—a course which admits of immediate generalization to similar polygons. The corresponding theorems for an obtuse angle and an acute angle are provided with alternative proofs, after the manner of Euclid I. 47. The diagrams are drawn with thick lines and bold letters in order to avoid a strain on the eyes. Unfortunately, help of this kind inclines the reader to make use of the diagrams in the book instead of drawing his own concurrently with the construction.

(4) Mr. Turnbull, by avoiding the verbosity of most modern text-books writers on geometry, compresses the four books that are now usual into a single volume of 136 pages. Wisely, we think, he leaves conversational introductions to be supplied by the teacher. The Cambridge syllabus is followed in its main outlines, but circles precede areas. In this, as in the other works before us which treat of the circle, the old Euclidean definition of the tangent is abandoned, and that of the limiting position of the secant adopted. This is, of course, an improvement, without any added difficulty. Teachers in search of a cheap but accurate text-book would do well to consult this volume.

(5) The "School Geometry" is completed by the issue of Part VI., which contains a brief but self-contained course of solid geometry, comprising the usual propositions of the Eleventh Book of Euclid, the more important properties of polyhedra, the cylinder, cone, and sphere, and the measurement of their surfaces and volumes. There are many easy examples, both numerical and theoretical. The diagrams are excellent.

The Medea of Euripides. Edited by HAROLD WILKINSON. (Blackie.)

Mr. Wilkinson is a first-rate Greek scholar, and at the same time a teacher of practical experience. It is rare for editors to combine these two qualifications, and we have no hesitation in pronouncing this the best school edition of perhaps the most often edited of Greek plays. Of his predecessors Mr. Wilkinson follows most closely Dr. Verrall, to whom he expresses his full obligations; but he is no mere popularizer, and rejects unhesitatingly Dr. Verrall's wilder conjectures. The thesis of Euripides's rationalism he accepts with some reservation. Our only general criticism is that in an edition which fully discusses readings, and seems planned for a sixth form, a vocabulary is a superfluity. One or two comments in detail. In line 341 *φροντίδα* must be a misprint for *φροντίδα*. In line 466 we see no flatness in the ordinary interpretation. It suggests not: "I would call you a worse name if I could find one"; but: "Words are weak compared with deeds." In line 457 we find no difficulty in the *δε*; it is parallel to "audique dolos subigitque fateri." The chorus 824-865 contains one "jewel five words long," but the praise seems to us extravagant, and assuredly Sophocles in the "Coloneus" was no imitator.

The Museums and Ruins of Rome. Vol. I.: *The Museums.* By W. AMELUNG. Vol. II.: *The Ruins.* By H. HOLTZINGER. English Edition, revised by the Authors and Mrs. S. A. STRONG. (10s. net. Duckworth.)

These books rise much above the level of ordinary guide-books; they are students' manuals, based upon sound archaeological knowledge, and following a clear educational plan. The monuments, both sculpture and buildings, are considered in their relation to each other, and to their place and import in the history of art or architecture. Illustrations to statues other than the catalogued examples are occasionally given, taken from better executed or better preserved copies, or from correctly restored casts, as, for example, the Demosthenes with folded hands on page 30. Plans and reconstructions accompany the description of ruined buildings. The books will be found useful to the

archaeological student, even away from Rome. They are written in popular style, yet with technical understanding and æsthetic appreciation, and are fully and clearly illustrated. Three new chapters enrich the English edition of the first volume. The English version is pleasantly readable.

A Handbook of Greek Sculpture. By E. A. GARDNER. Illustrated in text with 142 Figures. Revised Edition. (10s. Macmillan.)

It is a good omen for the cause of Greek sculpture that this useful manual has reached a new edition. We have compared it with the first issue of 1896, which was in two parts and somewhat handier to hold. The text has been revised here and there, but is substantially the same. What new material calls for treatment has been added as an appendix, with sections numbered to fit into the former divisions of the book. Here will be found some select early monuments taken by permission from "Les Fouilles de Delphes," the Hermes Propylæus of Alcámenes, the Agias of Lysippus, and the Cerigotto Bronze. The bibliography has been enlarged and brought up to date. The new illustrations are good. Some of the old illustrations, however, which have been retained are badly worn: the solid blacks have crumbled and the contours of several of the figures are disagreeably blurred. If the figures, for example, of the "Vaison" Diadumenus (Fig. 75) and the Hermes of Praxiteles (Fig. 82) be compared in the old and new editions, it will be seen that they have suffered from over-wear. In our judgment, the Hermes should be given as now restored at Olympia, and more complete illustration of the splendid "Sarcophagus of Alexander" would be a gain.

Rome: a Practical Guide to Rome and its Environs. By EUSTACE REYNOLDS-BALL. (A. & C. Black.)

This is a handy guide-book for the ordinary sightseer who is no specialist and has but a limited time to spend. It gives much useful information about routes, hotels, and conveniences generally: its plan embraces every side of interest—ancient, mediæval, and modern—hence judicious selection and brief notice are necessary, and will be found adequate for the purpose in view. There are eight pleasing coloured prints from drawings by A. Pisa, which illustrate some picturesque features of the city.

Elements of Quantitative Analysis. By G. H. BAILEY. (Macmillan.)

This little book does not aspire to being exhaustive; but it covers quite a wide range, and no branch of the subject, except organic analysis, is unrepresented. The first four chapters describe apparatus and operations of general application, and the next two are given over to instructions for the preparation of a few compounds in a pure state and their subsequent analysis. The methods of volumetric analysis and of gas analysis occupy the next seven chapters, and the eleven sections remaining deal with alloys, minerals common and rare, and a few important examples of commercial analysis. A competent teacher will be able to make a judicious selection of exercises from this book which will provide an excellent introduction to the principles of quantitative analysis for students whose special work in the future may lie in very different directions. There is an excellent index, subdivided under the following headings:—estimations, separations, substances of which the analysis is described, and general. This materially aids one in looking up any particular point.

[CORRECTION.—The price of Messrs. Blackie's "English School Texts" reviewed in our March number is 6d.]

UNIVERSITIES AND SCHOOLS.

LONDON.

As an illustration of the accessibility of the courses of study at London under the new constitution, it may be noted that in 1905 no less than 123 graduates of other Universities—ranging from Oxford and Cambridge to Allahabad and Quebec—claimed exemption from Matriculation under Statute 116, and 114 were similarly registered as holding other qualifications. Under this head came 66 with Cambridge Senior and 26 with Oxford Senior Local Certificates, and one student with a Leaving Certificate from Warsaw, one from Helsingfors, and one from Nijni Novgorod!

The Goldsmiths' Company have given a further donation of £1,558 to put in order the buildings of the College at New Cross, and £10,000 to the London University Institute of Medical Sciences Fund.

The Library has now been brought from its former state of chaos into something nearly approaching order, and it is hoped that it will shortly be available for the use of graduates. All who still have books in their possession should send them in, as several have not yet been found. No money has been spent on the purchase of new books, but it is to be hoped that this will soon be remedied when the Library is once opened. Our Library, when in full swing, should prove a valuable and interesting department of our University life under the courteous and scholarly direction of the Librarian, Mr. Hayward.

A great deal of interesting and important work has been done lately

by Convocation and its Standing Committee. Among matters dealt with have been the appointment of a Board to organize the University of London Union Society, and of a Committee on University boat and athletics.

At a recent special meeting of Convocation important resolutions were passed in favour of carrying out at the University buildings research work and higher study by means of lectures, laboratory work, &c., in the various faculties, on the lines of the splendid work done in the Physiological Laboratory under the able and enthusiastic direction of Dr. Waller. A motion in favour of the establishment of a University Information Bureau was also passed. Convocation minutes are now printed in the *Gazette*.

Some members of the University have felt aggrieved at officials or graduates of our University wearing at Presentation the hoods and gowns of other Universities in preference to those of London. Without desiring in any way to detract from the brilliance of the display of colour at such functions, a wish may be expressed, without giving offence, that those who are entitled to wear the academic costume of our University should wear it at its ceremonies.

The degrees in Theology seem to be popular, and to meet a want. Dr. Headlam, Principal of King's College, says that: "The London B.D. course is an excellent training for Holy Orders, and is far more definitely theological and philosophical than the Honours Courses in Theology at Oxford and Cambridge." The theological courses at King's have, it is understood, been entirely rearranged to suit the London degree courses in that faculty.

KING'S COLLEGE, LONDON (WOMEN'S DEPARTMENT).

A course of six lectures on "Business Matters for Women" will be given by Miss Cecil Gradwell on Wednesdays at 11 a.m., beginning May 9. The lectures will deal with law as relating to mistress and servant; the taking and letting of houses; the management of house and landed property; accounts; and committee work. A course of lectures on the Acts of the Apostles will be given by the Rev. R. B. Rackham on Thursdays at 3, beginning May 10.

OXFORD.

In the last five months the University has suffered four heavy losses by death, and the last of these occurred toward the close of the term just ended. Prof. Burdon Sanderson died in November; Mr. Haigh, of Corpus, in the last few days of December; Mr. Grose, of Queen's, in February; and now in the month just expiring we have to lament the sudden death of the youngest of these four—Dr. Greenidge, of St. John's and Hertford.

Obituary.

Prof. Burdon Sanderson is a name known everywhere, and he died in the fullness of years and honours; the three others were younger men, less known to the world at large, but all men of distinction and ability, and of real value to the University, which might reasonably have hoped for many more years of their work and service. Dr. Greenidge, who was barely forty at the time of his death, had already by his industry and ability made himself a considerable reputation as a worker in the field of ancient history, and also as a learned, ready, and forcible teacher, at once patient, sympathetic, and stimulating.

Among other losses by death of former members of the University are the following, containing some well known names:—Rev. Canon Tristram (Lincoln), a learned student of science and natural history; C. S. Roundell (Merton), some time M.P. for Skipton Division, much interested in many educational movements, especially the education of girls; Dr. Tuckwell, a practising physician of very high repute in Oxford, brother of Rev. W. Tuckwell (the "Radical Parson"), whose rich collection of Oxford anecdotes had added a new interest to life; Rev. W. G. Wilkinson (Worcester); J. H. Cadman (Worcester), for many years a county court judge; E. Armitage (Magdalen).

Another loss, happily not due to death, but to resignation, is that of the Master of University, Dr. Bright, whose retirement from Oxford will be very widely felt both in the City and in the University, where he has rendered

Dr. Bright.

long and valuable service, and won the greatest regard and respect from old and young alike. He is succeeded by Dr. R. W. Macan, Tutor and Librarian of University College, a man whose energy and ability is by no means confined to his own special study of Ancient History, in which he has held for many years the University Readership, but has been shown in several other branches of University life and administration.

In the last Council meeting of February, a notable incident was a letter from All Souls College announcing new benefactions to the University as follows:—£1,000 promised for this year to Bodley's Library; an additional

Benefactions of All Souls.

£100 to the £300 paid by All Souls toward the stipend of the Political Economy Professorship; a similar addition toward the stipend of the Reader in Indian Law; £300 to found a Readership in English Law. In view of the close scrutiny into the use of College endowments which is at present active in many quarters, such munificence towards University

objects is certainly well timed. It may be useful to remind the critics, whose statements (in a very intricate study) are not always quite accurate, that the assistance given by colleges to the University in the form of Fellowships sometimes escapes notice, owing to the diversity of method adopted in the College accounts. If full allowance were made for these contributions, it would be seen that more has been done by Colleges in this direction than is sometimes supposed.

The same *Gazette* (February 27) which announced the offer of All Souls also contained an interesting decree (adopted *mem. con.*) whereby a new lectureship to be called "the Speaker's Lectureship in Biblical Studies" will

be founded, in accordance with a scheme approved by the University, with a share of the net profits of "The Speaker's Commentary" amounting to £4,000, which has been paid into "the Chancery division of the High Court of Justice," and with the sanction of the Court is to be paid over to the University for this purpose. The scheme provides for the Board of Electors, the period of appointment (three years), and the number of lectures to be given.

Another announcement is the foundation of two new prizes (£70 and £40), by an anonymous benefactor, to be awarded to "British-born" candidates qualified for B.A., and less than twelve years standing, for a monograph

New Prizes.

or original research in each case. The first prize is for a subject connected with German history between 1250 and 1870; the second for a subject dealing with Continental thought in the fourteenth and fifteenth centuries.

On March 6 the Annual Report of the School of Geography was issued to the University. It is, as usual, a very interesting record of excellent work; but for one reason it will be read with great regret, namely,

Geography School.

that it contains the public announcement of the retirement of Mr. Mackinder, who may be truly called the founder and "onlie begetter" of the study of geography in Oxford. Mr. Mackinder was one of the pioneers of geography teaching on the Oxford "Extension" staff, and his great success led to his appointment as University Reader in the subject. For eighteen years he has lectured (twice a week for most of the time, and latterly once a week) throughout the year. In 1899 the School of Geography was started with the co-operation of the Royal Geographical Society. In 1900 the University Diploma in Geography was instituted. For the last two years vacation courses have given a chance to acting teachers of studying geography in the School. The Report justly adds that "the foundation of the Readership at Oxford and the energy and the influence of the first Reader have undoubtedly been amongst the most important, if not the dominant, causes of the change which has taken place during the eighteen years of his tenure."

A notable feature of the Geographical School has been the help which they have enlisted from scholars whose main work has been in other fields. Besides Mr. Herbertson (who has for long taken the lion's share of the work, and has been deservedly appointed to succeed Mr. Mackinder both as Reader and Director of the School), in the past year lectures have been given by Dr. Grundy and Mr. J. L. Myres. The number of students attending during the two terms preceding Mr. Mackinder's retirement is sufficient evidence of the success of the School. In the Lent term 140 students were on the roll, 119 being undergraduates, and 13 women students of the Association; in the Summer term the figures were 149 total—125 undergraduates (practically from every college), 19 women, and 5 outsiders.

Mr. Mackinder's inaugural lecture (as Professor of Poetry) drew a very large audience to the Sheldonian Theatre on March 10. The lecture is published, and therefore need not here be described: it is, perhaps, best summarized in the words of the *Oxford Magazine*, as "a charming lecture finely delivered." Those who know Mr. Mackinder's published work—especially those who (like the present writer) were privileged to hear his early papers at the Oxford Browning Society twenty-five years ago—look forward with peculiar interest to his tenure of the Chair of Poetry.

The following announcements have been made:—

New Proctors: Mr. Joseph (New); Mr. Cunningham (Lincoln).

Guardians: Rev. L. R. Phelps (Oriel), Rev. C. Plummer (Corpus Christi) re-elected.

Degrees—Research: D.Sc., W. Garstang (Lincoln) [Marine Biology]; Honorary: D.D., Rev. H. L. Paget (Christ Church), Bishop Suffragan of Ipswich.

University Grant: £20 to the British School at Athens.

SOMERVILLE COLLEGE.—A Fellowship of the annual value of £120, and tenable for three years, is offered by the Council of Somerville College under the following conditions:—(1) Candidates for the Fellowship must be women who have resided in Oxford for twelve terms (three years) and have taken an Oxford Honour Examination. (2) The Fellow elected will be required (a) to devote herself to some line of study to be approved by the Council, (b) to reside in Somerville College during at least three terms, (c) to publish the results of her work at the end of the three years, if the Council shall think it desirable. (3) Candi-

dates are requested to apply in writing before Monday, May 7, 1906, to the Secretary, at Somerville College, Oxford. The envelopes should be marked "Fellowship application." The Secretary will supply all further information. Each application should be accompanied by a statement showing that the candidate is qualified according to the conditions laid down in Regulation 1. Candidates are also invited to give references to not more than three persons who can testify to their qualifications, to supply full particulars of any work which they have done, and to indicate the line of study which they would pursue if elected.

WALES.

During the past month most Welsh educationists appear to have discussed nothing but the constitution and functions of the proposed Welsh National Council of Education. The result of the conference convened by the Lord Mayor of Cardiff was therefore awaited with much interest and not a little anxiety, as it was recognized that any resolution adopted there was probably destined to determine broadly the trend of educational development in the Principality. The scheme, as outlined by Mr. Brynmor Jones, M.P., in his lucid and masterly speech, proved to be of a highly ambitious character, and, if it becomes operative, will effect nothing less than a complete revolution in the system of Welsh education. As to its proposed functions. For the present, the Council did not propose to exercise any jurisdiction over the University of Wales or its constituent colleges, and no change in the powers of their respective governing bodies was contemplated. The different Education Authorities would also escape interference: they would continue to manage the elementary schools in their respective localities as before. The general effect of the scheme would be to substitute the National Council for the Board of Education. Further, the powers possessed by the Central Welsh Board would also be transferred to the Council: in fact, all the present power of the Board of Education and the Central Welsh Board in regard to primary and secondary education respectively will become merged in this proposed Council. The disposal of Parliamentary grants, which amount to £800,000, the appointment of inspectors, the issuing of a code of regulations for the primary schools, &c., are included among its functions as given in this speech.

Thus far the present scheme follows fairly closely the lines of the previous scheme which was wrecked through the refusal of Carmarthenshire to agree to certain of its details. According to both plans, Wales is to exercise complete and unfettered control over its primary and secondary schools, while the jurisdiction of the Board of Education is to be summarily ended. One of the chief objections to the now defunct scheme arose from the unsoundness of its financial arrangements; but it is proposed to remedy this in the present one. The new Council will possess a certain rating power, to a very limited extent, of course, but sufficient to provide it with funds for the proper discharge of its functions. The chief danger of the success of the above scheme arises undoubtedly from the difficulty of adjusting the constitution of the Council, though the conference appeared to be sanguine that at the proper juncture a satisfactory apportionment of representation would be agreed upon. For the moment, however, the difficulty is shelved, as it is only proposed to ask that a clause be inserted in the new Education Bill giving power to establish a National Council by an Order in Council. The real fighting over representation will therefore take place before the Privy Council at some future date.

The conference unanimously gave its support to the main principle, viz., that it is expedient to establish a Council to aid and supply education; but to certain of the details of the scheme some slight opposition was shown. However, the main object of the promoters of the movement has been secured, so that it may probably be taken for granted that before long a Welsh National Council, with certain powers over education and independent of the Board of Education, will be established.

Most Welsh educationists will be disposed to give an unqualified approval of the underlying principle that the management of education in Wales should be vested in a single body; for it is undoubtedly somewhat anomalous that primary education should be controlled from Whitehall, secondary education by the Central Welsh Board, and University education by the University Court. The unification of all grades of education must ultimately tend to greater efficiency in all directions. It is difficult, however, to pass judgment on the proposed Council until its exact constitution is definitely defined; in fact, the whole attitude of secondary masters towards it will be determined by the methods by which its members are elected. Long experience of the working of the Central Welsh Board has convinced them that it is impossible for any public body to deal satisfactorily with the complex problems of secondary education, unless the body itself possesses the necessary academic knowledge. The phenomenal success of the secondary schools in Wales and the efficiency of the Central Welsh Board are without doubt due to the presence on the Board of men and women capable of exercising independent judgment on all the questions, however abstruse, that were submitted to them. These were not obliged to receive blindly the recommendations of their inspectors.

Unless, therefore, there is some provision for the inclusion of persons with intimate knowledge of secondary schools and their problems in the constitution of the new Council, its advent will be regarded with a certain apprehension by secondary masters and mistresses. They dread bureaucratic government, as it ultimately tends to generate friction, and, therefore, inefficiency.

It is possible also that the complete severance from the Board of Education which is foreshadowed in this scheme will not be hailed with delight by all. In the early days of the Intermediate system the guidance of the officials of the Board, and very specially that of Mr. Bruce, proved of the greatest possible service to Wales. It is, of course, possible that Welsh Education Authorities have by now acquired sufficient knowledge and experience to manage without this guidance, and it is probable that the separation from the control of the Board will only be effected gradually.

The deputation from the three constituent colleges in support of their application for an increased Parliamentary grant furnished the Welsh Parliamentary party with some very striking statistics as to the growth of Welsh education. Principal Reichel, in his presentation of the case for the colleges, proved that Wales was very inadequately supplied with funds from Parliament, and that, in comparison with England, it did not receive its due share. Thus, Wales, in order to be in an equally advantageous position with England, should have had between two and a half and three times as much from educational endowments as she actually possessed, or about £20,916 per annum more. The whole speech was most convincing, and the Welsh party unanimously decided to support the colleges in their application to the Chancellor of the Exchequer.

The financial pressure in some of the smaller intermediate schools has attracted the attention of the Montgomeryshire Education Authorities, and at their last meeting they decided, after a discussion, to increase the rate to one penny from one halfpenny. Colonel Pryce Jones, a member of the Authority, suggested that the best method of relieving the pressure was by diminishing the number of schools in the county—a very absurd suggestion at the present juncture.

The Rev. J. Henson, late House Master at Reading School, has been appointed Head Master of Haverfordwest School. Prof. J. A. Green, of Bangor, has been appointed Professor of Education at Leeds University.

SCOTLAND.

The most important feature of the Annual Report of the Carnegie Trust is the large increase in the amount of money expended in the payment of fees. This is due not so much to the increase in the number of beneficiaries (which for the present session is only 109) as to "the rise in the average of fees paid per beneficiary, due partly to the greater number of classes attended by each beneficiary, and partly to the fact that three of the Universities had raised the fees of certain class attendances, mainly in the Faculties of Science and Medicine." As regards the second of these reasons it should be remembered that the raising of the fees in the three Universities merely brought them into line with Edinburgh University, which had previously been taking higher fees for certain classes. The first reason is the more important one. At some of the Universities there has grown up, since the institution of the Carnegie Trust, a system of subdividing classes and taking fees for each subdivision, with the result that the Universities in which this practice exists are obtaining an undue share of the Carnegie benefaction. Tables are given in the Report which show that since 1901-2 there has been an increase of the average fee paid by the Trust as follows:—At Edinburgh, 10d.; at Glasgow, 2s. 2d.; at St. Andrews, £1. 1s. 8d.; and at Aberdeen no less than £4 5s. 2d., per beneficiary. That this is not merely a matter of equalization of fees appears from the fact that at present the average fee paid for an Aberdeen student is £2 11s. more than is paid for an Edinburgh student and £4 5s. more than is paid for a Glasgow student. This is far from satisfactory, as, on the one hand, it may lead to friction between the Universities, and, on the other hand, it has already led to the almost complete absorption of the fee-paying income of the Trust. Indeed, the Report points out that, "unless some action be taken without delay, the Committee will probably find that the liabilities incurred in payment of class fees exceed the income at their disposal." Accordingly the Carnegie Trust is at present consulting with the Universities in order, if possible, to obtain a satisfactory solution of the problem.

The other departments of the Trust's work are being successfully carried on. The total expenditure for research fellowships, scholarships, and grants amounted during last year to over £4,500, and the work done in the Edinburgh College of Physicians Laboratory, which was taken over by the Trust, was thoroughly satisfactory.

Mr. J. N. Kiep, German Consul at Glasgow, has, in commemoration of the silver wedding of the German Emperor and Empress, given £1,000 to Glasgow University "to form a nucleus of a fund towards the endowment of a Professorship of German."

Glasgow University Court has resolved to institute a Lectureship in

Celtic Language and Literature. The appointment of the lecturer will be, in the first instance, for a period of five years, and the annual salary will be £200.

Edinburgh University has taken over the anatomical rooms of the New School of Medicine, Bristol Street, Edinburgh, for purposes connected with the anatomical department of the University, and the rooms have been put in charge of Dr. D. B. Jamieson, who has been appointed a Lecturer in Anatomy. The Edinburgh Court has also appointed Dr. A. H. Freeland Barbour to be Lecturer on Systematic and Clinical Gynaecology.

The new class-rooms and laboratories of the Edinburgh and East of Scotland College of Agriculture, which have been provided at a cost of about £9,000, contributed by the Scotch Education Department, the Carnegie Trust, and other public bodies, were opened by Lord Balfour of Burleigh on February 28.

The new buildings of the Glasgow and West of Scotland Technical Society are now approaching completion, and it is proposed that they should be open to the public during the afternoon of Saturday, April 7. The building and equipment fund now amounts to more than £224,000.

The commemoration of the quatercentenary of George Buchanan is to take place at St. Andrews on July 6 and 7.

At the spring meeting of the Classical Association of Scotland, held at St. Andrews on March 3, Prof. Bosanquet, in an interesting paper on "Plato's Attitude to the Workman's Life: a Suggestion for Teaching in Schools," raised the question "whether Plato was or ought to be studied by boys at school, and also whether elementary conceptions of human relations and of social duty were customarily brought before them either by help of Plato or in any other way." The discussion which followed revealed great difference of opinion among teachers, the question of the age at which such teaching should be given being, of course, the main point. The provisional report of the Committee on Latin Pronunciation was submitted, and, after discussion, it was remitted to the Committee to prepare a final report, keeping in view the recommendations of the English Association.

IRELAND.

An event which may have far-reaching consequences is the appointment of a Commission of Inquiry into Trinity College, announced by the Chief Secretary for Ireland in the House of Commons on March 21 in reply to animaldiversions against the College made by Nationalist members. Carefully disclaiming any imputation against Dublin University or its management, Mr. Bryce pointed out that no such inquiry into its condition had been made since 1853, while during that period four Commissions had sat on Oxford and Cambridge, and vast changes had taken place in University education.

The scope of the inquiry is comprehensive. It would "deal with the revenues of the College and the mode in which they are applied, with its government and administration, with the teaching staff, with the system of examination and rewards which successful students obtained. It would also necessarily deal with the method of awarding Fellowships. A general consideration of the place Trinity College ought to occupy in the higher education of Ireland, so that it might become more useful to the people of Ireland at large than, perhaps, it was at the moment, could not be excluded."

Mr. Bryce stated that the Commission should be small and non-political; that it would be at once appointed and act promptly. He added significantly that "the last thing he personally desired was to postpone any attempt that any one might make to deal with the Irish University question by the creation of another Commission which would last for a long time, and take a great deal of evidence, and practically put off dealing with the question to a more distant period than any of them desired. He did not think that any one ought to wish for the establishment of a Commission to add one more to the long delays which had impeded the settlement of the Irish University question." The announcement of the Commission has been received with general satisfaction within the walls of the College itself.

The post of Astronomer-Royal of Ireland and Andrews Professor of Trinity College Astronomy, vacant by the recent lamented death of Mr. Charles Joly, one of the most gifted of the younger Trinity College Fellows, has been filled by the appointment of Mr. E. T. Whittaker, F.R.S., Fellow and Lecturer of Trinity College, Cambridge, and Secretary of the Royal Astronomical Society. Mr. Whittaker comes from Southport, and was educated at Manchester Grammar School. He was second Wrangler and first Smith's Prizeman of his year. Before Mr. Joly's appointment the post was held by Dr. Rambaut, who left to take an Oxford appointment; and previous to Dr. Rambaut Sir Robert Ball was Irish Astronomer-Royal until he left Dublin for Cambridge. The post carries with it work and residence at the Dunsink Observatory, which stands on high ground in a lonely part of the country north of Dublin.

The abolition of Greek as a compulsory subject and the entrance of so many girl students have necessitated an increase in the modern language staff of Trinity College. Dr. Maurice A. Gersthohl has

been appointed Assistant Lecturer in French Language and Literature. Dr. Gersthohl, who holds degrees from Brussels and Paris, has been for the last two years Chief Examiner and Inspector in French to the Central Welsh Board of Education.

At a recent meeting of the Senate a resolution was adopted: "That the Report of the Royal Commission, in its animaldiversions on this University as an examining body, indicated truly the essential defect in its constitution, and we believe that its reform in this respect, so as to make it a teaching University with colleges adequately constituted and brought into organic connexion with it, is a matter of urgent need both for the University itself and for the interests of higher education in this country."

At the same meeting the Earl of Meath resigned his position as Chancellor of the University, in consequence of the position in which the authorities are placed in regard to the disturbances that took place on the last Conferring Day. The Senate applied for a change in the Charter, giving them power to maintain order on such occasions; but they have been informed by the Government that they already possess adequate powers, and that no change in the Charter is required. The Earl of Meath, however, is not satisfied; hence his resignation. Judge Shaw, a member of the Senate, resigned a few weeks previously on much the same grounds. It is somewhat difficult to see what steps practically the Senate can take to prevent a repetition of the scenes that long have disgraced the public Annual Meeting of the University.

The Equipment Fund, when it closed in December, had reached £72,000. Out of this £5,400 will, with the same amount granted by the Treasury, be spent on improving the laboratories and supplying two new class-rooms. The rest will be treated as capital to provide additional lecturers, assistants, and demonstrators, and to improve the library.

The number of students who have given notice of their intention to present for examination in the present year is the largest since the establishment of the system—viz., boys, 8,283; girls, 3,384—total, 11,667, being an increase on the corresponding figures of last year of 840 in the case of boys, 539 in the case of girls, or a total increase of 1,379. The number who gave notice in 1905 showed a total increase of 1,122 over the number for 1904. The increase is partly accounted for by the rule made recently by the National Board that a certain number of monitors and monitresses in the primary schools will be appointed from intermediate students.

The Consultative Committee representing the heads of secondary schools had a conference with the two assistant secretaries in February, the rules and programme of the examinations for 1907 having been previously submitted to them. The latter do not contain any important changes—which means that all the evils at present existing are maintained. In this year's rules it was laid down that each candidate for exhibition will have to submit to another examination in the special obligatory subjects of the group he has chosen. To this is added that medals for excellence in special subjects will only be awarded to candidates taking the special group to which the subject belongs. The absurdity is thus produced that in any subject—say, for example, German—the candidate obtaining the highest marks may not obtain the medal, as German may have been taken by him as a voluntary subject, not one of the subjects compulsory in the group in which he enters; so that in future the medals may frequently be awarded for second- or third-rate answering. The Board have declined to alter this absurd anomaly.

Another matter of much moment was discussed at the Conference—the sudden reduction of the school grant (results fees) by 30 per cent. this year. Without any notice, about £21,000 less was given in results fees than was distributed last year. The effects have been disastrous in many cases where the grant is allotted to specific persons or purposes. The cause of the economy is the smaller revenue—less by over £7,000—received last year from the Excise, and the sum, amounting to nearly £4,000, spent on the examinations in music. In reply to the remonstrances of the Committee, it was stated that there would necessarily be a diminution of income in 1907, for which it was wise to prepare. This is scarcely a valid reason for reducing the endowment suddenly without any previous notice this year—a course more trying for the schools than a reduction duly notified and anticipated. The Committee intend laying their various grievances before Mr. Bryce, the Chief Secretary. A question was put to the Chief Secretary in the House on the subject, and his answer implied that he thought it was but one aspect of a state of things that needed thorough-going reform in every way; so that there is some hope that the present Administration may undertake much needed alterations in the whole Intermediate system.

Some little time ago Mr. Michael Davitt, the well known Nationalist politician, created a sensation by some letters published in the *Freeman's Journal* demanding reforms in the National schools and the placing of them under proper control. At present they are wholly managed by

(Continued on page 272.)

OXFORD UNIVERSITY PRESS.

Books suitable for Candidates at Oxford Local Examinations, 1907.

RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible.** With copious Tables, Concordance, and Indices, and a Series of Maps. New, Enlarged, and Illustrated Edition. Pearl 16mo, 1s. net; Nonpareil 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By the late W. R. W. STEPHENS. 2s. 6d. net.
- Revised Version of the Holy Bible—**
Pearl 16mo, 10d.; Ruby 16mo, 3s.
- Revised Version of the New Testament—**
Nonpareil 32mo, 3d.; Brevier 16mo, 6d.; Long Primer 8vo, 9d.
- The Greek Testament,** with the Readings of the Revisers and with Marginal References. 4s. 6d.; on India Paper, 6s.
- Evangelia Sacra Graeco.** Fcap. 8vo, 1s. 6d.
- Old Testament History for Schools.** By the late T. H. STOKOE. In three Parts. With Maps. 2s. 6d. each.
- Manual of the Four Gospels.** By the same. 3s. 6d. Or, separately, Part I, *The Gospel Narrative*, 2s.; Part II, *The Gospel Teaching*, 2s.
- Life and Letters of St. Paul.** By the same. 3s. 6d. Or, in two Parts, each 2s.
- First Days and Early Letters of the Church.** By the same. 3s. Or, separately, Part I, 1s. 6d.; Part II, 2s.
- Graduated Lessons on the Old Testament.** By U. Z. RULE. Edited by LL. J. M. BYBB. In three volumes, 1s. 6d. or 1s. 9d. each.

ENGLISH.

- Matthew Arnold.—Merope;** with The Electra of Sophocles, translated by ROBERT WHITKLAU. Edited, with Introduction and Notes, by J. CHURTON COLLINS. 3s. 6d.
- Selections from Addison's Papers in the Spectator.** Edited by T. ARNOLD. 4s. 6d.
- Byron.—Childe Harold.** Edited by H. F. TOZER. 3s. 6d.
- Burke.—Reflections on the French Revolution.** Edited by E. J. PAYNE. 5s.
- Spenser.—Faery Queene, Book I.** With Introduction and Notes by G. W. KITCHIN, and Glossary by A. L. MAYHEW. New Edition. 2s. 6d.
- Johnson.—Life of Milton.** Edited by C. H. FIRTH. Cloth, 2s. 6d.; stiff covers, 1s. 6d.
- Johnson.—Vanity of Human Wishes.** Edited by E. J. PAYNE. Paper covers, 4d.
- Milton.—Samson Agonistes.** Edited by J. CHURTON COLLINS. Stiff covers, 1s.
- Milton.—Lycidas.** Edited by R. C. BROWNE. Paper covers, 3d.
- Milton.—Lycidas.** Edited by O. ELTON. Paper covers, 6d.
- Shakespeare.—Coriolanus.** Edited by W. ALDIS WRIGHT. 2s. 6d.
- Shakespeare.—Twelfth Night.** Edited by W. ALDIS WRIGHT. 1s. 6d.
- Shakespeare.—As You Like It.** Edited by W. ALDIS WRIGHT. 1s. 6d.
- North's Translation of Plutarch's Coriolanus, Julius Caesar, Brutus, and Antony.** Edited by R. H. CARR.
- Scott.—The Tallman.** Edited by H. B. GEORGE. 2s.
- Kingsley.—The Water-Babies.** Slightly abridged. With Introduction, Notes, and Illustrations.

LATIN.

- Tales of Early Rome.** Edited, with Notes, Maps, Vocabulary, and English Exercises, by J. B. ALLEN.
- Caesar.—De Bello Gallico.** Edited by C. E. MOBERLY. Second Edition. Books III-V, 2s. 6d.; VI-VIII, 3s. 6d.
- Horace.** Edited by E. C. WICKHAM. *Odes, Carmen Seculare, and Epodes.* Second Edition. 6s. *Satires, Epistles, and De Arte Poetica.* 6s.
- Livy.—Book V.** Edited by A. R. CLUER. Revised by P. E. MATHESON. 2s. 6d.
- Virgil.—Aeneid, Book IX.** Edited by A. E. HAIGH. 1s. 6d.
- An Elementary Latin Grammar.** By J. BARROW ALLEN. 208th thousand. 2s. 6d.
- A First Latin Exercise Book.** By the same. 2s. 6d.
- A Second Latin Exercise Book.** By the same. 3s. 6d.
- Anglice Reddenda;** or, Extracts, Latin and Greek, for Unseen Translation. H. C. S. JERRAM. Fourth Edition. 2s. 6d.
- Anglice Reddenda.** Second and Third Series. By the same. 3s. each.
- Reddenda Minora;** or, Easy Passages, Latin and Greek, for Unseen Translation. For the use of Lower Forms. Composed and selected by the same Editor. Sixth Edition. 1s. 6d.
- An Elementary Latin Dictionary.** Square 8vo, 7s. 6d.
- An Intermediate Latin Dictionary.** Small 4to, 12s. 6d.

GREEK.

- Greek Reader, Vol. I.** Selected and adapted, with English Notes, from Professor VON WILAMOWITZ-MOELLENDORFF'S Griechisches Lesebuch, by E. C. MARCHANT. 2s.
- Scenes from Sophocles.—Antigone.** Edited by C. E. LAURENCE. With Illustrations. 1s. 6d.
- Sophocles.—Antigone.** Edited by LEWIS CAMPBELL and EVELYN AMNOTT. 2s.
- Thucydides, Book III.** Edited by H. F. FOX. 3s. 6d.
- Euripides.—Medea.** Edited by C. B. HEBERDEN. 2s.
- Plutarch.—Coriolanus.** With Introduction and Notes.

GREEK (continued).

- An Elementary Greek Grammar.** By J. BARROW ALLEN. 3s.
- A Primer of Greek Prose Composition.** By J. Y. SARGENT. 3s. 6d.
- A Greek-English Lexicon,** abridged from LIDDELL and SCOTT'S 4th Edition. Square 12mo, 7s. 6d.
- An Intermediate Greek-English Lexicon,** founded upon the Quarto Edition of LIDDELL and SCOTT'S Greek Lexicon. Small 4to, 12s. 6d.

GERMAN AND FRENCH.

- Short German Plays.** Second Series. *Der ungebetene Gast*, and other Plays. Edited, with Notes and Vocabulary, by E. S. BUCHHEIM. 2s. 6d.
- Hoffmann.—Heute mir, Morgen dir.** Edited by J. H. MAUDE. 2s.
- Chateaubriand.—Mémoires d'Outre-Tombe.** Edited by LOUIS SERS. (Oxford Modern French Series.) 2s. 6d.
- Gozlan.—Le Château de Vaux.** Edited by A. H. SMITH. (Oxford Modern French Series.) 1s. 6d.
- A Concise French Grammar.** By A. H. WALL. Contains the simplifications allowed by the French Minister of Public Instruction in 1901. 4s. 6d.
- A French Primer.** By the same. 2s.

MATHEMATICS.

- Geometry for Beginners.** An easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. 1s. 6d.
- Experimental and Theoretical Geometry.** By A. T. WARREN. Third Edition. Cloth, 2s. (Following the plan recommended by the Mathematical Association.)
- Elementary Modern Geometry.** Part I. Experimental and Theoretical. (Ch. I-IV.) Triangles and Parallels. By H. G. WILLIS. 2s.
- Euclid Revised.** Edited by R. C. J. NIXON. Third Edition. 6s.
- Book I, 1s.; Books I, II, 1s. 6d.; Books I, IV, 3s.; Books V, VI, 3s. 6d.
- Geometrical Exercises from Euclid Revised.** By A. LARMOR. 3s. 6d.
- The Junior Euclid.** By S. W. FINN. Books I and II, 1s. 6d. Books III and IV, 2s.
- Arithmetic.** By R. HARGREAVES. 4s. 6d.

NATURAL SCIENCE.

- An Elementary Treatise on Heat.** By BALFOUR STEWART. Sixth Edition. 8s. 6d.
- First Lessons in Modern Geology.** By A. H. GREEN. Edited by J. F. BLACK. With Forty-two Illustrations. 3s. 6d.
- Woolcombe.—Practical Work in General Physics.** By W. G. WOOLCOMBE. 2s. each Part.
- Part I. GENERAL PHYSICS. Part II. HEAT. Second Edition, Revised.
- Part III. LIGHT AND SOUND. Part IV. MAGNETISM AND ELECTRICITY.
- A Class-Book of Chemistry.** By W. W. FISHER. Fifth Edition, Revised and Enlarged. 4s. 6d.
- Elementary Chemistry. Progressive Lessons in Experiment and Theory.** By F. K. L. WILSON and G. W. HEDLEY. 8vo, with many Diagrams. Part I, 3s. Part II, *In the Press*.

MISCELLANEOUS.

- Companion to English History (Middle Ages).** Edited by F. P. BARNARD. With Ninety-seven Illustrations. 8s. 6d. net.
- A School History of England.** By O. M. EDWARDS, A. J. CARLYLE, R. S. RAIT, and others. With Numerous Maps. 3s. 6d.
- Historical Geography of the British Colonies.** By C. P. LUCAS, C.B. Crown 8vo.
- INTRODUCTION: ORIGIN AND GROWTH OF ENGLISH COLONIES. With Eight Maps. By H. E. EGERTON. 2s. 6d. Also in binding uniform with the Series. 3s. 6d.
- Vol. I. THE MEDITERRANEAN AND EASTERN COLONIES (EXCLUSIVE OF INDIA). With Fifteen Maps. Second Edition, Revised and brought up to date. By R. E. STUBBS.
- Vol. II. THE WEST INDIAN COLONIES. With Twelve Maps. Second Edition, Revised and brought up to date. By C. ATCHLEY, I.S.O. 1905. 7s. 6d.
- Vol. III. WEST AFRICA. With Five Maps. 7s. 6d.—Vol. IV. SOUTH AND EAST AFRICA. HISTORICAL AND GEOGRAPHICAL. With Eleven Maps. 9s. 6d. (Also Part I, HISTORICAL, 6s. 6d. Part II, GEOGRAPHICAL, 3s. 6d.)—Vol. V. HISTORY OF CANADA. Part I (New France). 6s.
- Oxford Geographies.** By A. J. HERBERTSON.
- Vol. I. THE PRELIMINARY GEOGRAPHY. *In the Press*.
- Vol. II. THE JUNIOR GEOGRAPHY. Second Edition. With 166 Maps and Diagrams. 2s.
- Relations of Geography and History.** By H. B. GEORGE. With Two Maps. Second Edition. 4s. 6d.
- Geography of Africa South of the Zambesi.** By W. P. GRESWELL. With Maps. 7s. 6d.
- A Music Primer.** By I. TROUTBECK and R. F. DALE. Third Edition. 1s. 6d.
- Chart of the Rules of Harmony and Chart of the Rules of Counterpoint.** By A. SOMERVILLE. 1s. net each.
- Elementary Political Economy.** By E. CANNAN. 1s.
- Elementary Politics.** By SIR THOMAS RALEIGH. 1s.
- Remarks on the Use and Abuse of some Political Terms.** By SIR G. CORNEWALL LEWIS, Bart. New Edition, with Notes and Introduction by SIR THOMAS RALEIGH. 3s. 6d. and 4s. 6d.
- Book-keeping.** By SIR R. G. C. HAMILTON and J. BALL. 2s.

the Board, which is appointed by the Government, and conducts all its work in private, and the Churches, through the clerical managers, who have the sole voice in the appointment and dismissal of the teachers. The laity are entirely excluded, and are wholly ignorant of and uninterested in the schools. As is usual, the Catholic press maintained profound silence; but in their Lent pastorals the Archbishop of Dublin and the Bishop of Limerick severely condemned the utterance of such views by any Catholic, and their publication by any newspaper—practically demanding the abolition of freedom of speech and prohibiting any movement of reformation among the laity.

The Chief Secretary has announced that he will restore the facilities for the teaching of Irish (of which he approves in education) removed by the late Government. His action may not take the form of merely restoring payment for Irish as an extra subject, as he has stated that he desires to improve the teaching of Irish in every way.

The unjust financial treatment by the Treasury of Irish primary education, however, more needs reform than anything else, and the present Government, so far, shows no sign of undertaking it. Dr. Kingsmill Moore at the recent Annual Meeting of the Kildare Place Training College—one of the best in the United Kingdom—stated that in the Estimates for the present year “there was provided for England, from Imperial sources, an increase of £490,224; for Scotland an increase of £154,838 was proposed; while for Ireland all that could be doled out from the same source was the almost invisible sum of £1,500.”

SCHOOLS.

BRANLEY, GUILDFORD, ST. CATHERINE'S SCHOOL.—Twenty-three pupils from this school were entered for the Cambridge Local Examination held in December last. Of these, seven Senior, ten Junior, and four Preliminary candidates passed. One Senior obtained Second Class Honours, and two Third Class Honours, with distinction in History, English, and Geography. One Junior and two Preliminary candidates obtained Third Class Honours, the latter with distinction in Religious Knowledge and English.

CITY OF LONDON SCHOOL.—Alexander, the school captain, has gained a scholarship of £80 at Queen's College, Oxford, and Hirschbein one of £80 at St. John's. At Cambridge we have also the following:—Ramsay, Caius Scholarship of £80; Easterling, Trinity, minor

scholarship; Saunders, Christ's, exhibition of £30. F. A. C. Smith has also won a Law Scholarship of £250, and Egbers came out fourth in the examination for the Exchequer and Audit Department. One of our old boys, the Rev. F. Stephenson, has been elected to the Head Mastership of Felsted School. The football team lost their game to Cranleigh by three goals to one. Unusual activity has recently been displayed in the fives courts both by boys and masters, and on February 25 Mr. Allpress's team played a “friendly” with the Old Boys. There has been a marked increase in the Cadet Corps, which turned out to Hampstead Heath on March 3, and had a route march to Wimbledon Common on the 6th, Captain Spilsbury and Lieutenant Perrott being present on both occasions. Notwithstanding the wet weather on February 17, the Modern Side Saturday Club kept its fixture in Epping Forest, visiting the Chingford Museum, and, on account of the rain, holding an impromptu discussion on “Tariff Reform” (Mr. A. G. Munro in the chair) under cover. On March 3 the Club were kindly conducted round the East London Waterworks, and afterwards adjourned to High Beech. On March 17 Archdeacon Sinclair has again invited the members to a visit to St. Paul's, followed by tea in the Chapter House, and on April 1 the Dean is conducting us round Westminster Abbey.

HARROW SCHOOL.—There will be an examination on the Tuesday before Easter for ten or eleven entrance scholarships, open to all boys not members of the school who were born in or after the year 1902. Further particulars may be had from the Head Master's secretary. College Scholarships and other distinctions outside the school—Major Scholarship (Classics), Trinity College, Cambridge—J. R. M. Butler; Minor Scholarship (Natural Science), Trin. Coll., Cambridge—A. A. Pallis; Classical Scholarship, University College, Oxford—E. S. H. Corbett; Junior Hulme Scholarship, Brasenose College, Oxford—H. R. Lynch-Blosse; Brackenbury Scholarship in History, Balliol College, Oxford—D. L. Murray; McBride Scholarship in Classics, Hertford College, Oxford—J. W. Law; History Exhibition, Jesus College, Cambridge—E. G. de L. Hopcraft. Passed into Sandhurst, direct from school, in December: 24th, M. P. Dilworth; 31st, R. G. de Miremont; 54th, G. W. Dobson; 93rd, A. A. Fowler; 94th, H. G. Gauntlett. Bratton has won the Fortescue Prize for French. The Kintore Prizes for Scripture have been awarded to Brandt and Butler *ma.* (sixth form); in the fifth form to Butler *mins.*, and in the Lower School to Cadman. Dr. Wood, we are happy to see, is rapidly recovering from the awkward accident which befell him when he was riding the other day. Last, but not least, the burning

SCHOOL HYGIENE. By A. NEWSHOLME, M.D., F.R.C.P., and W. C. C. PAKES, D.P.H. With a Chapter on "Eye-sight," by JAMES KERR, M.D. 311 pages, with 43 Illustrations, 3s.

READY SHORTLY.

THE SCIENCE OF COMMON LIFE. By J. B. COPPOCK, B.Sc. Lond., F.I.C., F.C.S., Principal of the Schools of Science, Kendal.

SWAN SONNENSCHN & CO., LIMITED, 25 HIGH STREET, BLOOMSBURY, W.C.

question of the "Motor Post" seems settled by an honourable compromise with the County Council. On December 11 we had the great grief of losing our respected and beloved colleague, Mr. E. W. Howson. Mr. N. K. Stephen succeeds to his house—"Druries." Mr. W. G. Young succeeds to Mr. Stephen's small house. Mr. W. Benemann has been taking work for Mr. C. E. Prior, who continues in delicate health. Mr. A. W. Siddons has succeeded Mr. C. H. P. Mayo as chief master of mathematics in the Army class. We have recently been inspected and "recognized" by the University of London, which is shortly to hold an examination of Army candidates for the Leaving Certificates. It was considered only right and natural that the examining body should also be the inspecting body.

JERSEY HIGH SCHOOL FOR GIRLS.—We regret to state that the Principal, Miss L. D. Royce, was found dead in bed on March 11, after a severe attack of influenza. She was much beloved by her pupils and held in the highest esteem of all who knew her. Keenly interested in all educational matters, she had had a successful career in Australia before beginning her work in Jersey in 1898, when the company transferred the High School to her, and its numbers doubled in two years. Her death has cast quite a gloom over the island.

LIVERPOOL HIGH SCHOOL.—The prize-giving took place at the school on February 5. The chair was taken by Mr. R. G. Tatton, member of the Council. The prizes were distributed by Miss Jex-Blake, Vice-Mistress of Girton College, who gave a most interesting address. The following scholarships were won during 1905:—D. E. de Zouche, Gilchrist Scholarship, £50 for three years (bracketed First in Classics), Somerville College; E. J. Ewart, exhibition of £15 for three years at Girton, for Classics; K. M. Cowe, Ladies' Educational Association, £20 for three years, Liverpool University; G. Dearnley, London Royal Free Hospital School of Medicine for Women, £30 for three years (relinquished). A dinner took place at the school on February 24, and was attended by nearly a hundred guests, including the first two Head Mistresses, Mrs. Bolton and Mrs. Browne (*née* Huckwell), eighteen former mistresses, twelve of whom are now head mistresses, Vice-Chancellor and Mrs. Dale, Mr. and Mrs. Paget, Mrs. Booth, Miss F. B. Melly, Mr. Falk, Dr. and Mrs. Macalister, and Prof. Hebblethwaite.

SHREWSBURY SCHOOL.—The House Scholarships have been awarded to J. E. W. Bath, P. R. Heaton, H. S. Newill, A. Pigott, G. E. Raven, and F. H. Young.

WINCHESTER COLLEGE.—The Debating Society has decided by

14 to 8 that "England is not a musical nation," and commended Chinese labour by 30 to 11. The response to the Head Master's appeal to Old Wykehamists to support the restoration of the cathedral has met with a very gratifying response. The sum contributed up to February 11, when Dr. Fearon preached to the school on the subject, was £1,272. Dr. Fearon's sermon has been printed by request. The Duncan Prize for a historical essay has been awarded to F. P. Robinson. The Sixteen Society has discussed an exhaustive paper on Mahomet by G. D. Roechling.

WOOLWICH POLYTECHNIC SCHOOL.—Miss Adams, who has been on the staff since September, 1904, first in charge of a class in the Lower School, latterly as teacher of Nature study, botany, and geography, left us at mid-term. Florence Mockeridge has passed the London Matriculation Examination in the First Division.

[Our Manchester letter is unavoidably held over.]

PRIZE COMPETITIONS.

The Translation Prize for March is awarded to "Emil."

The winners of the Translation Prizes for February are:—For the verse translation of Claudian, the Rev. Charles Stanwell, Ipsden Vicarage, Wallingford; for the prose translation of Claudian, E. T. Hardman, Esq., Charterhouse, Godalming; for the verse translation of Gruppe, Miss Charlotte A. Ford, 1 Branch Hill Side, Hampstead Heath, N.W.; for the prose translation of Gruppe, Mrs. F. Schacher, Ellenborough House, 12 Upper Belgrave Road, Clifton, Bristol.

Mais ce qu'il faut dire et faire observer, c'est que La Bruyère était d'une génération plus jeune que celle des purs écrivains du XVII^e siècle; venu le dernier, il avait à renchérir un peu à sa manière, à s'efforcer. Il le faisait en écrivant; il le montrait aussi dans sa personne; il avait des saillies, des fougues et comme des poussées d'agrément qui passaient la limite. Ces gens de goût de la génération précédente le remarquaient et se le disaient entre eux. Tout est dans l'ordre. Règle générale: nous remarquons de prime abord les défauts de ceux qui entrent dans

(Continued on page 276.)

W. & A. K. JOHNSTON'S LIST. SCHOOL WALL MAPS.

- A range of over 100 maps of Political, Physical, Classical, and Scriptural Geography.
- They are thoroughly accurate and up to date.

IS YOUR PENCIL A KOH-I-NOOR OR ONLY AN IMITATION?

There are no better pencils made than L. & C. Hardtmuth's Koh-i-Noor Pencils. Many manufacturers have tried to equal this wonderful Pencil—and have failed. The merit lies in the lead, in the selected wood, and in the workmanship. Using a Koh-i-Noor is like drawing silk over paper—so smooth.

Koh-i-Noor Pencils are one price everywhere—4d. each or 3s. 6d. for one dozen. Of Stationers, Photographic Dealers, and Artists' Colourmen. Dainty Booklet on Pencils post free from L. & C. HARDTMUTH, 12 Golden Lane, London, E.C.

Just published, price 3s. 3d. post free.

Medium 8vo, x+91+6 Plates.

PHONETICS OF THE NEW HIGH GERMAN LANGUAGE.

(Late of 39 Holywell Street, Strand.)

la vie et dans la carrière après nous ; les qualités, quand nous les recon- naissons, ne viennent qu'en second lieu.

Heureux homme, après tout, que La Bruyère ! Son talent regarde deux siècles ; sa figure appartient à tous les deux ; il termine l'un : on dirait qu'il commence et introduit l'autre. Bossuet l'a tout d'abord pris par la main et patronné ; Despréaux l'a accepté, sauf une légère réserve ; Racine l'a tout à fait accueilli : et, en même temps, il précède Montesquieu ; il l'annonce et le présage pour ses "Lettres persanes," il reste son maître en ce genre. Tout ce qu'il y a d'esprits piquants dans le XVIII^e siècle semble tenir et relever de lui ; tous ces hommes de lettres et à la fois gens du monde, qui régissent la société, qui dans le tous-les-jours ont le mot vif, mordant, ironique, le propos plaisant et amer, semblent avoir trempé la pointe de leurs traits dans l'écrivoire de La Bruyère. Et il a ce singulier bonheur encore que, quand le XVIII^e siècle est passé et qu'on en parle comme d'une ancienne mode, quand le XVII^e siècle lui-même est exposé de toutes parts aux attaques, aux irrévérences et aux incrédules des écoles nouvelles, lui, La Bruyère, comme par miracle, y est seul respecté ; seul, tout entier debout, on l'épargne, que dis-je ? on le lit, on l'étudie, on l'admire ; on le loue précisément à cause de cette manière un peu marquée et appliquée, qui faisait question en son temps, qui semblait trop forte, qui n'est que suffisante aujourd'hui : il en demeure le premier modèle. Fénelon — tout Fénelon — a pâli et s'est effacé ; lui, il subsiste, il brille comme au premier jour. Le temps n'a rien ôté à sa solide et vigoureuse peinture. La curiosité, comme au lendemain de 1688, s'acharne à ses demi-obscurités et à ses mystères. L'artiste n'a pas cessé de le révéler. Il est le premier nom en tête de la liste des nouveaux venus, des plus modernes et des plus hardis, de ceux qui prétendent bouleverser les rangs et changer les choses. Il est le classique de tout le monde. Allons ! cet effort de La Bruyère ne l'a pas si mal servi : il est trois fois couronné du succès.

By "EMIL."

But what must be pointed out is that La Bruyère belonged to a younger generation than that of the correct writers of the seventeenth century. The latest born, he had to adopt a somewhat exaggerated style—to force his talent. This came out in his writings as well as in the man himself. His impetuous sallies, his inequalities, and what might almost be called his efforts to please, often transgressed the limits laid down by the men of good taste of the preceding generation, who noticed it and commented upon it among themselves. This is in accordance with the natural order of things. As a general rule we are impressed first by the defects of those who live and do their work in the world after us ; their good qualities, if we recognize them at all, come second.

What a fortunate man La Bruyère was, after all ! He is linked by his talents to two centuries : he himself belongs to both. He closes one ; he may be said to inaugurate the other. Bossuet took him by the hand at the outset and patronized him ; Despréaux accepted him, if with certain reservations ; Racine received him with open arms. And, at the same time, he is the forerunner of Montesquieu ; he anticipates and forestalls his "Lettres persanes" ; and has remained his master in this branch of literature. All the keenest and boldest spirits of the eighteenth century owe a debt to him ; they are, as it were, his lineal descendants. All those men of letters who are at the same time men of the world and leaders of society, men who in their everyday intercourse with their kind are quick, incisive, and ironical of speech, whose conversation bristles with humour and sarcasm, seemed to have dipped the point of their shafts in the inkpot of La Bruyère. And he is also singularly fortunate in this, that, now that the eighteenth century is passed and looked upon as belonging to a bygone order, now that even the seventeenth century is exposed on all sides to the attacks, the irreverences, and the incredulities of the new schools, La Bruyère alone, as if by some miracle, is respected ; he alone is left standing, is spared—but what do I say ?—he is read, studied and admired ; he is extolled for that very pointed and energetic style which was taken exception to in his own age as too forcible, but which is only forcible enough to-day. He remains the original model of this style. The light of Fénelon has paled, and at length become quite extinct ; La Bruyère subsists ; he shines with all the brilliancy of his earliest days. Time has robbed his portraits of none of their solid worth and vigour. Speculation as to his half-lights and mysteries is still hot and keen, as in the days following the publication of his book. He is the revered of artists of all ages. His name stands at the head of that list of new men, the boldest and the most modern, whose watchword is change and the subversion of ranks. He is a universal classic. After all, this effort of La Bruyère's has not served him so badly. It has been thrice crowned with success.

We classify the 160 versions received as follows :—

First Class.—Lethe, E., Lob, Taugenichts, Nessko, Black Beetle, Menevia, Chestnut, G.D., Terreaux, Moï, Emil, W.E.G., Eicarg, Baloo.

Second Class.—Comet, L.S., Borealis, Narcissus, Beta, Me, R.A.,

(Continued on page 278.)

Some Valuable Works.

28th Thousand.

A History of England. By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. Revised. Fully Illustrated. Extra crown 8vo, 816 pages, bound in cloth, price 5s. ; or handsomely bound, cloth gilt, 6s. 6d.

New Edition of a Popular Work.

The Story of English Literature. By ANNA BUCKLAND. New and Enlarged Edition. Cloth boards, 3s. 6d. A charming Reading Book for Pupil-Teachers and Young Students generally.

This new edition contains chapters covering the Victorian period. The volume gives a clear and attractive account of the development of English Literature, and the great names connected therewith ; not in the form of an examination cram-book, but as a simple introduction to the subject. The new chapters are the work of Miss CHRISTABEL COLERIDGE.

Cheap Edition, Newly Revised.

Cassell's NEW French Dictionary.

FRENCH-ENGLISH—ENGLISH-FRENCH. 746th Thousand. Edited by JAMES BOIELLE, B.A. Newly Revised by DE V. PAYEN-PAYNE, Assistant Examiner to the University of London. 1,230 pages, ex. crown 8vo, strongly bound in cloth, 3s. 6d. ; or in half leather, 5s.

"Quite the best Dictionary of its size that has been issued."—*Globe*.
"The best French and English Dictionary of an ordinary size in existence."—*Critical Review*, Paris.

"In view of its many excellent features, Cassell's New French Dictionary may be strongly recommended. It will be found equally suitable in school, in office, or in study."—*The Scotsman*.

A prospectus of the Cheap Edition of Cassell's NEW French Dictionary will be sent post free on application.

Fifth Edition. Revised and corrected.

By J. HOLLAND ROSE, Litt.D. Crown 8vo, cloth, with Maps, 6s.

[Ready April 23.]

The Student's Handbook of Stratigraphical Geology.

By A. J. JUKES-BROWNE, B.A., F.G.S. Illustrated with Maps, Diagrams, and Figures of Fossils. Large post 8vo, cloth, 12s. net.

"At present our best text-book on the subject."—*Athenæum*.

Outlines of Geology.

An Introduction to the Science for Junior Students and General Readers. By JAMES GEIKIE, LL.D., F.R.S. With 400 Illustrations. Third Edition, Revised. Large post 8vo, cloth, 12s.

The Great Ice Age, and Its Relation to the Antiquity of Man.

By JAMES GEIKIE, LL.D., F.R.S. Third Edition. Revised and greatly Enlarged. With Maps and Illustrations. Demy 8vo, cloth, 25s.

Prehistoric Europe.

A Geological Sketch. By JAMES GEIKIE, LL.D., F.R.S. With Maps and Illustrations. Medium 8vo, cloth, 25s.

Physical Geology and Geography of Great Britain.

By Sir ANDREW C. RAMSAY, LL.D., F.R.S. Sixth Edition. Edited by HORACE B. WOODWARD, F.G.S. With numerous Illustrations and Coloured Geological Map. Post 8vo, cloth, 10s. 6d.

A Physical, Historical, Political, and Descriptive Geography.

By KEITH JOHNSTON, F.R.G.S. Fifth Edition, Revised by A. H. KEANE, F.R.G.S. With numerous Maps and Illustrations. Large post 8vo, cloth, 12s.

A School Physical and Descriptive Geography.

By KEITH JOHNSTON, F.R.G.S. With Maps and Illustrations. Sixth Edition. Revised by A. H. KEANE, F.R.G.S. Crown 8vo, cloth, 6s.

London: EDWARD STANFORD, 12, 13, and 14 Long Acre, W.C.,
Geographer to His Majesty the King.

G. P. PUTNAM'S SONS' NEW BOOKS.

Enigmas of Psychical Research

By JAMES H. HYSLOP, Ph.D., LL.D., former Professor of Logic and Ethics at Columbia University, Vice-President of the Society for Psychical Research; Author of "Science and a Future Life," "Problems of Philosophy," &c. Crown 8vo, cloth, extra.

Physical Efficiency.

A Review of the Deleterious Effects of Town Life upon the Population of Britain, with suggestions for their arrest. By JAMES CANTLIE, M.A., M.B., D.Ph. With Preface by Sir LAUDER BRUNTON, M.D., D.Sc., LL.D., F.R.S., and a Foreword by Sir JAMES CRICHTON-BROWNE, M.D., LL.D., F.R.S. Illustrated. Crown 8vo, cloth, 3s. 6d.

"A most original book, which should be read by all who regard their own health as belonging to the community."—*Daily Chronicle*.

"Amid a mass of excellent advice, Dr. Cantlie would, like every earnest Briton, see our nation more physically fit, and in his book just issued, 'Physical Efficiency,' he tells us what to avoid and what to seek in this direction."—*Daily Mail*.

"Mr. Cantlie gives utterance to what seem to us some very wholesome truths, and it is to be hoped that his book will be widely read."—*Westminster Gazette*.

* * SEND FOR DESCRIPTIVE CIRCULAR.

Practical Rifle Shooting.

By WALTER WINANS, Author of "The Art of Revolver Shooting," "Hints on Revolver Shooting," "The Sporting Rifle," &c. With Frontispiece. Crown 8vo, cloth extra, 1s. net.

Mr. Winans believes that the man who can use his rifle as he uses his knife and fork, as a matter of habit, and without needing to consider what he is doing; who can hit his mark very near the centre instantly, at any reasonable range, and at whatever rate it is moving; and who has had experience in stalking game, and in taking cover, should make a more useful soldier or scout than the man who has only shot at a stationary target, and then only in a prone position, and who would lose himself were he turned out in a deer forest.

"Mr. Winans is one of the world's most expert marksmen, and he tells in the most concise and lucid way how the veriest tyro may make himself proficient as a rifle shot."—*Lloyd's Weekly News*.

"It is short, and well to the point; for the soundness of the advice offered the author's name is ample warrant."—*Oxford Magazine*.

* * SEND FOR DESCRIPTIVE CIRCULAR.

A Sword of the Old Frontier.

The Adventures of a French Officer in the Pontiac Conspiracy.

By RANDALL PARRISH. First Edition (English and American). 25,000 copies. Second Edition in the Press. Crown 8vo, cloth extra, 6s.

This, with the eighth edition of "My Lady of the North," and the sixth edition of "When Wilderness was King," makes 100,000 copies of Mr. Parrish's three books printed in a year and a-half. This is Mr. Parrish's third story, and we regard it as his best for securing and holding the reader's interest. There are four pictures in colour by F. C. Yohn, the greatest American illustrator of the Colonial period.

"A stirring tale."—*Belfast Northern Whig*.

"Mr. Parrish writes with colour and spirit, and his ingenuity in devising new variations in adventure is admirable."—*Athenæum*.

Louis XIV. and La Grande Mademoiselle.

By ARVEDE BARINE. Authorised English Version. Illustrated, 8vo, cloth extra, in box, 12s. 6d. (Uniform with "The Youth of La Grande Mademoiselle.")

"It is entertaining in the vivid picture it gives of the times."—*Manchester Guardian*.

"The work shows literary qualities of a high order, and a clearness of judgment and orderly marshalling of facts which cannot be too freely praised."—*Sheffield Daily Telegraph*.

The Novels of Henry James.

A Study. By ELIZABETH LUCY CARY, Author of "The Rossettis," &c. With a Bibliography by FREDERICK A. KING, and Photogravure Frontispiece. Crown 8vo, half-cloth extra, gilt top, 5s.

"To those who have read with appreciation and understanding a considerable proportion of the works of Henry James, Miss Cary's book will be a treasured possession."—*Belfast Northern Whig*.

"The value and attractiveness of the book are advanced by a photogravure of Mr. James, and a bibliography of his writings which has been compiled by Frederick A. King."—*Dundee Advertiser*.

Spring List now ready.

24 BEDFORD STREET, STRAND, LONDON; & NEW YORK.

Maidenhylthe, Clarence, Darius, Parisiana, Fides, J.E.D., Erica, M.S.L.L., Chingleput, Felicia, Sorbier, Fé, Dudevant, Bloemfontein, Erin, Great Western, Aiglon, Iram, H.A.T., Clev, R.J.P., Blank, Amry, Rogenfeld, C.H.T., Chemineau, Théophraste, Tio, Prauner, Devanha, Prig, M.H.C., Fortes et Fidelis, Effnie, Garth, Sirach, Vandoon, Thérèse de Lisieux, Saracinesca, H.J.C., Chien Lung, M.V.W., Effort, O. I. Dunno, Nephest.

Third Class.—Papillon, Saunterer, Verlinde, M.E.B., M.G., Senator, J.M.H., S.H.C.J., Ariel, Ursula, Kindergarten, Rustic, Cynthia, Rosita, Fanti, Noisette, A.L.O.A., Enoch Arden, Tête Blanche, Crawford, Excelsior, A.M.S., L.E.R., Black Douglas, Liberty, Earnest, Di, M.A.D.U., Martine, Summerbank, Teinturier, Gardez-bien, Cosy, Bluebell, M.C.E.F., Nabote, Roger de M., E.J.R., Topsy, Evangeline, C.V.I., Blue, Mimosa, Stedye, Guinevere, Dydbos, Cairngorm, T.V.D., Lina F., No. 4, M.H.B., Ananias, Primrose, M.N.V.

Fourth Class.—E.G.H., M.P.U., Marcelle, At spes non fracta, Philo, Le Petit Chose, Daisy, Hovis, Weimar, Muriel Blumer, Betty, Peter, Achnamara, D.V., Gemina, Hilly, Apache, Hamar, Nero, Plon-plon, J.S.R., Nemo, Clare, Hernani, Emilia, L.J.P., V.M.S., M.E.T., K.M.L., Veronica, E.M.B., Blanche, Roxburgh, Douteux.

Fifth Class.—Rene, Clemson, Sato, U.M., Mari magno, Vis, I.N.S., Girlie, Trombone, Cutis, High, Camb, T.A., S.E.P., Devia, Watson, V.N.N., Mat, S.S.A., B.Sc., Folio, Sec, Guido, Emmie, 86.

The Sainte-Beuve was a severer test than usual, as is shown by the limited number of those who steered clear of all the rocks and shoals and landed safely in a First Class. The prevailing faults were, on the one hand, stiffness and flatness arising from a too close adherence to the French construction and order of words, and, on the other, a lack of precision and a failure to give the full significance of hidden metaphors. The detailed comments that follow will furnish examples.

Most beginnings were stiff and awkward. Contrast "But what we must state and call attention to" with "The point that should be emphasized is." *Purs*: "genuine," "typical"—not "correct" or "classical." *Rencherir*: "to go one better" exactly expresses it, but is too colloquial; "to outstrip them by a style of his own"—not "to outdo their style," which would be *renchérir sur*. *S'efforcer*: more than "to make an effort"; "to strain himself," "to force the note" exactly gives it. *Il le faisait*: "This effort (strain) appears in his writings, and we notice it also in the man." *Il avait des saillies*: this sentence was the touchstone of the piece, and hardly any version could be mint-marked as without alloy. *Agrément* has no exact equivalent in English: it applies to all that gratifies or commands—ornament, accomplishment, grace, charm. Here it refers to La Bruyère's literary graces, and in translating we are almost forced to define these as "pleasantry" or "wit and humour." *D'agrément* qualifies both *fougues* and *poussées* (and, I think, *saillies* as well). This was not seen by the majority, and I had such monstrosities as "bursts of charm" (common), "impulses of adornment," "spasms of amiability," "abnormal sprouts of ornamentation." With these *prolegomena* I will attempt a rendering: "He indulges in sparkling sallies, in outbursts and ebullitions, as it were, of wit and humour which exceed the limits of good taste." *Il l'annonce*: here a literal rendering left it often doubtful whether La Bruyère or Montesquieu was the author of "Lettres persanes." "He heralds and forestalls the 'Lettres persanes'" gives the full sense. *Tenir et relever de lui*: "to be his heirs and descendants." *Trempe la pointe*: the metaphor must, of course, be retained, but "shafts" is better than "arrows," and "ink-horn" or "ink" than "ink-pot" or "ink-stand." *Marquie et appliquée*, "emphatic and studied"; *suffisante*, "adequate." *S'acharne*: "is at grips with" (or "is still running to earth"); "his half-veiled hints and dark sayings"; the metaphor is from a pack in full scent. 1688 is the year when the "Caractères" were published. *L'artiste*: "the literary artist," in contrast with the student (*la curiosité*). *Allons*: "after all." *Effort*: "strenuousness" is, perhaps, the best word. Sainte-Beuve ends on the keynote of the first sentence, *s'efforcer*. No one, by the way, thought of substituting Boileau for the (in English) unfamiliar Despreaux, and Fénelon often had an accent too much or too little.

PROBLEMS.

The prize is divided between "R. S. D." and "M. B. B." Most of the similar problems sent in were merely a variation of the figures.

Correct solutions have been sent in by—Zarah, M.B.E., E.F., G.S.W., M.W.C., R. Farquhar, M.M., Bathford, Terry, Masonica, Amaryllis, Bladud, *Aloupops*, Pierre Arvaud, Log π , Tana, Via Frattina, Froebellian, G.H., A.T.B., J.W.M., M.W.C., R.S.F., M.B.B., Lampblack, J. S. Goller, Q.E.D., S.H.C.J., G. W. Lawrence, St. Mungo, A.P., J.W.C., Kettlewell, Capstan, M.C.W., L.J.P., Maida, Chemineau, A. Cory Thomas, R.S.D., F.M.J., P.C., H.W.C., π , Reve, J.A.J., H.D., M.M., A. Stuart, Erin-go-bragh, E.A.G., Amadan, Molly, E.M.M.T., A.A.R., F.M.K., Z., Bianca, Eicarg, Hasta, Bog-oak.

SOLUTION.

If the triangle ABC is folded down the line AD , the side AB must meet DE at a distance of 3 units from C , and cut off a triangle with sides 26, 25, and 3.

The area of this triangle will be found, by the usual formula, to be 36 ;

$$\therefore \text{the vertical height } AD = \frac{36 \times 2}{3} = 24.$$

The angle ADB being a right angle,

$$DE = \sqrt{(26^2 - 25^2)} = 7,$$

and the whole base, $BC = (7 \times 2) + 3 = 17.$

\therefore the area of the triangle ABC

$$= 17 \times \frac{24}{2} = 204.$$

By "M.B.B."

ABC is a triangle having its sides AB and AC equal to 22 and 15 respectively. The bisector AE of the angle BAC meets the circumference of the circle ABC at the point D and the base BC at E .

Given that $DE = 7$, find, *without Algebra*, the length of AE , and show how to construct the triangle ABC .

We invite solutions of "M. B. B.'s" problem.

Prizes to the amount of One Guinea are offered for the best original Arithmetical Puzzles (not more than three). The solutions must be given.

A Prize of Two Guineas is offered for the best translation of the following extract from De Tocqueville:—

Enfant des deux races, élevé dans l'usage de deux langues, nourri dans des croyances diverses et bercé dans des préjugés contraires, le

métis forme un composé aussi inexplicable aux autres qu'à lui-même. Les images du monde, lorsqu'elles viennent se réfléchir sur son cerveau grossier, ne lui apparaissent que comme un chaos inextricable dont son esprit ne saurait sortir. Fier de son origine européenne, il méprise le désert, et pourtant il aime la liberté sauvage qui y règne ; il admire la civilisation et ne peut complètement se soumettre à son empire. Ses goûts sont en contradiction avec ses idées, ses opinions avec ses mœurs. Ne sachant comment se guider au jour incertain qui l'éclaire, son âme se débat péniblement dans les langes d'un doute universel : il adopte des usages opposés ; il prie à deux autels ; il croit au Rédempteur du monde et aux amulettes du jongleur, et il arrive au bout de sa carrière sans avoir pu débrouiller le problème obscur de son existence.

Ainsi donc, dans ce coin de terre ignoré du monde, la main de Dieu avait déjà jeté les semences de nations diverses. Déjà plusieurs races différentes, plusieurs peuples distincts se trouvent ici en présence.

Quelques membres exilés de la grande famille humaine se sont rencontrés dans l'immensité des bois. Leurs besoins sont communs : ils ont à lutter contre les bêtes de la forêt, la faim, l'inclémence des saisons. Ils sont trente à peine au milieu d'un désert, où tout se refuse à leur effort, et ils ne jettent les uns sur les autres que des regards de haine et de soupçon. La couleur de la peau, la pauvreté ou l'aisance, l'ignorance ou les lumières, ont déjà établi parmi eux des classifications indestructibles : des préjugés nationaux, des préjugés d'éducation et de naissance les divisent et les isolent.

Où trouver dans un cadre plus étroit un plus complet tableau des misères de notre nature ? Il y manque cependant encore un trait.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by April 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY ; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Chairman—THE DEAN OF CANTERBURY.

Vice-President—THE LORD HARRIS.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,251,779. Annual Income, £406,752.

ARCHIBALD CONSTABLE & CO., Ltd., 16 James Street, Haymarket, S.W.

EDUCATION IN THE TRANSVAAL.

There are more children being educated in the Transvaal now than ever before the war.—*Education Reports.*

I would rather see one half of the children taught well than see the standard of education lowered.—*Lord Selborne.*

I cannot imagine that the average man has any adequate idea of the extent to which the children of this country are being left in utter ignorance.—*Mr. Lionel Phillips.*

HOW are we to reconcile or explain such apparently conflicting statements? How are we to remedy what is wrong? As many nostrums as there are doctors. Let us have a South African Winchester, says Mr. Sargent; or a Transvaal Eton, say others; or more South African Church of England schools, says the Archbishop of Canterbury. Future ideals, possibly; present impossibilities, certainly. (A coloured Eton would have more chance in Cape Colony, where there are more coloured children at school than white.) William of Wykeham would writhe in his tomb to see his scholars' education hampered by transference to South African soil, and the present masters of the foundation would claim compensation for premature grey hairs after a year's teaching of the colonial youth. Traditions grow; not even in a subtropical climate can you force them—no, not by cross-fertilization. Parents must first be educated, and a cultivated stock obtained, before it will be possible to propagate a healthy seedling capable of growth and development. "But the Boer child learns so readily," you say; and the Boer farmer replies: "The longer my son stays at school the less fitted he is for farm work." "The colonial child," you say, "is healthy, has not been over-driven, and should learn well." "He cannot want more than I did," replies the parent, "when I came to this country, and all I knew was reading, writing, and arithmetic." No: the only class that, as a whole, really want education are the Civil Service, who send their children home for education similar to what they had themselves—those of them who can afford it.

To remedy what is wrong is, then, not easy. To reconcile or explain the statements at the head of this paper is another matter. The Education Department is bureaucratic, Olympian, *χρησιν ἀνθρώπων*, and the "dii majores" are new to the job, trying to patch together with prentice hand in a new country a system that shall vie with those that date from the Renaissance and before. An old hand that has worked for a score of years in the country, should he offer advice, is "pro-Boer," and must make way for the latest Balliol Babe. Mathematical schemes are evolved in the head office by a Senior Wrangler with a Third Class (provisional) Certificate (of which Certificates anon), and Latin schemes are framed by a First Class Classic, ex-Assistant Inspector; neither with teaching experience in the schools, for which they are drawing up syllabuses; schools, too, which they "inspect" with considerable satisfaction—to themselves, and report on for the benefit of—the Education Department. What shall we say of a high school Inspector who speaks of the introduction of the "set" system as opposed to the "form" system as an "interesting experiment"? Or of a boys' boarding house Inspector, whose own water tank was so befouled with decaying organic matter that it was the presumptive cause of two cases of enteric? Of a body of Inspectors who regret the absence of or rejoice at the presence of South African history in the curriculum, when it has been prohibited by the Department? Of a Department that introduces into its primary schools the system of individual inspection that has been abandoned even in conservative England? Of a country in which a school committee breaks open the school-house and forces the lock of the piano, rather than take the trouble to get the keys from the head master, when it is going to use the school for a club meeting-house; or ejects an evening-class teacher and his class because it wants the room for "bridge"? What shall we say of these and like matters? At least that education is in its infancy where such things are possible.

Security of tenure is perhaps hardly to be expected in a department of which the chiefs have only been temporary, and the subordinates—the teachers themselves—are not yet

ranked as civil servants, inferior in this respect to the office clerks, where two years' service as clerk in the office can count as two years' teaching experience for the purpose of teachers' certificates. Temporary chiefs have succeeded one another with kaleidoscopic rapidity, and variety of view, only surpassed by the permutations of the teaching staff and the schemes and regulations issued by the head office, which latter, on the estimate of one Inspector, involved departmental circulars at the average rate of one for each day of the year. Each temporary chief, whether expert in comparative systems and camp schools, B. ès Lettres, member of Legislative Council, ex Town Clerk and ex-Treasury official, or seconded from Scotland, had to learn local conditions, reconcile, or at least temporize with, Dutch opinion; and, this done (more or less satisfactorily), each in turn has made his exit, peacefully, without demonstration, and in one case mysteriously; for such indeed was that of the late Director, preceded by such a labyrinthine tour of inspection that it was not known he had left the country until the Secretary of the Department signed himself Acting Director.

Under such unstable chieftainship it is perhaps not surprising that "security of tenure" is never used except sarcastically. But at the time it was, to say the least, startling for a head master who had gone home on six months' leave, and returned bringing out his wife and family, to find a letter awaiting him, some three months old, to say that his services are no longer required. "Gone on leave" is at present under this Government a byword in the Colony. "So-and-so has gone on leave: do you think he is coming back again?" is a common question; so often has "gone on leave" been an euphemism for "retired" or in plain language "dismissed," or, at least, gone to look for a better job at home and stop there if possible. There are not many services where the changes are so great. The year 1903 saw 193 primary teachers out of 919 leave the Department—80 through death, dismissal, return home, or (and chiefly) marriage, and 113 for "general reasons." The year 1904 saw 246 out of 924 leave the Department, 79 for the above reasons and retrenchment, and 137 for "general reasons." "Of the last, many were teachers of inconsiderable qualifications, temporarily engaged during the period of the rapid extension of the work of the Department in country districts." Good enough for beginning the work, but not for carrying it on! Why did not the Department engage competent teachers in the first instance? Even in the same school there are often continual changes of staff, a standing game of "musical chairs," and the commonest remark of the child on reaching home is: "Oh! mother, we've got another new teacher to-day."

Now what are the salaries: are they such as to attract good teachers and to keep them? The Directors of Education and the Colonial Secretary pat the teachers on the back, praise their work, and say they are really worth better salaries—how far they are getting them the following table will show. Roughly the salaries must be divided by 2 to arrive at an equivalent English figure.

MEN AND WOMEN, PRIMARY-SCHOOL TEACHERS, PRINCIPALS AND ASSISTANTS.

	Number in 1903.	Number in 1904.*
£400 and over	13	27
£300 to £400	78	59
£200 to £300	337	351
£100 to £200	417	398
Under £100	74	22

Average salary: 1903, £203. 3s. 3d.; 1904, £203. 13s. 11¼.

The average number of pupils per teacher in all primary schools is for 1904 29, but in some schools it runs as high as 48 and 49 on pupils enrolled, 41·5 and 45·7 on average attendance—and this in two of the largest town schools. In a school in which the average distribution of 677 children is 48 per teacher it is perhaps not surprising to hear of 70, and even 90, pupils under one teacher. But is this education or a Government-managed *crèche*? Pity the poor teacher. Is it a wonder she faints at her work? This, too, in a school within about seven minutes' walk of the head office!

Lord Selborne does not want the standard of education lowered. What is the standard? The following figures show:—

AVERAGE DISTRIBUTION OF CHILDREN IN ALL ELEMENTARY SCHOOLS FOR 1903 AND 1904.

Standards.....	Sub.	I.	II.	III.	IV.	V.	VI.	VII.
Percentage 1903	48·3	17·0	13·6	9·6	6·7	3·3	1·2	·3
„ 1904	40·3	17·4	14·5	11·6	8·3	4·9	2·2	·9
Ages 1903	7·7	10·0	10·9	12·1	12·9	13·4	14·1	15·9
„ 1904	7·3	10·3	11·2	12·1	12·8	13·6	14·1	15·0

Though these figures point to an improved condition of affairs for 1904, they show clearly that it will be years before the education in the elementary schools can produce any permanent results. Nearly 58 per cent. of the children are still in Sub-Standard and Standard I.

Comparing this with the standard reached in secondary education and going right to the top, we find, out of 744 children (in 5 high schools), 17 entered for the Cape Matriculation in 1904 and 9 passed, and this is at present the highest point reached by the high-school course. The Cape Matriculation is generally reckoned inferior to the London Matriculation.

The "cost per head" of education, as given in the Report for 1904, was for elementary schools £6. 14s. 2d. and for secondary and high schools about £14·7. These figures are, however, calculated solely on the basis of numbers of children and salaries of teaching staff, and represent—

For Elementary Schools (26,794 children), £179,925
For Secondary „ (1,970 „), 29,062

(28,764 children), £208,987

Total Education Department expenditure, £338,371

Difference, £129,384

In addition to the above scholars there were 3 orphanages (148 children) and 409 evening students, costing between them £7,678, leaving a balance of £121,706 not accounted for by teachers' salaries. This means another £4·25 per head all round. Add to this the fact that the Education Department's financial statement does not include public works charges, such as rent, building, light, water, and sanitary charges, which would add considerably to the actual cost per head of education to the colony—with water, for instance, at 2s. 4d. per 1,000 gallons in Pretoria and 6s. per 1,000 gallons in Johannesburg. Johannesburg College pays for its present housing in Barnato Park about £2,400 a year for rent. The cost per head for students at the Normal College, Pretoria, is £96. 7s. 9d.

To leave the question of finance, what are the conditions under which the children are learning?—Five or six schools in Pretoria condemned by the Medical Officer of Health as unfit, owing to defects of accommodation, lighting, sanitation, rotten floors, leaking roofs, &c. But the Medical Officer of Health and municipality are powerless, as they have no authority on Government premises. The Government is a law unto itself.

The condition of the outlying schools has not been reported on publicly. As regards furniture and school equipment generally, the condition of affairs has greatly improved, to judge by the Inspectors' reports. Physical exercises receive due prominence. The children's eyesight is not a matter of Departmental concern. Generally speaking, the progress all round has been considerable, and for this the teachers and inspectors merit every praise for their energy and enthusiasm.

It is, however, a matter for regret that considerable sums of money have in some cases been spent on the embellishment of town schools, and provision of what may be termed luxuries; while the provincial and farm schools have still been somewhat starved, in the provision of necessary and adequate materials and buildings. To borrow a metaphor from the present Acting Director, the canvas age is mostly passed; the wood and iron age is now predominant, and in the principal schools of important towns the stone age has set in. An unlined iron building gets hot when the sun temperature reaches 120 or 130 degs.; but a head master who considered his school so hot as to be unfit for the children to be studying in it, and sent them

* Omitting 73 teachers who are licensed, or provisionally licensed, for special subjects, but not Certificated.

home, was reprovved for doing so without previous sanction of the Department.

High schools have suffered from the desire of the Department to fill them. In this object it has to some extent succeeded, but largely by help of children unprepared for and not requiring a high-school course: by converting them, in fact, for the time into fee-paying elementary schools. This defect, however, time and elimination of the unfit are remedying.

One of the necessary conditions for the fit working of an Education Department is the gradation and certification of the teachers. By January, 1904, every teacher was required by the Education Ordinance to hold a certificate. By December, 1903, none had their parchments. Nor have they now (December, 1905); but they have been awarded, and promised shortly.

In December, 1903, there was a flutter in the Department. Previous Grading Commissions had sat and tried to hatch out schemes; but they were addled. But the Education Department must be Ordinance-abiding. How to grant Certificates to 919 teachers in a month? Call in the Inspectors and take advice. Inspectors called. Happy thought—a simple method. Number of years of teaching experience in certain classes of schools will do it. If wrong, can be rectified at leisure after January 1, 1904. Certificates awarded just in time (December 31). "Any complaints shall receive consideration." 334 claims for Higher Certificates made—172 granted.

The First Class Certificate requires six years' service under the Government—can a non-Government teacher ever obtain one?—an original thesis, and one year's travel in one or more foreign countries for additional study in the subject of the thesis, and a report on such travel. Teachers inquire: "Whence will the money necessary for such travel be forthcoming?" Department replies that a travelling scholarship of some sort is postulated by the regulations; but definite arrangements are postponed until such time as the first applicant for a First Class Certificate appears. A holder of a First Class Certificate is "eligible for any post under the Education Department."

There existed until the middle of 1904 a "Stores" section of the Department to manage the issue of stores of all kinds in the early stage of rapid development. As time went on and there was less mass of material to deal with, it devoted its attention to details that had previously been left to the discretion of heads of schools and Inspectors, until the centralizing system was carried to such perfection that it required the actual signature of a Departmental chief at £1,000 a year to sanction the purchase of items worth a few shillings by a high-school principal at £800 a year. The principal first obtained an estimate from the local tradesman, and sent this in on a triplicate application for sanction. Sanction being granted, it was returned to the principal, who forwarded it to the tradesman, who sent the goods to the principal and the invoice to the Department, which latter forwarded the invoice to the principal for certification of correctness, who returned it certified to the Department, which then paid the bill—in due course. Naturally, the envelopes containing the applications for sanction and those bearing the invoice on its many peregrinations contained special typewritten foolscap documents in official form. Good for salary-earning clerks, purveyors of typewriters, and paper makers, but hardly economical or business-like, and a most expensive method of preventing possible petty frauds by highly paid officials.

To turn to other matters, no reference to Transvaal education would be complete without some mention of the "language question" and the "religious question." These two are closely connected, and yet again are separate. Connected, because the Dutch wish their children to learn their language mainly in order that they may follow and properly understand the services of their Church. Separate, because the Dutch have not taken advantage of the "right of entry" clause in the Education Ordinance, by which ministers of religion of various bodies might on request of parents give denominational instruction in the schools. The language question is very largely a political party question. But there are educational points of view. The Dutch say: "Give a reasonable amount of time to Dutch." The Government says: "Yes, what we think reasonable, but not as much as English schools give to French or to German." "Well," reply the Dutch, "let the young children who cannot understand English have some of their early education in

Dutch." "No," reply the Government, "they must learn English" and (*sotto voce* to themselves, "we have not got enough Dutch-speaking teachers to be able to do it"). Enter Lord Selborne, however, who says: "Most reasonable demand; let it be done," and it is so ordered. Now, in sober earnest, the bilingual colonial is a no-lingual, and that is largely the reason of the backwardness of the pupils. Your bilingual Franco-German Swiss boy is not to be compared with a French or German boy for fluency of speech or power of expression. And your bilingual, or possibly polylingual, Transvaal boy (for he may know scraps of Zulu or Basuto as well as of Dutch and English) is not to be compared with an English or Holland boy. Educationally a boy is likely to make more mental progress if his early education is confined to one language and instruction given him through that language. His ideas have a chance of being clear in one language instead of in a perpetual muddle in two. Duplication of lower standards is a necessary corollary of the logical carrying out of Lord Selborne's concession, with a consequent increase in the staff of teachers, which may involve another "sick leave circular." But that circular must be explained later. In principle the scheme is sound. Lord Selborne might have been a schoolmaster, with a professional diploma for "theory," had he not betrayed his adherence to the Berlitz system, a Berlitzian of the "strictest sect."

Lord Selborne's minute appears at first sight to make a considerable concession in the language question. In fact, however, it will make but little difference. As a knowledge of the Code requirements in English is still compulsory for passing into a higher standard, the Boer child who comes to school, knowing only the Taal, and claims to be taught in Dutch, will stop in the standard in which he enters until he has learnt English enough to pass him out of it with English children. Consequently the child's rise in the lowest standards is still dependent on his acquiring English and his ability to follow instruction in English. This being so, and his Dutch language lessons being limited to three hours per week, it is inconceivable on what grounds the standard of Dutch for the Government's Lower Certificate Examination (one year junior to the Cape Matriculation Examination) is made the same as that of English. No Continental school has yet, with three hours a week, brought a foreign language to the same pitch as the mother tongue. Nor will a Transvaal school bring High Dutch in three hours, or even five hours, a week to the same standard as English. Mr. Sargant's plea that the Dutch continually heard by the pupils outside the school will make up for the short hours is beside the point. They hear the Taal, or at best Afrikaans, and the children of English parents not over much of either. Mr. Sargant cannot have read examination papers of children taking Dutch. The Education Department seems to recognize the difficulty, as it now allows five hours' Dutch language instruction in the high schools, such permission being based on what is a questionable interpretation of a section of the Ordinance, an interpretation that almost certainly was not in the minds of the framers.

But what do the politico-Dutch party really want? Not Dutch so much as control of the schools and appointment of teachers; and that, naturally enough, the Government will not give them. The educated colonial Dutchman speaks English as a rule perfectly, and in very many Dutch families English is the language in the home. General Botha speaks English with ease, but at official interviews of deputations to the Government he speaks in Dutch through an interpreter. At the Eendracht School at Pretoria (which numbers about four hundred children, boys and girls, about the same number as the boys' and girls' Government high schools and preparatory department) Dutch is by no means the subject that receives chief attention. The secretary is an Englishman, the head mistress of the girls' boarding house is English, beside other English assistance on the staff, and the school prepares for the Cape examinations, which are essentially English examinations. Be it noted, however, that this school is an independent one, not run by the same body as runs the commonly called "Dutch schools." The head master of this school has said publicly that he prefers speaking English to speaking High Dutch, as he can speak it more grammatically, and yet he is a Dutchman. Be it noted further, a matter of some interest, that there are many English children in this school.

The denominational instruction clause of the Education Ordinance was originally introduced with the idea of allowing the

Dutch ministers and those of other Churches an opportunity of entering the Government schools to give religious instruction to members of their own Churches. The Dutch Church are not in favour of "Church" schools, and have not availed themselves of the Ordinance to make the Government schools centres of their own Church teaching. The Churches called in England dissenting are strongly opposed to the scheme, and, like the Jews, look after their children's instruction in their doctrines entirely apart from their schools, and the only bodies who have availed themselves of the opportunity offered are the English and the Roman Catholic Churches. At the time of the recent Commission appointed to investigate the question only 696 children out of 29,000 were making use of the Ordinance's provisions, and the finding of the Commission was strongly in favour of deletion of the clause. The Government has left the matter over to be dealt with by the new Assembly.

The Anglican, Roman Catholic, and Jewish bodies are not likely ever to fall under the Government school system. They have had, and still maintain, their own separate schools. What is more, they have children of other Churches attending their schools, though there are the Government schools at hand. We have thus in Pretoria the apparently anomalous condition of English children attending the "Eendracht" school, Gentile children attending the Jewish school, Anglican children attending the Loretto Convent school, and, at the same time, many children of various creeds who are sent to Natal and Cape Colony rather than to the local Government schools. In spite of these notable facts, the Government has attempted, but so far completely failed, to bring all schools under its own sheltering wing. It has failed, and will fail, unless it can produce a system that gives general satisfaction. This cannot be accomplished without an entire change of policy. The Government has done its best to kill the private schools; underselling them by charging ridiculously low fees; compelling them to submit to inspection and to send in returns of attendance, staff's qualifications, &c., but giving them no Government grant; proposing at one time even to require them to send in returns of revenue and expenditure. But it has not succeeded. What is to be the end of it? Almost inevitably that the Transvaal must follow the example of Natal—maintain its own Government schools, but at the same time give grants in aid to private schools, subject to efficiency tested by Government inspection.

In Natal in 1902 there were 37 Government schools, with an average attendance of 6,031 and a cost to Government of about £41,000; there were 462 Government-aided schools, with an average attendance of 12,418, receiving Government grants of £16,241. These Government-aided schools are nearly half of them for natives, but there are 57 fixed European schools, as against 31 Government European schools, of which two only are high schools, one in Durban and one in Maritzburg, both for boys.

Such a system introduced into the Transvaal would be beneficial to education, as it would enable the private schools which exist, and which will continue to exist, to run still more efficiently than they do, while the bodies that support them would feel they were receiving some share of the money they contribute for education in the form of taxes.

DURHAM SCHOOL.

ONE tale is only good until another tale is told, and there is no finality in historical research even for a day. In the October number of this journal I gave a sketch of the "Pedigree of Durham School," showing that it had no relation to the monastery, but was a public school under the rule of the bishops, one of whom amply endowed it in 1414, while an earlier endowment "about 1320" had failed. In the fuller history of this school, since published in the "Victoria County History of Durham," I wrote: "What is perhaps the earliest mention of scholars in the Almonry, though it much more probably refers to scholars in the Public Grammar School, is a deed in the Almonry Register, whereby Richard, Bishop of Durham, formerly of Salisbury (i.e., Richard of Bury, 1333-1345), arbitrated between the convent of Durham and the Master of Trinity Hospital,

Gateshead, about the manor of Kylow (Killow) 'formerly given to the Almonry of Durem (Durham) for the maintenance of three clerks, scholars of the school of Durham, in the liberal arts (ad sustentacionem trium clericorum, scholarum scholarum Dunelmensium liberalium arcium) by Mr. Symon, of Farlington, but afterwards given by his brother Henry, the heir of Symon, to Gateshead, for the maintenance of three poor men and a chaplain.' The Bishop settled the dispute by letting the hospital keep the manor, paying 40s. a year to the convent."

The document from which this was taken I found in the Almoner's Register at Durham, written in the fourteenth century. But, alas! misled by Le Neve's "Fasti Ecclesiae Anglicanae," and adding thereto a blunder of my own, I misdated the document by a century, making it a hundred years too late. Instead of being "about 1320"—a date due to the date assigned to Simon of Farlington by Le Neve—and, instead of this Bishop Richard being Richard of Bury, the bibliophile (or bibliomaniac; for he is said to have left himself an absolute pauper by spending the princely revenues of the bishopric of Durham on buying books), who was not ever Bishop of Salisbury, the Bishop was Richard Poore, and the date of the document is at latest 1230. Moreover, there is in the same Almoner's Register an earlier document than the arbitration I had noted, namely the actual gift itself, for the benefit of the school. My only excuse for having missed it is that, utilizing the only time I had for perusing the Register, I read it in bed at midnight. Canon Greenwell, who has done so much for the history of Durham—he revolutionized the whole story of its foundation, and shows that its so-called foundation charters were fourteenth-century forgeries—having leisurely read the book, has kindly given me a copy of the grant to the school. As it clearly shows that the endowment was for the Public School of Durham, in no way monastic, and as it was late in the eleven hundreds, or early in the twelve hundreds, instead of the thirteen hundreds, your readers may be interested to see it. The original is in Latin.

To all the faithful in Christ to whom the present writing shall come, Master Simon of Farlington, Archdeacon of Durham, Greeting in the Lord. Know ye that I have given and by this present deed (*carta*) confirmed to the Almonry (*Elemosinarie*) of the house of Saint Cuthbert in Durham the manor (*vilam*) of Kylow with its appurtenances, which I bought of Walter de Monasteriis and his heirs, in pure and perpetual alms for the maintenance of three scholars of the school of Durham (*trium scholarum descol. Dunelm.*) whom the Master shall by way of charity elect (*beatim eliget*) and send every day with a tally (*tabella*) in honour of the Blessed Virgin and Saint Cuthbert to the Almoner of Durham, and he shall charitably (*beatim*) provide for them in food and drink, and they shall spend the night in the Almonry and the Almoner shall provide them with proper beds (*in lectis eis decenter prospiciet*).

In witness whereof I have confirmed this deed with my seal, these being witnesses: John of the Isle, Walter monk of Durham, Richard chaplain of the City, Laurence chaplain, Robert of Ripon, Robert Bird, and many others.

The date of this deed cannot be settled exactly. But, as the arbitration award before quoted says that after the Archdeacon's death his brother Henry recovered the manor by hereditary right in the Court of Durham, and then granted it to the Hospital of Holy Trinity at Gateshead, which was under the rule of a Procurator—a monk of Durham, who was apparently *ex officio* its nominal head, the Abbey being trustee for the Hospital—and as process had been brought by the Abbey against the Procurator and brethren for its recovery before they determined to ask the Bishop to arbitrate, some years must be allowed for all these transactions, since law moved even more slowly then than now. The bishop who arbitrated "Richard, by the grace of God Bishop of Durham, late Bishop of Salisbury (*Salisburiensis*)"—was not Bishop Richard Augerville of Bury, but Richard Poore. He was Bishop first of Chichester, then of Salisbury (where he built the present cathedral), and was translated May 14, and enthroned at Durham September 4, 1228. His very unusual description of himself as "late of Salisbury" shows that the award was made very soon after his translation, in all probability in his first year at Durham. It can hardly be doubted, therefore, that the gift for the scholars of Durham School must be placed either towards the end of the twelfth, or, at latest, at the very beginning of the thirteenth, century, which brings the direct evidence of the existence of the school up to more than a century earlier than I previously thought. As it is even then

spoken of in a matter of fact way as a well known existing institution, this greatly strengthens the argument that it existed from the days when Durham was not an abbey, but a minster; not a house of monks, but a college of secular canons.

There was nothing original in Farlington's gift establishing exhibitions for scholars in connexion with a hospital or almshouse, and it is one which would have peculiarly commended itself to Bishop Richard. For he himself had assisted in the foundation of a Hospital of St. Nicholas at Harnham Bridge, Salisbury, by Ela, Countess of Salisbury, in 1220, which still exists, part of the establishment of which seems to have been a provision for poor scholars, which was afterwards, in 1261, developed into a regular college for a warden, two chaplains, and twenty scholars, the earliest university college in England, three years older than Merton College, Oxford. The scholars were afterwards moved, like those of Merton, to Oxford, where the College was known as Salisbury Hall. Moreover, Bp. Richard was the son of Bp. Richard of Winchester, known to his day as Richard of Ilchester, but described on his tomb as Richard Toclvyve, who had attained his bishopric by his eminence as a lawyer in the Court of Exchequer and as a judge on circuit. At Winchester this Bishop Richard had wrested from the Knights of St. John the Hospital of St. Cross. Evidence still preserved at New College, given in a great suit (in 1373) between William of Wykeham and the Masters of St. Cross, who had been robbing the hospital for their own benefit, shows that the original founder, Henry of Blois, brother of King Stephen, and Bishop of Winchester, had founded it, in 1130, for thirteen resident brethren, impotent from old age or disease, and a hundred men, who were to be given daily in the Hundredmenhall porridge or pottage made in the Hundredmenpot, served out by the Hundredmenladle, with a sufficient quantity of bread, herrings, and three gallons of beer.

Among the hundred men were to be included "thirteen of the poorer scholars sent by the Master of the High School of the city of Winchester"—the predecessor of Wykeham's new college there. Richard of Toclvyve doubled the number of the recipients, making two hundred men instead of a hundred—including, no doubt, the scholars in proportion. As Richard Poore had himself probably been an official in the Exchequer, then kept at Winchester, as his father and his brother (who preceded him in the see of Salisbury) had been, he was, no doubt, well acquainted with this exhibition endowment, which, as Farlington was a Hampshire man from Farlington, near Portsmouth, was perhaps directly imitated from it. Bishop Poore secured the continuance of Farlington's gift by awarding, on the principle that equality is equity, that the then Hospital of Gateshead was to keep the manor in dispute, but to pay half the net income (then valued at £2 a year) to the Almoners of Durham for the three "scholars clerks"—"the Warden and Scholars Clerks" is still the corporate title of Winchester College—of Durham School.

ARTHUR F. LEACH.

RELIGIOUS EDUCATION IN SECONDARY DAY SCHOOLS.

AT the present time, when religious education is a subject that is often in the minds of thinking men, and is troubling the brains of practical politicians of the Radical shade, it is, perhaps, worth while to consider the question from the point of view of the practical schoolmaster. The following remarks apply chiefly to secondary day schools, although much of what is here said would be equally true for any other description of school known in this country:—

In the first place, it is an undeniable fact that there is no "religious question" in the schools themselves. The question is a purely political one, invented by Nonconformist politicians and political parsons as a very useful weapon with which to belabour a weakened Government. Like the Nonconformist "conscience," it is a political fact and a moral fiction—of great value in the days of stress and storm that precede and accompany appeals to the unthinking voting public.

You may teach the children of Buddhists, Mahometans, and Confucians in the East, and you will never find a parent who troubles his head about anything else except the secular education of his children during the hours they are in school. In

this country you will teach Jews, Roman Catholics, and Protestants of every denomination in the same school, in the same class. With the exception of the Jews—and occasionally, but rarely, of the Roman Catholics—you will never hear a parent raise the faintest inquiry that can by any stretch of the imagination be construed as evincing any practical interest in the "religious question." If your experience as teacher, governor, or manager has taken you on active service into either elementary schools or secondary schools, in no instance will you ever find that the parents of either the rich or the poor are in any way concerned with this so-called vital question. You may almost be challenged to find a school which has been troubled with a "religious question," except where some local political parson or some semi-priestlike layman has raised the question to serve his own ends while electioneering.

But there is a religious question of a different character that has often caused thoughtful and religious teachers much perturbed reflection, and that is the proper use of the Bible in secondary day schools. The Bible seems to be studied in schools for several different purposes. Theoretically, it is supposed to be studied as the one book which contains the great truths on which the Christian faith is based—truths which are the guide of even those who doubt the supernatural basis on which they are erected. The Bible is also studied as a text-book of the history and geography of the Jews, of the biographies of great prophets, kings, and teachers. More rarely it is used as an example of English literature, and its beauty as a great literary work is impressed upon the scholar.

Now, it is safe to say that the parent and the general public would, if they thought about the matter at all, assume that the Bible is taught in schools on account of its moral and spiritual worth. But in actual practice the moral truths—the spiritual teaching—of the Bible are lost: they are absolutely non-existent, except in a very indirect fashion. The Bible is used almost solely as a text-book of history, geography, and biography, and is treated by both boys and master as an ordinary school-book. If some of the really religious people only knew how the Bible is handled in schools, they would be the very first to cry out for the abolition of Scripture teaching or for its reform.

The fault for the present non-moral—one might almost say immoral—use of the Bible, lies with the ancient Universities of Oxford and Cambridge, who, by means of their Local Examinations, control in a very large measure the teaching of the schools. Now each boy who takes the University Local Examinations must take Scripture unless his father signs a declaration to the effect that he has conscientious objections to his son learning Scripture. (In the last eight years the writer has known one parent who made use of the privilege; he did so that his son might devote more time to Latin and so qualify for entrance to one of the learned professions.) Practically then, every boy takes Scripture, and he takes it on lines laid down for him by the University examiners.

We should probably all agree that an examination in "morals" for boys under sixteen could result in nothing but a race of hypocrites or sanctimonious prigs. Perhaps the Universities realize this also, and hence away go all the questions that concern life and conduct and in come all kinds of questions about people, places, and antiquities. It would perhaps not matter so very much if the questions set dealt with simple stories and broad outlines, but they do not. They are of a type that demands not a broad knowledge of important events, but an acquaintance with details difficult to acquire and useless when obtained. By way of illustration take the following questions set at the Local Examinations on the "Acts of the Apostles":—

1. Explain: *Captain of the temple, proselyte, Grecian Jew, synagogue of the Libertines, pro-consul, deputy, colony, sergeants, Areopagite, certain of the chief of Asia.*
2. What do you know of: Theudas, Ananias of Damascus, Agabus, Eutychus, the Syrtes, Aquila, Assos, Amphipolis, Antipatris?

Let some devout man explain what is the moral value of "the Syrtes." Perhaps some constant church-goer would try his hand at answering the above and also the following questions:—

3. Give four instances in which the historical accuracy of the Acts is remarkably confirmed by external testimony.
4. On what occasions does the author of the Acts use the pronoun "we."
5. Draw a map of Asia Minor, marking and naming on it important seaside places.

What is the result? It takes so long to get up all the details about Agabus and Amphipolis that there is no time left to impress the really great and useful lessons which the Bible contains for all men, even unbelievers. The splendid heroism of some of its characters, the unparalleled beauty of its language, the overwhelming force of its appeal to all that is best in man, its denunciation of all forms of sin, whether in deed or thought, are swamped under the direction of the ancient Universities by a mass of irrelevant, unimportant, and uninteresting detail. But this is, after all, a negative result. There are positive results of an even worse character.

I do not think I shall be over-stating the case if I say that many boys dislike the Bible, and regard it as a source of trouble and annoyance like other text-books. I have heard many a boy say: "I hate Scripture." If only one boy in a hundred is caused by our present methods to regard this unrivalled book as a mere school-book, is it not worth while to ask ourselves whether we should not pause and reconsider our methods? Personally I am in favour of doing away with all dogmatic religious teaching in day schools. The proper place for such teaching is the home, the church, and the Sunday school. The proper person to give lessons on morals and character is the parent or the priest.

Moral instruction is, however, indirectly a feature in the right teaching of history and literature, and, given in connexion with these two subjects, savours less of "preaching," which is greatly resented by boys unless very skilfully performed. The general tone of the school, its discipline, its *esprit de corps*, its insistence on habits of punctuality, thoughtfulness, and honourable dealing between boy and boy, and between boy and master, are worth a host of lessons on the position of Joppa, and the relation of Herod the Tetrarch to Herod the King. There should be no more definite religious teaching than is included in the following:—Let a short lesson be read from the Bible, let a suitable hymn be sung, let a suitable prayer be said at the opening of the morning school; let this be done reverently and without comment. The effect, both present and future, is by no means so inconsiderable as the professional teacher of religion may suppose.

But, if religious teaching is to be kept as part of the school curriculum for examination purposes, could not the Universities ask for the parables, and the meaning and the application of the same, or for the teaching of the Sermon on the Mount; and could they not once and for ever drop their soul-deadening, disgust-inspiring inquisitiveness as to "Libertine synagogues" and "certain of the chief of Asia?"

ERNEST YOUNG, B.Sc.

NOTES ON NOTES.

A VOICE of high authority has lately been raised against the use in schools of annotated editions of the classics. The notes, we understand, are not good for boys; yet it is graciously conceded that they may be serviceable to imperfect scholars, some of whom are to be found teaching even in public schools. We have seen nothing but an abridged report of what was said, and it were unjust to challenge an epitome. Not, then, with any purpose of controversy, but simply because the question has been newly mooted, we offer a few pedagogic and other thoughts upon it.

The objections to notes are, for the main part, obvious. They divert attention from the subject-matter; they diminish for the learner the calls on his thinking powers; a boy, especially a young boy, does but glance at them for some scrap of translation; and, above all, they prevent a habit of self-reliance from being formed.

Yet we venture to think that these objections, not weightless, have no decisive weight. Thus, if the third be brought into connexion with the first, it would appear that, the more cursory the inspection of the note, the less is the mind drawn by it from the subject-matter. As to the second, if some notes stifle thought, others stimulate it. With regard to the fourth, that notes cripple independence, it is the strongest article of impeachment. Yet the evil is counteracted when much unprepared translation is called for.

The arguments against annotations being not conclusive, we

may plead more hopefully the case in their favour. And first we see a justification for them in exceptional circumstances. May not a boy inferior to his class in one subject be saved by the support of them in his weakness? And a whole form may be backward. A teacher must sometimes read an author with boys insufficiently equipped for the task. An examination may bind him; or he may shrink from asking leave to try something easier for fear of casting reflections on others or discredit on himself. Surely in such a case notes are lawful auxiliaries to employ as a reinforcement of oral teaching.

We go further and consider, not backward boys, but boys in general. At times a text presents difficulties hardly to be overcome with a lexicon. There are choruses in *Æschylus*, and indeed in *Euripides*, which even a clever boy could not fathom without assistance. In *Aristophanes* the interpretation is sometimes a mere tradition from a scholiast. Nay, straightforward passages often have in them an allusion (*as columnatum*, &c., in the "Miles," for example) to elucidate which lies beyond the scope of a common dictionary. Moreover, there are parallels to be indicated—that inspiring teacher, Kennedy, in his commentary on *Virgil*, collected them under a special heading; and *Arrian* is read to small profit if we do not ask whence his phrases are borrowed. In short, there is plenty of business for notes to do. We suggest that they may effect it for boys in general with gain, not with detriment, to scholarship.

We are open to the retort that the teacher can do all these things himself; he can help the stragglers on, make the way fairly smooth for all, expound allusions beforehand, dictate the parallels, and so forth. That is true. But the object of notes is to save the teacher's time—to do some of the rougher work for him, and so leave him free for the discussion of finer points of grammar and language. Notes, if we may hazard a definition, are condensed "pupil room" adapted to the intelligence of the average boy.

Those who use them may chance sometimes to get knowledge that would otherwise be inaccessible. But on that we will not dwell, since such knowledge may well be of the condemned and distracting kind. Nor will we urge that, while modern pedagogues are recommending us to swallow the camel of a complete translation, it is idle to strain at a few gnats of version and comment. Modern pedagogues are not unanimous on the matter.

Having said so much about the serviceability of notes to boys, we touch briefly on the value of them for teachers. We have already said that we are not writing to any particular address. Yet we would fain hope that eye or memory has deceived us about those "imperfect scholars." All scholars are imperfect, and the more scholarly in proportion as they are conscious of their imperfections. Scholarship we have always conceived as a habit of mind resulting in great accuracy within certain limits, and in a perpetual desire to extend them. It would seem probable that head masters engage—may our coarseness be forgiven us!—the best scholars they can get for their money. It would be impertinent to inquire why more money cannot be offered. But, be your teacher more or less far from perfection of scholarship, he may learn from notes. How without them is he to obtain the latest fruits of special studies? Is he to talk, for an instance, if not a very modern instance, of Kelts and Teutons without having heard of the Miltenberg stone? It is, of course, better that he should go to learned treatises than trust to snippets from them. But seldom has he time or opportunity for any great width of reading. And it grows more and more desirable that he should apply himself chiefly to realizing and bringing home to his pupils the rare and abiding worth of the classics as *literature*.

Let us approach our subject from another side and in a lighter vein. At this moment of national storm and stress it may be not improper to set forth the economic consequences that would ensue if an important branch of industry were suppressed. Small need to state that it is native labour that would suffer, and that England would become more than ever the "dumping ground" of plain texts made abroad. Even your foreigner, be it remembered, can construct texts; nor as yet have protective duties been levelled at emendations. And the classes that would be affected by the abolition of the note-making trade are among the most deserving in the community. We trouble ourselves not about publishers. Having human curiosity on the one hand of them and human vanity on the other, they are not likely to be starved by anything except a

revolution of human nature. But, since the clergy get the prizes of education, the lay assistant master has hitherto been wont to eke out his scanty and uncertain income by preparing food-balls for young beaks. It were hard usage if now an imperial *ukase* should condemn the mouths of his own young to go short. What, moreover, would be the fate, if notes were gone, of our classical reviewers? Nothing would be left them to criticize except just those parts of the books which, as it is maliciously hinted, they are unable to read. Printers, too, would lose some of their work, and much prized opportunities of making misprints.

Lastly, the change projected would cause a grave diminution of what we may call our æsthetic pleasures. There is more to be got out of a note than the innocent might suppose. Let us, that we may give a finger-post to our meaning, tell of a trivial thing that pleased us. A professor commenting on the words *se vallis induebant*, "they pitted themselves on stakes," "impaled themselves," observed that the expression reminded him of the vulgar phrase "to get round a square meal." Perhaps the learned commentator was confounding "stakes" with "steaks." But head masters, more than others, would have a poignant sense of privation should the rule "No notes" go forth; it would be verily a self-denying ordinance. For, if lay assistant masters are the principal toilers in this humble field, head masters themselves occasionally take a turn in it. Now it is the joy of every true head master to catch another head master tripping; just as it is the legitimate ambition of a coroner to hold an inquest on a brother practitioner. There have been notes written by the heads of schools which must have yielded intense satisfaction even to the most Christian and clerical of their *confrères*. Not the supreme delight of a false quantity is always withheld.

So much have we to say in defence of annotated editions of the classics for boys. Whether our pleas be held valid or not is of no great moment. The spirit of idleness innate in man will undoubtedly assure victory to the labour-saving appliances. Our only wish is that the labour saved in one direction may be utilized in another. We hold no brief for indolence.

φ.

VILLAGE CONTINUATION SCHOOLS.

By P. SHAW JEFFREY.

THE problem of continuation schools in rural districts is one of considerable difficulty. To begin with, it must be conceded that there is no spontaneous call for evening classes in villages. The initial thirst for knowledge has to be artificially induced: indeed, cases are not unknown in which it has been found necessary to offer a bonus to students in order to procure a class at all—this bonus taking the form of a supper at the parsonage or of "free food" in some form or another. Where, however, a successful class exists experience seems to show that the young men of the village welcome the distraction for winter evenings and will often attend for several consecutive seasons, without undue pressure.

On the whole, then, one may fairly say that, given an interesting teacher and an energetic body of managers behind him, it is not impossible to form successful classes even in remote country villages, and one is tempted to ask why such classes are not more usual and not more successful than at present.

The reason is, I think, twofold. In the first place, the classes are too long. It is too much to expect youths who have spent all day in the open air at the plough tail or in the rick-yard to sit for two mortal hours on a hard bench in an imperfectly ventilated room. One has only to visit a village night school towards the end of the proceedings to see how best intentions fail before the all-pervading drowsiness. Two periods each of three-quarters of an hour's duration should, I think, be the limit: more than this becomes a weariness to the flesh.

But there is a much more serious obstacle to the success of the village continuation class than the foregoing, and that is the supineness of the village schoolmaster himself. In not a few cases the schoolmaster is the village factotum: he is probably clerk to various boards; in some cases he is also the rate collector of the district; and in any case he has small difficulty in finding occupation more interesting and

more remunerative than "teaching school" in the evenings. For this reason, instead of becoming an enthusiast for the betterment of his former pupils, he views with reluctance any further encroachment on his evening leisure, and is inclined to throw cold water on any schemes for continuation work, or at least to keep these within limits as narrow as possible.

The remedy lies in the hands of school managers to a certain extent. If they were to let it be known that in appointing a head teacher preference would be given, *ceteris paribus*, to a man interested in continuation work, they would in time evolve a race of head teachers willing to second the efforts of County Councils and Advisory Committees in making evening continuation classes in country districts a success. In order, however, to strengthen the hands of provincial Education Authorities, it would be advisable to demand from headquarters a reconstitution of the Code as far as it relates to the village schoolmaster and his acceptance of the various small offices alluded to above.

The head master of a secondary school is very straitly limited by his scheme or his board of governors or both as to what he may or may not accept as regards external work, and it is both necessary and desirable that some similar limitation should be imposed on the head master of a primary school. I do not suggest that he should be made thereby to suffer in his pocket, but that he should be paid sufficiently to allow of his disregarding all external work, and that he should be required to take in hand evening continuation classes, as part of his regular routine, and should attend in his school at fixed times, whether pupils were forthcoming or not.

I do not myself regard continuation classes in villages as a luxury for the village youth to be taken or left as the humour seizes him, and as he takes his beer or tobacco. Boys who leave the village school at the age of thirteen to scare the farmers' rooks forget practically all they have ever learnt within two years, and, if the national scheme of education as far as it relates to country districts is ever to be anything better than a hollow sham, it must be completed and supported by attendance at continuation classes. If such attendance cannot be made compulsory in England by law, it rests with us to make it almost equally so by the force of public opinion, and this could be done by any energetic body of school managers with an enthusiastic head master in their pay.

Teaching in a village school is discouraging work at the best of times, but the sense of discouragement to the head master would be greatly lessened if he had some good hope of carrying on the education of his more promising pupils over a term of years in continuation classes. It would also, I imagine, eliminate from village school time tables "exotic" subjects as distinct from "educational" by relegating the "exotics" to the evening time table if they should be required at all. This would cheer the much abused Inspector and benefit the community at large.

The appalling lack of education in our villages is never more evident than at election times, and now that we are setting our house in order I suggest respectfully but forcibly some legislation on behalf of the potentially intelligent villager and his masters. As a beginning I would recommend that there should be a formal inquiry throughout the country as to the subsidiary offices held by each village schoolmaster and the amount of the emoluments he earns by means other than his teaching.

From the data supplied Committees would have an opportunity of judging (1) how much of the teachers' energy is applied to matters other than teaching; (2) how much it would cost the country to buy that energy and turn it into its proper channel.

If, finally, some millionaire philanthropist of the excellent transatlantic type would "Carnegise" country villages by providing a village hall and gymnasium contiguous to the continuation school, with, perhaps, a "Robertsonian" rifle range attached, the village youth would turn naturally to the school for his amusements in the evening, and it would be easy to make his admission to the recreation room dependent on his regular attendance at educational classes.

The question of compensation to the village publican would be a matter for future legislation.

THE *Working Gentlemen's Journal* is a new monthly which made its first appearance on March 7. The leader, by Miss J. Merivale, discusses fully and temperately "Primary-school Teaching as a Career for High-school Girls and Graduates."

BOOKS OF THE MONTH.

Art and Drawing.

- Manual Training Drawing** (Woodwork): Its Principles and Application. With Solutions to Examination Questions, 1892-1905. 50 plates and 140 figures. By F. Sturch. *Methuen & Co.*, 5s. net.
- Catalogue of Modern Etchings and Aquatints in the National Art Library.** Issued by the Board of Education. *Wyman & Sons*, 2s. 6d.
- The "A.L." Bold Outline Drawing Copies in Portfolio. 10s. 6d. net.
- The "A.L." Nature Drawing Cards. In two packets, 10½ in. by 7½ in., each containing 24 cards of bold and simple outlines of Animals, Birds, &c. 2s. 3d. each. *E. J. Arnold*.
- A Selection from the Discourses delivered to the Students of the Royal Academy by Sir Joshua Reynolds. Edited by J. J. Findlay. *Blackie & Son*, 2s. net.
- The Simplex Brush Drawing Copy Book. In two parts, each 3d. net. *W. & A. K. Johnston*.
- W. & A. K. Johnston's Simplex Drawing Books (Birds). Plain, 3d. net; coloured, 6d. net.
- The English Water Colour Painters. By A. J. Finberg. *Duckworth & Co.*, 2s. net.

Biography.

- Letters from Samoa, 1891-1895. By Mrs. M. J. Stevenson. Edited and arranged by Marie Clothilde Ballour. With 12 Illustrations. *Methuen & Co.*, 6s. net.
- The Life of Sir Walter Scott. By G. Le Grys Norgate. With 53 Illustrations by Jenny Wylie. *Methuen & Co.*, 7s. 6d. net.
- Henry Sidgwick: a Memoir by A. S. and E. M. S. *Macmillan & Co.*, 12s. 6d. net.

Classics.

- Sonnenschein's New Classical Library. Edited by Dr. Emil Reich. Vol. II., Plutarch's Lives of Alexander, Pericles, Caius Caesar, and Æmilius Paulus. Translated by W. R. Frazer. 3s. 6d. net.
- Blackie's Latin Texts. Edited by W. H. D. Rouse, Litt.D. (1) *Livy VI.* Edited by E. S. Thompson, M.A. 4d. net. (2) *Ilias Latina.* Edited by W. H. S. Jones, M.A. 6d. net. (3) *Cæsar's Gallic War VI.* Edited by Dr. Rouse. 6d. net. (4) *Cæsar's Gallic War VI.* Edited by Dr. Rouse. 6d. net. (5) *Virgil: Æneid I.* Edited by S. E. Winbolt, M.A. 6d. net.
- The *Philoctetes* of Sophocles. With a Commentary abridged from the larger edition of Sir Richard Jebb, Litt.D. By E. S. Shuckburgh, Litt.D. *Cambridge Press*, 4s.
- A Handbook of Greek Sculpture. By E. A. Gardner, M.A. *Macmillan & Co.*, 10s.
- The *Medea* and *Hippolytus* of Euripides. With Introduction, Translations, and Notes by Sydney Waterlow, M.A. *J. M. Dent & Co.*, 2s. 6d. net.
- The *Medea* of Euripides. Edited by Harold Williamson, M.A. *Blackie & Son*, 2s.
- Virgil: *Æneid II.* Edited by S. E. Winbolt, M.A. 6d. net. Virgil: *Æneid III.* Edited by S. E. Winbolt, M.A. 6d. net. Virgil: *Æneid IV.* Edited by S. E. Winbolt, M.A. 6d. net.

Criticism.

- Nature Knowledge in Modern Poetry:** Chapters on Tennyson, Wordsworth, Matthew Arnold, and Lowell as exponents of Nature Study. By A. Mackie, M.A. *Longmans & Co.*, 2s. 6d. net.
- The Study of a Novel.** By S. L. Whitcomb, M.A. *D. C. Heath & Co.*, 5s. [A very thorough analytic study of the novel in all its forms.]

Divinity.

- A Primer of Religion. Based on the Catechism of the Church of England. By W. J. Oldfield, M.A. *Methuen & Co.*, 2s. 6d.
- Development and Divine Purpose. By Vernon F. Storr, M.A. *Methuen & Co.*, 5s. net.
- To-day: Thoughts on Life for Every Day. By J. C. Wright. *Methuen & Co.*, 1s. 6d. net.
- Prayers for School Boys and School Girls. By the Rev. William Watson, M.A. *Oliphant, Anderson, & Ferrier*, 2s. net.
- Religion in Evolution. By F. B. Jevons, Litt.D. *Methuen & Co.*, 3s. 6d. net.
- Selections from the Septuagint, according to the Text of Swete. F. C. Conybeare, M.A., and St. George Stock, M.A. *Ginn & Co.*, 7s. 6d.
- "Religions Ancient and Modern" Series. Each 1s. net. Religions of Ancient China, Dr. H. A. Giles; Animism, Edward Clodd; Pantheism, J. A. Picton; Religion of Ancient Greece, Dr. Jane Harrison. *Archibald Constable & Co.*
- The Gospel according to St. Luke. Edited by W. Williamson, B.A. With three maps. *Methuen & Co.*, 2s.
- Nelson's Bible Pictures for Class Teaching. A set of 6 pictures mounted on stout cards for hanging. Size 25½ by 33 inches. 15s.
- Small Lessons on Great Truths: a Book for Children. A. K. Parkes. *Methuen & Co.*, 1s. 6d.

English.

- Helps to the Study of Milton's Paradise Lost.** Books I. and II. By Alfred L. Cann, B.A. *Ralph, Holland, & Co.*, 2s.
- Helps to the Study of Shakespeare's A Midsummer Night's Dream.** By C. W. Crook, B.A., B.Sc. *Ralph, Holland, & Co.*, 1s. 9d.
- Beaumont and Fletcher.** Vol. II. The Text edited by Arnold Glover, M.A., and A. R. Waller, M.A. *Cambridge University Press*, 4s. 6d. net.
- Brief Literary Criticisms.** By the late Richard Holt Hutton. Selected from the *Spectator*, and edited by his Niece, Elizabeth M. Roscoe. *Macmillan & Co.*, 4s. net.
- The Picture Shakespeare: A Midsummer Night's Dream. *Blackie & Son*, 1s.
- Précis Writing.** (Second Series.) Compiled and edited by H. Latter, M.A. *Blackie & Son*, 3s. 6d.

Geography.

- The Imperial Reader: a Descriptive Account of the Territories forming the British Empire. Edited by the Hon. W. P. Reeves, High Commissioner for New Zealand and E. E. Speight, B.A., F.R.G.S. *Hodder & Stoughton*, 2s. 6d. net.

Gymnastics.

- The Vaulting Horse and how to use it. Compiled and arranged by G. M. Campbell, F.R.G.S. 350 Exercises and 47 Illustrations from Photographs. *Gale & Polden*, 1s.

History.

- City Government for Young People. By C. D. Willard. *Macmillan & Co.*, 2s. net.
- The Making of Modern Egypt. By Sir Auckland Colvin. With Portraits and Maps. *Serley & Co.*, 18s. net. [An account drawn mainly from official documents of English administration from 1882 up to the present date.]

Mathematics.

- Geometrical Conics. Dr. F. S. Macaulay. (Second Edition.) *Cambridge Press*.
- Advanced Algebra. Dr. H. E. Hawkes. *Ginn & Co.* 6s. 6d.
- Chambers's "Thorough" Arithmetics. Teacher's Book, No. V. *W. & R. Chambers*, 10d. net.
- A New Junior Arithmetic. By H. Bompas Smith, M.A. *Methuen & Co.*, 2s. 6d.
- A New Arithmetic: Theoretical and Practical. By G. A. Christian, B.A., and G. Collar, B.A., B.Sc. Twelfth Edition. *Meiklejohn & Holden*, 4s. 6d.

Miscellaneous.

- Voice Production and the Phonetics of Declamation. By J. Newlands. *Oliphant, Anderson, & Ferrier*, 2s. 6d. net.
- The Philosophy of Voice. By Charles Lunn. Tenth Edition. *Baillière, Tindall, & Cox*, 6s. net.
- Toward the Heights: an Appeal to Young Men. By Charles Wagner. *T. Fisher Unwin*, 1s. net.
- Where to live round London (Southern Side). With a Chapter upon the Geology and Subsoils. By W. H. Shrubsole, F.G.S. Edited by Prescott Row. Fifth Edition. *The Homeland Association*, 1s. net.
- Cassell's New Dictionary of Cookery. With numerous Illustrations and Eight Plates in Colours. Containing about Ten Thousand Recipes. Cheap Edition. *Cassell & Co.*, 7s. 6d.
- A Dream of Realms beyond us. By Adair Welcker. Ninth separate American Edition. Published by the Author at 214 Pine Street, San Francisco. ["The price of this book is 40 shillings, or 10 dols., if bought from the author; but all people are at liberty to make MS. or typewritten copies and sell them for what they will."]—Extract from Title Page.]
- School and Sport: a Record of Work and Leisure. Tom Collins. *Elliot Stock*, 6s. net.
- The Iron Trade of Great Britain. J. S. Jeans. With twelve Illustrations. *Methuen & Co.*, 2s. 6d. net.
- The Art and Craft of the Author. Practical Hints on Literary Work. C. E. Heisch. *Elliot Stock*, 2s. 6d. net.
- Unconscious Therapeutics; or, The Personality of the Physician (Second Edition). Dr. A. T. Schofield. *J. & A. Churchill*, 5s. net.
- Greatness in Literature. W. P. Trent. *George G. Harrap & Co.*, 5s.
- Industrial Efficiency: A Comparative Study of Industrial Life in England, Germany, and America. Arthur Shadwell, M.A., M.D. In two vols. *Longmans*, 26s. net. [A most opportune work of reference at the present moment, full of varied information and statistics. The second volume has chapters on elementary and technical education.]
- Spiritualism. E. T. Bennett. With Introduction by Sir Oliver Lodge. *T. C. & E. C. Jack*, 1s.

Modern Languages.

- Italian Self-taught. With Phonetic Pronunciation. By C. A. Thimm, F.R.G.S. Third Edition, Revised and Enlarged by G. Dalla Vecchia. *E. Marlborough & Co.*, 1s. 6d.
- Nouvelle Grammaire Française. By J. G. Anderson, B.A. *Methuen & Co.*, 2s.

Readings on the Inferno of Dante. Based upon the Commentary of Benvenuto da Imola and other Authorities. Text and literal Translation by the Hon. W. W. Vernon, with an Introduction by Edward Moore, D.D. Second Edition, entirely re-written. 2 vols. *Methuen & Co.*, 15s. net.

First Steps in Colloquial French. By A. Thouaille, M. ès A. With 6 Illustrations. *Blackie & Son*, 2s.

French Auxiliary and Regular Verbs. Arranged for Junior Forms by A. Bourdass. *Blackie & Son*, 6d.

Bell's First French Reader. By R. P. Atherton, M.A., assisted by F. Gal-Ladevèze. With Illustrations by French Artists. *George Bell & Sons*, 1s.

Blackie's Little French Classics. (1) L'Abbé de L'Épée. Edited by W. G. Hartog, B.A. 8d. (2) Poésies Choiesies. Edited by A. Mayenobe, B.A., B.Sc. 4d. (3) Histoire des Quatre Fils Aymon. Retold by S. Barlet and A. Canivet. 6d. (4) Les Aventures de Tom Pouce. Edited by H. H. Horton, B.A. 4d.

Natural History.

Philips' Nature Calendar, 1906. 6d. net.

Nature's Story of the Year. By C. A. Witchell. *T. Fisher Unwin*, 2s.

The Frog: An Introduction to Anatomy, Histology, and Embryology. Ninth Edition. By Dr. A. M. Marshall, F.R.S. Edited by F. W. Gamble, D.Sc. *David Nutt*, 5s.

Darwinism and the Problems of Life: a Study of Familiar Animal Life. By Conrad Guenther, Ph.D. Translated from the Third Edition by Joseph McCabe. *A. Owen & Co.*, 12s. 6d.

The British Woodlice: a Monograph of the Terrestrial Isopod Crustacea occurring in the British Islands. By W. M. Webb, F.L.S., and Charles Sillem. *Duckworth & Co.*, 6s. net.

Novels.

"They." By Rudyard Kipling. With Illustrations by F. H. Townsend. *Macmillan & Co.*, 6s.

From Paleolith to Motor Car; or, Heacham Tales. By Harry Lowerison. *A. J. Whiten*, 3s. 6d. net. [A series of short historical novelettes.]

The Inseparables: an Oxford Novel of To-day. Second Edition. By James Baker. *Chapman & Hall*.

The Mayor of Troy. By "Q." *Methuen & Co.*, 6s.

Durham's Farm. By C. C. Yeldham. *Methuen & Co.*, 6s.

Loaves and Fishes. By Bernard Capes. *Methuen & Co.*, 6s.

Pedagogy.

The Neglect of the Study of the English Language in the Training of Teachers. Criticisms and Suggestions by H. C. Wyld, B.Litt. *Liverpool University Press*, 6d.

Primitive Christian Education. By Geraldine Hodgson, B.A. *T. & T. Clark* (Edinburgh), 4s. 6d. net.

Aristotle's Theory of Conduct. By T. Marshall, M.A. *T. Fisher Unwin*, 21s. net.

Philosophy.

Sociological Papers, Vol. II. By Francis Galton, P. Geddes, M. E. Sadler, E. Westermarck, H. Höfding, J. H. Bridges, and J. S. Stuart-Glennie. *Macmillan & Co.*, 10s. 6d.

The Revelation of the Trinity. By S. B. G. McKinney, M.A., L.R.C.P. *Oliphant, Anderson, & Ferrier*, 3s. 6d.

Readers.

Black Beauty: the Ups and Downs of a Horse's Life, told by Himself. By A. Sewell. Edited for School use as a Supplementary Reader. *Jarrold & Sons*, 1s. 6d.

Lamb's Tales from Shakespeare. A Second Selection, edited by J. H. Flather, M.A. *Cambridge Press*, 1s. 6d.

Poetic Gems: a Selection of good Poetry for Young Readers. In four Parts. Part I., 2d.; Parts II., III., and IV., 3d. each. *W. & R. Chambers*.

Tales from the Norse: a Selection from the Translation of G. W. Dasent, D.C.L. With Illustrations. *Blackie & Son*, 1s.

Blackie's English School Texts. Edited by W. H. D. Rouse, Litt.D. The Age of the Antonines; Macaulay's Third Chapter; Burke's Speeches on America; More's Utopia; Bunyan's Pilgrim's Progress (2 vols.). 6d. each.

Science.

A Three Years' Course of Practical Chemistry. By G. H. Martin, M.A., and E. Jones, M.A. With an Introduction by Prof. Cohen. Third Year's Course, 2s. *Livingtons*.

The Gases of the Atmosphere: the History of their Discovery. By Sir William Ramsay, K.C.B., F.R.S. Third Edition, with Portraits. *Macmillan & Co.*, 6s. net.

Ganot's Physics. Seventeenth Edition. Edited by A. W. Reinold, M.A., F.R.S. Illustrated by 9 coloured plates and maps and 1,048 woodcuts. *Longmans & Co.*, 15s. [The chapter on the steam-engine has been rewritten by Lieut. Roberts, R.N., and the articles on photography by W. A. Haddon.]

Chemistry Lecture Notes. By G. E. Welch, B.Sc. *Blackie & Son*, 1s. 6d.

Practical Exercises in Chemistry. By G. C. Donington, M.A. *Macmillan & Co.*, 2s. 6d.

Practical Physics. By W. R. Bower, A.R.C.S., and J. Satterly, B.Sc., A.R.C.S. *W. B. Clive*, 4s. 6d.

Elements of Quantitative Analysis. G. H. Bailey. *Macmillan*, 4s. 6d. [The Preface gives the keynote of this truly educative treatise:—"The study of quantitative analysis is too often restricted to the performance of a series of experiments the precise significance of which is of little concern to the student."]

Examples in Physics. C. E. Jackson, B.A. *Methuen & Co.*, 2s. 6d. [Covers the average physics course in secondary schools. Answers are given to the elementary examples, but not to the advanced problems.]

Practical Object Lessons from the Plant World. H. J. Barnell. Illustrated. *Sir Isaac Pitman & Sons*, 3s. [A useful book for teachers, supplying notes of lessons and blackboard diagrams.]

The School Magnetism and Electricity. Dr. R. H. Jude. (University Tutorial Series.) *W. B. Clive*, 3s. 6d.

COLONIAL AND FOREIGN NOTES.

FRANCE.

One of the most extraordinary features of the progress of education under the Republic has been the development of libraries for the people. Education, it must always be remembered, is in modern theory something that aims at promoting the general welfare and happiness, not at the creation of an exclusive learned caste. To be prosperous and happy a community must be governed by a sound and enlightened public opinion, the existence of which can only be assured by schools that teach how to think and libraries that supply the material of thought. The French show an increasing consciousness of the necessity of having libraries to supplement schools. In 1874 France possessed 771 popular libraries. The latest figures available (published December 13, 1902) inform us that there are 2,991 popular libraries that have accepted State control, in addition to a large number which remain outside it. State control goes invariably with State support. State support takes the form of grants of books, purchased by the Ministry of Public Instruction upon the recommendation of a special committee. Control is exercised by means of inspection, whilst annual reports of the condition and growth of every assisted library must be made to the Minister. A nation that quadruples its libraries in less than thirty years bears valiant witness to its faith in the mission of the book.

The Marseille section of the Ligue de l'Enseignement is circulating for signature a petition pleading for the equality of children in the matter of instruction. The Republican principle of fraternity, it is urged, cannot be realized if by the side of free, secular, and obligatory primary education there is maintained a system of secondary and higher education accessible only to the richer classes. Accordingly, the petitioners demand free secondary education as a natural corollary to free primary. The idea is not new in France, where it is revived from time to time in spite of the practical difficulties in the way of its realization. M. Massé, reporting on the budget for this year, also advocates "le lycée gratuit"; but his plan is quite feasible. He proposes only to increase the number, at present small, of non-paying pupils in the secondary schools. Perhaps the notion of free secondary education in France is not so fantastic as it seems. For ourselves the best system would appear to be a process of continual selection, the finer intellects being taken for higher training, and assisted to it by means of endowments or at the public charge.

BELGIUM.

There are signs visible that Belgium will presently be ranked with the States in which compulsory education is in force. The Government shows no great disposition to collect statistics that would reveal the state of education in the country; but the examinations of the recruits conducted by the military authorities exhibit it with cruel frankness. The figures of the staff show that in the large towns—Brussels, Antwerp, Ghent, and Liège—from 20 to 25 per cent. of those who present themselves for military service are illiterate; the percentage of illiterates in the smaller towns rising to 35. Town communities have their schools, and spend money to support them; but many parents deliberately withhold their children from instruction.

On the other hand, in some parts of East and West Flanders there is a lack of schools, and in these provinces the number of illiterate recruits sometimes forms 60 per cent. of the whole. Under the circumstances it is welcome news that the recently established Ligue de l'Enseignement is urgent for the introduction of compulsory education. The clerical party, too, since Church schools are protected by the constitution of the State, is prepared to accept a reform that otherwise might endanger them.

GERMANY.

A Professor in England is a teacher in a University upon whom the University itself bestows the title, unless, indeed, as Mr. Matthew Arnold once remarked, he happens to be a Wizard of the North. In Germany, which seemed once about to free itself from the craze for titular distinctions, a reaction has set in. Thus in Hessen the title of "Professor" was formerly bestowed as an honour on some of the senior teachers. Selection was invidious, and the teachers protested. Now every secondary teacher becomes a professor in due course. In witness of the same tendency a decree of the Prussian Ministry, under date January 27, 1906, lays down that higher teachers (*Oberlehrer*) of *Gymnasien*, *Realgymnasien*, *Oberrealschulen*, &c., may be styled professors up to one-half of their total number, instead of, as hitherto, up to one-third; and that, if they have twelve years' service to their credit, they are qualified to receive personal rank as Councillors (*Räte*) of the Fourth Class. To us teachers are teachers whether the pupils be undergraduates or the poor children in the Isle of Dogs. But we see no advantage in labelling schoolmasters "professors." Every science, every profession, every business, gains by using definite—not indefinite—terms. And surely the value of a title varies inversely as the number of those who bear it. Yet, if these titular honours cause the teacher to be more highly esteemed in the society to which he belongs, they may haply render some service both to him and to it.

Kritische Blätter, a review of the social sciences, in a notice of certain recent pamphlets, gives us incidentally a picture of the war that is raging in Germany between the humanistic and the realistic principles of education.

The War of the Schools.

A brochure by Adolf Harnack, "On the Necessity of preserving the *Gymnasium* in Modern Times," argued the case for the classical school. He did not ask for it that it should be restored to its old position of monopoly; nay, he did not even assert its supremacy over other higher schools. "It were ridiculous," he said, "to assume that idealism was the product, only or in a special degree, of classical studies." But he held that the *Gymnasium* must be maintained on an equality with its rivals; in fact, he could not believe that its existence was seriously threatened. A few weeks later Walter Parow, of the Friedrichs-Werder-Oberrealschule in Berlin, as if to discredit Harnack's optimism, issued his "The *Gymnasium* as an Obstacle to School Reform." He, for his part, thought that the resistance offered by the old *Gymnasium* to the development of a modern *Einheitsschule* was only to be overcome by its demolition. "We look with yearning for the day when the fortress (*Zwingburg*) that dominates German youth shall fall, for the day when by the death of the *Gymnasium* its inheritance will pass to us." P. Selge, of the Oberrealschule at Gross-Lichterfelde, next inquired "To whom does the Future belong?" He dwelt on the necessity of a higher *Einheitsschule*, sought to determine the aims that it must have; considered how far *Gymnasium*, *Realgymnasium*, and *Oberrealschule*, as at present organized, could realize these aims; and came to the conclusion that the *Einheitsschule* of the future must be a *Realschule* with much language teaching in the lower and middle classes, and broadly planned instruction in physics in the upper classes. Lastly, Karl Stigler, engineer and *Baurat*, in "The *Oberrealschule* and the Admission of its Pupils to the University," discussed the subject whether the school organization, as it was left by the Prussian reform of 1901, sufficed to secure complete development of all the mental powers. He arrived at the result that Latin was useful, but not indispensable, pronounced for the unconditional abolition of Greek, and contended that the school should introduce its pupils to the study of philosophy.

Does not all this attest most visibly the modern revolt against the tyranny of the classical school? The interest and importance of the questions at issue are not, however, fully apparent until we look at them in the light of history.

Reflections.

Mediæval education aimed at producing a class of scholars for the Church and to do the business of penmanship. When the idea of national education supplanted it, the instruments of education remained for long unchanged. Slowly and reluctantly we have added to them. But on the Continent, especially in Germany, there is a perpetual and growing dissatisfaction with the amount of concession that has been made. The classical school is on its defence, and will, as it seems, have to yield more of its territory if it will save any. As to our own view of the conflict, we are not minded, for the present and in this place, to go beyond agreement with Harnack that idealism is not inspired exclusively by the ancient classics. It is possible to use them without forgetting that there are also modern humanities.

UNITED STATES.

We occasionally hear complaint made that some of our English professors are too old for efficient service; and we hear it sympathizing with the complainers and still more with the professors. From the point of view of education, however, we cannot approve the theory of the professorship as a haven of rest. In America—we submissively adopt the American custom of putting the whole for the part—the authorities of Universities and colleges incline more and more to the principle of full work for full pay. But to enforce it without harshness they must be able to pension those whom age robs of power. Harvard, Yale, Columbia, and some other institutions have already retirement funds; the Chicago and Brown Universities are taking steps to establish such funds. At Harvard, the plan (which is reported to work satisfactorily) is to pension off professors at sixty with something less than two-thirds of their last salary. We give the Harvard rule in full, as showing how, where money enough is available, clemency to age may be combined with justice to youth. It runs thus:—"Any person in the service of the University, and sixty years of age, who has held an office of the grade of an assistant professorship, or of a higher grade, for twenty years shall be entitled to a retiring allowance of twenty-sixtieths of his last annual salary in activity, and to an additional allowance of one-sixtieth of his last annual salary for each year of service in addition to twenty; but no retiring allowance shall exceed forty-sixtieths of the last annual salary in full activity. In counting years of additional service, years of continuous service as member of a Faculty, with the title of tutor, instructor, or lecturer, or as assistant in a scientific establishment on an appointment not annual, may be added, at the discretion of the President and Fellows, to the years of service as assistant professor or in a higher grade."

In Austria, we believe, there is an age limit for professors; and, as we learn, the German Kultusministerium is considering a scheme for retiring them at seventy.

Of Compulsory Education.

But let us not wander from America. We said lately that compulsory education did not in practice reach all either in France or in England. Washington, the capital of the United States, has a compulsory education law. Recent investigations have brought out the fact that more than 6,000 children there, from eight to fourteen years of age, do not attend school. This is out of a total of 48,000 children of school age in the district. It is a surprising state of affairs to exist in the very centre of American civilization, and would seem to indicate that American freedom includes a liberty to ignore the obligations of law.

A writer in the February number of the *Educational Review* deplors

Wealth and Learning.

not that the American professors are too old, but that they have too little time for their private studies. "Our greatest Universities," he says, "are very rich. They have great graduate schools. They have scholars who have proved to be productive men. And yet, when the total output of scholarly work done in them is compared with that done in Germany, for example, the result is generally conceded to be discouraging. In many cases, little is accomplished beyond the comparatively elementary research work which has its terminus in the doctor's degree. No explanation of this result seems so probable as the fact that the German professor has, as a rule, the leisure which the American professor only secures by exception." We have here another indication that the vast endowments which American Universities have received have not been so applied as to yield the greatest possible good to learning. It is the contention, we may observe, of American schoolmen—not unfriendly criticism on our part. We, judging from books, had supposed that the work done by American Universities was improving in quality and increasing in amount.

Since a somewhat exaggerated notion prevails as to the extent to which the degree of Doctor is conferred in the United States, we furnish our readers with statistics on the matter. They will see that the figures, although large, do not indicate reckless profusion with the title. The doctorates conferred in the departments of philosophy and natural science in 1904-5 were 324, those in the successively preceding years being 281, 266, 216, 253, 239, 224, and 234. Since the figures relate to thirty-five Universities, they are almost complete. Chicago bestowed the degree in the year under consideration 44 times; Harvard and Columbia each 38, Johns Hopkins 35, Yale 34, Pennsylvania 26, Cornell 21, Clark 18, Boston 14, Wisconsin 9, Michigan and New York 7 times each, Princeton 5 times, California 4, George Washington, Minnesota, and Nebraska each 3 times, Bryn Mawr, Georgetown, Iowa, and Missouri each twice, Cincinnati, Illinois, North Carolina, Stanford, and Virginia, each once. Colorado, Kansas, Lafayette, Lehigh, Syracuse, Tulane, Vanderbilt, and Washington did not confer the degree on any applicant. By the way, it would interest us to know how many Universities per head of population are nowadays considered adequate. The United States has thirty-five, and some more.

The Doctor's Degree.

AUSTRALASIA.

PROGRESS IN VICTORIA.

The Victorian Parliament has passed three measures of considerable importance affecting education. The first, the State School Teachers Act, removes a great body of grievances under which the State school teachers have laboured for years. It provided a statutory committee to classify the teachers; a yearly promotion list so constructed as to prevent any block; and a transfer list so devised as to ensure that, in future, practically all vacancies will be given to teachers according to their classifications on the classified roll. Generally the new law simplifies procedure in the State Department, and when it comes into force in 1906 should promote the recognition of merit. The second law is the Truancy Act, a measure which enables prosecutions to be started in respect of non-attendance extending over a week instead of as hitherto over three months. Under it, children between six and fourteen years of age must make eight attendances out of ten per week. The Act is expected, if faithfully administered, largely to increase the average attendance at the State schools. The third, and, in a sense, the most important, law is the Registration of Teachers Act, which embodies a long sought reform. It affects private schools especially in that it requires the registration of their teachers. In this respect Victoria is, I believe, the pioneer amongst colonies. The Act will be administered by a Board representing the Education Department, primary schools, secondary schools, the University of Melbourne, and technical institutes. All persons now teaching go automatically on to the Register and six months' grace is given to others to register. Subsequently new comers will have to give proofs of fitness.

The seventeenth annual report of the Roman Catholic Schools of the Archdiocese of Melbourne, which has just been issued, shows how great are the sacrifices made by the Romanist laity in their carrying through their policy of dogmatic religious education. The report shows that during the year ended September 30 21,484 children attended the 110 schools of the Church, and were trained by 452 teachers, of whom 249 are members of teaching orders. The cost of maintenance was £22,850.

The Romanist high schools and colleges in Victoria number 31, with an attendance of 3,051—1,055 boys and 1,996 girls. These secondary schools employ 211 teachers.

The annual summary of the work of the Council of the University of Melbourne is this year quite an encouraging affair. It shows that the debt on the general account has been decreased from £21,000 to £18,000, and the deficiency in the trust funds has been wiped out altogether. It is remarked that the innovation of evening lectures has been successful, there being an attendance of 107 students. At the day lectures 750 students attended in 1905, as against 543 in 1904, the increase being spread over all courses. Many structural and other improvements are recorded.

GREECE.

During the period of Turkish domination Greece can hardly be said to have had a system of education. The common schools (*Kοινὰ Σχολεία*) offered little beyond reading in religious books, writing, and the rudiments of arithmetic. They were generally attached to a church or to a convent, and the teacher was often the parish priest, but sometimes a mere artisan. Yet the Greeks had a continual desire for education; and when the Lancaster method of instruction was devised they were among the first to adopt it, introducing it into their larger towns. Nevertheless the standard of primary education continued very low. Secondary and higher education was sought principally in colleges established in Turkey and the islands, where ancient Greek was studied in conjunction with modern, and the mathematical and physical sciences and sometimes Latin were taught. In the decade of years (1821-31) from the Insurrection of the Greeks to the creation of the kingdom political unrest hampered progress. But to this time belongs the foundation of the *Ionian Academy* in Corfu, and President Capodistria, the most conspicuous figure in it, proved a zealous advocate of education in all its forms. If some of his work perished with him, yet the impulse that he gave resulted in the establishment of the national system of education that Greece enjoys at the present day.

King Otho was proclaimed in 1832. Hitherto English influence had been most strongly felt in the country. To England Greece owed the *Ionian Academy*; it was to England that Capodistria had sent young Greeks to be trained as teachers. With the advent of a Bavarian prince German influence superseded English. The German Meyer drafted the law of 1834, on which primary education still rests. By it all children from the completion of the fifth year of life to the completion of the twelfth must attend the primary school of the commune in which they live. Two years later was promulgated the law which, with some modifications, remains the fundamental document for secondary education in Greece. Associated with it is the name of Thiersch.

It is with secondary education that we will concern ourselves here, premising, however, that all the schools are regularly graduated from the infant school to the University.

Secondary Education.

Apart from trifling dues at entrance or for examination, secondary education is gratuitous. It is designed to prepare for the University, or for higher scientific studies, and to impart notions useful for social life. Given, however, in two kinds of schools, Hellenic schools for the first three years of study, and Gymnasia for four subsequent years, it is so ordered that the first part forms, as it were, a complete whole, and is deemed sufficient for those who do not intend to follow professional careers. A normal Hellenic school consists of three classes, controlled by three masters, of whom the senior is called *scholarch* (*Σχολάρχης*). The subjects of instruction are Greek (with a comparative study of the ancient and the modern language), religion, geography and general history, writing, arithmetic, elementary physics, natural history, music, and drawing. French and Latin are taught to pupils who purpose to go on to the Gymnasium. School begins at seven o'clock in summer, at eight in winter, the number of hours increasing with the class. In the four classes of the Gymnasium the subjects are religion (2), Greek, ancient and modern (11), Latin (4), French (3), mathematics (5), history (3), physics (3), philosophy (1), gymnastics (3), the figure in parentheses denoting the number of hours given to each in the fourth or highest form. As in the Hellenic school, so in the Gymnasium, the senior teacher is head master (*Γυμνασιάρχης*); in the latter subject masters take the place of the form masters of the lower school. To enter a Gymnasium a boy must show that he has been through a Hellenic school; on quitting it he has to pass a leaving examination (*Ἀπολυτήριος ἔξτασις*). Greek is taught much as it is in German *Gymnasien*; there is *lectio stataria* of Greek authors, with minute grammatical explanations, and *lectio cursoria*, the reading of long passages for the sake of the rhythm and the spirit.

To establish a private Hellenic school or a Gymnasium a permission from the Minister of Public Instruction is requisite. No private school is allowed to have courses as high as those in the highest classes of a public school. Thus, to obtain a leaving certificate, pupils from private schools must attend, at least for a year, the courses of a State Gymnasium.

Secondary teachers are State servants. Down to last year they were liable to be removed at any moment for political reasons, the fall of a Ministry affecting most public officials. In 1896 the primary teachers obtained by law fixity of tenure. Now, thanks to the exertions of the Pedagogic Congress of Athens in 1904, secondary teachers have gained a like security. A Council of Superintendence, consisting of professors and teachers elected by their colleagues and acting with the Director of Secondary Education, determines all cases in which removal or suspension seems desirable. Even small disciplinary punishments are inflicted only after the opinion of the Council has been taken.

MODERN LANGUAGE HOLIDAY COURSES,
1906.

Compiled from information supplied by the Special Inquiries Office of the Board of Education.

The information is given in the following order:—Place, date, fees, and address of Secretary.

Germany and Austria.

GREIFSWALD.—July 9-28. 5-15 marks. For both sexes. Conversation Classes on modern methods. Prof. Dr. Bernheim, Ferienkurse, Greifswald.

JENA.—August 6-18. Entrance, 5 marks; 12 Lectures, 10 marks; 24 Conversation Classes, 30 marks. For both sexes. Renowned for its Course of Pedagogy. Frau Dr. Schnetger, Gartenstr. 2, Jena.

KÖNIGSBERG.—Date not yet fixed. 15 marks. Special Language Courses for foreigners. Ferienkurse, Königsberg.

MARBURG.—First Course, July 9-28; Second Course, August 5-25. 40 marks for each Course, or for both 60 marks. Special German Courses (elementary and advanced): 3 weeks, 20 marks; 4 weeks, 30 marks. For both sexes. Conversation Classes; Preparatory Courses from Easter; Special German Courses. W. G. Lipscomb, Esq., Grammar School, Bolton, Lancs.

NEUWIED.—August 3-24. 42 marks. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

SALZBURG.—September 1-15. Registration, 1 krone; membership, 5 kronen; entrance fee for a Course of 3-6 hours, 2 kronen, of 8-10 hours, 4 kronen. For University students and others. Lectures by University Professors. The Secretary, Local Committee for the University Vacation Courses, Salzburg.

Switzerland.

- GENEVA.—July 16–August 28. 40 francs, and 6 francs for special Conversation Classes and correction of written work. Intended for advanced students of both sexes. M. Bernard Bouvier, Administrateur du Séminaire et des Cours de Vacances de Français Moderne à l'Université, Geneva.
- LAUSANNE.—July 19–August 29. 40 francs For both sexes. M. J. Bonnard, Avenue Davel 7, Lausanne.
- NEUCHÂTEL.—First Course, July 16–August 11; Second Course, August 13–September 8. 30 francs for each Course, or for both 50 francs. For both sexes. Elementary and Advanced Courses. M. P. Dessoulavy, Académie de Neuchâtel.
- BASLE.—No Course this year.
- ZÜRICH.—Last fortnight in July. Particulars not yet to hand.

Spain.

- SANTANDER.—August 4–25. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

France.

- BESANÇON.—(a) Holiday Courses, July 10–November 15; (b) other Courses during the year, September 10 to the end of June. 30 francs, 1 month; 40 francs, 2 months. Lectures on Literary, Commercial, and Scientific Subjects. M. le Secrétaire de l'Université, 30 Rue Mégevand, Besançon.
- DIJON.—(a) July 1–October 31 (Holiday Courses); (b) other Courses during the whole year. (a) 30 francs for first 6 weeks and 10 francs for each subsequent fortnight, or 60 francs for the 4 months. Examinations for University Certificates. M. Ch. Lambert, Professeur à l'Université, 10 Rue Berbissey, Dijon.
- GRENOBLE.—Holiday Courses: July 1–October 31 (4–5 hours per day); other Courses during the whole year. 40 francs for the first 6 weeks and 10 for each subsequent fortnight, or 60 francs for the whole Course. Performance of Classical French Tragedy in the open air; Roman Theatre at Orange. M. Marcel Reymond, The University, Grenoble.
- NANCY.—(a) During the academic year; (b) Holiday Courses, July 1–October 31. (a) 50 francs for the half year, 70 francs for the whole year; (b) 40 francs for the first month, 10 francs for each following month—maximum, 60 francs. Preparation for Examinations of Alliance Française and University Certificates. M. Laurent, à l'Université, Nancy.

- BOULOGNE-SUR-MER.—August 1–30. 40 francs for each Course. For both sexes. Classes: Elementary and Advanced. M. Bornecque, Professeur à l'Université de Lille, 70 Rue de Turenne, Lille.
- ST. SERVAN—ST. MALO.—August 2–29. £2 for the whole month; £1. 4s. for half the month. For both sexes. Examinations for Diplomas. M. Gohin, Professeur agrégé au Lycée de Rennes.
- PARIS (1).—First Course, July 1–31; Second Course, August 1–31. 100 francs both Courses; 55 francs single Course. Elementary and Advanced Courses; Conversation Classes. M. le Secrétaire, l'Alliance Française, Boulevard St. Germain 186, Paris.
- PARIS (2).—July 2–28, August 1–28, September 3–29. 75 francs for 1 month, 140 francs for 2 months, and 200 francs for 3 months. Use of Reading Room at International Guild for Students. The Secretary, Guide Internationale, 6 Rue de la Sorbonne, Paris.
- PARIS (3).—Christmas and Easter Holidays Successive series of 8 Lessons: 12 francs each series. Preparatory to Summer Courses of the Alliance Française, &c. M. Louis Jadot, Université Hall, Boulevard St. Michel 95, Paris.
- TOURS.—August 3–24. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.
- HONFLEUR.—August 3–30 (*i.e.*, 20 days—5 days a week). £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.
- BAYEUX AND GRANVILLE.—August 1–24. £2. 2s. Students allowed to go from Granville to Bayeux, and *vice versa*, without extra fee. For both sexes. Elementary and Advanced Classes. John A. Nichols, Esq., Stanley Mount, New Mills, Stockport.
- CAEN.—Easter Holidays, July 2–31, August 1–30; other Courses during the whole year. £1 for 1 week; £1. 12s. 2; £2. 4s. 3; £3 for 1 month. Lectures by well known writers. Evening Courses and Conversation Circles. Walter Robins, Esq., St. Brelades, Preston Road, Leytonstone, N.E.
- LISIEUX.—July 3–28, August 2–28; a Private Course during the whole year by M. Féquet. £1. 14s. Conversation Circles. J. Stott, Esq., Pulteney Grove, Bath.
- VILLERVILLE-SUR-MER (near Trouville).—£2. 5s. For both sexes. Conversation Circles. M. L. Bascan, Professeur, Rue Caponière, Caen.

Programmes of most of these Courses may be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, London, S.W.

A TEXT-BOOK OF PHYSICS.

By J. H. POYNTING, *Sc.D., F.R.S.*,

AND

J. J. THOMSON, *M.A., F.R.S.*,

Late Fellow of Trinity College, Cambridge; Professor of Physics, Birmingham University.

Fellow of Trinity College, Cambridge; Professor of Experimental Physics in the University of Cambridge.

JUST OUT. SECOND EDITION. VOLUME THREE. CLOTH, VERY FULLY ILLUSTRATED. 15s.

HEAT.

"Well up-to-date, and extremely clear and exact throughout, and is as complete as it would be possible to make such a text-book."—*Nature*.

"As a text-book it stands by itself, and should be put in the hands of every student of physics early in his course."—*Science*.

Volume II. Third Edition. Fully Illustrated. Price 8s. 6d.
SOUND.

"The work . . . may be recommended to any one desirous of possessing an EASY, UP-TO-DATE STANDARD TREATISE ON ACOUSTICS."—*Literature*.
"Very clearly written. . . The names of the authors are a guarantee of the SCIENTIFIC ACCURACY and UP-TO-DATE CHARACTER of the work."—*Educational Times*.

Introductory Volume, fully Illustrated. Third Edition, Revised. Price 10s. 6d.

PROPERTIES OF MATTER.

"Students of physics cannot fail to derive benefit from the book."—*Knowledge*.
"We regard this book as quite indispensable not merely to teachers, but to physicists of every grade above the lowest."—*University Correspondent*.

A MANUAL OF ROMAN ANTIQUITIES

By WILLIAM RAMSAY, M.A.
Revised by Prof. R. LANCIANI, D.C.L. Oxon., LL.D., F.S.A., assisted by Prof. E. DE RUGGERO, both of the University of Rome.

With Two Photographures, and Map and Plans prepared by Prof. LANCIANI to illustrate the most recent discoveries relative to the Topography of Ancient Rome.
"The chief interest in the new edition centres in the chapter on Roman topography, which has been entirely revised and partly rewritten by Prof. Lanciani."—*Athenæum*.

A HISTORY OF ROMAN LITERATURE.

From the Earliest Period to the Times of the Antonines. By Rev. C. T. CRUTT-
WELL, M.A. Sixth Edition. 8s. 6d.
"Mr. Cruttwell has done a real service to all students of the Latin language and literature. . . Full of good scholarship and good criticism."—*Athenæum*.

SPECIMENS OF ROMAN LITERATURE:

OCCASIONAL NOTES.

AT times when religious feeling is aroused it is inevitable that much foolish exaggeration and many irrelevant statements should be found in newspapers or heard on platforms. Moderate men of all parties will agree that the Education Bill does not attack religious teaching, even though it may seem to withdraw from the hands of one party an influence that has long, and perhaps on the whole not unwisely, been exerted. Mr. Acland, in his opening address in the Bar Congregational Church at Scarborough on Easter Sunday, spoke with the greatest admiration of the influence of Dr. Temple at Rugby, and recalled that "from Monday morning to Saturday afternoon they had no dogmatic teaching. Dr. Temple's influence as an educationalist was wholly apart from dogmatic teaching." The parent who, like Mr. Chamberlain or Mr. Frederic Harrison, sends a boy to Rugby or Harrow makes no inquiry into the religious beliefs of the members of the staff. It is impossible to assume that all masters at the great public schools are convinced of the value of the dogma of the Church of England, or that they teach such dogmas in their form rooms. Yet we are asked to believe (by the extremists on the one side) that Church of England parents shrink from sending their children to elementary schools unless the whole staff have declared their allegiance to the State Church. The arguments on the other side seem to us equally untenable. It is asserted that, although a man's qualifications for teaching arithmetic may be investigated before he receives permission to teach the subject, yet that as regards religion he may teach it, but may undergo no inquiry as to his beliefs. The plain truth is that the majority of teachers, though remaining devout, religious men, do not accept the dogmas that satisfied most people fifty years ago. This is true of all grades of teachers. But the

Church of England seems to see no danger except in the public elementary schools.

THE deliberations at two important conferences that have recently been held go to show that there is a large body of opinion opposed to the Education Bill, quite distinct from the hostility of the Churches. The Independent Labour Party, meeting at Stockton-on-Tees, while recognizing the increased public control to be effected by the measure just introduced, regrets that the sectarian controversy has not been settled by a system of universal secular education at the cost of the Imperial Exchequer. This party regrets also that no adequate provision has been made for the unsectarian training of teachers, or for a national system of technical and secondary instruction which may place the advantage of higher education at the disposal of the working classes, or for the medical inspection of schools and for the feeding of the children. The Socialist Conference at Bradford expressed similar views. Mr. Hyndman held that the Bill was a mere attempt of the Liberals to evade the question at issue in the interests of Nonconformists. It was said that education was the first line of the nation's defence; that a Bill to be satisfactory must provide for the complete nationalization and secularization of all education from the primary school to the University; that the first consideration was the physical well-being of the children; and that therefore throughout the whole period of school attendance the nation should be responsible for the maintenance of the children. These views are ignored by the Archbishops and framers of Bills of to-day: they may be the views of a majority in the House of Commons of to-morrow.

AS the correspondence columns of the *Times* testify, clerics have not been slow to follow the cue given them by the Archbishop. A single day's issue (April 12) may serve as sample. The Bishop of Manchester leads off in a temperately worded letter. He would like to know "why religious toleration is left to the tender mercies of Local Authorities, or what connexion there is between religious toleration and the mystic number four-fifths." We ourselves last month deprecated devolution, but we would ask the Bishop in turn whether he thinks that the House of Commons would have shown itself more tender-hearted; also whether, if the proportion of children had been fixed at one-half, he would have called one-half a mystic number. But the minor clergy mistake abuse for argument; robbery and confiscation are the mildest words in their vocabulary. Undenominationalism is "that most flabby of all shams." "Cant phrases are the special province of smug dissent." The Church must "put her back to the wall," "throw away the glove and wage war against the enemy of the souls of our children," the enemy to whom another correspondent applies the sacred words: "They know not what they do." The moderates among the Bishops are bidden to "throw away the mask of Erastianism." This is a fair *florilegium* from a single column, but we would note another point in the last letter from a clergyman. He argues his case quite fairly and temperately, but begins his letter: "My school." The phrase is used quite innocently, but it reveals the common attitude of the clergy towards national schools, and helps to explain the counter attitude of the nation, of which the present Bill is the outcome.

THE Register, as we anticipated in our last number, has received its death warrant, and for the reasons we there stated we shall not be found among the mourners.

The Register of Teachers.

But, while we fully agree with Mr. Birrell that the Register in its present shape is neither legal nor profitable to the profession, we dissent entirely from his contention that the Department by increased grants to secondary schools can do all and more than a Register of Teachers was intended to do. Let us suppose that Mr. Birrell's aspirations are fulfilled, that all the public secondary schools of the kingdom are brought under the control of the Department, and that training is gradually enforced as a condition of tenure for all their staffs: when this ideal is attained teachers will find themselves a branch of the Civil Service, not a learned profession. The Head Mistresses' Conference and the Teachers' Guild have already protested against this consummation, and we have no doubt that other bodies will follow suit. The primary teachers at Scarborough were too jubilant over the extinction of the bend sinister, Column A, to consider the future, but the N.U.T. still stands pledged to agitate for a Register of Teachers. *Pace* Mr. Birrell, the Act of 1899 gives the Board of Education full authority to constitute a comprehensive Register that will satisfy both the N.U.T. and the Teachers' Guild.

ON the subject of tenure Head and Assistant Mistresses have arrived at an agreement, and that without calling in a judicial arbiter, as did the Masters. The terms are briefly these:—(1) The head mistress shall have power to select the members of her staff, and to recommend them for final appointment to the governing body.

(2) There shall be a probationary period, not exceeding three terms, during which the appointment shall be terminable by one month's notice on either side, without reference to the governing body. (3) After this period the assistant mistress shall be dismissible only by the governing body, at the request of the head mistress, due opportunity being given to the former to state her case. These terms seem to us eminently reasonable, though we should have preferred to see an appeal granted to the Board of Education. We hope that the Council of the G.P.D.S.C. will at once give effect to the concordat.

THE second Report of the Studies and Examinations Syndicate concerning the compulsory study of Greek at Cambridge was discussed in the Senate House on

Greek at Cambridge.

April 27 and 28, too late for us to chronicle. The minority on the Syndicate have circulated a fly-leaf alleging that the second report "differs little in substance, intention, and probable result from that submitted to the Senate last March." Mr. S. H. Butcher, and the Bishop of Ely (Dr. Chase), both of whom voted *non placet* on the first report, point out in a letter to the *Times* that this objection cannot be sustained. Then all students were exempted from examination in Greek; now the exemption is confined to students of mathematics and science. Then the same degree was conferred on all alike; now the difference of studies will be indicated, as in the University of London, by a distinction of title—"Bachelor of Arts in Letters" and "Bachelor of Arts in Science."

THERE comes to us from Croydon what seems on the face of it a case of gross injustice, which cannot fail to strengthen the claim of teachers, both head and assistant, to a right of appeal. Miss Holden, the Head Mistress of the Croydon Secondary School for Girls, has been called upon by the Education Committee to resign. No doubt is thrown upon her competency as a teacher or her success as an

administrator. The sole reason assigned is "a want of tact in her dealings with those who have been placed in authority over her." This "want of tact," when probed, resolves itself into friction between Miss Holden and the Clerk of the Committee, who is also "correspondent" of the secondary school. Our knowledge of the case is derived solely from the local press, but from the Chairman's own statements it is clear to us, first, that the disagreement between the Clerk and the Head Mistress was on matters of detail, and that the Clerk was mostly in the wrong; secondly, that there was no colour for a charge of insubordination to the Local Authority; thirdly, that the decision of the Committee was based on the *ex parte* statement of their officer. Nothing but the right of appeal to a higher court can correct such cases of malversation of justice, which must occur where Town Councillors know nothing themselves of schools or schoolmasters, and have to trust to an officer who may himself be equally ignorant of either branch of the service.

IN reference to the deputation of the Private Schools Association to Mr. Birrell, Mr. George Bartley writes: "These schools do not want rates and taxes to help them,

Private Schools.

but what they do ask is that schools shall not be established to compete with them," meaning rate-aided schools. We hope the

Private Schools will not adopt such an unreasonable demand. No branch of education in England is self-supporting. For the lower classes it is free, and for the upper classes it is largely subsidized by help of ancient foundations such as Winchester and New College. Hitherto the lower middle classes have been left out in the cold, and this defect is slowly being remedied by the Board of Education and the municipalities. Mr. Bartley is indignant that the Girls' Public Day School Company should be able, by converting itself into a trust, to receive Treasury grants, and can see no difference between a trust and a limited company. There is all the difference in the world. At present the dividend is limited to 5 per cent., and in forty years the shareholders will have been paid off and the Company's schools will become a national asset. If the Private Schools Association are well advised, they will agree with their adversary quickly, submit to inspection and control within reasonable limits, and claim on these terms their fair share of Imperial and local grants.

MR. ACLAND, in addressing the Conference of the National Union of Teachers at Scarborough, was very outspoken in his denunciation of examination diplomas and certificates. He thought that any one

Mr. Acland on Examinations.

who could strike out five-sixths of the examinations of this country, and who would carry away and deposit on the Dogger Bank whole ship-loads of certificates, would be doing a very effective public service. We heartily agree with Mr. Acland, and are grieved to learn from this pronouncement that he is not omnipotent on the Education Committee of the West Riding of Yorkshire. Fifty years ago examinations were good, and served a useful purpose. They have now become a tyranny, and seem likely to squeeze the life out of education. Gradually, little by little, so insidiously that the danger is hardly apparent to the worker, teachers are becoming slaves to the examination system. We have all read "Kappa's" vigorous attack on schools. No doubt we have felt that, if a "Kappa" could be provided for every twenty boys, education would quickly become alive again. But, if a master will deliberately set himself to inquire why he has so far departed from the ideal that "Kappa" depicts, he may find the answer in the examinations for

which he is bound to prepare his pupils to the best of his ability, and which have deadened and formalized his teaching. Many masters also are never at their best, because they are filled with hourly worry lest their pupils will not know their work and do creditably in the examination—a state of mind absolutely hostile to good teaching.

ON the subject of a clause relating to the tenure of assistant masters in a scheme for Tottenham Grammar School an interesting correspondence between Mr. Daniell and Mr. Bruce has been recently published.

A New Tenure Clause. The clause in question is as follows:—
“Subject to the approval of the Governors, the Head Master shall appoint, and may at pleasure dismiss, all assistant masters.” Mr. Daniell asked Mr. Bruce for the precise meaning and effect of this clause. These are the important words in Mr. Bruce’s reply:—“Clause 10 of the proposed new scheme, while reserving for the Head Master the initiative in the appointment and dismissal of the staff, takes away from him the sole power of appointment and dismissal. The assistant masters would hold office as the servants of the Governing Body and the Head Master would exercise his authority under the clause as the agent of the Governing Body. No appointment or dismissal of the assistant masters could be effectively made without the definite authorization of the Governing Body.” This reads excellently to assistant masters, and will be welcomed by them, we are sure, as a satisfaction of all their just claims with regard to tenure. The weakness is that the ordinary man cannot see in the clause any complete justification for Mr. Bruce’s statements. It looks as if the Governing Body could, under this clause, pass a resolution empowering the Head Master to act in the matter of appointments and dismissals, and need then have no definite knowledge of appointments and dismissals until they had long taken place. We hope, however, that Mr. Bruce’s explanation may be taken as authoritative.

THE ninth annual Conference of the National Association of Manual Training Teachers was held in the middle of last month at Sheffield. Perhaps to-day we are all convinced of the value of training in handicraft. Two things stand in the way of translating conviction into action.

Manual Training. In the first place, we are accustomed to rely upon the “Reader.” It is so simple, so easy, and, above all, so cheap. Sixty shilling “Readers,” bought at the net price of sevenpence-halfpenny, will last a class for years. And when the desire and the energy necessary for making a change have been aroused we are met by the cry of expense. Mr. Judd, in introducing to the Conference a system of handicraft suitable for all schools, laid special emphasis on the slight cost of the equipment required. For a class of twenty children the initial outlay would be £12, and the annual cost of material about 10s. This does not sound excessive; but the whole *crux* lies in the number of the class. If in our public elementary schools the nation would bear the cost of three teachers where at present there is one, other difficulties would soon be overcome. No one proposes to teach sixty, or even forty, children together in a workshop. It is in the multiplication of teachers that the real expense lies. Reforms are not carried out in a moment: all that can be done at present is to continue to represent the need, and to trust to insistence and to time. The brain centres controlling the hand and the faculty of speech are closely contiguous. There is no ground for

believing that the atrophy of the one will strengthen the other.

THE discussions that have recently taken place with regard to physical degeneration, the feeding of school-children, medical inspection, and the like, have brought to the front, and impressed upon the public mind, views that to many are startlingly fresh. For thirty years we have tried to educate the mind while neglecting the body. As a nation we are only just growing out of the shackles of the Puritan teaching that looked upon the body as a vessel of clay, the proper care of which was unworthy of a seriously minded man. We now know, and the knowledge is slowly permeating the people, that the same blood nourishes muscle and brain alike; we know that in the average man the development of moral character and of intellectual power needs a body fitly nourished and warmly clothed. We are not prepared to argue that the State should directly concern itself with feeding and clothing, except by the dissemination of knowledge; though in the long run such an expenditure would probably prove to be less than we pay now for lunatic asylums, prisons, homes, and hospitals of all sorts. But we are inclined to blame the medical profession in the past for keeping too jealously to itself the secrets of good health. Knowledge as to the laws of health had to be sought in long, forbidding, technical treatises, or else in the writings of quacks whose conclusions were rightly looked upon with suspicion. But of recent years the doctors have realized their duties as citizens. The most eminent of the profession—Sir Lauder Brunton, Sir Thomas Barlow, and Sir Crichton Browne—have taken the lead in organizing congresses of hygiene and arousing educators to a sense of their physical responsibilities. They have even induced the Head Masters’ Conference to appoint a special committee.

IN a recent letter to the *Times* on the subject of physical education Sir Charles Eliot spoke slightly of the value of cheese as a food. Weight for weight cheese is more nourishing than meat. Mr. Birrell in the same connexion rather scoffed at the idea that boots were a matter of concern to the teacher. Yet it is often insufficient clothing that helps to produce the physical wreck who proves so costly to the nation. It is well known that in crowded areas many diseases diminish regularly when the schools are closed, only to increase again at the end of the holidays. Rabies has been banished by legislative measures. It is true that children are more numerous than dogs and less amenable to strict discipline. But many diseases are preventible: it is a question of cost and trouble. The importance cannot be called in question. With proper medical inspection and a sufficiently wide organization to ensure that all needy children are provided with proper food and clothing, another generation would see an immense improvement in the physical well-being of the nation. First and foremost we want information. Children are ill nourished because their mothers neither know what is the proper food to give them nor how to cook or prepare that food. It is often ignorance and the desire for smartness that result in the purchase of unsuitable clothing. Putting the argument on a commercial ground, it would pay us to look after the physical welfare of the children of the masses in the large centres of population.

IN the matter of educational endowments, the Education Bill proposes to complete the powers given under the Education Act of 1902 and subsequent Orders in Council,

Educational Endowments.

and to make the Board of Education the controller of all such monies. Any scheme in relation to which proceedings have been begun during this current year may go through in the ordinary way; and any educational endowment founded within the last thirty years may remain unaltered except by consent of the governing body of that endowment. With these exceptions, the Board of Education will have power, if this Bill becomes law, to investigate and overhaul and rearrange any educational endowment; the latter phrase including any monies that, in the opinion of the Board, ought to be applied to educational purposes. In case of doubt as to the objects of an endowment the Charity Commissioners shall decide the matter. If a petition is lodged against an Order of the Board, and if it is persisted in, the question may finally come before Parliament, and, if Parliament so decide, the petitioner may be heard by counsel according to the procedure adopted in the case of private Bills. This part of the proposed Bill is not easy for the lay mind to follow, but it assuredly means that the Board will acquire powers of control over all educational trusts of whatever character, and that they will be able without difficulty to vary the instructions of the pious founder, provided he died at least thirty years ago.

IT seems clear from the clauses above referred to that the Board will acquire power over the training colleges belonging to religious bodies. All of these are endowments to the extent, at least, of their buildings.

Training Colleges.

Beyond the buildings the endowments and annual income from subscriptions of these Colleges are, we believe, insignificant in most cases in comparison with the annual expenditure, the main part of which, of course, is borne by the national Exchequer. Great have been the complaints of the exclusion of candidates on the ground that they do not subscribe to a particular formulary. From the point of view of the religious body itself, it might fairly be argued that this policy has been unwise. Denominational training colleges claim to have a certain distinctive "atmosphere." This ought to influence all and any of the students, whether on entrance they adhere or not to the distinctive teaching. According to the Bill regard must be had primarily to educational advantage. When this is secured provision in respect to any particular religious worship may be made. In this connexion a point arises that will require elucidation when the Bill is under discussion in the House. If a teacher is free from all tests of religious belief, and, seeing that the word "teacher" is so defined as to include pupil-teacher, can creed tests be logically or legally imposed by authorities of training colleges?

THE Bill expressly excludes from the operations of the clauses dealing with endowments—(1) any University or any college or hall in any University; (2) any of the schools mentioned in Section 3 of the Public Schools Act of 1868; and (3) the administrative powers of the Bill shall not affect the colleges of Eton and Winchester, except with the consent of the governing body in each case. Ireland and Scotland are each excluded. Wales will have its Welsh Council, which may supply and aid education of all kinds, including apparently University education; though over the latter it will have no control. Saving, then, for these exceptions, the Board will become the real controller of all educational endowments of whatever kind, and the real Authority in England for education of all grades.

Limitations of the Powers of the Board.

THE difficulty felt by Local Authorities as to spending money on the training of teachers who may, so soon as they are trained, go into the service of another Authority is a very real one. There are Authorities who openly ask why they should incur expense when, by offering a 5 per cent. increase of salary, they can fill up all vacancies. The difficulty is serious, and must be met. We cannot feel that in the new Bill a satisfactory solution has been found. It is doubtful whether a student in training can be legally bound by his promise to work for a period (not exceeding seven years) in the area of the Authority who paid part of the expenses of his training (it must not be forgotten that the State already pays the greater share of the cost); and the provision that the amount spent on a student who transfers his service to another area is a debt that can be recovered from the Authority of that area seems scarcely to be taken seriously. The stronger objection to the term of service is the limitation it imposes on a teacher's liberty to move from the home area and gain fresh experiences and a wider outlook in life. This, in our opinion, is a fatal defect. The only alternative is to be found in throwing open training colleges to all qualified comers and putting the cost upon the national Exchequer.

The Seven Years Pledge.

UNDER the Bill any borough or urban district with a population of fifty thousand may apply to the Board for power to become an Authority for Part II. of the Education Act of 1902. This is an obvious and necessary extension of the earlier Act and can, we imagine, meet with no opposition.

Part II. Authorities.

Any large and increasing residential area may look forward, when its population reaches fifty thousand, to taking over the management of its secondary schools, pupil-teacher centres, and technical institutes. It will then rate itself for this part of its educational work and neither receive from nor pay to the administrative area from which it has been detached any rates for secondary education. The limit of the 2d. rate for this part of the Act of 1902 will also be abolished if this Bill passes. Here, again, there can be little opposition. The 2d. limit was but a trial. It has been obvious all along that the money raised would be insufficient, seeing that the education of pupil-teachers and the training of teachers has to come out of it. However much, as rate-payers, we may dislike the idea, we must face the fact that education rates are going to rise considerably.

ONE perfectly fair charge brought against the Act of 1902 was that under its provisions local interest in educational matters was in danger of dying out owing to the centralization of control and the removal of any real power from the local managers of public elementary schools. The present Bill makes an attempt to remedy this. Any area, however small, may require the County Council to delegate to it any powers or duties with regard to the management of its schools with the exception of the powers in connexion with the appointment, payment, and dismissal of teachers. Opposition will no doubt be taken to this exception; but it is obvious that teachers trained, paid, and pensioned at the cost of the nation cannot be left to the whims and fancies of very minor Authorities. The clause will do much to revive local interest in schools; at the same time, and speaking quite generally, local interest is not apt to be keenly aroused except where expenditure of money is involved. It will still remain for the County Education Committee to invite local co-operation by the reasonableness, courtesy, and consideration of its administration.

Devolution.

WE need not heed the stage thunder of excited clerics who pronounce undenominational teaching "a form of religious instruction infinitely worse than secularism," and speak of School Board religion as "the hogwash of Christianity," but the objections of the Bishop of Birmingham and of Canon McColl are soberly stated, and call for a serious answer. Dr. Gore urges that it is impossible to teach effectively the Sermon on the Mount without raising the question of the authority of the Speaker; that, as Churchmen hold, no one is qualified to give Bible lessons who is unable to subsign the Articles of the Church. In the same sense, Canon McColl demands from Mr. Birrell a formal definition of "the fundamental truths of Christianity," and, if this is satisfactory, a further guarantee that these truths shall be taught by men who hold "the historic Creed of Christendom." Our answer to Dr. Gore is that theology, in its strictest sense, has no business in the schoolroom. In science, no less than in religion, "omne exit in mysterium," and a lesson in physics or natural history involves questions on which philosophers are no less divided than theologians. Dr. Gore will remember how the first verse of St. John's Gospel is treated in "Faust," and even he would find it difficult to expound to children the full significance of the first verse of Genesis. Canon McColl tells a story of a School Board teacher who was expounding to his class "the doctrine of miracles," and compelled by an inquisitive pupil to confess that he did not himself believe in miracles. The story sounds apocryphal, but Canon McColl vouches for it, and the moral of it is not what the Canon suggests, that the Bill will encourage cynics or hypocrites to teach what they do not believe, but, what we knew before, that some teachers are fools. To return to Dr. Gore, we would answer in a concrete form: to a child it is immaterial whether a lesson on "Blessed are the merciful" or on the Good Samaritan is given by a homoousian or a homoiousian.

MR. BIRRELL, in his great speech on the Bill, stigmatized the offensive phrase "the undenominational conscience." There is another false coin which has passed current and needs nailing to the counter. What could be more absurd than talk of "the endowment of Dissent"? The phrase can bear only one of two meanings—either that Dissent is a homogeneous body of believers, or that it is united in a Mephistophelian negation of all religious creeds. The Dissenters may well turn the tables and ask the Bishop of Birmingham to define what he means by Church doctrine. Do not the Ritualist and the Low Churchman differ among themselves no less widely than the Calvinistic Baptist and the Primitive Methodist? Would Dr. Gore expound the second half of the Church Catechism in the same sense as the Dean of Ripon? We have ourselves heard an extreme Anglican declare that nine-tenths of the religious teaching given in Church schools is utterly worthless—worse indeed than none at all.

THE Head Master of Eton writes to the *Westminster Gazette* to protest against the use of quotations from Bishop Westcott and Archbishop Davidson in favour of Cowper-Temple teaching. "To discuss the matter from this point of view is to ignore, first, child nature, and then the claims of citizenship." This is a dark saying; but an elucidation follows:—"Educational policy will be judged as it favours or thwarts the incorporation of children into denominational bodies." Were this test applied to Eton, the Head Master could hardly claim for it a high place in the

scale of schools. For "some dribblets of sound Bible teaching" it might take credit; but the distinctive notes of Eton—"Montem" and "Pop" and "College Beagles"—can hardly be styled denominational. "Incorporation," *i.e.*, *esprit de corps*, the public-school spirit—this is what we want to see permeating all our national schools, but of Church school treats and Chapel tea parties we have already too much. Sects there must needs be, but the less childhood knows of them the better, and citizenship knows no distinction of sect. If it is a good thing that Protestants, Romanists, and Jews should share the common life of a boarding school like Eton, it is surely illogical to condemn a Bill as radically bad because it does not favour the discrimination of day-school pupils into denominational bodies.

OLD FRENCH AS A SCHOOL SUBJECT.

By H. J. CHAYTOR.

A RECENT article in this journal has discussed the advisability of withdrawing Latin from the secondary-school curriculum. The subject of this paper will, it is hoped, provide some small reason for its retention. More than half of the average school curriculum is devoted to some form or other of linguistic teaching. This is as it should be: an important part of the business of life consists in the intercommunication of ideas; for instance, the scientist who attempts to popularize his discoveries and succeeds merely in realizing the ideal of language as an instrument for the obscuration of thought exemplifies the consequence of an education ill balanced upon the linguistic side. A powerful instrument of use in developing the feeling for language is the study of philology, if taught upon the right lines: and it may be claimed that the most suitable language for the purpose is French. The philology of the Latin and Greek languages is too extensive a business to be capable of that definite treatment which secondary teaching demands, and the mind of the boy is generally clouded by the remoteness of the origins and the immensity of the field to be covered. The claims of English and German for philological treatment might be argued with greater plausibility; but here, again, the origins of Germanic philology are outside of a boy's scope. Anglo-Saxon, which might serve as a halfway house, is not a school subject. French and Latin, on the other hand, represent exactly the basis required for such teaching; the origin and its result are school property, and it is obviously the business of the teacher to make some attempt to explain the intervening process.

At first sight it would seem that any one engaged in teaching French to boys who learn Latin could hardly fail to show the connexion between the two languages—by accident, at least, if not of set purpose. And, as a matter of fact, there are probably very few boys who could not write down a number of French words which "come," somehow or other, from Latin, if they were asked to do so; there are very few teachers who have not had occasion to refer to Latin in the teaching of French. But when we leave the haphazard, the amateurish, and the unmethodical, and from the occasional dropping of scraps of information turn towards a regular lesson in French philology, and ask whether we may give definite and systematic instruction in the subject, then objectors start up to smite us with staves. "The subject lends itself to cram." If incompetent examiners be appointed whose only notion of setting an historical question is to write down a string of words and ask for their derivations, then will cram flourish exceedingly. "There is no time for the subject."—One cannot answer for every time-table in the country; but there are few public schools where the top forms could not spare half an hour a week for historical French, and a great deal can be accomplished even in this short space. "The Latin of modern sides is hardly equal to the task."—Then such a modern side must have been very badly taught: modern sides are ceasing to be the school sink or ashpit for the dumping of intellectual fail-

ures, and can take an intelligent interest even in Old French. It is a subject that interests boys for many reasons, and chiefly because they feel that the Latin they have painfully acquired is of some use after all—is something more than the instrument of mental discipline on which speech day orators expend their encomiums.

As in most cases, the question "solvitur ambulando." A few weeks' teaching will soon make plain to both teacher and taught whether the subject is worth the time spent on it or not. It depends, of course, entirely upon the teacher whether the boys think Old French tiresome or interesting. And here a few words as to the proper method to pursue. Our object is not to turn out erudite *romanistes*, but simply to enable boys to see the aims which have to be kept in view, and, above all, the methods by which investigation is conducted. To sit a boy down to "look up" derivations and historical phonetics is to sicken him of the whole business. If the school library possesses such a book as Darmesteter's "Historical Grammar," so much the better; but such books are for reference, and not for class use.

The teacher will begin with some preliminary observations. It will be necessary, first of all, to point out that the language of a country is by no means uniform at any one time, and that, roughly speaking, we shall in every case find three strata—the literary language of books, the spoken language of the cultured classes, and the vulgar language of the common people. Examples will then be given to show the existence of these three strata in the case of Latin, and it will be explained by what means Latin was distributed over the countries within the Roman Empire and what kind of Latin was carried into them. The question then arises: If Latin was spoken throughout the Roman Empire in the main centres of population, why has it not developed into one Romance language instead of into several? An explanation is thus evoked of the causes tending to produce linguistic separation, and a table of the Romance languages may be given. We have then to confront the problem of the line of demarcation between one language and another, and it will appear that in cases where Nature has not provided a geographical boundary this is by no means an easy task, and that the only means of distinguishing, for instance, French from Provençal is by a strict attention to the phonetic peculiarities of both languages. The fact that one language shades off into another through a series of dialects will also lead to discussion of the difference between dialect and language, and when the several dialects of French have been differentiated, and the reasons explained which led to the final predominance of one, the class should have been provided with some facts bearing not only upon the history of French, but also illustrating the influence of geographical configuration and of political progress upon linguistic development.

Something must then be said upon the subject of phonetics. It is not necessary at the outset to teach more than the changes undergone by the Latin tonic vowels, and these only as simply as possible. The form may then begin to read a piece of Old French without more ado. Such reading has, indeed, been the object of the foregoing explanations. To lecture upon the history of the transition from Latin to French and to conclude with the details of phonetic change or of historical grammar is to disgust the form with the subject.

The boys should be put on to translate from the outset; when they stick at a word, the teacher should help them to its meaning, when possible, by showing them the phonetic changes on the board, and so taking them back to the Latin. Most boys who have learnt Latin and Modern French for some years will be able to make out a great deal with a little practice. They must be made to take notes, and to formulate their rules for the mutation of vowels and consonants as they go along; constant back reference must be made to rules already enunciated. It is well to take a specimen of a well marked dialect at first. Norman French is useful to boys who may wish to read modern history at the University, and here local peculiarities of dialect had better be neglected as far as possible, and only the general characteristics emphasised. The teacher must, whenever possible, show how the Old leads to and explains the Modern French, this being the great reason for teaching the subject; and he will find many a peg whereon to hang rules of Modern French in better order than they appear in the grammars.

He must devote careful attention to the study of "semantics," and show how words become restricted or enlarged in mean-

ing—the phonetic change, for instance, involved in the transition from *mutare* to *muer* is of minor importance in comparison with the lesson that may be drawn from the respective meanings of these words. The workings of analogy will interest the boy who is prone to disfigure Latin prose with such forms as *potebam*. The question: "What is an irregular verb?" will not be answered by the assertion that such a verb cannot be brought under one of the "four conjugations." Syntactical problems, in particular, must be subjected to this form of treatment, and the formation of the future and conditional tenses or the agreement of the past participle must be explained by reference to the changes of meaning involved. To make the case clearer, we may take the formation of the conditional tense as an example.*

The future tense (the origin of which has been already explained to the form) considers future time from the point of view of the present. The future tense may also be regarded from the standpoint of the past—e.g. (1) "General White in Ladysmith observes: 'To-morrow the enemy will attack'" (future). (2) "General White, by the power of imagination, regards the attack as delivered, reviews the circumstances which led up to it, and observes: 'To-morrow the enemy should attack' (i.e., if my calculations are right)" (subjective conditional—*attaquerait*). (3) "General White, transporting himself into the past, by imagination, sees that, owing to circumstances, the enemy cannot help attacking, and says: 'Le lendemain, l'ennemi devait attaquer'" (objective conditional).

Now Latin could not express the second meaning, as it had lost the periphrastic conjugation (fut. part. and *sum*), and therefore a new tense—the imperfect future or conditional—was called into being, formed as the future with *habere*. So Tertullian could write in the sixth century: "Nazareus vocari habebat secundum prophetiam." The difference between the subjective and objective uses is shown in two Provençal translations of St. John's Gospel (Paul Meyer, "Recueil d'anciens Textes," page 36, Vol. I.): "Sciebat enim quisnam esset qui eum traderet," where one translator takes the subjunctives as being Jesus's thought, and translates: "Sabia cal's era che lo trairia"; while the other considers the betrayal as certain, and translates: "Sabia cal's era aquel quel devia luiar."

After this the teacher will proceed to ask for modern uses: "I ought to have done it," &c.; and, if there is time, and the text in use brings up the question, to discuss conditional sentences.

It may be objected that such explanations as these are far too wide, and that there is no use in quoting ancient Provençal to learners of Old French. On the other hand, it can be answered that we are educating, not cramming; to show boys how to go to work, how to use their tools, and how to get to the bottom of things is our object; and this cannot be done if our explanation of the future simply is that it can be formed by adding *-ai* to the infinitive in the first conjugation. An insight into methods of working and searching for explanations from the beginnings of language is worth more to a sixth form than all the derivations in the language learned by heart.

Thus Old French is to be taught empirically. Boys then feel that they are doing something for themselves, and contributing something to the elucidation of a problem; the text helps them to keep in connexion and remember the rules they have been told, and, even if they forget them, they will have gained a valuable experience in method. One last objection remains: that there exists no book suitable for our purpose. The question of expense is one to be considered, and too heavy an addition to the book-bills of a sixth-form boy would hardly be justified here, since Old French can never be more than a minor subject in schools. If the 4s. 6d. which will procure F. F. Roget's "Introduction to Old French" (Williams & Norgate) be thought too heavy an expense, we are reduced to selecting and printing our own texts privately. For our purpose all that is required is a small book containing a few pieces in prose and verse at the price of a shilling or eighteenpence. Any publisher who would produce this would confer a benefit. The "Primer of Old French," by Messrs. Clarke and Murray (Blackie & Son, London, 1902), would serve our purpose were it not for the Modern French translations upon the opposite page, which rather destroy the effort at discovery which the form is

* See Karl Foth, "Verschiebung der Tempora in den romanischen Sprachen." Boehmer, "Romanische Studien," Vol. I.

expected to make. The "Recueil de Morceaux choisis en vieux français," by Eugène Ritter (Geneva, 1885, 2 fr. 50 c.), contains a fair selection of texts, and nothing else. Of historical grammars the English translation of Darmesteter's "Grammaire historique" (Macmillan) is undoubtedly the best for purposes of school reference.

THE SHEFFIELD CONFERENCE.

THE thirteenth Annual Conference of the Teachers' Guild of Great Britain and Ireland opened at Sheffield on April 23, with a reception given by the Lord Mayor and Lady Mayoress in the Town Hall, at which the best traditions of civic hospitality were well maintained. The number of members attending, apart from those living in Sheffield, was somewhat smaller than is usual at these Conferences. Had the members of the Guild realized the genial warmth of a Yorkshire welcome and had they known how easy it is to get away from the industrial parts of the town into some of the finest scenery in Yorkshire or Derbyshire, perhaps the attendance would have been larger. But the zest of those who did attend made up for paucity of numbers; and from the point of view of an enjoyable holiday, coupled with a little "educational shop," the Conference was voted a great success.

The more serious work began on the Tuesday morning with an address from Dr. Alex. Hill, Master of Downing College, on "The Teaching of the Laws of Health in Schools." Dr. Hill, after a few introductory remarks relative to his installation as President for the year, spoke as a physiologist who, on the whole, objected to the general teaching of physiology in schools, though certain knowledge, especially in reference to germs, might well be taught, provided that its individual application is avoided. Miss Morris, Lecturer to the West Riding of Yorkshire, took a view somewhat opposed to that of Dr. Hill. While deprecating any teaching that induced introspection at too early an age, Miss Morris thought that the reverent care of the body should be taught as a preventive against future tragedies resulting from ignorance. Of this subject we hope to give our readers a fuller report next month. Prof. Findlay, who followed, twitted the Conference with being led away by popular cries into empty discussions upon matters as to which the teacher could exercise little influence. He was sceptical as to the whole value of teaching of morals, civics, or the like; the experience of America was a warning to us. Before we attempted to get any general teaching in this subject, we must have demonstration as to methods employed and results obtained. But teachers should beware of lightly undertaking responsibilities they cannot carry out. Several speakers followed, and an interesting and profitable discussion was the result.

The second subject was introduced by the Rev. H. Hudson, Principal of St. Mark's Training College, Chelsea, who, in dealing with the relation of the Board of Education to the Local Authority, pleaded for more freedom for the locality and less interference from the Board. Too great centralization would check progress and tend to take the life from the work of the Local Authorities. In reference to training colleges, Mr. Hudson thought Local Authorities ought to define more carefully the obligations students were under in accepting aid from the rates or from the Treasury; and to state exactly how far students could honourably withdraw from these obligations if they repaid the public money that had been spent on them. He strongly objected to the attempt to confine students and teachers to a certain area. The elementary school, the pupil-teacher centre, the training college, the University, the school in which the finished product will teach may all be in one small area. The result may be a very unfortunate limitation to the experience and knowledge of the next generation of teachers. If one may sum up in a few words the discussion on this point, one would conclude that on the relation of the Board of Education to the Local Authorities the members of the Conference scarcely knew which to distrust more, the official Inspector from headquarters or the representative of the rate-payer at home.

In the evening of Tuesday Mr. J. A. Green, Professor of Education in the University of Sheffield, opened a discussion on the subject of Registration and Training. He admitted that the Register had failed in the primary purpose of encouraging training; though at the same time the existence of the Register for four years had done something to familiarize teachers with the idea of training; and even the secondary-school master, with his cloak of tradition that protected him from new ideas, was beginning to think about training. But the Register should not have been ended: it should have been mended. Prof. Green advocated a Register of persons qualified to give higher instruction. This Register would be based on training, experience, and high academic qualification: it would be open to any one, and would, therefore, satisfy the N.U.T., as the speaker believed. He did not advocate a Register that would include all teachers. Miss Cleghorne, of the Executive of the National Union of Teachers, said that one of the

objects of the Association she belonged to was to secure a comprehensive Register of all teachers without reference to the type of school. The N.U.T. was glad the present Register should die; but was quite willing to help in the formation of a new Register on better lines.

Mr. Storr, who was unavoidably absent, had written a letter which had been read to the Conference. He said the question really was whether teachers were to be civil servants or members of a learned profession. Miss Cleghorne and Prof. Findlay, who spoke subsequently, agreed with the views expressed by Mr. Storr. Prof. Findlay also stated that he was not altogether discouraged with the results of seventeen years' work in favour of training, and he pointed out that seventeen years ago Sheffield would not have believed that it would have a University and a Professor of Education in 1906. Things had progressed considerably, and would advance further as people gradually learnt that the study of education was helpful. Miss Escott, of the Sheffield High School, expressed the views that have already been uttered by the Association of Head Mistresses.

Many other speakers followed. The general feeling seemed to be that, while the existing Register could be buried without too much weeping, yet the Guild must exert its utmost influence to secure a fresh Register of qualified teachers.

On Wednesday morning an interesting discussion took place on the best arrangement of the school day (including home-work) and of the school year. Mr. Tristram, Head Master of Loretto School, insisted that conditions of health were paramount, and proceeded to outline the ideal day in a boys' boarding school. We hope to give a fuller account of his views in a subsequent number. Mr. Kahn, who followed, dealt with the subject as chiefly a matter of brain hygiene, and spoke strongly upon the imperfect physical conditions in boys' day schools. In the later discussions the feeling was strongly expressed by several speakers that the chief difficulty in the way of a proper organization of the school day was to be found in the regulations of the Board of Education, which pressed with especial hardship on girls' schools. It was also pointed out with perfect truth that the Board is always ready to listen to, and be guided by, any carefully considered expression of expert views.

The second subject of the morning session was introduced by Prof. Findlay. Apparently having in mind the increasing desire of Local Education Authorities to pass as many pupils as possible through the secondary stage of education, he questioned whether after the age of fifteen an ordinary secondary school was the best training ground for a large proportion of future citizens; and thought that only those who were morally and intellectually worthy should remain at school after the age of fifteen. Miss Escott, Head Mistress of the Sheffield High School, dealt with the subject chiefly as it would affect high-school girls, who, if they left school at fifteen, would have little or no further intellectual training. She would have every girl, in the limited class from which she drew her pupils, stay at school to the age of seventeen or eighteen.

In the afternoon Mr. Trice Martin, Head Master of Bath College, spoke on the subject of school-leaving examinations and University entrance examinations. He urged the need of co-ordination to reduce the number of existing examinations and to maintain a constant value in the work of schools and Universities. The Board of Education should bring about this co-ordination, but should not itself conduct the examination. A paper written by Mr. Rayment, Vice-Principal of the Goldsmiths' College, was then read. After an interesting discussion and the passing of cordial votes of thanks to the authorities in Sheffield who had welcomed the Conference the public session was brought to a close. In the evening the members were entertained in the University buildings by the Vice-Chancellor, Sir Charles Eliot, and Dr. Hicks, the Chairman of the Sheffield Branch of the Teachers' Guild.

THE SCARBOROUGH CONFERENCE.

THE bright sun and the fresh invigorating air contributed to the good temper of the two thousand delegates from local associations who met at the Annual Conference of the National Union of Teachers at Scarborough. Climatic conditions have great influence. On this occasion, when "burning questions" which stir the feelings to the utmost were under discussion, it is fortunate that exterior conditions were favourable to peace. In a large hall where some two or three thousand persons are present, inhaling wearily the exhausted air, it is easy for passionate feelings to be aroused. The delegates, keenly interested and following with close attention each speaker's points, applauding with enthusiasm or dissenting with complete frankness, remained always alive to the seriousness of the debates which will be taken by the country as representing the views of some fifty or sixty thousand teachers in public elementary schools.

The President's Address.

Recreation in the form of excursions, public functions, dinners, balls, reunions were by no means neglected by the delegates, who, clearly,

had come for a holiday as well as for business. We only deal here with the political aspect of the Conference. This part of the proceedings was begun on Easter Monday afternoon by the incoming President's address. Mr. T. P. Sykes refrained from adding fuel to the "burning questions." He asked his listeners to consider the effect of the Education Bill on the children who would be taught under its terms. It was in the elementary school, he said, that the indefinable something aptly called "the soul of the nation" was produced. The children in the schools to-day would be the citizens of to-morrow, and it depended on what went on in the schools whether they would be sober-thinking citizens or the reverse. That was the task of the teacher—to develop and train the dormant faculties of the child, to encourage the tender mental hand, as it were, of the child to reach out and grasp something of the complex phenomena of life by which he was surrounded. Would the new Bill help the teachers to do better in the future the work that they were now doing? This was the touchstone by which they must try the Bill. He approved the financial provisions, but pointed out that the extra grant of one million pounds, if it were equally divided amongst the public elementary schools, would come to just fifty pounds for each. He also viewed with the liveliest satisfaction the abolition of religious tests, on the ground that the teacher could not do his work satisfactorily so long as he was dominated by the theologians. Mr. Sykes admitted that the chief struggle would centre round the clauses dealing with religious teaching. He instanced a town in which were two schools separated by less than three minutes' walk. In the one, a Council school, there were about 40 per cent. of children of Church parents; in the other, a Church school, there were to be found children of professed Nonconformists to the extent also of 40 per cent. of the whole. In these schools the first half hour every morning was given to Bible teaching. In the Church school part, and only part, of the Church Catechism was taught. With this exception the syllabuses of the two schools were interchangeable. No child during the past twenty years had been removed from the one school to the other on account of the quality of the religious instruction. He was convinced that there was no religious difficulty felt by parents, and therefore deprecated the introduction of an opportunity of fanning religious bitterness by asking parents to appeal for sectarian teaching. He found the Bill wanting in that it failed to raise the age of compulsory attendance above twelve years. He closed his address with an appeal for more satisfactory staffing in elementary schools. Not only were more teachers wanted—the classes were twice too large—but the Board of Education should recognize the individual child. In Bradford Grammar School there were 538 boys taught by a staff of 28 qualified masters. This staff would be sufficient, according to the regulations of the Board of Education, for an average attendance of 1,680 children in a public elementary school, meaning a school with at least 2,000 names on the roll. Under the conditions teachers in elementary schools became skilful in presenting a subject lucidly to rows of listeners, rather than in stimulating intelligence. The result was that in training to think the primary schools were weak. Mr. Sykes is correct in saying that by doubling the number of teachers, by insisting that all are qualified, and by raising the compulsory age of attendance to fifteen years, the only serious reproach against public elementary schools would be removed. But it was only by slow degrees that the nation would be induced to face the cost of these changes.

The Education Bill.

On Tuesday the session for public business opened. The hall was packed with delegates anxious to discuss resolutions on the Bill which were to take precedence of the published agenda. The first resolution was as follows:—"That this Conference expresses approval of those principles of the Education Bill of 1906 under which all public elementary schools, their teachers and managers, are to be brought under complete popular control, and under which creed tests for teachers are to be abolished." Dr. Macnamara opened the discussion in a spirited speech in which he showed that these principles were simply the logical result of the Act of 1902. That Act put all public elementary schools upon the rates and taxes. Complete public control must follow. At present the teacher in a non-provided school had to serve two masters—the Local Authority and the managers. His position was impossible. The creed test, he considered, put a premium upon hypocrisy. An amendment was moved to the effect that where four-fifths of the parents desired it the voluntary school system should be retained. Much earnestness and conviction were shown by the speakers in favour of the amendment, and a section of the audience expressed their hearty approval; but the amendment was lost, and the original resolution passed by a large majority.

The second resolution was also moved by Dr. Macnamara, and passed unanimously. It was to the effect that Local Authorities who were overburdened by the work of controlling education might apply to Parliament for an increase in membership; that an *ad hoc* Authority should be elected for London; that for this body women be eligible; and that powers be given to county Education Committees to pay the travelling expenses of members.

The third resolution likewise provoked a spirited controversy. Mr. Croft moved, and it was carried by a large majority, that the abolition

of religious tests cannot be effective unless means are taken by the regulation of State grants to secure that no qualified applicant for admission to a training college shall be refused on the ground of his religious belief.

A resolution in favour of throwing upon the taxes a greater proportion of the cost of education and of equalizing the local charge was carried without discussion. Then came a resolution containing very contentious matter. These are the exact words: "That any denominational religious teaching in public elementary schools shall be given by persons other than the teaching staff." It is clearly an unfortunate state of affairs that tends to make it undesirable for a man to teach to his class just those truths that he deems most important. Many speakers felt this, but they also felt that, unless a teacher were actually prohibited from giving this teaching, he would be as much as ever liable to clerical pressure in the matter. It was felt that teachers needed to be protected. The opinion of the Conference was clearly and sharply divided on the subject. Keen expressions of feelings were evoked. In the end the matter was talked out and no vote was taken. This was fifteen minutes before the close of public business. The President immediately proceeded to put the numerous resolutions remaining on the agenda paper, and all those to which there were less than ten dissentients were declared carried. We mention a few of these that are of general interest. In no school should Cowper-Temple Bible teaching be given at the same time as the denominational religious instruction under the scheme of "facilities." The Conference was not opposed to a seven years' guarantee being required from a student entering at a training college, but emphatically objected to any local restriction of area. It was reaffirmed that no teacher should be responsible for more than forty children.

The abolition of the Teachers' Register was evidently welcome to the Conference, though no resolution was carried on this point. The elementary teachers have always felt aggrieved by the conditions of registration, and have done their best to compass the downfall of the Register. A Conference consisting of some two thousand delegates coming from all parts of England and Wales is likely to reflect pretty evenly the opinions of the nation. Certainly this Conference was divided on the subject of voluntary *versus* Council schools, just as the country is divided on the point. It was a pleasing feature of the Conference that in all the discussions the note of bitterness was absent. The extreme speakers on the side of Council schools were quite ready to admit the good work that had been done by the Church of England in her voluntary schools. Opposition was always met in good temper, and the opinions of minorities were always respected. If the House of Commons knew as much about the Education Bill, its causes and effects, as the members of this Conference, much time might be saved in the forthcoming Session of Parliament.

PEBBLES FROM SCARBOROUGH.

MR. ACLAND wished that five-sixths of all the examinations could be abolished by a stroke of the pen, and all the certificates and diplomas be deposited on the Dogger Bank out yonder. They were embedded even in the national literature. On the last page of the first part of the "Pilgrim's Progress" it was told how Ignorance, having been ferried across the river by Vain Hope, was challenged by the Warden of the Holy City. "Then they asked him for his certificate. So he fumbled in his bosom and found none. Then the King commanded the two shining ones to bind him hand and foot and have him away."

WHEN he was Minister of Education he had a good deal to do with what was known as "South Kensington"—that quintessence of the examination system—and he had been instrumental in removing a portion of the military element—those good-natured old gentlemen whom they knew so well. He had often consoled himself during the weary hours that he spent there by repeating to himself an inspired quatrain of Wordsworth:

"Enough of Science and of Art;
Close up those barren leaves;
Come forth and bring with you a heart
That watches and receives."

MR. SYKES.—In a certain town there have been for the last twenty years within a stone's throw of one another a Church school and a provided school. In the Church school 40 per cent. of the pupils are children of professedly Nonconformists, and in the provided school the proportion of children of Church parents is even greater. During these twenty years no religious difficulty has ever arisen, and to the best of my belief the reasons that have led parents to choose one or the other school have never been religious reasons.

DR. MACNAMARA.—The non-provided school was now paid by the

Local Authority, but the teacher was still the servant of the managers, who were to the extent of two-thirds independent of the Local Authority. He was in fact between the Devil and the deep sea. Heaven forbid that he should discriminate or decide which was the Devil.

DR. MACNAMARA.—The Church had had a full return for what it had laid out on its training colleges half a century or more ago. Let them look at the maintenance accounts of Church training colleges:—Cheltenham, income £7,938, voluntary subscriptions £51; York, income £7,028, subscriptions £148; Chichester, income £5,149, subscriptions £150. This was a flimsy foundation on which to build a right upon the consciences of intending teachers.

MR. HODGES.—Do you believe that the average master or mistress in an elementary school is capable of teaching the terminological—exactitude of the Church Catechism?

MISS FITTON.—The Bill provides for lazy children and lazy teachers.

MR. LISHMAN.—The Bill is supposed to be the battle ground between Churchmen and Dissenters, but a recent census has shown that only 25 per cent. of the population attend either church or chapel. Is no account to be taken of the remaining 75 per cent.?

JOTTINGS.

IN Mr. Birrell's exhaustive Memorandum on the Abolition of the Teachers' Register he has neglected one point which has evidently escaped his attention. In most recent schemes for secondary schools (for instance, that of Clitheroe, signed March 8, 1906) there is a clause requiring that "the name of the head master shall be on the Teachers' Register." These schemes will all need redrafting.

EXTRACT from answer to question in Scripture paper: "Give briefly the history of Joseph."—"Joseph was buried in Egypt and his bones were carried to Palestine. When we next hear of him he was in a pit where he had been put by his brethren."

THE following letter was received by the Director of a County Education Committee:—"Toulon the seven march 1904. Master the director I have been veriest happy of receive your amiable post-card, and I thankful much you. I have commence to learn the english from tovv month, solely, I learn sole vvithout professor, vvith meaning of present me to bachelership; meantime of time in time, I has-keed of explain to a englishman professor, vvho say to me vvhom I make of progress enough rapid, but beyond the english I have many of other matter to learn, that is cause vvhom I less diligent. In short I have many of perseverance, for I vvill obtain my diploma by me sole. I am tvventy tvvo year old. I thank you still one time. My respectful salute ALEXANDRE M—."

THE *Parents' Review* for April has an instructive article on "The British Museum for Children." Mrs. Ennis Richmond treats that all-engrossing subject for parents, the choice of a school; but her counsels are mainly negative. First she dismisses public schools as a comparatively unimportant matter; and, as to the preparatory school, her advice comes to this: Interview the principal, and convince yourself that he is a good man. "It is practically an impossibility that a good man can be governing a bad school."

"SCARBOROUGH, A GUIDE AND A SOUVENIR," is a present made by Messrs. Nelson to all the delegates attending the N.U.T. Conference. It is frankly a publisher's advertisement, but we have rarely seen one so attractive in appearance and at the same time so full of useful information. Advertisers who lumber hotel tables with their meretricious rubbish might well take a hint.

"A. R." WRITES: "In confirmation of your very mild protest against the encouragement of militarism in schools, I send you an extract from a letter published in the official magazine of a great public school in 1902:—'The total bag for the whole treck is as follows: Killed 26 Boers, wounded 28, captured 7, surrendered 3. Also following stock: 1,846 sheep, 2 goats, 355 cattle, 34 horses. Altogether a very successful treck.'"

In an excellent article on English secondary schools, by Dr. Klein, that appeared in *Anglia* there is a very natural, but none the less ludicrous, mistake as to the meaning of a word. The farming system of endowed schools is explained as an arrangement by which the head

master himself farms the land constituting the endowment, and, in return, has to run the school and provide free places.

CANON HENSON is a bold man. Lecturing in St. Margaret's Church, Westminster, within earshot of the Broad Sanctuary, where the Archbishop may have been sitting in conclave, he quoted Lord Shaftesbury's denouncement of the National Society: "It is governed by men who are wholly unequal to the exigencies of the times, ignorant of the public mind, and satisfied with themselves. Fear has some effect on them, but wisdom none." What is more, he endorsed this view as equally applicable to the present day.

A CAPITAL performance of "The Tempest" was given on March 31 in the theatre of the Birkbeck College by students of the Greystoke Place Day Training College for Women. There was no change of scenery, as in Shakespeare's theatre, and the dresses were home made; but the acting was excellent, and gained rather than lost by this absence of external aids. We are informed that the *impresario* and manager was the Lecturer in English, Miss R. Monkhouse. Assuredly this is the best way of teaching Shakespeare.

THE annual display by the members of the Gymnastic Teachers' Institute will be given on Saturday, May 19, in the large hall of the Northampton Institute, Clerkenwell.

THE overcrowding of the existing secondary schools, and especially the lack of secondary-school places for girls, is driving the London County Council rapidly to increase the number of its own secondary schools. Arrangements have been made for September next, not only to double the size of the Fulham Secondary School and to enlarge that at Kingsland, but also to open new ones at Eltham, Hackney, and Wandsworth; and to convert into girls' schools the pupil-teacher centres at Stockwell, Peckham, and Southwark. These will have a fee of six guineas a year; except the last-named, which will charge £4. 10s. Altogether, the London County Council will be selecting, during May, June, and July, no fewer than six head mistresses, all at the "commencing" salary of £300 a year; and at least thirty assistants, who will be appointed at from £120 to £180 a year, according to experience and qualifications. The settlement of the scale of salaries and increments for the Council's secondary schools is still under consideration.

"CROSS-FERTILIZATION in Schools" was the happy title of a lecture by Mr. J. L. Paton at Manchester University. He pointed out how terribly the great public schools had suffered by breeding in and in, and welcomed the interchange of masters between English and Continental schools.

WE are glad to announce that Mr. Charles Fry is continuing his Shakespearian Recitals. He gives on the 5th "The Winter's Tale," on the 12th "The Merry Wives," and on the 19th "King Richard the Third." To witness such performances is more educative than a dozen set lessons in Shakespeare.

MR. CRUSE, who headed a deputation from Roman Catholic parents to Whitehall, has the courage of his opinions. Asked by Mr. Birrell: "Would you insist on a Roman Catholic teacher to give cookery lessons?" he answered: "Yes, I should certainly press for that, because there may be religious bigotry even in cookery lessons." The old Scotch lady in Dean Ramsay's "Reminiscences" went, perhaps, to the opposite extreme. She was inquiring as to the capacities of a cook from her late mistress, who hinted that her moral character was not immaculate. "D—n her morals," interposed the old lady; "can she fry a collop?"

WE would direct attention to the advertisement of the Edinburgh Vacation Courses in Modern Languages. This year's programme is even more attractive than that of 1905, when no less than 353 regular students, besides occasional hearers, attended. As the Council and all the officials give their services gratuitously and the University provides free accommodation, students get full value for the moderate fee that is charged.

THE third annual conference of the Girls' School Music Union will be held at the Guildhall School of Music on Saturday, May 5. Mr. W. H. Hadow will deliver, at 2.30, his presidential address on "The Training of Taste."

THE Central Education Committee of the Society of Friends have issued a useful little pamphlet for the use of those advising intending elementary teachers and pupil-teachers. It can be obtained from the Secretary, C. E. Stansfield, 29 Upper Redlands Road, Reading, price 2d. post free.

MISS POWNOLL WRIGHT, late Professor of English in the University of Tokio, has joined the staff of the Training College, Cherwell Hall, Oxford.

THE REV. F. A. HILLARD, who was recently appointed Head Master of Bristol Grammar School, in succession to Mr. R. L. Leighton, resigned, has, at the request of the Governors of Worcester Grammar School, withdrawn his resignation.

THE seventeenth annual exhibition of the Royal Drawing Society was held in Caxton Hall, Westminster, from April 9 to April 20. No less than 2,699 sheets of drawings, &c., were received for it, and the exhibitors ranged from three to nineteen years of age. The President, Princess Louise's, prize for snapshot drawing went this year to Bertram Elliott, British Columbia, and Elsie W. Lunn. Mr. Ablett, on the opening day, showed, by lantern slides of the exhibits, the natural evolution of picture making by means of which young people of ten to twelve become good pictorial artists.

BOOKS OF THE MONTH.

Art.

Flowers and how to paint them. By Maud Naftel. New Edition. With 10 Coloured Plates and Wood Engravings. *Cassell & Co.*, 2s. 6d.

STANFORD'S New Orographical Maps

Compiled under the direction of **H. J. MACKINDER, M.A.**,
Director of the School of Economics and Political Science in the University of London, and lately Reader in Geography in the University of Oxford.

JUST PUBLISHED.

PALESTINE.

Size, 52 by 62 inches. Scale, 4 miles to an inch (1 : 253,400). Price, Coloured, Mounted on Rollers, and Varnished, 20s.

AFRICA.

Size, 50 by 58 inches. Scale, 115 miles to an inch (1 : 7,286,400). Price, Coloured, Mounted on Rollers, and Varnished, 20s.

EUROPE.

Size, 60 by 54 inches. Scale, 63 miles to an inch (1 : 4,000,000). Price, Coloured, Mounted on Rollers, and Varnished, 20s.

ASIA.

[In preparation.]

These Maps have been compiled with care from original materials, chiefly Government Surveys. They are primarily intended to depict the Physical Features of the Continent, but, by the employment of the device of grey, almost transparent, lettering, many names have been inserted without spoiling the graphic effect of the colouring. The contour lines have been drawn at the same intervals above and below the sea level.

Detailed Prospectus of the series gratis on application.

New Orographical Map of Lancashire and Cheshire.

Reduced from the Ordnance Survey, by **E. G. W. HEWLETT, M.A.**,
and **C. E. KELSEY, M.A.**

Size, 42 by 60 inches. Scale, 2 miles to an inch (1 : 126,720). Price, Coloured, Mounted on Rollers, and Varnished, 15s. net.

A graphic representation of the physical features of the area covered. County Boundaries, Railways, Canals, Rivers, are all laid down, and the principal Towns and Cities shown by symbols which enable the student to discern at a glance the approximate populations.

Prospectus gratis on application.

Stanford's "Large" Series of School Wall Maps.

Stanford's "Large" Series includes Twenty-one Maps in all. The Maps are extensively used in Public and Private Schools throughout the British Isles and the Colonies, and have gained the Highest Awards at the Great Exhibitions.

SPECIAL FEATURES:—

Bold,

Clear,

Accurate,

Attractively Coloured.

Size, 50 by 58 inches. Price, Mounted on Rollers and Varnished, 13s. each.

Prospectus post free on application.

JUST PUBLISHED.

Fifth Edition. Revised and corrected.

A Century of Continental History (1780—1880).

With a Supplement descriptive of Events up to the Year 1900.

By **J. HOLLAND ROSE, Litt.D.**,

Formerly Classical Scholar of Christ's College, Cambridge; Author of "The Life of Napoleon I.," "Napoleonic Studies," &c., &c.

This work is intended for the Upper Forms of Schools, as well as for all who desire to have a clearer knowledge of the course of events on the Continent. Three chapters have been added describing in brief compass the chief events in the history of France, Germany, and Russia in the last two decades of the century.

494 pages. Crown 8vo, cloth. Price 6s.

IS YOUR PENCIL A KOH-I-NOOR OR ONLY AN IMITATION?

There are no better pencils made than L. & C. Hardtmuth's Koh-i-Noor Pencils. Many manufacturers have tried to equal this wonderful Pencil—and have failed. The merit lies in the lead, in the selected wood, and in the workmanship. Using a Koh-i-Noor is like drawing silk over paper—so smooth.

Koh-i-Noor Pencils are one price everywhere—4d. each or 3s. 6d. for one dozen. Of Stationers, Photographic Dealers, and Artists' Colourmen. Dainty Booklet on Pencils post free from L. & C. HARDTMUTH, 12 Golden Lane, London, E.C.

An Opinion from Bristol.

"We have had the delightful 'Temple Reader' in use here for some time. I have to acknowledge the receipt of your equally charming books 'A Book of Ballads' and 'The New Temple Reader'. I am so pleased with both of them that I intend to introduce them to my boys and girls at the earliest opportunity."

A FIRST HISTORY OF ENGLAND.

By C. L. THOMSON, late of Somerville College, Oxford, and the Cambridge Training College. Part VI. (1689-1820). 2s. 6d.

WALL PICTURES FOR HISTORY LESSONS.

A cheap series of effective Pictures, framed and unframed, illustrating the Old English Period, is now ready. A full Prospectus, with prices, will be sent free on application.

HISTORICAL ALBUMS.

Each of these consists of sixteen quarto pages, printed on one side only, and containing from sixteen to twenty Pictures, taken mainly from contemporary sources, and illustrating the social life and important incidents of a particular period. Thus, the six Albums for the period 1272-1399 contain portraits of Edward III., Richard II., and Chaucer; pictures of various cathedrals, illustrating ecclesiastical architecture, and of halls and manor houses, illustrating domestic architecture; and reproductions of pictures from such authorities as the Luttrell Psalter, which throw much light on the dress and social life of the time. In Six Parts. Price 6d. each. Send for complete list of the series.

THE LIFE OF THE STATE.

By GERALDINE HODGSON, Mistress of Method at University College, Bristol; sometime Cobden Scholar of Newnham College. Cloth, 240 pp., 2s. 6d.

MEDIAEVAL HISTORY.

By M. A. HOWARD, B.A. Illustrated. 2s. 6d. Now ready.

LITTLE FRENCH FOLK.

By C. T. ONIONS, M.A., Author of "English Syntax." Second Edition. Specimen Booklet post free. Price 2s.

DEUTSCHE SAGEN.

Edited by MARGUERITE NINET. 1s. 6d.
This reading book in German, adapted for pupils in their third year, contains four charming stories, based on mediæval legends. They are prettily illustrated, and form a very attractive reading-book.

HENRY IV. PART 2.

Edited by J. W. B. ADAMS, M.A. (In the "Carmelite Classics.") Cloth, 1s.

THE LAY OF THE LAST MINSTREL.

(In the "Carmelite Classics.") Cloth, 1s.

MARLOWE'S "DR. FAUSTUS."

(In the "Carmelite Classics.") Cloth, 8d.

"Prettily bound and excellently printed, with notes and questions for examination at the end."—*Schoolmistress*.

A FIRST BOOK IN ENGLISH LITERATURE.

Part I. (to Wycliffe and Langland) and Part II. (from Chaucer to Lyndsay). Now ready. 2s. per Volume. Fully Illustrated, with Reproductions from contemporary MSS. (of which transcripts are given), Portraits, &c., and containing many valuable Illustrative Extracts.

An Opinion from Burton-on-Trent.

"I have been waiting for the results of our Cambridge Local Examination to let you know how the use of your History (Parts I. and II.) has answered from an examination point of view. I am glad to be able to tell you, as I was sure I should be, that we have obtained the best results we have ever had . . . About seventy of our boys are using your Part III., and even the dull ones seem interested."

MR. EDWARD ARNOLD'S LIST.

NEW FRENCH AND GERMAN BOOKS.

ARNOLD'S MODERN FRENCH BOOK I. Edited by H. L. HUTTON, M.A., Senior Modern Languages Master at Merchant Taylors' School. Crown 8vo, cloth, 1s. 6d.

This book is written on reformed methods, and contains a series of graduated Reading Lessons, followed by a carefully arranged *Questionnaire*, with Exercises for retranslation.

GRAMMAIRE FRANCAISE. A l'usage des Anglais. Par E. RENAULT, Officier d'Académie; Assistant Lecturer at the University of Liverpool. viii + 360 pages. Crown 8vo, cloth, 4s. 6d.

GRADUATED FRENCH UNSEENS. Edited by Professor VICTOR OGER, Professor in French at Bedford College for Women, London. In four parts. Limp cloth, 8d. each.

A FIRST GERMAN READER. With Questions for Conversation, Grammatical Exercises, Vocabulary, &c. Edited by D. L. SAVORY, B.A., Lecturer in the University of London, Goldsmiths' College. Crown 8vo, cloth, 1s. 6d.

The reading lessons in this book are simple in style, but not too childish in matter, being intended for pupils beginning German at about fourteen. The instruction is given on reformed lines entirely in German, excepting the Vocabulary and the Exercises for retranslation from English into German.

DER BACKFISCHKASTEN. By FEDOR VON ZOBELTITZ. Edited, with Notes and Vocabulary, by GUSTAV HEIN, German Master at the High School for Girls, Aberdeen, N.B. Authorised Edition. Crown 8vo, cloth, 2s.

This is probably the most entertaining story of all Herr Zobeltitz's popular works. It describes the experiences of two girls at a German boarding school, and is extremely lively and brightly written.

OTHER NEW BOOKS.

DIES ROMANI. A new Latin Reading Book. Edited by W. F. WITTON, M.A., Classical Master at St. Olave's Grammar School. Crown 8vo, cloth, 1s. 6d.

Designed to give pupils whose study of Latin is limited to two or three years a representative selection from the best authors within their range.

TEST PAPERS IN ELEMENTARY MATHEMATICS. By A. CLEMENT JONES, M.A., Ph.D., and C. H. BLUMFIELD, M.A., B.Sc., Mathematical Masters at Bradford Grammar School. 250 pages. Crown 8vo, without Answers, cloth, 2s. 6d.; with Answers, 3s. Answers separately, 1s.

EPOCHS OF ENGLISH LITERATURE. By J. C. STOBART, M.A., Assistant Master at Merchant Taylors' School, formerly Scholar of Trinity College, Cambridge. In eight volumes. Price 1s. 6d. each.
Vol. I. *The Age of Chaucer, 1215-1500.* (Others in preparation.)

GATEWAYS TO HISTORY. A magnificent new series of Historical Reading Books suitable for Junior and Middle Forms. The illustrations, consisting of reproductions of famous paintings, engravings, and sculpture, are of a character hitherto unapproached in school books.

LIST OF THE SERIES.

- Book I. Heroes of the Homeland. Price 10d.
- Book II. Heroes of Many Lands. Price 1s.
- Book III. Men of England. Price 1s. 3d.
- Book III.A. Men of Britain. Price 1s. 6d.
- Book IV. Wardens of Empire. Price 1s. 6d.
- Book V. Britain as a European Country. Price 1s. 6d.
- Book VI. The Pageant of the Empires. Price 1s. 6d.

ARNOLD'S LATIN TEXTS.

GENERAL EDITOR—

A. EVAN BERNAYS, M.A., Assistant Master at the City of London School.

The object of the series is to supply Short Texts, adapted for Lower Forms, sufficient to provide one term's work. Each volume consists of a Short Introduction, Text, and Vocabulary. Sixty-four pages. Cloth limp, 8d. each.

HORACE.—Odes. Book I. By L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School.

OVID.—Selections. By GEORGE YELD, M.A., Assistant Master at St. Peter's School, York.

OVID IN EXILE.—Selections from the "Tristia." By L. D. WAINWRIGHT, M.A.

CORNELIUS NEPOS.—Select Lives. By L. D. WAINWRIGHT, M.A.

VERGIL.—Select Eclogues. By J. C. STOBART, M.A., Assistant Master at Merchant Taylors' School.

VERGIL.—Selections from the Georgics. By J. C. STOBART, M.A.

PHÆDRUS.—Select Fables. By Mrs. BROCK, formerly Assistant Mistress at the Ladies' College, Cheltenham.

TIBULLUS.—Selections. By F. J. DOBSON, B.A., Lecturer at Birmingham University.

CÆSAR IN BRITAIN. By F. J. DOBSON, B.A.

CICERO.—In Catilinam, I. and II. By L. D. WAINWRIGHT, M.A.

CICERO.—Pro Archia. By Mrs. BROCK.

LIVY.—Selections. By R. M. HENRY, M.A., Classical Master at the Royal Academical Institution, Belfast.

CATALOGUES ON APPLICATION.

London: EDWARD ARNOLD, 41 & 43 Maddox Street, W.

Temple House, Temple Avenue,
AND
125 Fleet Street, London, E.C.

Whittaker's Educational Works.

A School Geography.

By CHARLES BIRD, B.A., F.G.S., Head Master of the Mathematical School, Rochester.

Many Illustrations and Sketch Maps. 2s. 6d.

This book is based upon the Head Masters' Association scheme for Geographical Teaching.

"Mr. Bird possesses the first requisite for success—a plain and straightforward style... Well printed, well bound, and wonderfully cheap."—*The Journal of Education*.

"Distinctly in advance of the usual school-books of geography."—*Nature*.

First French Book.

According to the Direct Method of Teaching Modern Languages.

By DUNCAN MACKAY, M.A., and F. J. CURTIS, Ph.D.

With 22 Illustrations. 1s. net.

This Edition contains enough matter for a whole year's Course.

"A capital exposition of the principles of the reformers in modern language teaching."—*The Journal of Education*.

"Provides the most complete set of apparatus for the practice of the 'New Method' that we have yet seen in a single text-book."—*Guardian*.

Practical Chemistry.

On the HEURETIC METHOD. For use in Secondary and Technical Schools.

By WALTER HARRIS, M.A., Ph.D.

Vol. I. Measurement. 1s. Vol. II. Exercises and Problems. 1s. 6d.

Vol. III. Analysis. 1s. 6d.

"The experiments are numerous, simple, and suggestive, and well adapted for a school laboratory, and there are many things which will be found of value to the teacher as well as to the student."—*Nature*.

Tamango—José Maria le Brigand.

By PROSPER MÉRIMÉE. Edited with Introduction, Notes, English Phrases for Re-translation, and Vocabulary by A. BARRÈRE, Professor of French, R.M.A., Woolwich. 1s. 6d. [Just published.]

Educational Catalogue post free.

WHITTAKER & CO., 2 White Hart Street, Paternoster Sq., London, E.C.

RELFE BROTHERS' BOOKS FOR OXFORD LOCAL EXAMINATION, 1907.

TWELFTH NIGHT.

Plain Clear Type, Interleaved with Writing-Paper for Pupils' own Notes.

Crown 8vo, cloth, 8d.

SAMUEL I.

ST. MATTHEW.

ACTS OF THE APOSTLES.

These books are all done on the same admirable plan, and are in use in nearly all Schools that prepare for Examinations.

Full Notes on both Versions by G. CARTER, M.A.

Maps, Historical Tables, &c.

Crown 8vo, cloth, 1s. 6d. each.

SCOTT'S TALISMAN.

With Notes and Introduction by W. MELVEN, M.A., Frontispiece, &c.

Crown 8vo, cloth, 2s.

On the same lines as their edition of "Ivanhoe" which was so favourably received last year.

OUTLINES OF ENGLISH LITERATURE.

By H. E. EVANS, B.A., L.C.P.

With Biographical Sketches, Chronological Tables, Index, and full Historical Appendix. Cloth, 1s. 6d.

PERRAULT'S CONTES DES FÉES.

Crown 8vo, cloth, 1s.

This Edition is distinguished by the very clear type and concise Notes. There is a separate Vocabulary to each Tale.

THE LOCAL EXAMINATION PHYSIOGRAPHY.

By W. J. PERRY, M.A., LL.D.

A Special Edition to meet every point in the new Syllabus except Political. With Illustrations, Diagrams, and Maps. Cloth gilt, 2s. 6d.

OXFORD LOCAL DRAWING COPIES.

The actual Copies set for Preliminary for the last ten years. Per set, 1s.

Junior and Senior Copies from the Cast. Per set, 1s.

RELFE BROTHERS, Limited,

6 Charterhouse Buildings, Aldersgate, London, E.C.

THE

JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-.			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.

Lectures, Classes, Non-Resident Posts, &c.—4s. each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE EDUCATION BILL.

IN our forecast of the Education Bill we discussed last month the fundamental principle that it was designed to embody—the complete nationalization of our primary schools; and there is nothing in the debate on the first reading or in the text of the Bill which calls for a restatement or modification of the main position.

"On and after the first day of January one thousand nine hundred and eight a school shall not be recognized as a public elementary school unless it is a school provided by the Local Education Authority."—So runs the first section, and those who most object to it are forced to admit that after the last General Election it was inevitable. For the Act of 1902 there was no popular mandate, and the one-sided agreement whereby the Church retained the management of its schools on the sole condition of keeping the buildings in repair was repudiated by the electors of the kingdom.

The *Spectator*, in an able and temperate leader (April 14), suggests that the settlement of 1902 might have been maintained, and all that was needed to remedy the grievances of Nonconformists was a single-clause Bill enacting that the majority of the managers in non-provided schools should be popularly elected; but such a suggestion could hardly have been made by one who had attended the Scarborough Conference. There the teachers themselves to the number of nearly 60,000—teachers of provided, no less than of non-provided, schools—speaking through their delegates, approved by an overwhelming majority not only the principle of complete public control, but also the abolition of creed tests for teachers. Such a vote is, in our opinion, conclusive, and the attempts of Unionist papers to minimize its significance seem to us singularly futile. These teachers, we read, can only be reckoned as so many units; they neither built nor help to support the schools; and they do not send their own children to them. The self-sacrifice of the Church-school teacher is forgotten when it does not suit the argument, and the latter statement is a pure invention. At any rate, these teachers know the condition of schools as no one else knows it, and they declare with one voice that the dual system must have an end.

The most debatable clause in the Bill is that which prohibits any teacher from giving religious instruction of a special char-

acter except in the extended facilities schools. We confess that this appears to us a case of liberty o'erleaping itself and falling on the side of intolerance. It is, indeed, a counterblast to the quasi-feudal incidents, such as Sunday-school teaching and organ-playing, to which Church teachers were subjected in the dark ages; but when they hold their appointments from the Local Authority their entire independence of all other authority will be secure and any service that they may render out of school hours will be spontaneous and voluntary. We see no cause why they should be estopped from such work, any more than from preaching in a chapel or teaching in a Sunday school. The Executive of the N.U.T. thought otherwise, and a sense of past grievances led them to mistrust unchartered freedom; but the official resolution in favour of this clause of the Bill was, if we are rightly informed, passed by a narrow majority, and, if it had been voted on by the Conference, it is very doubtful if it would have been carried. We prognosticate that it will be adhered to by the Government and pass the House of Commons, but that when it is rejected by the House of Lords their amendment will be accepted.

But the most contentious clause in the Bill which has roused the fiercest opposition is Section 8, providing for the compulsory sale or lease of voluntary-school buildings held under trust. Let us put, as fairly as we can, the case of the bishops. Churchmen have built their schools with their own money, encouraged so to do by the Department and on the understanding that the secular instruction given therein shall in perpetuity be paid for at the same rate as that given in Board schools. To starve them out by a withdrawal of grants, or to buy them out, is equally a breach of faith for which no money payment can compensate. But this claim cannot be substantiated. Granted that a virtual pledge was given, there must be a time limit to every pledge. Ten years ago the late T. R. Green—an impartial authority—held that the Church had received full value for what it had expended on its schools. If this was then the fact, it has now received more than full value. Hardship there may be, and in individual cases there undoubtedly will be; but the talk of spoliation and robbery is an abuse of language, a form of episcopal swearing. What the Bill says is: Come to terms, if you can, with your Local Authority. If by the end of the year you fail to strike a bargain, your case must come before a legal Commission. If you can satisfy the Commissioners that you can give effect to your trust, you will be left in possession; if you cannot give a sufficient guarantee, they will award you such compensation as they think just for handing over your school.

This appears to us a just and equitable arrangement, and to describe the Bill as an act of spoliation and the Commission as a Star Chamber is the wildest rhetoric. Were the denominations to stand upon the letter of the law and claim their pound of flesh, they would find themselves left with a "damnosa hereditas," buildings that they could neither use nor sell, and in another generation the Ordnance map would be marked with thousands of Cold Harbours.

No one but a fanatic would deny or seek to repudiate the debt that the nation owes to the Church of England. It has been the schoolmaster to bring us to education. But from the first it has fought, as it was bound to fight, for its own hand. In 1807 Mr. Whitbread's Parochial Schools Bill, which would have given England the educational rest that Scotland has long enjoyed, was opposed by the Primate of the day on the ground that it would take control of the schools out of the hands of the parish incumbents. This monopolizing spirit finds an echo in the debates of to-day, and a sweeping measure was called for to abolish finally benefit of clergy. It was voiced by one of the minority at the Scarborough Conference who declared that he was a Churchman first and a teacher afterwards.

The *Church Times* reminds its readers that Canon 77, ordaining that no man shall teach either in a public school or private house, but such as shall be allowed by the Bishop of the diocese, is still in force and may need to be revived. "But this last were fitter for a satire than for a serious observation."

What is serious and deplorable is the mistrust of the people that the Church party show. That they should mistrust a Radical Parliament and believe it a passing phase of opinion is only natural; but when they talk of being handed over to the tender mercies of Local Authorities they convict themselves of being out of sympathy with national sentiment. They appeal to the parents; but it is those parents who elect the Local

Councils and who will dictate the kind of religious teaching given and (what is more important) will appoint the teachers to give it. There is no reason why they should not secure all over the country a similar scheme to that of Hampshire. Such a scheme satisfies all parents except the Romanists and all Churchmen except a few irreconcilables like Lord Hugh Cecil.

Section 4, for affording extended facilities for special religious instruction, is avowedly a concession to Roman Catholics, and, while it fails to satisfy them, it will be hotly opposed by the Free Churches as a bowing in the house of Rimmon. We heartily approve it in principle on the same ground that we have supported the claim of Irish Catholics for a University of their own. And we hope to see it amended in this sense. It may not be possible to extend the privilege to country districts where one-school parishes are the rule, but we should like to see in the first line—"A Local Education Authority may afford," &c.—the "may" changed to "shall."

Other points in the Bill we must leave for future discussion. It is an honest and courageous attempt to nationalize education, to rid it from sacerdotal patronage, and at the same time to maintain in our schools the "pure religion" set forth in the Epistle of St. James.

THE TEACHING OF GEOMETRY.*

By TELFORD VARLEY.

SCHOOL subjects in general are selected with reference to two main considerations—(a) the content, *i.e.*, the amount or bulk of useful knowledge or fact imparted by their study; (b) the discipline, *i.e.*, the formative training, mental, moral, or muscular, which they afford. It is for the second of these that geometry is universally accorded a high place in most school curricula.

There comes a stage in mental development when adequate expansion imperatively demands careful training in logical processes, the tracing out of cause and effect, the cultivation of the faculty of precise and accurate discrimination between one object and another and between one phenomenon and another. If at the proper stage these disciplinary processes are duly brought to bear, the development of mental power is very rapid. The mind acquires at once flexibility and method, a faculty for reasoning and a faculty for discrimination, and side by side that capacity for precision of statement which is at once the outcome and the test of the acquisition of the former. These geometry, pursued theoretically, enables a student to develop more readily perhaps than any other school subject.

The schoolmaster's problem is, then, this: How to present geometry so as to secure the utmost amount of useful intellectual training, while at the same time giving the pupil as much insight into geometrical principles as circumstances permit? The teacher has to develop and train the reasoning faculty, rather than to show how that faculty can best develop the facts of geometry—in other words, he has to make careful selection of the ideas he means to present, and, to a certain extent, to prepare and predigest them, regarding them as mental food for infants and invalids rather than as strong meat for adults. Thus, the University professor presenting a subject to an adult intelligence can fairly use conceptions, and look for mental processes, which would be quite out of place in dealing with the young. The teacher's aim is not so much to train the mind to scale the lofty geometrical peaks as to develop the mental thews and sinews which will enable him to confront and master the mental obstacles which later life will inevitably place across his path.

Up to quite recently Euclid has held the field in English schools, almost without a rival. Though now almost a matter of ancient history, it would not be without interest to inquire into the causes which have led to Euclid being almost universally set aside as an unsuitable system, without large modification, for teaching geometry in schools. The first effect of the change has been to produce much free experimenting and a good deal of temporary confusion. It is, however, now possible

* A paper read before the Southampton and District Branch of the Teachers' Guild.

to lay down, with some confidence, proper principles of procedure.

The study of geometry must necessarily be undertaken in two stages—(1) the preliminary, or descriptive, stage; (2) the deductive, or more properly disciplinary, stage. The exact form which the preliminary stage takes will vary considerably according to the age at which it is commenced; nor do I think the problem has yet been worked out at all exhaustively. Some useful, guiding principles are laid down in a recent report to the Head Masters' Association. An average boy would probably begin it not later than eleven years of age; but in many cases the subject may be introduced earlier in co-ordination with the arithmetic teaching, physical measurements, drawing, and, where it is taught, woodwork. The boy should be familiarized with scales, particularly decimal, geometrical figures—solid models, cubes, prisms, cylinders—with lines, circles, triangles, and angles: the use of the protractor. Nothing deductive should be attempted, the object being to arouse interest, to develop the sense of geometric form and general space relationship; but, from the first, exact language should be insisted on, and whatever is done should be described more or less fully in as accurate language as possible, the child being taught to state what he is required to do, how he did it, and what he observed. This written description will present many difficulties; but it must be insisted upon, and will serve as a valuable index to the teacher of the state of the boy's mind. We often mistake the glib repetition or facile reproduction on paper of our own remarks for the real workings of the boy's mind. The first step in producing precision and accuracy will thus be taken, and the subject will become a real discipline from the very first. Above all, care must be taken to avoid loose description, and such phrases as "a right angle is a quarter of a circle," "there are 360 degrees in a circle," "an angle is the space between two straight lines"—definitions which are found in so-called practical books and used by some teachers of so-called practical geometry—must be carefully guarded against.

A proper preliminary course of this nature, not necessarily lengthy, will give the requisite acquaintance with the fundamental entities, and bring the boy in contact with the things of geometry themselves, not the words which describe them. At this stage it is a mistake to attempt much in the way of definition. The capacity to define accurately is often the last stage of apprehension, and is never the first; and as long as no false definitions are given the boy may be taught to carry out accurately, and in a proper spirit of observation, numerous operations before he is able to give a definition complete in all its parts. He should be taught very thoroughly the use of the protractor to measure angles. The angle should always be presented to him as a rotation; and, if this be properly done, there will be no danger later on of his having a vague idea of what an angle is—a very fruitful source of misapprehension and muddle later on if the preliminary work has been neglected. Above all, we should avoid allowing this stage to develop into mere playing with compasses—a danger which regular written descriptive work will largely help us to avoid.

The second stage is partly deductive, partly practical. The subject will now be commenced again and viewed strictly from the theoretical and deductive point of view. The action will be found sufficiently rapid to enable a parallel course of practical geometry to be pursued alongside with it, though these courses will later on diverge again, after some twenty-five propositions have been studied.

Exact definitions should now be given—one by one as occasion requires, and propositions should be at once introduced. I consider the following order best, using the old nomenclature:—Prop. 1; then Prop. 22. These should be taken before angles are introduced at all. The definition of "angle" should be given next, the angle being defined rotationally, and a unit of measurement being at once deduced—a right angle or quarter revolution. The protractor will be largely used at this stage.

Then come the angle propositions, all dealt with rotationally. Props. 13 and 14 now seem almost axiomatic—to any boy practised in using a protractor they certainly will be. Prop. 15, proved also rotationally by pivoting a ruler at the point of intersection, comes next. Then comes Prop. 32, proved by successive rotation through the exterior angles and sliding along the sides. The same method extended to polygons

proves Cor. 2 of the same proposition; and these principles open up a wide field of valuable work of a practical nature.

These early propositions and those also which are to follow should be approached in a semi-heuristic spirit. Before any verbal hint or enunciation be given experimental measurements should be made and the results obtained by the whole class compared. This does not take long; but it leads the class to the perception of the truth before the verbal suggestion is made—a great point in all scientific study.

Now we can develop the study of the angles of a triangle. Prop. 32 has shown us that in a triangle at least two angles will be acute, and the distinctive features of a triangle will not now be matters of memory, but matters of experience. As, however, we shall prove these triangle propositions by superposition, we shall first spend some time dealing with superposition of paper triangles—folding them, reversing them, rotating them. When this is done we take 5 and 6.

These can both be readily proved by cutting triangles out of paper or card, colouring the under side, and showing that the triangle fits back again in the hole equally well whichever side is uppermost. The absence of any right-handedness or left-handedness proves the truth of each proposition. The same propositions can be alternatively proved by folding, and it is desirable to give the alternative proofs.

Then comes the equality or congruence of two triangles—Props. 4, 8, and 26. Prop. 8 can be proved by turning over one triangle on its base, or, more simply still, by describing circles with centres at the ends of one side of each triangle, and showing by superposition that one system fits exactly on the other.

Prop. 26, viewed by the light of Prop. 32, becomes readily provable by superposition; and only one case arises.

An extremely important aspect of the work must not be overlooked—viz., the application of geometrical principles to facts of everyday life. This will widen the pupil's outlook, stimulate interest, and prove highly suggestive. Prop. 26 enables us to solve a simple problem—how to find the width of a river without crossing it—which can be carried out practically in any school playground. The thoughtful teacher will find plenty of opportunity for ingenuity here, with remarkable results as far as his class is concerned.

We have now a fair stock of theoretical propositions, and we proceed to constructions: Prop. 23—To make an angle of given size: Props. 9, 10—To bisect an angle and a straight line: Props. 11, 12—To draw perpendiculars to a straight line. Prop. 32 enables us to prove that the angle in a semicircle is a right angle. I myself introduce this here, and employ it for practical constructions, from the first.

Next come the inequalities of triangles—Props. 16 (following as a corollary from 32), 18, 19, 20, 21. One application of Prop. 19 will readily occur—viz., why it is that a string tied round an ordinary parcel will work loose unless it crosses the edges at right angles. Prop. 20 obviously suggests the moral of the short cut across a field.

Next comes a proposition important rather for its practical application than geometrically valuable—Prop. 24. A simplified proof based on properties of intersecting circles can readily be given, while experimental verification can be given as follows:—If two rods are jointed and their free ends connected by a string, we can open them out until the string becomes taut. We cannot further increase the vertical angle without breaking the string, but directly we diminish it the string hangs loose. If we joint the three rods together at their extremities, the system becomes perfectly rigid.

It is well now to make a little digression, showing how the principle of rigidity of a triangle dominates the whole subject of design of rigid structures. A lesson or so applied to discussing the rigidity of gates, framed structures, roof trusses, lattice girders, and so on, with applications also to the Forth Bridge and the Eiffel Tower, will give a thoughtful boy an interest in geometry which no mere book study will secure. We next open on a section of extreme importance—parallelism.

Nothing in Euclid is less defensible than his presentation of parallelism. No schoolboy beginning the subject can possibly form an adequate idea of the theory of parallelism from his treatment, and the twelfth axiom only becomes axiomatic when practically the whole of the First Book has become axiomatic also. The softening down of the twelfth axiom by Playfair's axiom renders the treatment more logical, but is unsatisfactory.

The idea of parallelism should be based on that of general direction in space—that is, that a line has three qualities: extension, direction, position—and two straight lines which agree in general direction, but have different positions, are parallel. Two straight lines will have this similarity of direction if they are produced from the same position by equal and opposite rotations; therefore we should define parallel straight lines as those which make the alternate angles equal.

From this point it is easy to prove (1) that parallel straight lines never meet; (2) that, if two straight lines make alternate angles equal across one transverse line, they do so across all. The gain in simplicity and the burden removed from the intellectual conscience of master and boy are immense. Now come the properties of parallelograms. Here we introduce additional propositions, such as "The diagonals of a parallelogram bisect," and conversely; and the opportunity should be taken to show the relationship between the parallelogram and ordinary life.

Euclid's Prop. 33—Straight lines which join the extremities of equal and parallel straight lines are equal and parallel—should be used to prove the principle of translation—viz., that one parallel straight line can be obtained from another by a simultaneous equal movement of all its points in one given direction. The principle of the parallel ruler should be instanced and an important principle in engineering design should be developed—viz., rigidity produced by flexible connexions. This can be proved by taking a jointed parallelogram and connecting the opposite corners by strings: the whole system becomes at once perfectly rigid; and it is a simple matter to extend the same principle to the theory of the bicycle-wheel, where a frame, in itself easily deformed, united by flexible ties to a central point becomes capable of resisting practically any direct crushing force in its own plane.

Our next step is similarity of triangles, proved in the simplest way possible and without reference to incommensurables. This opens up a large field of practical work. So far it will have proved possible to keep the practical and theory courses parallel: after this they will diverge, but the succeeding practical work will now rest on a sound theory basis, and can be fairly left to work itself out independently.

The next subject is areas. Here the algebraical method of statement is valuable, and the basis of area should be the rectangle, not the parallelogram. Thus Euclid's fundamental proposition should be stated: "If a rectangle and another parallelogram be on the same base and between the same parallels, their areas are equal." This should be proved first, and then: If a rectangle and a triangle be on the same base and between the same parallels, the rectangle is twice the triangle, leading to the formula $\text{Area} = \frac{1}{2} \text{base} \times \text{height}$. This can be used to prove Euclid's Props. 39 and 40: "If two triangles are of equal area on the same base, they are between the same parallels"—the proof being direct, and not by *reductio ad absurdum*.

The construction of areas follows, somewhat as in Euclid—though the treatment can be simplified. An application should be made to the geometry of the circle, and the formulæ $\text{Circumference} = 2\pi r$, $\text{Area} = \pi r^2$ can be deduced without trouble. I will not stop to further enlarge on this.

The treatment of area affords scope for much arithmetical work, and the results can frequently be illustrated graphically. Practical methods of measuring areas by squared paper and so forth should be explained, and examples given, affording a useful opportunity to plot statistical results by means of graphs—the proper function of, and certainly the most valuable one, which, in my opinion, graphs (at any rate, at this stage) can claim.

We now come to Prop. 47, proved as in Euclid. This enables us to calculate square roots and to plot the square-root curve.

We have now covered the ground of Book I., and we take selected portions of Book III.—the geometry of circles. Here Euclid's treatment can be largely simplified; and much of the book will probably have been already given to the class as riders before this stage is reached. Superposition should play an important part. Tangents should be treated in accordance with the ideas of limits.

After covering a fair amount of Book III. we turn to Book II., which is simply graphical algebra. Props. 1, 4, and 7, 5 and 6, 12 and 13 are all that are necessary, when Book III. will be resumed, and Book IV. taken.

I cannot this evening pursue the matter further—the work now takes on an advanced character, and the ordinary methods followed are quite adequate. The treatment of proportion, of course, in Book VI. requires recasting, but this would lead us too far. I have indicated thus the general treatment I should regard as ideal. I will touch briefly on some other matters.

Riders should be frequent, and, from the very first, often a proposition, or some point in a proposition, can be set as a rider before the proposition is reached. This should always be done if possible.

In matters of nomenclature, I prefer to name an angle by a figure or a letter. Coloured chalks are valuable aids also. I need not insist on the careful drawing of figures; but drawing must never be allowed to dominate theory. Over-elaboration obscures even more than slovenly drawing.

Geometry has hitherto too often been presented as a hopeless, uninviting medley of the artificial and incomprehensible. This has not been due to the subject itself so much as to the unsatisfactory treatment formerly adopted. But one word of warning must be given as to its ever being easy. No truly disciplinary subject can ever be made easy: that only is easily acquired which makes but slight impression. "There is no royal road to geometry." But it can be made interesting, suggestive, and stimulating, capable of stirring imagination and arousing even enthusiasm. Like the shepherd's flower in "Comus," though "the leaf is darkish and has prickles in it," it "bears a bright golden flower"; and those who have sought it in the proper spirit will gather and treasure those golden blossoms.

CONTEMPORARY HISTORY AND STIMULUS IN TEACHING.

HOW comes it that readers of history are so rare? Not only is the question one of interest in itself, but is one to which any reasonable answer may perhaps throw some light upon the practice of education. In seeking such a solution, however imperfect, I shall postulate that history is one of those subjects which are taught in our schools and Universities not only for the mental training which is given in the process of learning, but also for the sake of the thing learnt, and shall endeavour to regard the question not so much with an eye to the wants of the specialist, but rather from what may be called a national point of view—that is, I shall have in view the good of the ordinary student, for whom places of education should not be schools of professional study, but homes of liberal culture, whose office, in the words of Döllinger, is "to turn out for the benefit of the State and society the cultivated and independent gentleman," whose influence extends "beyond the mere communication of knowledge to the ennobling elevation of life and character."

Therefore the initial question runs "readers of history," not professional students, but men who from their studies have drawn an interest and enthusiasm which in after life will bring them back to those same studies, to find therein cultured relaxation, intellectual pleasure, or practical good. It is, one may note in passing, a suggestive commentary upon our present organization that no adequate provision is made for the encouragement of certain modes of culture which the spontaneously developed tastes of after-life prove to be in many cases the most natural. While we talk of the importance of general culture, of the necessity of educating and bringing out all that is good among our potentialities, the artistic and emotional sides of our nature are neglected. Forgetting that the injury caused by this neglect is often positive and active, we leave the ear and the eye, the most direct channels of our æsthetic impressions, untrained and undisciplined, and relegate to the class of "extras" music and drawing, two of the most potent and important means of self-expression. But, in an age of concrete ugliness, a direct knowledge of the beautiful is desirable, in addition to that which is afforded through the symbols of literature.

To return to those subjects which are universally taught in our schools. Small indeed is the number of those among us who continue to find delight in poetry and other branches of literary fine art; but the number of readers of history is smaller

still. The explanation of this is hardly to be found in the subject-matter. One would expect that to man the study of man would be of the highest interest, and that of this study not the least interesting part would be the inquiry into man, in his political and social conditions, into the rise and fall of States, the development of customs, laws, and government, into the secrets of national success and failure, expansion and decay. The popularity, from time to time, of the historical novel gives indirect confirmation; for this popularity, evanescent though it be, does not rest only upon imaginative delight in a work of fiction, but also upon the instruction conveyed by a narration of fact. The explanation is rather to be found in the attitude of man to this subject-matter, an attitude due either to his present surroundings or to his previous training. Doubtless the average man, struggling with the hard realities of life, will seek his relaxation in something that enables him for a while to forget the pressure of the present in games, in bodily activities, in outside Nature, in the products of fine art; for, though in these last the object of the "imitation" be man, yet it is man idealized and released from the bonds of a constraining and commonplace reality; chiefly, however, it will be found by emotional natures in that least imitative of arts, in the vague suggestiveness and charm of music. Such relaxation history, however we define it (the end being instruction, not pleasure), can never give; something of the kind was possible in the days of the pseudo-poetic style, when a certain romantic or theatrical glamour was shed about the past; but with the modern school, pressing research ever deeper, the reign of fact, of reality, becomes more relentless and absolute; history teaches that in the past life was just as real, just as hard, as to-day.

Such a change in the spirit of history is no cause for complaint; it is desirable, and, as a matter of evolution, inevitable, that history should assume this scientific character. But, with the change, all the old charm is gone. The average man may continue an old study or even begin a new one that will draw him away from self and the daily round of fact; but one that promises no such relaxation will have no claim upon him, unless he recognizes in it an utilitarian value in relation to his daily life.

It has already been noted that a subject may be studied either because the training given in the learning is valuable, or because of the value of the thing learnt; the thing learnt, again, may be prized either as an end or as a means, as a pleasurable activity or as a practical good.* The best subjects are clearly those in which both values are united. Assuming history to be such, to be valuable, that is, both for the mental discipline in the process of learning and for the thing learnt, it would follow that history should be taught in schools in such a way that not only the boy shall profit by the process, but the man shall recognize that the thing is and will continue to be of interest and value to his manhood. Further, by the original hypothesis, this value and interest in the case under consideration will, if the previous argument run aright, lie in the thing learnt regarded not as an end, but as a means.

And more: the end, which we are seeking and to which history is here regarded as a means, must be one of permanent interest and universal appeal. One such end is not far to seek; possibly there is none other that will meet the needs of the case. A sense of citizenship can give the stimulus required, a rational pride in privileges and powers conferred upon every one by our social conditions as a trust to be discharged for the common good of society and self. The problem then resolves into two questions: Can we stamp upon our teaching of history this sense of citizenship, of direct and visible contact with practical life? Secondly, Can we do so without impairing the value of the process of learning?

Now it is acknowledged that of all stimuli to a youthful mind one of the greatest is the presentation of an end—the word being used simply in the sense that work will not be well done unless the reason for doing it is understood; aimless work is

generally, from the intellectual side, bad, and always morally hurtful. An object, a central point of interest is required to which every thought and fact shall press or from it radiate. We must appeal to a strange love of the direct and concrete, an instinctive rejection of the abstract, in which an older mind delights. I well remember a meeting of a school debating society where these two characteristics were exhibited in a manner worthy of record on account of a deeper lesson which it suggested. The matter under discussion was of pressing interest and national importance; each boy, as he rose, honestly sought to contribute from his imperfect knowledge some definite fact, something solid and concrete; the directness of attack and the trouble taken both to discover and to think was worthy of all praise. At the close a master arose, clad in the panoply of orthodoxy—a teacher, too, of history to the highest forms; suddenly the atmosphere was transformed: broad generalizations, lofty appeals to sentiment, patriotism, and *authority*; twice only did the flight of rhetoric seek to touch on solid earth; twice fell into Avernus; both facts were wrong. The tone of the speech, the appeals to authority at once recalled to mind the lament of a Cambridge tutor: "If So-and-so would not think so much, he might do very well."

In this characteristic of a young mind doubtless it is to be found the explanation of the success which attends those direct methods which have revolutionized the teaching of modern languages and promise to revolutionize that of chemistry and even of geometry. Does history refuse to admit a similar handling? Here, too, perhaps, as in warfare, when the foe is strong and the assailant weak, a direct attack may often carry entrenchments when the most systematic and scientifically engineered series of parallels will fail. The rule is simple, though the practice be hard: build upon that and round that which is known. A child's memory—alas! poor Plato and the oft-quoted derivation of education—is no *tabula rasa* upon which you may write at will, no empty waste where you may dump your favourite building material. Few of those old enough to begin the study of history as now taught are too young to be interested in any of the events which are happening around them. The struggle in the East, the war in South Africa, the progress of the "Ophir" through Britain beyond the seas, even the passing flutter of an election—what a scope in such topics for simple lessons in history and politics! And round these one may gather illustrations from other days and other lands, when or where matters little, provided the great lesson be unconsciously learnt that history is one. No need to fear the amended proverb "History never repeats itself" or sneers at cheap historical parallels: such arrows glance harmless off the very young. The formation of scientific character is not unlike a convergent series, and the first term is the recognition of seeming similarities.

During the earlier years of those generally spent in preparatory schools nothing would be lost by giving to the teaching this oral, informal, and, to outward seeming, unsystematic character. Later visible system would be introduced and definite periods studied. Upon what principle are these periods to be chosen? Look awhile at a favourite system of teaching English history. A text-book is chosen and divided (sometimes, it is to be feared, almost by pages) into sections, one for each of the forms in which the book is used. Consequently boys whose promotion is normal (and it is only for such that one can legislate) will cover the whole of English history. Such a scheme, however, seems open to several objections, theoretical and practical. The reign of the text-book with all its dangers begins. Unless the whole course is covered, unless both the *terminus a quo* and *terminus ad quem* are included, the sense of unity is lost and the value of the teaching greatly impaired; that this must in many individual cases happen is clear. Again, the stimulus postulated in the present paper is absent; the teaching is indirect and the goal overshadowed. Further, until the highest forms are reached, no provision is made for extra-English history, that is to say, most boys remain in ignorance of much that is greatest and best, confirmed in their insularity and prejudice. This defect is acknowledged, and I have known a corrective applied which may be left to speak for itself; two consecutive forms, on both the classical and the modern side, through which the great majority of the school would pass, devoted one term in alternative years to the whole history of Greece and Rome in shilling primers! Above all, though a principle of unity is recognized, it may be doubted whether that

* This distinction between "the thing learnt" and "the discipline of learning" is held by most teachers, and is here adopted in order to meet them on their own grounds. It is, of course, based on the unsound psychology of separate mental faculties. The argument, however, does not depend upon it and would, indeed, gain by substituting for "mental discipline" the more correct view "evoking of interest." No subject is worth teaching unless the thing taught is worth knowing.

principle is the truest and most stimulating. A unity of history is not only to be found in chronological sequence, but also in qualitative illumination; whether it be that in social phenomena, as in families, there works a spirit of atavism or not whereby modes of thought and action long dormant generate afresh by mysterious laws, it is certain, without committing ourselves to Vico's cyclic theory, that we find in certain remote epochs—the age of Pericles, for example—a modernity, an illumination, a community of ideas which is lacking in many ages nearer to ourselves. Choose rather periods which are great in themselves and qualitatively near; teach them with constant reference to the present; and, in addition, teach, at least occasionally, the present* itself.

"But contemporary history cannot be written, much less taught." "Latet anguis in herba"—Is the historian speaking or the orthodox advocate of the classics? Dr. Prothero denies the impossibility; the scheme of teaching already criticized postulates the contrary. Though the progression of society is no closed cycle, but an infinite trajectory, still, just as the true meaning of seed and bud is found in the perfect plant, so in human affairs the present is often the best commentary and explanation of the past. At any rate, the judgment, like all other deductions from abstract premisses, claims no validity without verification by fact; and there are certain facts which, though not conclusive, are suggestive. The history of the nineteenth century is written daily; other nations teach it in their schools; and one Thucydides is said to have written the history of his own times with reasonable freedom from prejudice. Perhaps the difficulty—and one, be it noted, which will not disappear with time—is mass of detail. But, even if this mass be great, if prejudice be inevitable, against them may be weighed the stimulus of directness, the visible end, the unifying principle, the practical interest, the light upon the past, the foresight into the future; above all, the conscious exercise of thought.

If arithmetic, for example, were nothing but multiplication tables, or Latin a monotonous round of declension, the mind might indeed be working, but the working, being mechanical and unconscious, would be dull, languid, and unfruitful. In the unsolved problem is the spur to progress, even in the dry puzzles of early translations and compositions. The mind begins with an instinctive faith in itself, with a pride in the consciousness of activity—"potest quia posse videtur"; with each victory the faith is strengthened—"posse videtur quia potuit." Add to the mathematical problem a solution, a retranslation to the Latin exercise, and the mind rejects the fraud in disgust and sulks in idleness. Now the controversies of past history are question and solution, to which the ordinary text-book adds the further evil of a dogmatic judgment. Who cares, it has been well asked, to consider what other courses were open to this or that statesman when the turn of a leaf tells the course adopted? And we may add, What boy will trouble to criticize that course when his text-book supplies a criticism ready-made? Contemporary history—ever questioning, never answering—generates those habits of independent thinking and judging which are not among the meanest of the ends of education.

Is it then altogether unreasonable to hope that, by making contemporary history the centre of our scheme, we may be able to secure a stimulating method of teaching and a permanent interest in the thing taught? It remains to touch briefly upon the importance of the knowledge thus acquired.

Upon the professed historian our own age has a compelling claim. I am not thinking of the intrinsic greatness of the nineteenth century, that it will rank among the cardinal epochs in the story of society, among the colossal pivots down the long corridor of Time on which the gates of Change are swung; I am not thinking of the untrodden fields of research where a rich harvest lies ungathered to every hand; I am thinking of those, too, who are content to labour in the past, and to say with Chaucer—

And I came after, gleaning here and there,
And am full glad, if I can find an ear
Of any goodly word that ye have left.

How much of historical intuition did men like Stubbs, Creighton, and Grote owe to a practical knowledge of their own time? How far were they great historians because they were men of affairs?

And also, for all of us, history, especially in these latter days, is desirable as the school of patriotism and citizenship. To the

task of government aristocracy can bring inherited traditions, pride in the past, and something of instinctive culture and refinement. But with a democracy, called to direct the destinies of great nations, that which is lacking by inheritance education alone can supply. The knowledge of our past history, our literature and art must be the foundation of our patriotism. But patriotism must be more than sentimental: it must be practical; we must be not patriots only, but citizens; hence we need a knowledge of the present; and not active citizens only, but intelligent: hence we need lessons beyond those that our own history can give. Only, in order to be citizens at all, we must ever build around the present; with that as centre, we may range wider and wider at will, growing with each widening circle established in a rational self-control. So may democracy hope to gain a patriotism which will be the motive force, and a citizenship which will be a guiding helm to steer her ship through the troubled waters of the future.

E. W. CLAYFORTH.

REVIEWS AND MINOR NOTICES.

Demosthenes: Against Midias. By WILLIAM WATSON GOODWIN. (9s. Cambridge University Press.)

The oration of Demosthenes against Midias, to be properly understood, requires the student of it to be acquainted with matters about which we have more knowledge now than we had fifteen years ago. Arbitrators, for example, who play a part in the business of the speech, have grown more distinct, and darkness in various corners has been illuminated owing to the discovery of Aristotle's treatise upon the Constitution of the Athenians. Since that fortunate event a useful English commentary on the Midiana has appeared. But there was room for one in which the full power should be got out of the new lights; and, indeed, there is always room for anything that Emeritus Professor Goodwin has to say about Greek. In editing this piece for the Syndics of the Cambridge University Press, as he has already edited the "De Corona," he substantially increases the obligation that he long since imposed on us with his studies in Greek syntax. As to his latest work, we say at once that we find it very much to our liking. The book has merits of many kinds. The first that we perceive is that it is beautifully printed, even the smallest letters standing out so sharply and distinctly that they can be read with ease. Absolute correctness in the setting of type is hardly to be attained. With pain we observe that not even at the University Press are they free from that last infirmity of noble printers—the incapacity to distinguish *v* from *ν*. Accordingly, in the note on § 78¹ we have *λῆξις κλήρον* for *λῆξις κλήρου*, although the accent proclaims its warning. We cannot think that a veteran scholar like Prof. Goodwin would use *scholia* as a singular noun (§ 101², note: "The Patmos scholia . . . thus interprets"); we must therefore, with the somewhat lopsided charity usual in such cases, saddle that, too, upon the printer. But such slips are exceedingly rare; in general the setting is as correct as the type itself is beautiful.

We look next to the text. In constituting it the editor has been guided chiefly by seven manuscripts. It occurred to us at times as we read that he has been unduly deferential to Σ. It is doubtless the best manuscript available, and, now that it has been reproduced in photographic facsimile, it is likely to have more influence than ever. We can read it at our own fireside, and worship it as a household god. But it is possible to be too abject in devotion even to a photographic facsimile. To accept from Σ in § 109 *ἐκβάλλον τινὰ καὶ προπηλακίσας* for *ἐκβαλὼν κ.τ.λ.* is to show to it (as Prof. Gildersleeve once said of the English attitude towards Prof. Goodwin's syntax) "a reverence that is dangerously near to superstition." Surely *τινα* generalizing the statement, and so differentiating it from that in § 115, *ζητῶν μὲν ἐκβάλλειν ἐκ τῆς πατρίδος*, renders *ἐκβαλὼν* far more probable as an accompaniment of another aorist participle. In § 149 something stronger than the authority of Σ would be needed to make us prefer *ταύτης* to Dobree's *τῆς αὐτῆς*. On the other hand, our editor has been able to fix the reading in § 41 *ἀλλ' ἂ μὲν . . . ἐξαχθῇ πρᾶξαι* with tolerable certainty through his discovery that Σ has not *τοῦτο* before *ποιήσῃ* in the next clause. On the whole, he gives us a

* The present or contemporary era may be dated from 1832.

satisfactory text together with an *apparatus criticus* that will enable us to alter it where our taste or judgment differs from his; for, as the late Prof. Sir Richard Jebb admonished us: "we must not exaggerate the degree in which textual criticism can approach to the character of an exact science." As to Prof. Goodwin's commentary, it were almost impertinence to praise the grammatical part. But the thought often rises in us that the principles of grammar are like the optical glasses of philosophy: they must be adjusted from time to time rather to the observers than to the phenomena observed. Prof. Goodwin's classifications are good; that is to say, they realize the sole object of such classifications in being instructive or suggestive. But neither his rules nor his applications of them can claim finality. Who will guarantee, for example, that in § 146 ἀλλ' ὅμως οἱ κατ' ἐκείνον ὑμέτεροι πρόγονοι οὐδενὸς τοῦτων αὐτῶν συνεχώρησαν the genitive will always be classed as a genitive of price? It is so that Prof. Goodwin (with Weil) describes it. Buttmann in his index termed it a genitive of cause. We are disposed to think that the genitive with συγχωρεῖν indicates, if sometimes price, yet also that from which one draws away, out of fear (§ 160 of this speech), or conceding it to another (Herodotus vii. 161); in which view the genitive might be regarded, like that with εἶκεν, as one of separation, depending on the notion of retirement contained in the verb. Yet, if any one chose to call it a genitive of something else, we should be rather interested than surprised; for, with all these labellings, we interpret ourselves as well as the Greek.

But, however many different ways there may be of looking at the internal relations of a set of words, you may be sure that Prof. Goodwin's will be a sensible way: commending itself, moreover, by the brevity and clearness with which it is presented. Although he declines to use the oration for the purpose of teaching Greek syntax, and is generally content to send readers to his "Moods and Tenses" or to his "Grammar," his commentary is nevertheless a continual instruction in the subject of which he has established so notable a mastery. The excursus (Appendix vii.) in which he discusses the rule, commonly laid down, that when the subject of an infinitive is the same as that of its leading verb it is in the nominative; otherwise, in the accusative—showing that the rule does not hold for ἐγώ, σύ, ἡμεῖς, or ὑμεῖς, and that, if we leave αὐτός (the case of which is determined on another principle) out of account, the only sound examples involve the rare indirect relative σφείς—must not be overlooked by teachers of Greek. With regard to questions of law and history, Prof. Goodwin's rulings are as precise and safe as his precepts on grammar. English students would have found, in connexion with law, an occasional reference to Wyse's admirable and recent edition of Isaeus much to their advantage. In rendering the Greek into English, to touch one last point, they must not expect the American editor to supply them with the aptest and most elegant words. Felicity in translation he has none, or perhaps, we should more justly say, never makes it his mark. Indeed, it has sometimes occurred to us that the success achieved by him with Greek is that of a man of science rather than that of a man of letters. But we will not follow the ungracious thought. Prof. Goodwin is a guest; we are more inclined to welcome him once again than to criticize him, and will now but offer him our thanks for his excellent book and the new service that he does with it to the cause of exact scholarship.

Development and Divine Purpose. By VERNON F. STORR.
(6s. Methuen.)

These are the first set of lectures delivered at Cambridge in accordance with the recently founded Lectureship in the Philosophy of Religion, and they mark a stage of progress in both academic and theological thought. Founded by a living Professor of Divinity, it shows that theologians have abandoned the claim of theology to be the queen of sciences, to which all other knowledge is ancillary; and, though we are getting accustomed to an interchange of teachers between the two older Universities, it is the first time that Cambridge has engaged an Oxford "expert in philosophy."

Mr. Storr is, it is true, a cleric and Examining Chaplain to the Archbishop of Canterbury, but he approaches the problem from the point of view not of a divine, but of a psychologist and a student of natural science. A revealed religion must stand before the tribunal of reason, and a philosophy of religion is a

study of the borderland—or, to vary the metaphor, an arraignment of authority before the bar of reason. At a time when it is claimed that dogma is not only the Church's one foundation, but the rock on which all education must be built—as Lord R. Cecil put it the other day in the House: "Dogma is the child's natural food"—it is well to be reminded that "dogma" is only the learned word for "opinion"; that it needs restating for each age; that "the history of a dogma is its inevitable criticism."

The volume might well bear for its second title: "A Re-statement of Paley's 'Natural Theology.'" Paley was not abreast even of the science of his day. He believed in special creations and in fixity of species; he relied on instances of special adaptation. His theodicy is as much out of date as Leibnitz's pre-established harmonies, and his architectonic watchmaker seems to modern science on a par with Caliban's Setebos. But, though all Paley's outposts must be abandoned, yet the central truth (such is the main argument of the lectures) may still be maintained. Evolution, progress, development—call it what you will—are all teleological ideas. Though we can no longer conceive of God as an artificer, an external designer, yet all science goes to show that "through the ages one increasing purpose runs," and by the very laws of mind we are forced to posit a "something not ourselves," a Divine Will.

In the reconciliation of evolution with Theism, as Mr. Storr well insists, variation is the key of the position. "There could be no progress if among the variations which occur were not some leading in the direction of progress." "It is, indeed, always possible to maintain, without self-contradiction, that, if you tossed the letters of the alphabet often enough, the combination of them into a lyric poem might take place"; but the paradox of the atomists cannot be seriously maintained. The teleological idea is an ultimate category of thought.

The lecturer accepts whole-heartedly and without reserve the science of the evolutionary school, and has followed all its latest developments; but he warns them that metaphysics, as the very name implies, lies beyond their province. Only once or twice does he seem to us to lay himself open to the charge of special pleading. Thus, though he elsewhere allows that the Weismannian doctrine of the non-transmission of acquired faculties so far holds the field, yet on page 112 he apparently argues from the Lamarckian giraffe. Again, on page 118, he endorses, on what seem to us wholly insufficient grounds, Wallace's heresy that natural selection cannot account for the higher faculties of man. In summing up his argument he allows that natural religion cannot lead to the conclusion of a God who is perfectly wise and good, but only of a God who is very wise and good. Even this conclusion seems to us to overshoot the mark. It overlooks or puts wholly in the background the aspect of "Nature red in tooth and claw."

It is a commendation, not a censure, of the lectures to say that they raise more questions than they solve. We look forward in future courses to a treatment of some of these—the evolution of Christianity, the relation of ethics to religion. Mr. Storr is a popular lecturer in the best sense of the word. His thought is clear, his sentences are well turned, and there is no trace of pedantry.

Henry the Third and the Church: a Study of his Ecclesiastical Policy, and of the Relations between England and Rome.
By Abbot GASQUET, D.D. (G. Bell & Sons.)

This book is a collection of materials for history rather than a history. It contains little more than documents, translated from Latin, illustrating the relations between England and the Roman see during the reign of Henry III. These documents are given in chronological order, and, as they refer to matters of various kinds, some of small and others of great moment, matters of policy, of ecclesiastical discipline, of jurisdiction, and so on, all following one another, the general effect on the reader is one of weariness. Political affairs, apart from those which immediately concerned the Papal see, are scarcely noticed, and so the full bearing of many things told here will not be understood without a thorough acquaintance with the foreign and domestic history of the reign. It is to be regretted that Dr. Gasquet has not attempted to write either a narrative or an appreciation of the relations between England and Rome founded on the materials he has collected, and supported by references to, and extracts from them. Such a book would have been more attractive; and serious historical students,

who do not want translations and who possess probably most of the sources used here, would have welcomed a work of that kind from so respected a scholar as Dr. Gasquet.

The proposition laid down in Dr. Gasquet's preface as regards the influence exercised by the Roman see during the early years of the reign is amply justified by these documents. The surrender of John, which should be regarded as it seemed to men of the time and in connexion with like acts of submission by other kings, certainly secured the throne for his son, and the wise and efficient administration which marked the early years of Henry's reign may, in a large measure, be attributed to the work of the legates Gualo and Pandulf. Although the Papal action during the pontificate of Honorius III. was not always beneficial, England and her King owed much to his care. Later Popes took advantage of Henry's gratitude, and plundered the kingdom and subjected the Church to many abuses in order to gain money for their struggle with the Hohenstaufen house, to an extent which Dr. Gasquet does not attempt to justify or disguise. Pope and King played into one another's hands, and in the end the King had to suffer for it. Yet, in spite of the angry remonstrances constantly addressed to the Roman see both by Churchmen and barons, it must not be supposed that Englishmen for a moment denied the spiritual authority of the Popes, or that the English Church in any way revolted from their jurisdiction. The barons, indeed, refused to alter the common law of England in order to bring it into conformity with the law of Rome, but the law of Rome remained the law of the English Church. Its power in England was limited by the rights of the crown enforced by the steady resistance of the lay courts to Papal aggression. Dr. Gasquet says that Henry III. claimed that questions touching the right of presentation to benefices belonged not to ecclesiastical but to the King's Courts; he should, we think, have added that this was not an arbitrary claim: it was a declaration of the law of England, which had been established in the twelfth century by the King's grandfather, Henry II. In this connexion it may be observed that the translation of *curia Christianitatis* as "the common court of Christendom," whatever that may mean, is misleading; the term has no mysterious significance; it is the ordinary Latin for an ecclesiastical or spiritual court. We have an interesting account, derived from documents in Wilkins's "Concilia," of the high ideals more or less prevalent among the best English Churchmen during part, at least, of the reign, and of the efforts made by some of the bishops to raise the standard of Christian life among the clergy and people, at a time when a reader of contemporary chronicles might well suppose that all the energies of ecclesiastics were occupied in struggling against unjust taxation.

Readings on the Inferno of Dante. Based upon the Commentary of Benvenuto da Imola and other Authorities, with Text and Literal Translation by the Hon. WILLIAM WARREN VERNON. With an Introduction by EDWARD MOORE, D.D. In Two Volumes. Second Edition, entirely rewritten. (Methuen.)

"Of making many books," especially Dante commentaries, "there is no end," and a second edition of Mr. Vernon's "Readings on the Inferno" is yet one more testimony, if such were needed, of the popularity of Dante made easy. Indeed, so completely does one of the most accomplished of our Dantists anticipate the difficulties that hedge his subject that one cannot help feeling the admirable prevision of the commentator leaves little incentive to the student of the Italian original. To thousands of readers, however, every good translation that appears of the "Divina Commedia" is the most valid of excuses for not tackling its beauties in that Italian where alone they can be duly appreciated.

Mr. Vernon's translation remains what it always has been, faithful and scholarly to a degree that only those familiar with the difficulties of the original can appreciate. And it is not merely a translation: it is a guide book so detailed and exhaustive that the dullest traveller must needs be enlightened as to the involved cosmography of that strange underworld of the "Inferno," with its carefully mapped compartments of crime, a hideous *crescendo* of horror, culminating in the frozen depths of the *bolgia* of the traitors.

Mr. Vernon has fairly "read round" European history for his "notes by the way," and some of these seem to anticipate possible examination papers for future Dante students, when

a knowledge of mediæval history should go to swell full marks. His list of authors and "editions quoted" fairly make the average reader giddy with contemplating such an array of learning, while the "itinerary" and imposing chronological table bring the times and seasons dealt with within the grasp of all.

In addition to these aids, Dr. Edward Moore contributes a characteristic introduction, and brings his own square and compass to the task of measuring the most immeasurable of poems, but he holds a rather unnecessary brief for Dante's mediævalism, which in places strikes one as almost comic. If the British public has not learned by this time of day that it "must not criticize a writer or teacher of the thirteenth or fourteenth century by the canons and ideas of the nineteenth," it is indeed a pity. The introduction contains for the rest a deservedly generous tribute to the excellence of Mr. Vernon's translation of the "Inferno," which, coming from one of the most distinguished of living Dantists, is specially valuable. It certainly is due in great measure to the labours of such scholars as Dr. Moore and Mr. Vernon that English readers are learning to value the grandest of all poems at something of its true worth, even though it be in the dress of a foreign language. For, when all that the most accomplished of translators can do has been done, the "Divine Comedy" in an English garb must ever be shorn of its best glories thus presented in an idiom that is, by its very modernity, incapable of preserving that aroma of mediævalism that clings to the original *cantiche*. All of which reminds the ungrateful reviewer that our modern editions can give a great many good things, notwithstanding, to Dante in English, including a faultless format, excellent indexes, and some really charming illustrations (including a striking reproduction of an old sixteenth-century woodcut of the "Torre della Fame"), which do much to enhance the value of a singularly attractive book.

Roman Private Law. Founded on the "Institutes" of Gaius and Justinian. By R. W. LEAGE, M.A., B.C.L. (10s. net. Macmillan.)

The text-books of Gaius and Justinian—the latter a revised edition of the former some three and a half centuries later—are naturally the Roman law text-books of our own schools. Mr. Leage is a distinguished teacher of Roman Law at Oxford, and an examiner in the Honours School of Jurisprudence there; and this volume is the outcome of an attempt to satisfy a want that he has felt in his work—"a book which is content to give, as simply as possible, the subject-matter of the 'Institutes' of Gaius and Justinian, following, in the main, the original order of treatment." Of course, the strict programme requires modification for Mr. Leage's specific purpose: he omits minor details of little or no practical importance, such as some of the degrees of cognatic relationship; and he adds a good deal of necessary, or at least desirable, information from other parts of the Corpus Juris and from the writings of modern civilians. That is to say, he sets out in English a simple and fairly complete exposition of the elements of Roman private law—an English amalgamation and recension, as it were, of the two famous Latin text-books. A long introduction gives an adequate historical account of the sources of the law; but it "presupposes a knowledge of the elements of Roman Constitutional History"—*præcognoscenda* that, in our opinion, Mr. Leage would have done better not to take for granted, whether his readers be Oxonians or others.

The summary of the body of the law is efficiently done, as of course. It does not matter at all practically, but it is curiously interesting theoretically, that Mr. Leage adheres to the classification of "res" that he finds in his texts, and does not follow the usual plan of setting out such large subjects as contracts, wills, intestate succession, &c., as independent divisions of the subject. On the whole, we rather think he is right to hold by his originals. On critical points we think Mr. Leage might have ventured more boldly: Maine, Roby, and Moyle are scarcely the weightiest authorities. Henry Nettleship's discussion of the Jus Gentium, for example, is far more important than Maine's speculations on the subject. Strangely enough, Hunter, who is by far the strongest British critic on purely legal points, is not mentioned (so far as we have observed) anywhere in the book—not even in connexion with "correality and solidarity," possession, *nexum* and *obligatio*, the transition from the *legis actio* to the formulary system, &c. The Continental scholars chiefly but sparingly drawn upon are Girard (his excellent

"Manuel Élémentaire"), Sohm (in Ledlie's translation), and Wassak ("Processgesetze"). The fact is that Mr. Leage takes care not to shoot over his men's heads. They might get the most of his instruction from Moyle's Introduction and notes, with an occasional dip into Poste; but he presents the matter in a simple and literary form, whereas Moyle is stodgy, and Poste is Germanized and Benthamic. The volume is attractively written and got up, and will be very serviceable, especially to such students as need a lift over the not very arduous stile. But Mr. Leage would have bestowed his labour to more useful purpose if he had essayed to push the knowledge of the subject beyond the range of the ordinary English text-books.

Corydon: an Elegy in memory of Matthew Arnold and Oxford. By REGINALD FANSHAW. (Frowde.)

Mr. Fanshawe's eloquent tribute to Oxford and to Matthew Arnold is not so closely related to Arnold's "Thyrsis" as its title would have led us to surmise. There are, indeed, occasional reminiscences both of this and of other of the poems, and the style of the verse is modelled to a considerable degree on Arnold's. But even in the style there are other echoes that sweeten and obscure the crisper clearer note, and the general effect is not of coolness and precision, but of sultriness and haze. "Thyrsis" was a monody, a lament in twenty-four stanzas, in which a peculiar form and the artifice of the pastoral manner were used to conceal the poignancy of the poet's grief: he turns away from his central thought time after time, touches with an exquisite grace on the beauty and sweetness of earth, and even fondles lovingly the old fable of the poet's conquest of death: how

when Sicilian shepherds lost a mate
Some good survivor with his flute would go,
Piping a ditty sad for Bion's fate;
And cross the unpermitted ferry's flow,
And relax Pluto's brow.

And yet this is no artifice; it is no concealment: it is passion reflected and so revealed. "Corydon" we should rather describe as an essay than as an elegy: it numbers not twenty-four, but two hundred and twenty-four, stanzas. Both diction and thought maintain a high level of excellence all through the work; and not only Matthew Arnold, but at least twenty other great names of contemporaries or forerunners are appreciated and interrelated, Oxford providing throughout the scenic background. All this is finely done. The author has a profound conception of life: we have no quarrel with him. And yet his work has moved us little, hardly at all. Poetry—"song," as Mr. Fanshawe consistently calls it—may mean infinitely more than prose, or, just because it aims at something prose need not aim at, missing that something it may mean less. In purely poetic quality Mr. Fanshawe's work is not equal to the grandeur of his theme; and thus the very means by which he attempts to heighten its value seem to lower it. Even grief, even regret, when a true poet handles them, may rouse and stimulate the mind. In Mr. Fanshawe's "Corydon" aspiration itself ceases to brace us and becomes a spiritual soporific.

Translations into Greek Verse and Prose. By R. D. ARCHER-HIND. (6s. net. Cambridge University Press.)

What distinguishes Mr. Archer-Hind's "Translations" from the score of classical *prolusions* which we have noticed in recent years is their variety. Like Goethe, he

"sings

To one clear harp in divers tones."

Not only are the originals drawn from German, Italian, and Spanish, but there are specimens of nearly every Greek metre except the hexameter. His favourite metre is the elegiac, and he demonstrates the superior flexibility and beauty of the Greek compared with the Latin couplet. How is it that head masters like Mr. Lyttelton, who maintain the supreme virtue of verse-making as a mental gymnastic, prefer the dull mechanic art of Ovid? We may choose as a sample (mainly by reason of its brevity) the version of Shelley's "Music when soft voices die":

ΝΑΜΑ μελιγλώσσοιο λέλοιπ' ὄπδς, ἐν δ' ἔτι φρεσσίν
ρίπαι εὐμνάστοις ζῶσ' ἐλελίζμεναι
οὐδ' ἔμ' ἰων χαρίεσσα πνοά, κἀν αὐτὰ μαρνανθῇ,
ἔφθιτο· σφίζει γὰρ τὰν ἀνέγειρε πάθα.
λέκτρα χαμαιπετέεσι ρόδων πετάλοισιν ἑραστὰς
πῆσεν ἐφ' αὐτὰ καλῶς ἐνευδόμεναι
ὅς ἀνεύριτα τὰς ρόδα φροντίδος, εὐτ' ἂν ἀποίχῃ
αὐτὸς ἔρως αὐτῇ κοῖτον ὑπαστορέσει.

Of Heine we have eighteen versions, and we confess that the impression left on us is that his lyrics lend themselves no more to Greek than they do to English. Would ἡννοῖαν γλαυκὸν πέλαιος be intelligible to a Greek? The prose versions are no less admirable, but they will appeal only to the professional.

"The Temple Greek and Latin Classics."—*Medea and Hippolytus of Euripides.* Translated by SYDNEY WATERLOW. (2s. 6d. net. Dent.)

The first volume of this new series promises well. The original text faces the translation, and typography, paper, and binding leave nothing to desire. The translation itself has distinct merits. Mr. Waterlow never shirks a difficulty: we may even say that his English is clearer to an Englishman than Euripides can have been to an Athenian auditor, and it is rarely that we find ourselves differing from his interpretation. On the other hand, there is no attempt to reproduce the order of words, the turn of sentences, the poetical atmosphere of the original. We may take a triplet from the first speech in the "Medea" to illustrate the translator's method. It runs literally: "And this proves a woman's best security when she is not at variance with her husband; but with her all is estranged and her heart is sore." Mr. Waterlow has: "As a general rule a wife has only not to quarrel with her husband, and all is safe; but in this case love is blighted and turned to loathing." In the much disputed passage, "Medea," 124 *et seq.*, we cannot think the present version is right. τοὺς ἐν θυγατρὶς is not "among strangers," but those who go abroad, appear in public, contrasted with ἀφ' ἡσυχίου ποδός, not "from mere indolence," but from not stirring, from keeping at home. "Carelessness" hardly expresses βαθυμῶν, ἐνὶ σπίνῃ; and αὐθάδης is rather self-willed than "selfish."

Nouvelle Grammaire Française. Par J. GAUCHEZ ANDERSON. (2s. Methuen.)

We have recently noticed several French grammars written in French for the use of English schools, but so far they have been for beginners. This is a more ambitious attempt, designed to take the place of the larger Eve and Baudiss, from which it differs radically in the prominent position given to phonetics. The introduction on phonetics, treated physiologically, is written in English—quite rightly, as we judge—though by this concession to usage Mr. Anderson weakens his argument for the use of French. To master the introduction and the following chapter on phonology is at least a term's work, and this is a long time to hold in suspense the "incontrovertible" principle that the sounds of the mother tongue should be heard as little as possible. For our part, we could have wished for more exceptions. Thus it is impossible to bring home to a pupil the different uses of tenses in French and English without English examples, and constantly the French examples need an English note or translation: "Il faut distinguer entre: tout à coup et tout d'un coup, tout de suite et de suite. Il demeure dans Londres. Il demeure à Londres." The author would doubtless rejoin that such explanations are best given by the teacher, and we quite allow that the point is arguable. Particularly commendable features are the treatment of the conjugations and of uses of the subjunctive. We are rid of the four conjugations and the absurd derivation of tenses from the present participle; and the superstition that the subjunctive is the mood of doubt, which still haunts most French grammars, finds here no countenance.

"Stories from Shakespeare for Children."—*Julius Caesar.*

By ALICE SPENCER HOFFMAN. (Dent.)

The "Stories" provoke comparison with Lamb's "Tales," but both plan and scale are different. Miss Hoffman follows closely the text of the play and paraphrases or incorporates the salient passages with running comments. She has happily seized the play of characters (by the way, "Caesar was not a strong man" sounds strange), and a teacher of a junior class could not do better than read to them this small volume before tackling the play itself.

The Sounds of Spoken English. By WALTER RIPPMMANN. (Dent.)

This little primer supplies a real need. We have had in the same series a primer on comparative phonetics translated from the German of Viëtor and an excellent guide to French pronunciation. English, which in the logical order should come first, naturally brings up the rear. We all of us think that we can pronounce our native tongue without any aid from books, and it is only the professed philologist or physiologist who cares to inquire into the machinery. A perusal of Mr. Rippmann's primer will surely shatter this idol of the forum. We hope the book will be largely adopted in pupil-teacher centres and schools where provincial or vulgar pronunciation has to be corrected. Mr. Rippmann is no purist, and he takes as his standard London English, meaning the English spoken by an educated Southerner. Thus, to his ear, "miller" is a perfect rime to "villa"; "law" and "lore" are identical, as are "which" and "witch," "when" and "wen." When two pronunciations are current, as in "brougham," "pedagogy," he gives both, without expressing a preference. This is unkind to critics who would like to quarrel about the Emperor's beard. Thus we should maintain that "golf" rimes with "doff," and that all other pronunciations are Southern corruptions. To our ear "sandwich" rimes with "stitch," and "Greenwich" with "ridge." Mr.

Rippmann makes the sounds identical. There is a very useful word-list at the end, but some of the words might be cut out: we have never heard "algebra," "balsam," and many more in the list mispronounced. On the other hand, we miss many questionable words—"Dalhousie," "Johannesburg," "Oude," "angina," "octopus," "lichen."

"Blackie's Golden Library."—*Essays from the "Spectator."* (2s. 6d. net.)

Mr. W. A. Lewis Bettany has collected Steele's and Addison's papers on the minor morals into a little volume which it is a pleasure to handle. We doubt whether they needed a showman. Mr. Bettany has doubts himself, and invokes the proverbial curse on all from Johnson to Mr. Austin Dobson "qui ante nos nostra dixerunt" (*dis-erunt* he should have written). To bracket the Earl of Rochester and Pepys as exponents of "that Gallic ideal of blackguardism and of brutality which the whole Court party pursued" shows a lack of delicate discrimination; and surely it was the frog, not the trout, that Walton handled as though he loved it.

English Historians. With an Introduction by Prof. A. J. GRANT. (2s. 6d. Blackie.)

The volume is happily planned and well executed. Part I. gives us the theory of historians at different periods on their art, and Part II. their practice, as far as this can be shown by extracts. Of necessity the two lists do not exactly tally: there are thirteen in Part I. against eight in Part II., and only five names—Hume, Gibbon, Macaulay, Carlyle, and S. R. Gardiner—figure in both. The selection may appear at first sight arbitrary; but the authors have been chosen not solely for their individual merits, but as innovators or as typical of a school. The book incidentally would furnish excellent private reading for a sixth form, to be tested by essays.

Die Flut des Lebens. Von ADOLPH STERN. Edited by E. M. PROWSE. (1s. 3d. E. Arnold.)

This historical novelette, which turns on the flight of Frederic of Bohemia and his Consort in 1620, makes a capital reader. There are no notes or vocabulary, but a glossary explains the harder words, partly in English and partly in German. A *questionnaire* to each section calls attention to derived and connected words. Thus the pupil is asked to form substantives from *sprechen*, synonyms of *Gemach*, the opposite of *ruhig*. The general plan seems to us excellent. As criticisms are invited, we do not see how the pupil is to prepare a lesson. He may discover for himself *Sprache*; but it is chance if he lights on *Spruch*, *Besprechung*, &c. We doubt whether hunting in a dictionary will help him to remember derivatives. Is it not better to give the information with hints as the laws of derivation? Some brief historical introduction would add to the interest of the story.

A Primer of Religion, based on the Catechism of the Church of England. By W. J. OLDFIELD. (2s. 6d. Methuen.)

The title is ambitious, though modified by the sub-title. The book is intended for confirmands or children at a stage before confirmation, and the lessons take mainly the form of questions and answers. The teaching is simple, and, as the second part of the Catechism is not touched, it raises few disputed points. It will prove a valuable aid to Sunday-school teachers.

Bacchylides. The Text edited by Sir RICHARD JEBB. (1s. 6d. Cambridge University Press.)

Prof. Jebb's last contribution to Greek scholarship was his edition of the poems and fragments of Bacchylides, and it proved that his powers of divination and interpretation had suffered no decay. Many a poor scholar who cannot afford to purchase the annotated edition will be glad to possess himself of the text.

Test Papers in Elementary Mathematics. By A. CLEMENT-JONES and C. H. BLOMFIELD. (2s. 6d. E. Arnold.)

These papers are partly selected from papers set by various examining boards, but mainly compiled by two masters of the Bradford Grammar School. They include arithmetic, algebra, practical geometry, and a few questions on trigonometry. The papers are well graduated in difficulty, and questions are avoided which entail an excess of ciphering. The argument that questions which "won't come out" are badly done in examination is doubtless edged. The preface speaks of tested answers, but there is no mention of a key.

Dictionary of Quotations: German. By LILIAN DALBIAC. (7s. 6d. Sonnenschein.)

German assuredly needs a volume to itself, and it is well that the original intention of the publishers to combine it with Spanish has been abandoned. Full justice has been done to Goethe and Schiller. From "Faust" alone there are nearly 250 quotations and from Schiller about 550. On the other hand, we miss a good many famous names—Auerbach, Mommsen, Grimm, Hauptmann, to take a few at random—and Kant, Hegel, Nietzsche are represented by a quotation apiece. The translations are correct, and where there are English versions the best has been chosen. We have noticed only one or two slips. "Im schönen zu leben" should not appear as "to live in the true," though it has Carlyle's authority. On page 374 E. A. Bowring makes nonsense of Goethe's *Spruch*.

Short Lives of Great Men. By W. F. BURNSIDE and A. S. OWEN. (6¼ × 5 in., pp. viii, 296, illustrated; 3s. 6d. Edward Arnold.)

Messrs. Burnside and Owen are two assistant masters at Cheltenham, and the lives which they have treated are those of the forty-four figures which adorn the reredos in the college chapel—a memorial set up, from the designs of Mr. H. A. Prothero, to the Old Cheltonians who fell in the South African War. Of course, this relieves them from a certain liberty of selection, and transfers it to Mr. Prothero. But, whoever is responsible for the choice, it is well made. We have forty-four of the leading men in English history and literature—beginning with St. Alban and King Arthur and coming down to John Lawrence, David Livingstone, and Charles Gordon—sympathetically and well treated, and illustrated with eight drawings of carved figures from the reredos itself. Each worthy has from two to ten pages allotted to him; so there is not much room for criticism. It will be sufficient to say that the chief facts are well chosen and well related, and the volume worthily fulfils its object.

The Romance of Empire. By PHILIP GIBBS. (7½ × 5 in., pp. xv, 478, illustrated; 6s. Edward Arnold.)

This is one of the best—if not quite the best—of the innumerable books which have been appearing of late dealing with the making of the British Empire. It is told with spirit and enthusiasm, and holds the attention almost as well as a novel. It begins with the Sea Rovers and Raleigh and ends with the story of the rival races in South Africa. The main episodes are the conquest of Canada—which owes not a little to Mr. A. G. Bradley's excellent book—the loss of the American Colonies, the conquest of India, and then the stories of Australia and of New Zealand. Besides being well and brightly written, it is well illustrated—many of the drawings being from old engravings or from the pencil of Mr. R. Caton Woodville. It would make an excellent reading book for the higher classes of a school, or, still better, a valuable present to a boy or girl with a taste for history. We do not remember to have come across a book before this written by Mr. Philip Gibbs; so we make a note of it and counsel others to do the same. There is no *braggadocio* or jingoism in the book: he tells a plain story well, and is scrupulously just to all concerned. It leaves no bad taste in one's mouth. It tells of heroes as simply as they should be told of. Therefore we recommend the book heartily to our readers.

(1) *Our School out of Doors: a Nature Book for Young People.* By the Hon. M. CORDELLA LEIGH. (7 × 5 in., pp. xii, 141, illustrated; 2s. Fisher Unwin.) (2) *A Nature Reader for Senior Students.* Edited by the Hon. Sir JOHN COCKBURN, K.C.M.G., M.D., and E. E. SPEIGHT, B.A. (7½ × 5 in., pp. xv, 334, illustrated; 2s. net. Hodder & Stoughton.) (3) *Practical Object Lessons from the Plant World.* By H. J. BARNEILL. (7 × 5 in., pp. 171, illustrated; 3s. Sir Isaac Pitman & Sons.)

(1) The chapters of this book are intended to serve as a kind of *vade mecum* for the teacher of Nature study to consult before starting on her fortnightly walk with her pupils; to refresh her memory as to what things they are likely to see; to study them on the spot, and to draw them. The book is well supplied with illustrations, and the subjects are well and judiciously chosen.

(2) This reader is made up of selections from the writings of a multitude of people about the sounds and sights of Nature—such as Emerson, Lowell, Keats, Thoreau, Burroughs, Browning, Wordsworth, &c. The selections are excellent. So are the illustrations—being copies of pictures by Turner, Constable, Corot, F. Walker, &c. The book is, in fact, a feast of the good things said about or pictured from Nature; and lucky is the child who has it assigned to him. We have read it through from cover to cover with true delight and sincere approval.

(3) This is a collection of twenty-seven object lessons on plants, set out under the heads of matter and method, and illustrated with black-board sketches (in white on black). The choice seems to us to be well and carefully made; and the treatment is full of interest. The book will give a child of ten years a good glimpse into the plant world.

(1) *Essays in the Making.* By EUSTACE MILES, M.A. (7½ × 5 in., pp. xiii, 161; 3s. 6d. Rivingtons.) (2) *Essays and how to Write Them.* By AVARY H. FORBES, M.A. (7 × 4½ in., pp. 146; 2s. Ralph, Holland, & Co.)

(1) Mr. Miles has given us a very suggestive and interesting book on the making of essays, and one that should prove useful in working out—only that will take time. And this is one of the first lessons to be learnt—that to get into the way of writing a fairly decent essay will take time. You cannot get the trick all at once. Mr. Miles, who is a coach and lecturer at Cambridge, has nothing to do with geniuses; he takes the ordinary man, and, having divided his difficulties under six heads, he sets to work to conquer them one by one. The first thing is to collect ideas; the next to select (or reject) and proportion ideas; and then to arrange what has been selected. The rest follows simply enough—devise the beginning and prepare some means of emphasis; express the ideas; and, lastly, revise the expression. This is all—though there is much to be attended to under each heading. But each is, in the main, a separate difficulty, and had better be treated separately. This is what the book has to tell us about, and it does its

work interestingly and well. The author warns us plainly that there is no short cut, except for geniuses—and they may look after themselves. But the ordinary person, by following his advice, will arrive at having a thought to express and at being able to express it fairly. He concludes with a list of books likely to be useful, and an index. The book is well written, and is full of good advice. Any of our readers who are anxious about the essays of their pupils had better give the plan a trial—a trial without short cuts.

(2) Mr. Forbes approaches his difficulties on a different plan. He divides his subject into four parts—viz., how to define his subject; how to divide; how to arrange (1) the law of climax and (2) climax in practice; and, lastly, how to expand—which includes style. Under each of these heads he tells us briefly and well all that he thinks need be told. He then gives us a set of outlines and then a set of fuller specimen essays. Last of all comes an appendix of subjects for composition. The book is well constructed and businesslike. It will be valuable in the hands of a good teacher. It is a good book: but, somehow, one does not feel so strongly drawn towards it as towards Mr. Miles's book. Our readers must choose for themselves.

"English Literature for Secondary Schools."—*Macaulay's Essay on Clive*. With Introduction, Notes, &c., by H. M. BULLER, M.A. (6½ × 4¾ in., pp. xvi, 114; 1s. Macmillan.)

It is a part of the plan of this series that each book shall be sufficient for one term's work. Hence the introduction and notes must be short—but not too short—and a glossary shall contain unfamiliar words as well as those which are obsolete. Mr. Buller—an assistant master at Clifton—has done his work as editor with discretion. We are sorry, however, that he has not found space to mention how much in the Essay Macaulay took bodily from Orme, nor to point out the grave misstatements with regard to the siege of Calcutta and the Black Hole which Macaulay makes in the course of his narrative. These are minor points which a word or two would have put right. For the rest, the edition is a good one, and should find its place among literature books to be read in secondary schools.

Asser's Life of King Alfred. Translated from the text of Stevenson's edition. By ALBERT S. COOK. (7¼ × 4¾ in., pp. xii, 83; 2s. 6d. Ginn.)

Mr. Cook is Professor of the English Language and Literature at Yale, and it has struck him that we had no handy translation of Asser's well known *Life of Alfred*, and so he has provided us with this capital little book, taking the text from Stevenson's edition. Quite apart from the question of authenticity it is well worth having. Alfred's preface to his translation of Gregory's "Pastoral Cure," and Archbishop Fule's letter to Alfred are added as appendices, and a short index is also given. The interpolations in the text made by Archbishop Parker are excluded—otherwise the text remains as the writer left it, except that certain insertions made by Stevenson, and duly indicated, are retained.

The Functions of Words. By M. C. CARMAN, B.A. (7 × 5 in., pp. x, 156; 2s. Sonnenschein.)

Mr. Carman is the English master at the Khedivieh School at Cairo. He has given us in the above book a capital short guide to analysis and parsing. It is well up to date in most respects, and is commendably brief. We have read through the chapters with interest and considerable approval. We should have preferred a more comprehensive definition for the pronoun, and the part of speech of a phrase has nothing to do with the initial word. The plan of taking a simple sentence first, and thoroughly explaining it and its parts has its conveniences; and that of putting away in an appendix certain anomalies and difficulties which require careful explanation is a good one. On the whole we like the book.

"Pitt Press Series."—*Burke's American Taxation and Conciliation with America*. Edited by ARTHUR D. INNES, M.A. (6½ × 4½ in., pp. xxxiii, 200; 3s. Cambridge University Press.)

Mr. Innes divides his introduction into two parts—the first dealing with Burke's biography, and the second with the state of politics in Parliament during the years 1774 and 1775, the years during which the two speeches were respectively delivered. These are well and succinctly written, and show a thorough grasp of their subject matter—quite sufficient at any rate for the purposes of any student. Then follow the texts of the two speeches, then thirty-five pages of notes, and last of all a short index. As we are accustomed to have them in Mr. Innes's editions, the notes are written with great care and judgment, and give just what it is necessary to know and no more, but with here and there a longer note where purposes of explanation require it. The edition is an excellent one and deserves to succeed.

Selections from the Writings of Benjamin Franklin. Edited by U. WALDO CUTLER. (6 × 4 in., pp. xviii, 366; 1s. 6d. George G. Harrap & Co.)

This is a capital selection from Franklin's "Poor Richard's Almanac," his "Essays and Miscellanies," and his personal letters. Mr. Cutler has prefixed a short introduction, and has added a few notes at the end of the little book. In an appendix are added Franklin's examination before the House of Commons relative to the repeal of the Stamp Act

in 1766, and extracts from his will. The whole thing is extremely well done, and we have read the book through with considerable interest. It is wonderful how little stale Franklin's words have become.

How to read English Literature. Part I.: *Chaucer to Milton*. By LAURIE MAGNUS, M.A. (6½ × 4¼ in., pp. xi, 207; 2s. 6d. Routledge & Sons.)

This little book is intended as an introduction to the study of English literature. It seeks to interest the reader, and to point out to him certain unifying principles which govern the subject. The literature is dealt with in definite relation to its surroundings, and its development is shown to be an inseparable part of the general expansion and growth of the nation. It deals with impressions rather than with the methods and *minutiae* of criticism. It is an ambitious design for a book of this size; but Mr. Magnus has fairly realized it. Chaucer's England and England's Chaucer; Shakespeare: his Predecessors and Contemporaries; the Progress of Prose; and the Puritan Reaction—these are the chief topics dealt with in the pages of this bright little book, and dealt with in an interesting and effective manner. Green's "History" and Traill's "Social England" and other books of a like kind are quoted here and there to bring the narrative into closer connexion with the change and progress of the nation and its story. The book is well written, and we shall look forward with interest to see its conclusion in its Part II. ("Dryden to Tennyson"), which is promised to us in a few months.

A First Year's Course in Oral French. By A. H. SMITH. (1s. 6d. Blackie.)

This small volume is intended for children of eight and nine beginning French by the direct method. Starting from the objects of the form room and their own persons, the *professeur* leads his boys on to geography and arithmetic lessons in French and the playing of French games. In this way, and by the learning of riddles, verses, and songs with music, and the help of frequent illustrations, the more serious work of word learning and sentence forming is made light for the young beginner. If any objection is to be raised to this part of the work, it is that many teachers may feel themselves hampered by the number of suggestions, in the way of questions and actions, offered in the text, when sufficient help of this kind has already been given in the preface. Grammar in French is insisted on from the beginning, is learnt by application, and summarized for revision at the end of the book, so as to form, as the author claims, a "short but fairly complete French grammar." We cannot help thinking that Mr. Smith has been rather ambitious in his standard of grammar for children of nine when he requires of them a knowledge of the *temps primitifs* of a number of irregular verbs, and such a refinement as the use of *Pon for on*. In other respects, however, the book is one to be recommended for both interest of subject-matter and for simplicity of style and language. Phonetics are not accentuated, but neither are they neglected, the first six lessons being repeated in phonetic characters, and a phonetic transcript added to each word of the vocabulary.

French by the Direct Method: Livre de Lecture. By H. VIVIER. (2s. T. C. & E. C. Jack.)

A most attractive summary of the history, literature, and geography of France. This little book brings us into touch with the men who have made France, and is calculated to arouse a living interest in them and their language and to lay a foundation for real study in the future. Mlle. Vivier has let the authors speak for themselves wherever possible, supplementing the long quotations given with a brief account of the work in question, some details of their life, and hints on their style. The book is in three parts—historical, literary, and geographical—and is profusely illustrated throughout. Appended are numerous questions on each chapter, often requiring answers of considerable length, so that they are applicable to either oral or written work. The standard of difficulty is suitable for an average fifth form.

French by the Direct Method. ROSSMANN and SCHMIDT. Part III. Edited by THOMAS CARTWRIGHT. (2s. 6d. T. C. & E. C. Jack.)

This book, which is avowedly Rossmann and Schmidt's "Lehrbuch der französischen Sprache" "recast and considerably extended," is, as its title indicates, entirely grounded on the New Method. There is every variety of material for oral and written work: descriptive pieces, anecdotes, history, poems and songs, with revision exercises on the "Four Seasons." The reduced copies of these pictures promised in the introduction do not, however, appear, though there are a fair number of other illustrations. A new and valuable feature of the book is the attention paid to word building, the formation of different parts of speech from the simple word being shown in very suggestive tables. This should encourage children to carry on such research for themselves, and so add largely to their store of words. The grammar, taught inductively and in French from examples met with in the text, is afterwards summarized in English—an unnecessary surrender, surely, where the two idioms are so similar and most of the difficulties have been already overcome. Finally, there is a full French-English vocabulary with phonetic transcript throughout. Indeed, nothing seems to have been omitted that could help and interest the most apathetic British child, and we confidently recommend the book to

schools where sufficient time can be given to use it thoroughly. We have noticed one misprint—"il vont," on page 209; and one curious error—in the use of the picture of the fox and crow to illustrate the fable of "Le Coq et le Renard."

Siepmann's Primary French Course. Part II. (2s. 6d. Macmillan.)

Mr. Siepmann has put together a delightful series of descriptions of French family life and visits to the chief monuments of Paris as related by an English boy spending his holidays abroad. Each chapter is a great fund for adding to the learner's vocabulary, and it is also coordinated with special work in grammar on the same plan as his German primer. There is, further, a selection of miscellaneous stories and poems which will be found useful for conversational purposes, and the usual exercises and vocabularies provided in all the volumes of his modern language series. In a work of such a kind it is rather surprising nowadays to find the use of the foreign tongue so little encouraged, all the grammar being in English. Where the words used are so near to our own, and the formulas so easily grasped and retained, it is surely a mistake to neglect such a convenient means for frequent practice of the foreign sounds. The verbs, too, strike us as unnecessarily elaborated; children, confronted with fifteen tenses of each of the four conjugations followed by their negative, interrogative, and interrogative-negative forms, are likely to be discouraged by difficulties that really do not exist, whereas they will very quickly learn the compound tenses by use. The book is, however, one that might well be used by a student working alone.

German Reader. Edited by W. SCHOLLE, Ph.D., and G. SMITH, M.A. (2s. 6d. Blackie.)

A great variety of subjects is included in this admirable Reader. Tales, legends, daily occupations, history, and geography in interesting *Bilder*, German literature, a few well selected poems, the story of the "Nibelungenlied," songs with music, and some excellent illustrations combine to make up a volume that should prove very useful to teachers and attractive to learners. The editors have aimed at placing the Reader "in German surroundings," and it needs but a little expansion on the part of a teacher to ensure the success of their careful efforts. "New Method" conversation is encouraged by notes written almost entirely in straight-forward German. A sketch of the treatment of each lesson and suggestions for written work are included in the same language. A vocabulary to the text is added, with helps to pronunciation in phonetic script, that has been previously explained. We have noted a few omissions: *Einpökeln*, *gellen*, *Herrschergelüste*, *tilgen*, *umherstreichen*, and a misprint, *vorgefordert*, on page 94, line 36. Clear type and a strong binding complete the equipment of a school book we can thoroughly recommend.

A Practical German Grammar, Reader, and Writer. By LOUIS LUBOVIOUS. (2s. Blackwood.)

This work is stated to be a compromise between the old and the new methods of modern language teaching, but it has, fortunately, a distinct leaning towards the latter. The great experience of the editor guarantees that the instruction is sound, and that the plan of the lessons is systematically progressive. Part I. contains object lessons, elements of conversation, useful drill on portions of grammar gradually introduced, and exercises for retranslation. In Part II. are a good selection of extracts for reading, phrases, "word-clusters" and grammar examples drawn from the text, on which are founded formal rules. Part III. consists of vocabularies, more elaborate "drill," and harder exercises for retranslation. If only a sufficient number of lessons for German can be secured in the time-table, there is every hope that this work will materially help to the acquisition of a "sound working knowledge" of the language, laid on solid foundations.

Aristotle's Theory of Conduct. By THOMAS MARSHALL, M.A. (T. Fisher Unwin.)

The "Nicomachean Ethics" is one of the earliest and one of the most interesting treatises on morals. To many, however, who are interested in ethical questions and problems Aristotle in the original is a sealed book. Mr. Marshall tries, and very successfully, we think, to undo the seals. Recognizing the defective arrangement, constant repetition, and highly technical character of Aristotle's writings, and at the same time the restrictions imposed on a professed translator, Mr. Marshall has adopted an excellent plan of bringing Aristotle's thought within the grasp of an intelligent reader. First, he gives a special introduction setting forth the purport of the "Ethics" as a whole. Second, each chapter of the "Ethics" has a special introduction by way of guide, and is followed by explanatory and critical remarks. Third, the chapters themselves are put before us in the form of a paraphrase rather than a translation; and, as far as we have tested the matter, Mr. Marshall's paraphrase seems to us most faithful to the Aristotelian thought. In his effort to make Aristotle's meaning thoroughly clear, Mr. Marshall makes abundant use of modern illustrations; and, whilst a few captious people may, as he thinks, blame him for thus treating a great classic, the great majority of interested readers will, we think, look upon such illustrations as imparting a more living interest to the work. And, after all, a great classic is not so easily degraded by being brought into the company of modern saws and instances. A copious and highly

useful index at the end completes a work that is sure to be welcomed and appreciated by a good many of that ever-increasing number of cultured people who know small Latin and less Greek.

Modern School Buildings, Elementary and Secondary. By FELIX CLAY. Second Edition, thoroughly revised and enlarged. (2s. net. Batsford.)

The first part, dealing with secondary-school buildings, has been curtailed by the omission of all such matters as more properly belong to pedagogics, and the space thus gained has been filled by a chapter on Fire Protection, the need of which has been proved by recent experiences at Eton and Shrewsbury and other public schools. Training colleges and the cost of school buildings are now more fully treated. The author's official position has given him exceptional opportunities for observing the world of school architecture—its needs and how they are being met. Thus we have the plans of the new University College School in course of erection at Hampstead and of several L.C.C. schools. It is a book that should be familiar to all Local Education Authorities.

Elizabeth Barrett Browning in her Letters. By PERCY LUBBOCK. (Smith, Elder, & Co.)

Mrs. Browning's Letters were a revelation—not as newspapers abuse the word. They gave the clue to no dark mystery such as the Byron letters recently published in "Astarte" are supposed to disclose; they did not expose the shadow side of a great poet like the letters of Keats; they did not even, like the Carlyle letters, chronicle the jars of a husband and wife who were ever falling out and kissing again in tears; but they do reveal the privates of the heart of a singularly pure and noble-minded woman who loved passionately and was loved no less passionately in return. The letters are a votive tablet on which the whole life of the poetess is writ large, but they are diffuse and prolix, and Mr. Lubbock has done well in using the letters as a *pièce justificative* for the "Life." He is no blind hero-worshipper: in fact, he sometimes does his subject bare justice. Thus, in his opening critique, he says: "They are not brilliant letters: . . . their value is not that they reveal genius in themselves." This may be true of them generally, and yet we should find it hard in all literature to match the letter of expostulation addressed to Miss Mitford: it is perfect in temper, in tact, and in expression. So, too, in all the references to her father, she writes as a Cordelia might of Lear—a father for whom Mr. Lubbock pleads as an "advocatus diaboli." Throughout the volume there is an excess of criticism. It is, on the whole, sound criticism, but the reader resents being told in each poem what he should admire or not admire. In spite of this defect, we have a clear presentment of a noble character whose poetry only half expressed her life.

Little Flowers of a Childhood. (3s. 6d. net. Moring.)

This is the record of a child who died in his fifth year, compiled, as we gather, by his aunt. It is a very simple record: there was nothing of precocity about the boy, only a temper and character of exceptional sweetness and loveableness. Though it will affect mainly the friends and relations, there is a gentle pathos in this story of a short life that will attract even strangers.

A First German Course for Science Students. By Prof. FIEDLER and F. E. SANDRACH. (2s. 6d. net. Moring.)

The Course consists of a Science Reader with vocabulary at the end and a very simple grammar, the passages corresponding to sections of the grammar. The diagrams of instruments are a good feature. For pupils beginning the study of science and German simultaneously nothing could be better, but we cannot help thinking that a more excellent way is to master first the elements of the language.

Analysis of certain of St. Paul's Epistles. Reprinted from Bishop LIGHTFOOT's Commentaries. (1s. net. Macmillan.)

This most helpful aid will be welcome to the student of the New Testament. A Pauline Epistle is at least as difficult to follow in argument as "In Memoriam," and Bishop Lightfoot has done for four of the Epistles what Miss Chapman did so well for Tennyson.

The Hundred Best Poems (Lyrical) in the Latin Language. Selected by J. W. MACKAIL. (6d. net. Gowers & Grey.)

Of Latin lyricists Catullus and Horace are first and the rest nowhere. Other poems number only twenty-five, of which the six from Virgil are rather idyllic than lyric. That Horace should have left no literary heir—not even an imitator—is almost a unique phenomenon in literature. Mr. Mackail has admitted one poem by Prudentius. There is ample material for a second volume—a *florilegium* of Christian hymns, the Italian Renaissance, and some exquisite exotics of Buchanan, Gray, and Cory.

The North-Eastern Railway have issued some attractive booklets likely to prove useful to the teacher tourist. The district covered by the line, "'twixt the Humber and the Tweed," is, of course, well known; but the sensibly arranged *Hotel and Lodgings Guide* (gratis), the *Anglers', Cyclists', and Golfers' Guides* (3d. each) should help to make easy the planning of a holiday tour. Application should be made to the Company's new London offices at 87 Gracechurch Street.

UNIVERSITIES AND SCHOOLS.

OXFORD.

LADY MARGARET HALL.—Scholarships have been awarded as follows:—To Josephine S. Elliott, St. Anne's School, Abbots Bromley, the Old Students' Scholarship of £40 a year for three years (French and German); to Maud E. A. Drew, Ladies' College, Cheltenham, £35 a year (English literature); to Helen Stocks, Leicester High School and Bournemouth High School, £25 a year (modern history); to Florence A. Macrae, Croydon High School, the Jephson Scholarship (modern history). A. Nölting, Edgbaston High School (modern history), is commended. The following scholarships are offered for competition in March, 1907:—The James Cropper Scholarship of £50 a year for three years; a Jephson Scholarship of £45; a scholarship of £35, and one of £30.

ST. HUGH'S HALL.—A scholarship of £35 a year for three years has been awarded to Mary Lindsay Gordon, Godolphin School, Salisbury (English literature). The following scholarships will be offered for competition in March, 1907:—One of £25 a year for three years; the Old Students' Scholarship of £30 a year for three years; and the Otley Scholarship of £40 a year for three years, open to candidates who have been educated for not less than three years at the Worcester High School.

SOCIETY OF OXFORD HOME-STUDENTS.—A scholarship of £25 a year, the gift of an old student, has been awarded to Gertrude M. Thatcher, Oxford Home-Student, Clifton High School, and Bristol University College (mathematics).

MANCHESTER.

At the meeting of the Court of the University on March 14 the Vice-Chancellor spoke strongly on the claim that the "New Charlottenburg" which is to be set up in London should be given an Imperial character; otherwise Manchester would urge an equally strong and even prior claim, for the new institution would be in imitation not of Charlottenburg, but of Manchester.

It was decided to provide a Certificate in Biblical Knowledge, which it is hoped may be useful for teachers in elementary schools.

In furtherance of the *concordat* between the University and the Municipal School of Technology, the ceremony of admitting as members of the University over a hundred students of that school has been performed by the Vice-Chancellor, who referred to the Association of both the School of Technology and the College of Music with the respective Faculties, and expressed the hope that those now recognized as new members of the University would take an active part in its corporate life.

The annual report of the Faculty of Commerce has been issued. The number of students reading for the commercial degree has increased from fourteen to thirty-one. The Faculty is recognized by the Ship Canal Company and most of the railway companies and a number of the banks, all of which pay the fees of students in attendance.

The most important of several recent benefactions is the gift of the premises now used as the Fielden Demonstration School and of a sum of £4,000 as an endowment to the School. The donor is Mrs. Sarah Fielden, who some years ago founded the Sarah Fielden Professorship of Education. The holder of this chair for the time being will be the director of the Practising School.

Prof. Schuster is to represent Great Britain at the forthcoming meeting of the International Seismic Association. A "Socialist Society" has been added to the list of students' clubs. New regulations agreed to by the Joint Matriculation Board provide that candidates may offer more subjects than the number required for the pass. The Examination of the Joint Matriculation Board is now recognized as exempting from the Previous Examination at Cambridge (if proper subjects are taken), a similar allowance being made by Manchester to those who have passed the Previous. It is also to be recognized as exempting from the Preliminary Examination of Medical Students at the Scottish Universities.

The Manchester Education Committee has appointed Mr. A. L. Cann, B.A. Lond., Principal of the Bolton Pupil-Teachers' College, to be Principal of the Manchester Pupil-Teachers' College, at a salary of £650 a year.

The post was held till December by Mr. W. E. Urwick, M.A. At the monthly meeting of the Committee Sir James Hay read favourable reports of Inspectors on the work and equipment of the Municipal School of Technology. Incidentally, he stated that the Committee would have to lose £900 owing to the increased soberness of the nation, that being the decrease in income from the whisky money.

Mr. J. W. H. Atkins, M.A., Lecturer in English Language, has been appointed Professor of English Language and Literature at Aberystwyth. The Council have appointed Miss Barbara Foxley, M.A., to the post of Mistress of Method and Assistant Lecturer in Education. Miss Foxley has held the post of Head Mistress at Dewsbury High School and at Queen Mary's Endowed School, Walsall. She has lately held a temporary appointment in the Man-

chester Training College since Miss Dodd's removal to Oxford. Mr. F. W. Gamble, M.Sc., has been appointed Secretary to the Manchester Literary and Philosophical Society in place of Dr. Lees, whose recent appointment in London has already been announced.

Dr. Ashby's third report on the special day schools for the mentally defective has been issued, and contains valuable information. The schools are attended by over 220 children. The utility of admitting the lower class of defectives to schools is dwelt upon. Referring to the question of causation of feeble-mindedness, Dr. Ashby states that it is clear that in the majority of cases it tends to run in families. There is no evidence that alcoholism in parents or shocks during pregnancy *per se* produce imbeciles or mentally defective children. The subject of the provision of schools for this class of children occupied the attention of the Salford Education Committee, but action in the matter was deferred. An appeal is being made for £20,000 to extend the work of the Sandlebridge Homes for the Feeble-minded, with which the name of Miss May Dendy will always be associated. The work was warmly commended by Sir James Hay, who supported the appeal.

The meeting of the Lancashire County Council was occupied principally with questions of finance. Sir Henry Herbert, who was again elected chairman, stated that this year £366,500 would be asked for for elementary education, an increase of £24,500, due mainly to the increase of teachers' salaries. It is estimated that the rate for elementary education will be raised by 1d., that for secondary education $\frac{1}{2}$ d. An inquiry has been conducted by the Local Government Board into the application of the Council for permission to levy an increased rate for higher education.

At the Grammar School one open classical scholarship has been won at Corpus Christi College, Oxford. In the list of Classical Moderations recently published the names of three Mancunians appear in the First Class.

Two performances of "The Ancient Mariner" have been given by the school musical societies under the conductorship of Mr. A. R. Florian, M.A. These concerts were made the occasion of a meeting of the parents of boys, first, of the upper, and, secondly, of the lower, school, and, in addition to the opportunity given for intercourse between masters and parents, a discussion was arranged for in which the parents were free to take part. This is the second year in which these conferences have been held. The Harriers' runs (in which Mr. Paton has been very ably assisted by Mr. H. A. Newbould, B.A.) came to a conclusion with a steeplechase, of which the course was laid by Mr. Paton, and for which there were over a hundred entries. A second playing field—the need of which has long been felt—has now been secured in North Manchester. The lectures concluded with a very able lecture on "The Reform Movement in Russia," by Mr. Bernard Pares, M.A. The numbers of the North Manchester Preparatory continue to rise steadily.

At the Manchester High School for Girls Edith Edmunds has won the Mary Conybeare Scholarship for classics. The scholarship, which is of the value of £50 for three years, will be held at Somerville Hall, Oxford.

Donations for the new electric lighting fund are coming in satisfactorily. The Governors of the Whalley Range High School for Girls have withdrawn for the present their application to the Board of Education for recognition as a secondary school.

In no part of England is the discussion of the new Bill likely to be more animated than in Manchester and in Lancashire generally. In the county there are 1,486 voluntary

to 307 Council schools, and the accommodation is respectively 706,437 to 242,518. Not only the county districts, but also some of the large boroughs, rely largely on voluntary schools for their primary education. In Manchester and Salford the Roman Catholics are, of course, very strong; and the Bishop of Salford and one of his chief educational advisers, Canon Tynan, have pronounced the Bill impossible from their point of view. The Bishop of Manchester (who alluded to the Bill in both his sermons on April 22) has issued a manifesto emphatically condemning the Bill and appealing to all Churchmen to organize a political agitation against it. To this Canon Hicks has replied by an open letter, suggesting that amendments are possible and necessary, but accepting the Bill as "an honest attempt to solve a difficult public problem"; though he makes no secret of his opinion that the secular system is the only possible final solution.

WALES.

Mr. Birrell's Bill has given general satisfaction in Welsh Radical and Nonconformist circles. It is, on the whole, regarded as a fair and courageous attempt to settle the religious question, while its treatment of the voluntary schools is considered just to all concerned. The Bill, however, is regarded in a very different light by Churchmen and the advocates of denominational teaching. If one may judge from the public utterances of some of the bishops and other prominent Church-

men, the opposition which will be offered to it will be as strenuous and as prolonged in Wales as it threatens to be in England. Its provisions are branded with such strong epithets as "scandalous," "grossly unfair," &c.—in fact, the attitude of Churchmen and Catholics towards the Bill is precisely similar to that of their co-religionists in England. The Welsh Churchman, moreover, has an additional reason for his alarm and distrust; for he will no longer be in a position to appeal to the Board of Education for protection against the treatment which he surmises will be meted out to him by the Education Committees of Wales.

During the dark days of the Welsh revolt (now recognized as a dismal failure), the managers of the voluntary schools were no doubt consoled by the knowledge that a deputation to the Board of Education would generally receive a sympathetic hearing, and occasionally result in securing for them a fair measure of justice. But by the present Bill this power of appeal is, apparently, done away with, inasmuch as Part IV. transfers the whole of the powers and duties of the Board of Education, so far as they relate to Wales, to the new Council of Wales. It is true that there is a saving clause "that His Majesty in Council may make certain exceptions," but the Bill contains no indication whatever as to the probable nature of these "exceptions," so that they are not likely to be of a very substantial character. The whole intention of the Government is evidently to confer on Wales very extensive, if not complete, powers of self-government as regards education, so that the "exceptions" contemplated in Section 4, Part IV., will necessarily deal with trivial details only. It would appear to be contrary to the spirit of the whole section to introduce into it any important reservation of powers. As far, therefore, as one can judge, the opponents of the Bill have but the slenderest ground for hoping that by more strictly defining this subsection, and enlarging its scope, they will find some way of escape from the absolute control and "tyranny" of the Council.

The scheme for a National Education Council as drawn up provisionally by Sir William Anson received the qualified approval of all sections; and at the Cardiff Conference the Bishop of St. David's went so far as to agree to the principle underlying it. The very extensive and unrestricted powers of the new Council, however, have filled the denominationalists with profound alarm, and we may therefore anticipate that they will fight it with all the vigour and with every resource at their command. The *Western Mail*, for instance, which in the past has been one of the strongest and most consistent advocates of a modified form of educational home rule for Wales, is now thoroughly frightened, and unhesitatingly dubs the present proposals as calculated to establish a Welsh "Star Chamber." In addition, therefore, to their general objection to the present Bill, Welsh Churchmen and Catholics consider that they have a special reason for fighting it strenuously and to the bitter end.

The members will be appointed by the Councils of counties and of county boroughs, and of any boroughs and urban districts having a population of twenty-five thousand. If, therefore, the present clause stands, all possibility of co-option or of admitting women members is done away with, and the promises of Mr. Lloyd-George, and of the promoters of the scheme at the Cardiff Conference, are completely falsified. Prior to the introduction of the Bill, it was generally assumed that a limited number of women, and other expert members, would form part of the constitution of the Council, but, for some reason or other, this is now rendered impossible, as Clause 1 is as definite as it well can be.

How far Mr. Lloyd-George is responsible for this decision there is, of course, no means of knowing. In spite of the vague promise that he would advocate the inclusion of one or more expert members, many feared that he would succumb to the influence of the County Councilors who appear to entertain a special dread of the person they designate vaguely as "academic." The omission of any guarantee that women shall be elected is especially serious to the future development of the education of girls in Wales. On the Central Welsh Board they were universally regarded as among its most efficient members.

The arguments in favour of co-option are so well known that they need not be repeated. And it is probably sufficient to state at this juncture that, unless some modification of the first clause is introduced, the proceedings of the Council of Wales will be viewed with considerable suspicion by all branches of the educational profession. An attempt may be made later on to pacify teachers by the formation of a kind of Consultative Committee, but it is doubtful whether such a Committee will commend itself generally, as its relationship to the Council itself is not sufficiently close; nor are its means of affecting the opinion of members very great. Our experience of the Consultative Committee of the Board of Education is not such as to justify much enthusiasm for a similar body attached to the Welsh Board of Education. There should be some scheme devised by which teachers and others concerned may have direct access to the Council itself.

As was generally anticipated, the powers and functions of the Central Welsh Board are transferred, but not those of the University Court. Why an exception in favour of the University should be made is not quite clear, as it cannot be argued for one moment that the Court transacts

business of a more complicated and academic character than the Central Welsh Board. As a matter of fact, owing to the great powers of the Senate of the University, the work of the Court is often of a very routine character, requiring no great special knowledge. On the Central Board, on the contrary, questions involving important educational principles are often discussed, in which a real acquaintance with higher education is essential. Clause (3) indeed appears to refer to some kind of control over higher education, as it specifically states that the Council shall have power to supply and to aid the supply of education of *all kinds* in Wales. Clause (5), however, eliminates the University and colleges from the list of bodies which will receive Parliamentary money through the Council.

The Council is invested with very great financial powers, and in this respect the provisions of the Bill are very satisfactory. How the different Local Authorities will regard this section it is impossible to say, but no doubt the fact that the Council will be empowered to levy rates will ultimately tend to its ultimate success and stability.

The Drafting Committee will meet at Cardiff on June 1 to decide upon a provisional constitution for submission to the Privy Council. Several names are already mentioned for the most important posts under this Council, so assured is the Welsh public that it will become an established fact. But, in the interests of the Council itself and especially of Welsh education, it is much to be hoped that one or two of these gentlemen will not be offered appointments, as they do not appear to possess a single qualification for the work, except that of having done some political service to the dominant party.

At the last meeting of the Court of Governors, Principal Reichel submitted a very convincing argument in favour of an increased financial grant to the Welsh colleges. As compared with the English provincial

colleges the grant assigned to the three Welsh colleges is quite inadequate, and, unless it is substantially increased, the financial condition of the colleges will be a serious one. The policy which is adopted by the Treasury, viz., the encouragement of higher education in populous centres and its discouragement in rural districts, will tell very hardly upon Bangor and Aberystwyth. Under this policy, these two colleges will actually receive a diminished grant. Yet, as Dr. Sadler recently pointed out, it is from the rural districts, and not from the great industrial centres, that Wales derives most of her educational power. The special condition of Wales should commend itself to Mr. Asquith, and it is much to be hoped he will be prepared to make an exception in regard to the two colleges of Bangor and Aberystwyth. Cardiff stands to gain a little by conforming to the latest policy of the Treasury.

At the same meeting Lord Kenyon proposed that the King be invited to lay the foundation stone of the new college buildings. The Governors, of course, warmly adopted the proposals. His Majesty has always shown the keenest interest in Welsh higher education; so it is not unlikely that he will accede to the request of the Governors.

The University of Wales has formally notified that it is prepared to accept the benefaction of Mr. Eyton Williams, but it remains to be seen whether his heirs-at-law will allow the money to pass to the University without testing the legality of the will. The publicity which has been given in this instance should be sufficient to warn all intending benefactors that they must eliminate all religious restrictions from their wills.

The Army Council has accepted the Senior Certificate of the Central Welsh Board as exempting candidates from the preliminary qualifying examination for entrance to Woolwich and Sandhurst.

Dr. Schuddekopf has been appointed to the Examinership in German for the Central Welsh Board next July.

SCOTLAND.

The Executive Committee of the Carnegie Trust have made certain provisional alterations in the regulations for the payment of class fees. The passing of the degree examinations is a condition of the continued payment of class fees on behalf of any beneficiary. Hitherto the student has been allowed one year in which to pass the degree examination in any department; but in future, if he has not passed after he has had two opportunities of presenting himself for examination, he shall cease to be a beneficiary until he passes. The reason of this change is that, while in some Faculties there are only two graduation examinations in the year, there are in other Faculties three or four. A change has also been made in the regulations regarding the payment of fees for Honours and other classes which are not obligatory. In future payment of these will be made only on behalf of applicants who have already passed the Ordinary degree examination in the relative subject or group of subjects. These alterations will check some abuses and reduce slightly the Trust's expenditure on fees.

Commemoration Day was observed at Glasgow University on April 18. An able and eloquent, though somewhat critical, discourse on Francis Hutcheson was delivered by Prof. Henry Jones. Honorary degrees

were conferred on a number of distinguished men, and a portrait of Principal Story, painted by Sir George Reid, was presented to the University. At the banquet in the evening Mr. James Caldwell, M.P., Chairman of Committees of the House of Commons, held forth the alluring prospect of a Government grant of £50,000 a year for the Scottish Universities, to be paid out of the equivalent grants which are due to Scotland in connexion with the Treasury expenditure under the English Education Acts. The general funds of the Universities, which are diminished rather than increased by the operation of the Carnegie and other benefactions, are sorely in need of some such help as this; but there many other claims on the part of Municipal and Educational Authorities, and it would therefore be foolish to count upon securing from the Government what the Universities require.

In the address which he prepared for the ordinary graduation at Glasgow University on April 17, but which he was unable, owing to ill-health, to deliver, Principal Story advocated the provision of a Chair of Music in the University.

The Rev. George Henderson, M.A., Ph.D., minister of the parish of Edrachillis, Sutherlandshire, has been appointed by the University Court of Glasgow to the recently established Lectureship in Celtic Language and Literature. Mr. Henderson is a distinguished graduate of Edinburgh University. He has also studied at Berlin, Vienna, and Leipzig, as well as in Wales and Ireland, and he has made a number of valuable contributions to Celtic study.

Prof. Henry Jones, of Glasgow University, has been appointed Hibbert Lecturer at Manchester College, Oxford, for three summer terms. The subject of his lectures will be "The Religion of Idealism."

The General Council of Glasgow University has unanimously passed a resolution strongly approving the new draft regulations for the training of teachers. The Council also passed a resolution of thanks to Mr. James A. Campbell, who retired from the Parliamentary representation of Glasgow and Aberdeen Universities at the recent General Election, after occupying the seat for twenty-six years. A similar resolution was adopted by the Aberdeen General Council.

The Scotch Education Department has issued a scheme for the training of boys in Scottish schools who desire to obtain commissions in the Army. Candidates for the new Army Certificate, which will admit to the Royal Military Academy or the Royal Military College, must be pupils of approved schools and must be not less than seventeen years of age. They must have qualified for the Intermediate Certificate of the Department and must have subsequently continued to give regular attendance at school for not less than one session, pursuing their studies according to an approved curriculum.

IRELAND.

The Commission of Inquiry into the position and condition of Trinity College and Dublin University has not yet been issued, but some recent utterances in the press indicate how many are the difficulties to be solved in endeavouring to improve and widen Trinity College, and at the same time make it acceptable to the Roman Catholic authorities. Mr. Culverwell in a letter to the *Irish Times* advocates not only reforms which by common consent are needed in the government of the College, the election to fellowships, and the curriculum, but also the establishment of double chairs and alternative courses in such subjects as philosophy, ethics, and history, so as to remove every reasonable objection to Roman Catholics attending the College. The attitude of the Bishops, however, shows plainly that no concessions of this kind will satisfy them. Mr. T. W. Russell, M.P., in the *Freeman's Journal*, suggests the advisability of falling back on the scheme proposed in the report of the last Royal Commission, namely, to reconstitute the Royal University as a teaching University, with constituent colleges, of which one should be University College, Dublin, adequately bestowed and equipped. The Archbishop of Dublin, hastening to reply, denied that such a solution would be accepted by Catholics, and emphatically re-stated his position, that nothing short of a college in every way equal to Trinity College, in buildings, equipment, staff, and endowment, and completely on Catholic lines, would be sufficient. It has always been evident that the Church will sanction no University for Roman Catholics which is not completely under Catholic control. It may also be taken for granted that intercourse between Catholic and Protestant students is entirely disapproved.

In endeavouring to settle the Irish University question it is mere waste of time not to recognize fully from the outset, first, that the insistence on such conditions is made by the Church—not by the laity. If the laity only had to be satisfied, the question could be settled tomorrow; and the educated and thoughtful among them, by a large majority, prefer the attendance at Trinity College of Roman Catholics and Protestants together. In the second place, it must be recognized that the Church will ask for the very utmost that they think the Government will give, or that their flocks will support them in demanding. The recent Maynooth resolutions have asked, not merely for a well endowed Catholic University, but for the conversion of Trinity College itself and its endowments to Catholic uses. In England Catholics can attend Oxford; but in Ireland the submissiveness of the laity enables

the Church to make higher demands, and to prevent their flocks using any advantages short of those their demands insist on.

"The cry is still they come!" At the previous Commencements this session, only a few women-students from Cambridge or Oxford appeared to take the Dublin University degrees. At the Conferring of Degrees on April 23, however, eighty-six ladies from the English Universities took the B.A., sixty-eight the M.A. degrees; and one the degree of Doctor in Litteris.

The Government have on their hands the duty of reforming not only University education, but also the Intermediate system. Early in April Mr. Boland, in the House, asked the Chief Secretary if his Government would permit permanent inspectors to be appointed, in order to carry out fully the scheme of the Commission of 1898. The late Government had prevented this, although high legal authority had been brought to bear on them to show that their refusal was a violation of the statutory obligations imposed by the Act of 1900. Mr. Bryce replied that the present Government still "considered it undesirable to create fresh vested interests in a Government which might be the subject of some change." He was, however, unable to make any definite statement on the subject.

While the Board may thus reasonably complain of not being allowed to carry out their schemes fully, they manifest such incompetence in their administration, and have so hampered the schools by their rules and their blunders, that it may well be doubted if any further extension of their powers should be allowed. Other questions in the House elicited the fact that the publication of the rules and programme has been delayed so long as to make it impossible for the books required to be written or edited in time for the beginning of the school year, while the publication of the results of the examinations is delayed till after the opening of the schools (September 1), leading to confusion in the arrangement of work and classes. A prominent Dublin head master, in a letter to the *Independent*, describes the proceedings of the Board this session.

The results published on September 9 were so full of blunders that a new prize list had to be published October 30, and a new pass list November 22. Both were produced "hugger-mugger," without any information concerning their existence being vouchsafed. Even these lists contained so many blunders that a fresh revision had to be ordered, December 14. Of this nothing further was heard till, accidentally on March 26, a new pamphlet, which had not in any way been advertised or made known to pupils or heads, was found in a bookshop. In this as many as forty-three new exhibitions had been awarded! It appears it had been published six weeks previously.

When we add to this mismanagement—which involves grave injustice to individual pupils, and the utmost confusion in the work of schools—the fact that this year the results fees were, without any warning, reduced by one-third, creating in many cases serious financial trouble, we cannot wonder that the unfortunate parents and teachers who are the victims of this huge, complicated, and bungled examination system are indignant.

The schools have one remedy in their hands—an effectual one. Let them all, or, at least, all the important ones, withdraw wholly from the Intermediate Examinations until the grievances they suffer from are redressed. Seeing that there is a large increase in the numbers entering this year, this plan of campaign does not seem likely to be adopted, and the Board can continue to reply to complaints, as they lately did through Mr. Bryce in the House, that they never undertook to bring out their programme in time; so there is no question of punctuality, and that they can take what time they wish—from two months to seven—to decide finally what the results of the examinations shall be, while, as is shown, what result fees shall be paid is a still more doubtful speculation, and completely at their mercy.

SCHOOLS.

ABBOTS BROMLEY, ST. ANNE'S.—In the recent examinations for scholarships at Lady Margaret Hall Josephine Scott Elliot was awarded the Old Students' Scholarship of £40 a year (French and German).

CITY OF LONDON SCHOOL.—Partisans of Rugby football in the school have recently found a warm supporter in Mr. Rowland Hill, who, supported by the Head Master, harangued a crowded audience. The enthusiastic reception accorded the eminent speaker was, however, due rather to the latter's personal popularity than to any intention of changing the present code. An old pupil, Mr. Israel Gollancz, has taken his D.Litt. at Cambridge; and Mr. Malcolm Delevingne, another Old Boy, has been appointed a member of the Commission to inquire into the working of the Truck Act. L. Spero, F. E. Daunt, and E. F. Ellis have been elected Secretary, Treasurer, and Captain of the Swimming Club, whose programme this season includes instruction in life-saving. The Modern Side Saturday Club ended a most successful season by a visit to Hampton Court, where, at the request of the editor of the *Captain*, the members were photographed. For the Summer Term a Modern Side Rambling Club has been organized, with E. G. Browning as Secretary, to promote country walks, cycle rides, and

Nature study. Unfortunately the school has sustained a serious loss in the retirement of Mr. A. E. Bernays, who is joining the publishing firm of Arnold as chief literary adviser. The various organizations of the school, however, to which Mr. Bernays has been a guide and friend, derive consolation from the fact that, as a near neighbour, he will in the future maintain friendly connexion with us.

HAMMERSMITH, ST. PAUL'S GIRLS' SCHOOL.—At the recent examination held on April 3, 4, and 5, the following girls gained junior foundation scholarships:—Phyllis Bewsher, Queen Elizabeth School; Marie Finch and Beatrice Hooke, St. Paul's Girls' School.

PORTSMOUTH HIGH SCHOOL.—In the recent examination for the Clothworkers' Scholarship for Girton College, Cambridge, Ethel Seaton headed the list of successful candidates, and has been awarded the scholarship of £60 a year for three years.

STEVENAGE, ALLEYNE'S GRAMMAR SCHOOL.—The new buildings of Alleyne's Grammar School, Stevenage, were declared open last month by Dr. Butler, Master of Trinity College, Cambridge, who also distributed the prizes. In the course of an address Dr. Butler referred to the revival of the school and pointed out the serious responsibility which devolved upon the boys in whose hands reposed its future welfare. He strongly advocated the reading of good novels, referring especially to the works of the first Lord Lytton, whose grandson, the present Earl, a governor of the school, was present. Lord Lytton moved a vote of thanks to Dr. Butler. The Head Master, in his report, urged the necessity of placing the school library and museum upon a sound basis. He also mentioned that the question of compulsory shooting, as recommended by Lord Roberts, was shortly to be brought before the governing body. Mr. Halidie, Education Officer of the Hertfordshire County Council, referred to the work done by that body in connexion with secondary schools since the passing of the Education Act. Subsidies to the extent of £3,000 were annually voted, and grants of £27,000 had been made for building purposes.

UPPINGHAM.—The following entrance scholarships have been awarded:—T. V. Durell, £70, classics and mathematics; K. B. Harper, £70, classics; G. G. Shute, £70, classics; E. Darke, £70, mathematics; K. M. Bailey, £70, classics and science; J. L. Leslie Smith, £50, classics; R. H. Fawcett, £50, classics; E. Newbolt, £30, classics; H. B. Moore, £30, classics (for one year). Rutland Scholarships: O. C. Constable, S. F. Haslam. At the usual Easter concert Handel's "Samson" was performed with great success. The soloists were: soprano, Mr. S. E. Brown; tenor, Mr. C. Norcutt, of Westminster Abbey, and Mr. Watkin Mills. Unfortunately, the Hon. Nora Dawnay, who was to have been the contralto soloist, was unable through illness to appear.

WINCHESTER.—The Debating Society resolved, by 19 to 15, that it did not welcome the movement which aims at putting women on an equality with men. B. H. Simpson has obtained a scholarship at Magdalene, Cambridge. The Sixteen Club has discussed a paper on "Gothic Architecture" by O. B. Wordsworth. The English literature prize has been awarded to C. H. Benley and A. J. Toynbee (bracketed equal). The Richardson prize has been won by R. H. Fowler; the English essay by R. M. Y. Gleadowe; the Latin essay by A. J. Toynbee.

WOOLWICH POLYTECHNICAL SCHOOL.—There was a successful display of drill and gymnastics in the New Town Hall on Friday, April 6, and term ended on April 12. The football season has been the best in the annals of the school. The First Eleven played twenty matches, winning fourteen and losing three, while three were drawn; and 105 goals were scored against 25 by our opponents. Only one defeat was from a school, a weak team being beaten away from home. Mr. Wolfsberger has left amid general regret, and Messrs. Michell and McDonald will join the staff next term.

WORCESTER HIGH SCHOOL.—This school was inspected at the end of last term and the beginning of this by the Board of Education, who have sent a very encouraging report, and it is now recognized for the purpose of training teachers for secondary schools.

THE complaint is often made, and with reason, that public examiners are out of touch with the teaching of the schools in which they examine. Occasionally examiners are chosen from the body of experienced teachers, but often one hears the examiner say: "Of course, I know nothing about teaching; I do not know in the least how long it would take to prepare for this syllabus I have drawn up," and so on. Under these circumstances any opportunity of bringing examiners and teachers together must be welcomed by those who have the true interests of education at heart. A notable instance of this occurred on Saturday, March 3, when the Secretaries of the Oxford and Cambridge Schools Examination Board and the examiners appointed by the Board to consider proposed changes in the Biological Schedules for the Higher Certificate Examination met, by invitation, some of the teachers of biological subjects in schools. The proposed changes were freely discussed, and the examination authorities proved themselves willing to modify their schedules in accordance with the suggestions of the teachers present.

PRIZE COMPETITIONS.

Prizes for April have not yet been claimed. The winners are requested to send their names and addresses.

Enfant des deux races, élevé dans l'usage de deux langues, nourri dans des croyances diverses et bercé dans des préjugés contraires, le métis forme un composé aussi inexplicable aux autres qu'à lui-même. Les images du monde, lorsqu'elles viennent se réfléchir sur son cerveau grossier, ne lui apparaissent que comme un chaos inextricable dont son esprit ne saurait sortir. Fier de son origine européenne, il méprise le désert, et pourtant il aime la liberté sauvage qui y règne; il admire la civilisation et ne peut complètement se soumettre à son empire. Ses goûts sont en contradiction avec ses idées, ses opinions avec ses mœurs. Ne sachant comment se guider au jour incertain qui l'éclaire, son âme se débat péniblement dans les langes d'un doute universel: il adopte des usages opposés; il prie à deux autels; il croit au Rédempteur du monde et aux amulettes du jongleur, et il arrive au bout de sa carrière sans avoir pu débrouiller le problème obscur de son existence.

Ainsi donc, dans ce coin de terre ignoré du monde, la main de Dieu avait déjà jeté les semences de nations diverses. Déjà plusieurs races différentes, plusieurs peuples distincts se trouvent ici en présence.

Quelques membres exilés de la grande famille humaine se sont rencontrés dans l'immensité des bois. Leurs besoins sont communs: ils ont à lutter contre les bêtes de la forêt, la faim, l'inclémence des saisons. Ils sont trente à peine au milieu d'un désert, où tout se refuse à leur effort, et ils ne jettent les uns sur les autres que des regards de haine et de soupçon. La couleur de la peau, la pauvreté ou l'aisance, l'ignorance ou les lumières, ont déjà établi parmi eux des classifications indestructibles: des préjugés nationaux, des préjugés d'éducation et de naissance les divisent et les isolent.

Où trouver dans un cadre plus étroit un plus complet tableau des misères de notre nature? Il y manque cependant encore un trait.

By "W. G. M.

Offspring of two racial types, brought up from childhood to speak two languages, nurtured amongst divergent creeds, and rocked in a cradle of conflicting traditions, the half-breed is a mixture of elements as incomprehensible to others as he is to himself. When impressions of the outside world begin to impinge upon his untutored brain, they create only a hopeless state of confusion from which his mind is unable to emerge. Proud of his European descent, he despises the prairie, yet longs for the barbaric freedom that pervades it. Civilization he adores; yet he will not submit heart and soul to its sway. His tastes are at war with his ideas, his views of life with his habits. His soul struggles along painfully in the bands of a doubt that embraces everything, not knowing, in the dim light that is dawning upon it, whither to go. He adopts customs that are incongruous. He worships at two shrines. He has faith in our Redeemer, and also in the talismanic juggleries of the medicine man. He runs his span without ever solving the hidden problem of his existence.

Thus it was that the hand of God had early sown the seeds of divergent types in this plot of earth, unknown to the world, where many different races and peoples now find themselves face to face.

A few exiles from the great human race meet in the vast solitudes of the forest. Their needs are the same. They must battle with beasts of prey, with hunger, and with the vicissitudes of climate. They are scarcely thirty in all, in the midst of a wilderness where everything presents an obstacle to their exertions. The only looks they exchange are those of hatred and suspicion. Difference of colour, money and the lack of it, knowledge and ignorance have set up barriers that cannot be broken down; racial traditions, the traditions of education and birth, have separated them into classes and keep them apart.

Where can we find a more perfect miniature of human wretchedness? Yet one more touch is wanted to complete it.

We classify the 155 versions received as follows:—

First Class.—Fonctionnaire, Clev, E.G.H., Emil, E.H.O., Chingleput, L'Aiglon, Enna, Caradoc, Illex, Den, Altnacaille, E.L., M. de C., W.E.G., Glenleigh, Bladud, Eicarg, Menevia, Shakspeare.

Second Class.—A.P.W., Maxima, Masonwyn, Douglas, Bruno, C.T.C., Gorrymore, D.A.J.K., Outis, Carky, Felicia, Vilette, Great Western, Vesuvius, H.A.P., Einna, Nokomis, Maurice, Megan, Don Quichotte, Max, Elna, C.Sch., Roggenfeld, Prig, Aiglon, Narcissus, N.B., J.K.M.B., Elra indignantis, O.R.S., Devanahay, C.H.T., A.M.C.D., E.M.B., Lonquia, Fife, Nessko, Rosita, Melissa, Fortes et Fidelis, A.F.A., Parergon, Tis, Martin, Day, Vérité, Eta, Wynberg, M.W., L.M.G., Chemineau, L.E.R., Chien-lung, D.B., Chem., Bairn, Wilts, M.G.

Third Class.—Reeda, Antithetic kal, Wilstub, R. de Ribou, Veritas, A.L., Zerubbabel, Dickie, Nemo, Excelsior, Alwen, Roxburgh, Netherton, Teddy, Annie Laurie, Papillon, Payerne, Cornet, Epi,

(Continued on page 348.)

GLOBES.

The Board of Education says:—"It would be highly advantageous if in every school there were a twelve-inch Globe with adjustable meridian and axis on a single pedestal."

BACON'S EXCELSIOR GLOBES.

No. 1. **TWELVE-INCH GLOBE** with brass graduated horizon, and double meridian, and adjustable axis, mounted on single pedestal, light and yet substantial, which will meet all requirements. Price 30s. net.

No. 2. **TWELVE-INCH GLOBE** with brass graduated single meridian and fixed axis. Price 21s. net.

No. 3. **NINE-INCH GLOBE** with brass graduated single-meridian and fixed axis. Price 12s. 6d. net.

No. 4. **SIX-INCH GLOBE**, neat, strong, and serviceable. Or without meridian, 10s. 6d. net.

Price 5s. 6d. net.

They are all artistically coloured, thoroughly up-to-date, mounted on single pedestal, light, and yet substantial.

ORDNANCE SURVEY MAPS.

The Maps executed by H.M. Ordnance Survey are on the one-inch, six-inch, and twenty-five-inch to a mile scales. A school in any part of the country can be supplied with a Map of the District, on the one-inch or six-inch scale, mounted on Cloth, Rollers, and Varnished, at 2s. per small Ordnance sheet.

ONE-INCH SCALE MAPS embrace an area of eighteen miles by twelve miles. Four of these sheets represent an area of thirty-six miles by twenty-four miles, making a map 38 by 26 inches. On Cloth, Rollers, and Varnished, 8s. net. Six sheets, an area of thirty-six miles by thirty-six, about 38 by 38 inches, 12s. net.

SIX-INCH SCALE MAPS of the same size of sheet embrace areas as follows:—Four sheets, six miles by four miles, 8s. net. Six sheets, six miles by six miles, 12s. net.

TWENTY-FIVE INCH SCALE MAPS embrace only an area of one and a half miles by one mile, each sheet being 40 by 30 inches. One sheet can be had uncoloured, mounted on Cloth, Rollers, and Varnished for 7s. net. Two sheets, 40 by 60 inches, covering one and a half miles by two miles, 13s. net. Four sheets, 80 by 60 inches, covering three miles by two miles, 22s. net. They show every feature of the district; roads, parks, houses, railway stations, &c., &c. Cost of Contouring in Colours on application.

G. W. BACON & CO., Ltd., 127 Strand.

GASPEY-OTTO-SAUER METHOD

For the Study of Modern Languages.

Mr. JULIUS GROOS desires to call the attention of teachers and students to the completion of the series of manuals of instruction in the French language published by him for the use of English-speaking people. The series has been now revised throughout by Mr. C. TALBOT ONIONS, M.A. Lond. (Author of "Little French Folk," Joint Author of "Advanced French Composition," &c.), whose aim has been to meet present-day requirements in the teaching of modern languages.

The two concluding volumes are now ready:—

Elementary French Grammar.

By Dr. J. WRIGHT. 3rd edition. Revised by C. TALBOT ONIONS, M.A. vii + 184 pp. 8vo, cloth, 2s.

Materials for French Prose Composition

(formerly known as "Materials for Translating English into French"). By Dr. EMIL OTTO. 5th edition. Revised by C. TALBOT ONIONS, M.A. vii + 193 pp. 8vo, cloth, 2s. 6d.

The other volumes, published in 1905, are as follows:—

French Conversation-Grammar.

A New and Practical Method of Learning the French Language. By Dr. EMIL OTTO. 13th edition. Revised by C. TALBOT ONIONS, M.A. viii + 402 pp. 8vo, cloth, 4s. net.

Key to the French Conversation-Grammar.

By Dr. EMIL OTTO. 8th edition. Revised by C. T. ONIONS. 76 pp. 8vo, boards, 2s.

A French Reader.

Being a Selection of Graduated Passages, with Exercises in Conversation and a Vocabulary. By C. TALBOT ONIONS, M.A. viii + 307 pp., cloth, 3s.

LONDON:

D. NUTT, 57-59 Long Acre. DULAU & CO., 37 Soho Square.
SAMPSON LOW, MARSTON & CO., LTD., 100 Southwark Street, S.E.
HEIDELBERG: JULIUS GROOS.

JUST PUBLISHED.

SECOND EDITION. THOROUGHLY REVISED AND ENLARGED.

With many new Plans and other Illustrations. Large 8vo, cloth gilt, containing 556 pp., with 450 Illustrations, 25s. net.

MODERN SCHOOL BUILDINGS.

ELEMENTARY AND SECONDARY.

A Treatise on the Planning, Arrangement, and Fitting of Day and Boarding Schools.

HAVING SPECIAL REGARD TO SCHOOL DISCIPLINE, ORGANISATION, AND EDUCATIONAL REQUIREMENTS.

By FELIX CLAY, B.A., Architect.

An Indispensable Book for all interested in the Equipment and Management of Schools.

In this new edition the information relating to ELEMENTARY EDUCATION AND SCHOOLS has been practically re-written, particular attention being given and examples added to the subject of planning small- and medium-sized country schools, a branch of school building that was somewhat perfunctorily dismissed in the First Edition; special chapters have also been added upon Infant Schools, Manual Training, and Cooking Centres, Temporary Buildings, the Alteration and Adaptation of Old Buildings, as well as a Comparative Survey, fully illustrated by a large number of standard plans drawn to a uniform scale, of the systems of school planning on the Continent and in America.

That part of the book dealing with SECONDARY SCHOOLS has been very carefully revised, a new chapter on Fire Protection has been introduced, and a rather fuller treatment has been given to Training Colleges, Pupil Teachers' Centres, Cost of Buildings, &c. Great care has been taken to treat fully all questions that directly affect the health of the scholars, and in both parts of the book additional plans and views of a number of recently erected schools have been included.

B. T. BATSFORD, 92 High Holborn, London.

TO TEACHERS AND SCHOOLS.—Suitable selection

PARCELS OF MUSIC to value of one guinea, sent on approval on condition that at least one third of value of parcel is kept. Returns and settlement at the end of the term. Catalogue gratis.

WICKINS' RAPID PIANOFORTE TUTOR. Price 2s. 6d. each net, post free. "Marvel of simplicity and thoroughness."—ANTOINETTE STERLING.

WICKINS' RAPID VIOLIN TUTOR. "Best popular violin school before the public."—ALFRED GIBSON.

WICKINS & CO., 10 Lancashire Court, New Bond Street, London, W.

"LE MAÎTRE PHONÉTIQUE,"

The Organ of the **Phonetic Teachers' Association** (President: Prof. W. VICTOR; Secretary: Dr. PAUL PASSY), appears monthly, giving varied reading matter in French, English, German, &c., all transcribed according to an International System of Phonetic notation. Subscription price, 3 fr. 50, or 2s. 10d.

Subscriptions are also received by Dr. R. J. LLOYD, 49A Grove Street, Liverpool, and by Dr. A. T. BAKER, University College, Sheffield.

Apply FONETIK, BOUR-LA-REINE, FRANCE.

PRINTING FOR SCHOOLS AND EDUCATIONAL PURPOSES.

Estimates furnished. Enquiries solicited.

Address—

GEORGE OVER, THE RUGBY PRESS, RUGBY.

CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, Stationers' Hall, London.

Cairngorm, Hilly, Rustic, At spes non fracta, France, J.B.A., Earnest, Gawayne, Alexis, Crauford, Lux., E.E.C., Nabote, La Chercheuse, M.A.V.N., Second Thoughts, Madame la Chaud, Candebec, Kindergarten, Katidear, Baby, Cosy, Tête blanche, Lob, Iris, Zilpah, Boanerges, K.M.L., Midship, Fatonville.

Fourth Class.—Ben, V.M.S., Douteux, B.H.M., Aimée, Shield, Louis, H.J.K., Nero, Summerbank, Elaine, A Rouillet, Selva, Quintain, S.O.A., Dys.

Fifth Class.—Schoolgirl, Lethbridge, Musty, Miss Jane, Devia, A.L.O., Query, Mongrel, Happy-go-lucky, Absolute, M.E.P.

The following names of competitors who sent translations for correction were inadvertently omitted in our last number :—

First Class.—W.G.M., E.M.W.

Second Class.—Judy Murphy, I.H.H., G.G.S., Abbess, Shakspeare, M.V.B., Osyth, Ezzin, Iris.

Third Class.—Parisien, Altnacaille, M.F.D., Payerne, France Albert, Rico, Best, Wilts, Eros, Epi.

Fourth Class.—H.M.W., E. M. Stephenson, Hiawatha, Water-sprite.

Fifth Class.—H.G.

Several competitors complained of the absence of context, but the name of de Tocqueville gave sufficient clue. All knew, or might have found out, that he is the author of "Democracy in America," and that, therefore, this description must concern the North American half-breed or half-caste; that "Eurasian" will not render *metis* ("mongrel") and "the half bred" are wrong for different reasons; and that "the charms of the medicine-man" is apter than "the amulets of the juggler."

Special points to be noted are: "offspring of these two races" previously mentioned. The article was generally omitted. "Forms a compound" is wooden; "is a complex nature" or "a medley." "The world's images" is hardly intelligible; "the world as reflected" is sufficient, or see prize version; *viennent* is not "happen," and need not be rendered; "struggles laboriously in the trammels of an universal doubt" is a typical Fourth- or Fifth-Class translation. "Swaddling clothes" must be kept as connoting the infant, and the article is both incorrect and superfluous. In *avait jeté, se trouvant, se sont rencontrés* there is no need to depart from the tenses of the French. "In a narrower frame" does not sound natural, rather "in a smaller compass"; and *misères* is not "misery"—"fallen human nature" is nearer.

PROBLEMS.

SOLUTION OF GEOMETRICAL PROBLEM.

As $\angle BAC$ is bisected, $\therefore \angle BAD = \angle DAC$.

$\angle ABC = \angle ADC$ (Euclid III. 27)

and

$\angle BEA = \angle ACD$ (Euclid I. 32).

\therefore The two triangles ABE and ACD are equiangular, and their sides are proportionals (Euclid VI. 4).

$AB : AD :: AC : AE$,

and, as $AB = 22$ and $AC = 15$,

$22AE = 15AD$.

But

$AD = AE + 7$;

$\therefore 22AE = 15AE + (15 \times 7)$,

i.e.,

$7AE = 105$;

$\therefore AE = 15$.

The Extra Prize for March is awarded to "R. J. B." for the following arithmetical problems, of which solutions are invited :—

1. John Robinson, writing A.D. 2050, says: "My grandfather, Alfred Jones, used to remark that at midnight on the day he was born the number of days which had passed since the century began was a divisor of the number of days which the century contained. If I had not been born just a day too soon, I could have made the same observation. Alfred Jones and I were born on the same day of the week and in the same month of the year." On what days respectively were John Robinson and Alfred Jones born?

2. The odds were 2 to 1 against Peter, 4 to 1 against Paul, 7 to 1 against Grace, 9 to 1 against Vathek, 12 to 1 against Rachel, Simon, Volunteer, and Daredevil. The place betting was evens on Peter, 2 to 1 against Paul, 3 to 1 against Grace, 4 to 1 against Vathek, 5 to 1 against any other. I put a sovereign on one horse, put 10s. on another horse for a place, laid 10s. against each of two others, and bet an even 5s. that the horse which ran second would be one in the name of which the letter *e* occurs. My net winnings were £6. 5s. What was the result of the race?

(Continued on page 350.)

PREPARING FOR IMMEDIATE PUBLICATION.

A GEOGRAPHY AND ATLAS COMBINED.

Demy 4to, cloth, price 6s. net.

A Progressive Course

OF

Comparative Geography

ON THE CONCENTRIC SYSTEM.

Illustrated by 177 Pictures and Diagrams. With over 1,300 Exercises and Examination Questions.

Accompanied by a **COMPLETE ATLAS** containing 172 Maps and Diagrams in Colour, with Index.

By P. H. L'ESTRANGE, B.A.,

Assistant Master at Malvern College; late Exhibitioner of Queen's College, Oxford.

SPECIAL FEATURES.

Provides automatically a *fixed Scheme for Schools* without restricting the freedom of the Teachers.

Contains a series of 172 Maps and Diagrams, printed in Colours on 63 Plates, with Questions and Exercises to accompany each. The Plates include *Physical, Climatic, and Commercial* Maps.

Equal-area Projections, with lines of Latitude as straight lines, are generally used. Mercator's not used.

The Regional Method is applied. Areas with similar conditions treated side by side.

All distances, heights, areas, &c., compared with a known unit.

Facts not related, but inferred by questions from the Maps.

Cause and Effect insisted upon throughout. All matter arranged on the *Concentric System*, i.e. A for Junior Course; A and B for Middle Course; A, B, and C for Senior Course. The names in Maps are printed in different colours according to the same divisions, in brown for A, in blue for B, in red for C.

177 Illustrations in the Text, mostly from Actual Photographs, with Questions below them.

Six Parts, one for each term of a two-years' course.

Over 1,300 Questions and Exercises on Tracing Paper, Squared Paper, and by Protractor.

Test Maps for all Fact Maps, with symbols arranged in a rational order.

The number of names is far less than in the ordinary Text-Book.

Detailed Prospectus, with specimen Coloured Map and specimen pages of Illustrations and Exercises, is in preparation, and will be forwarded gratis on application.

Z., Willing's Advertisement Offices, 73 Knightsbridge, S.W.

KINDERGARTEN WANTED.

WANTED to Purchase, by a Lady, a KINDERGARTEN in pleasant neighbourhood within easy reach of the Country. Address—No. 7, 216.*

A Prize of Two Guineas is offered for the best translation of the following extract from Cicero:—

M. Atilius Regulus, cum consul iterum in Africa ex insidiis captus esset, duce Xanthippo, Lacedaemonio, imperatore autem patre Annibalis Hamilcare, iuratus missus est ad senatum, ut, nisi redditi essent Poenis captivi nobiles quidam, rediret ipse Karthaginem. Is cum Romam venisset, utilitatis speciem videbat; sed eam, ut res declarat, falsam iudicavit: quae erat talis: manere in patria, esse domi suae cum uxore, cum liberis; quam calamitatem accepisset in bello, communem fortunae bellicae iudicantem tenere consularis dignitatis gradum. Quis haec neget esse utilia? Quem censes? Magnitudo animi et fortitudo negat. Num locupletiores quaeris auctores? Harum enim est virtutum proprium nihil extimescere, omnia humana despicere, nihil, quod homini accidere possit, intolerandum putare. Itaque quid fecit? In senatum venit; mandata exposuit; sententiam ne diceret, recusavit; quamdiu iure iurando hostium teneretur, non esse se senatorem. Atque illud etiam—o stultum hominem, dixerit quispiam, et repugnantem utilitati suae!—reddi captivos negavit esse utile: illos enim adolescentes esse et bonos duces; se iam confectum senectute. Cuius cum valuisse auctoritas, captivi retenti sunt; ipse Karthaginem rediit neque eum caritas patriae retinuit nec suorum. Neque vero tum ignorabat se ad crudelissimum hostem et ad exquisita supplicia proficisci; sed ius iurandum conservandum putabat. Itaque tum, cum vigilando necabatur, erat in meliore causa, quam si domo senex captivus, periturus consularis remansisset. "At stulte, qui non modo non censuerit captivos remittendo, verum etiam dissuaserit." Quomodo stulte? etiamne, si rei publicae conducebat? Potest autem, quod inutile rei publicae sit, id cuiquam civi utile esse? Pervertunt homines ea, quae sunt fundamenta naturae, cum utilitatem ab honestate seiungunt. Omnes enim expetimus utilitatem ad eamque rapimus nec facere aliter ullo modo possumus. Nam quis est, qui utilia fugiat? aut quis potius, qui ea non studiosissime persequatur? Sed, quia nusquam possumus nisi in laude, decore, honestate utilia reperire, propterea illa et prima et summa habemus; utilitatis nomen non tam splendidum quam necessarium ducimus.

An Extra Prize (or Prizes) of Two Guineas is offered for the best forecast of the Education Act—i.e., of the amendments to the Bill that will be passed.

Initials or a nom de guerre must be adopted by ALL com-

petitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by May 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

THE PROTECTION OF CHILDREN.—The Faculty of Social Science of the University of Zürich has organized a prize scheme bearing on the protection of ill used children. The sum of 4,000 francs—roughly, £160—is offered in prizes (at most three) for essays in English, German, French, or Italian on the following subjects treated separately:—(i.) The ill treatment of children by parents and others; the cause, nature, prevention, and repression of such treatment. (ii.) The over-working and exploiting of children by parents and others; preventive and repressive measures. The arguments must be dealt with in relation to conditions prevailing in some one country—preferably, but not necessarily, Switzerland. The remedies must be suggested with a view to a possible combination between public authorities and private persons. July 1, 1906, is the date limit fixed by the Director of the Faculty for receiving the essays, which should bear a motto duplicated on a sealed envelope containing the name and address of the writer. The prize essays will remain the property of the Faculty, together with the rights of publication.

THE case of Stackemann v. Paton, decided in the High Court last month, is of some interest to proprietors of schools. The plaintiffs, who represented the Photographic Tourist Association, brought an action against the proprietor of Paton's "List of Schools and Teachers" for infringement of copyright. Mr. Justice Farwell decided that, if a photograph is made and executed for a good or a valuable consideration—in plain English, is paid for—the maker or executor cannot retain the copyright in his work unless it is expressly reserved by agreement in writing. If the principal of a school has a photograph of the buildings taken and pays for it, it would be monstrous that he should be debarred from reproducing it in an advertisement.

These School and Teachers' Advertisements are continued from page 249.

TO BE LET OR SOLD.

TO SCHOOL PROPRIETORS AND INSTITUTIONS.—To be Let or Freehold Sold, extensive SCHOOL PREMISES, situated on high ground at Battle, Sussex, standing back from the road in nearly two acres of grounds. EDINBURGH, DUBLIN, and NEW YORK.

THE PLACE OF LYRIC POETRY IN THE TEACHING OF ENGLISH LITERATURE.

ONE of the chief objects at which the teacher of English literature must aim is to enable his pupils, by the time they have reached a certain stage in the curriculum, rightly to appreciate as works of art, involving artistic structure and design, those writings that form the object of their study. Whatever be the particular class of literature that for the time being may constitute the object of study, be it poem or play, biography or essay or novel, during the later stages of the literature course, the pupils will be required at suitable times to direct their attention to the artistic structure of the work in question: so that, after having read and considered it, they may be able to perceive it as a whole made up of parts skilfully arranged in such a manner as to produce the general effect at which the writer has aimed. The importance of studying literature from this point of view is well expressed by Mr. Walter Pater, in his essay on "Style,"* as follows:—"In literary as in all other art structure is all-important, felt, or painfully missed, everywhere—that architectural conception of work which foresees the end in the beginning and never loses sight of it, and in every part is conscious of all the rest, till the last sentence does but, with undiminished vigour, unfold and justify the first."

It may be claimed as one of the advantages appertaining to the study of lyric poetry in schools that through it as medium, more easily than through any other literary form, the importance of the element of structure in literature may be taught. The first lesson the pupil has to learn regarding structure is that a work of literary art should be pervaded by a certain unity: underlying all its details there must be implicitly present a central unity of feeling or thought and a corresponding harmony of atmosphere. It is the merit of a lyric poem, in this connexion, as compared with other forms of literature, that in it the reader may more easily perceive the central unity of its theme. This advantage lyrical poetry possesses, in the first place, because it is, compared with other literary forms, brief in its expression, and is less overlaid with details; and, secondly, because from its essential nature, it aims at impressing on the reader's consciousness some single vivid idea or emotion—thus we find Mr. Palgrave remarking in his preface to "The Golden Treasury" (First Series) that "'lyrical' has been here held essentially to imply that each poem shall turn on some single thought, feeling, or situation." It is true, of course, that in every work of literary art, whatever be its kind, there must be amid a varying multiplicity of detail an underlying unity; and just in proportion as the perusal of the whole work produces this effect of unity is the work great as a product of art. Hence, in the higher stages of literature teaching, in all cases the structure of the literary works that are read will form an object of study. For example, it will be a valuable exercise for pupils who are reading a play of Shakespeare to trace the unity of plan, and the progressive development of that unity, throughout the play. Such an exercise, however, in the case of a drama will be a task of much greater difficulty and complexity than is involved in examining the structure of a lyric poem. To illustrate this point we cannot do better than quote again from Mr. Pater, who, in his essay on "Shakespeare's English Kings" (*ibid.*), remarks that lyric poetry, "in spite of complex structure, often preserves the unity of a single passionate ejaculation"; whereas, in dramatic poetry, "especially to the reader, as distinguished from the spectator assisting at a theatrical performance, there must always be a sense of the effort necessary to keep the various parts from flying asunder, a sense of imperfect continuity." Mr. Pater is here speaking of the difficulty which the adult reader finds in preserving the sense of unity amid the multiplicity of detail of a drama; and for the schoolboy the difficulty is much greater. This will be admitted at once by every teacher who, in company with his pupils, has traced the gradual development of the plot through one of Shakespeare's plays. The same difficulty, though in a lesser degree, will be met in the class-reading of a novel. It is only when we come to the lyric that the study of structure can be effectively carried on with an appreciably less degree of effort; and the reason is that here we have a form of literature the content of which may at one reading be grasped as a whole and included in one view. In a

* "Appreciations: with an Essay on Style." (Macmillan.)

short space of time, in the course of a single lesson, a complete product of literary art may be studied and the interrelation of its different parts clearly shown. It may be claimed, then, for lyric poetry that it is a form of literature peculiarly well adapted as an instrument for first introducing the pupil to the study of structure and its importance as an element in literary art.
